היות האדם, בשנת הוא צער, צר כח; נרודים המה
כמותיו צטולות האמר אמור אמורתיים, כל ידע
ויצין את אשר לא יצחן צצקינה אחר צחינה וינסה
צנסינות רבות; לא ישיג רק אשר ימשש צידים ויראה
לעינים, וחלושות הנה עיני צער מהצט צמחה נפלאה;
לכן לא טוב לאדם משכיל להרים לבו קחת משריגי עץ הדעת
כרי סכמות נשגבות, טרם ישכיל ויצחן האדמה זה שתול
גזע, טרם הצין טצעה ואיכותה, ולא ישא עיניו הגצה
מעלה לעוף צמוץ ולדרוש צמתי התצונות, וקף כי צמה
שאחר הטצע, טרם השכילו לרמות ועיניו תשוטטה
צחכות הטצע עצמה לדעת מוצא דצר ולדרוש
צמינותיה יסודותיה ואיכותיה; כי איך ירהצ נפש עלם
קטן לעלות צחפלות רמות וגבוהות, טרם ידע צעד צדרך

EDITOR'S NOTE

Aims, Scope, and Selection of Entries

The aim of the Fitzroy Dearborn Reader's Guides is to provide guidance to the secondary material in specific intellectual disciplines in brief bibliographic essays that analyze, interpret, and evaluate that material, succinctly presenting the student, teacher, researcher, and librarian with a selection of eligible candidates for further reading.

On the basis of a perusal of current academic publishers' catalogs, or a subscription to the *Times Literary Supplement*, or a stroll through the aisles of a national chain bookstore, the observer could hardly be faulted for taking Jewish Studies to be one of the primary categories of intellectual inquiry in the humanities. The boom in English-language Judaica publishing, however, is as novel as it is conspicuous. Still perceived, unlike Classics, as an interdisciplinary hybrid (albeit increasingly as a mark of esteem rather than a slight), Jewish Studies as a presence of any kind in English-speaking academe was little more than nominal before the second half of the 20th century. The seemingly breakneck pace of publishing activity a generation later, however, is less a matter of hybrid vigor than of gestation: in institutions of general learning, especially in the United States, there is now a full complement of practitioners, from callow youths to venerable emeriti as well as representatives of every degree of experience in between. Of course, the number of scholars, as much as the number of publications, is a function of a fundamental change of attitudes among readers as well as writers, Jews as well as non-Jews, reflecting the valorization of ethnicity and the study of alternative and minority experiences.

The Jewish national(ist) poet H.N. Bialik famously excoriated scholars of Judaism who elected to publish in the vernacular—rather than recognizing the claims of Hebrew as the holy, or literary, tongue—as enemies of the people and of posterity. The relative obscurity into which the writings of the 19th-century titans of the *Wissenschaft des Judentums* have fallen would seem to offer him some vindication, and it is not inconceivable that the labors of the English-speaking heirs of the German-speaking pioneers of the academic study of Judaism are flawed with an inherent obsolescence that does not mark the work of their Israeli colleagues. Prescinding, however, from speculation on the future history of the Jewish people or the English language, the fact remains that just now Jewish Studies in English, with its culturally specific nuances and interests, as well as a community of readers of its own, has burgeoned to become fully the counterpart of its Hebrew-language fraternal twin.

There is a mythic moment, corresponding to an actual turning point, in the emergence of a discipline when its adepts must give up on keeping abreast of new publications in the field, and thereafter on keeping abreast of new publications in increasingly specialized subfields. That moment is past for Jewish Studies in the English language, and this is what prompts the *Reader's Guide to Judaism*. There exist a number of one-volume Jewish encyclopedias—at least a couple of them extraordinarily good—and this compendium does not seek to function as another. What is currently lacking, and what this reference work attempts to supply, is a critical and explanatory signpost to the monographic literature on a wide range of subject matter within the study of Judaism. To that end,

the field has been divided into almost 450 topics, and specialists have been invited to contribute signed bibliographic essays on the area of their expertise.

Each entry in the *Reader's Guide* consists of an essay preceded by a bibliographic headnote listing what the individual contributor deems the most valuable English-language works on the subject. Titles selected will all be available in English, whether originally or in translation, but, given the access services widely offered by contemporary libraries, they will by no means necessarily be in print. In the selection of titles, precedence has been given to books over articles, but essays or articles in journals or book-length collections have been included, especially where they offer important new interpretations or provide authoritative reviews of the literature on a subject. Typically, each essay in the *Reader's Guide* is around 1,000 words in length and discusses between five and nine titles. In certain cases ten or more items have seemed sufficiently important to require notice, and in these instances essays are 2,000 words in length. There are also a number of topics for which appropriate literature, at least in English, has proved severely limited, and here the reader is likely to find more extended discussion of fewer titles.

Naturally, the list of entries, developed in consultation with the project's advisers and contributing essayists, aspires to a balanced and authentic reflection of the scope of Judaism's preoccupations, but availability of scholarship, and specifically of scholarship in English, weighs very heavily here, since each topic needs to be the subject of sufficient worthwhile literature to allow for an expansive and somewhat comparative survey of the type that characterizes the *Reader's Guides*. While it is a cause for celebration that a work several times the present size could not begin to be exhaustive, many criminal omissions will undoubtedly be attributable to a lack of diligence on the part of the editor or a lapse of taste on the part of the contributors. On the other hand, one of the merits of a book like the *Reader's Guide* is its capacity to highlight surprising gaps. In the spirit of the *via negativa*, it may be hoped that the shortcomings of the present survey may stimulate here and there some localized bibliographic stocktaking.

Notwithstanding the generous proportions of the *Reader's Guide* and the avowedly selective and subjective approach of its essays, it has been necessary to restrict the range of topics covered, and as a result religious and ideological manifestations provide the primary focus. Insofar as the study of Judaism may be a narrower subject than Jewish Studies, it is the former that the *Reader's Guide to Judaism* purports to describe. It should also be noted that the *Reader's Guide* is a guide to secondary literature, and not to primary sources. There are two limited exceptions to this rule. An editorial introduction to a work by an important individual may be considered sufficiently valuable to justify inclusion in a case where the individual's own work would otherwise be excluded. Translations of portions of classical Jewish literature (e.g., Midrash Halakhah) have been included selectively, where the introduction, apparatus, or approach is such that the work may function as secondary literature in disguise.

Arrangement of the Entries

Entries appear in alphabetical order and a complete list can be found in the **Alphabetical List of Entries** (p. xv). Where there are several entries sharing the same general heading, the order does not normally proceed alphabetically, but from the more general to the more particular or from the earlier to the later, as appropriate (thus, "Holocaust: Responses" precedes "Holocaust: Film Treatments," and "Rabbinic Biography: Medieval" precedes "Rabbinic Biography: Early Modern").

While the overall arrangement of entries is alphabetical, there are other means of access to the contents of the *Reader's Guide*. These are:

1. **Thematic List** (p. xxi). This provides the reader with a list of entries arranged by broad subject area, specifically Arts and Material Culture, History, Individuals, Literature, Practice, References, and Thought. The criterion for the sometimes dubious distinction between topics assigned to Practice and those assigned to Thought is their degree of abstraction.
2. **Booklist Index** (p. 653). This lists in alphabetical order of author all books and articles discussed in any of the entries and can be used to locate discussion of the work of particular scholars. Occasionally books appear in more than one entry, and the reader can consult this index to locate multiple discussions of a particular title.

3. **General Index** (p. 687). This lists individuals, topics, and events mentioned in any of the entries. This index may be particularly useful for locating references to individuals, events, or other topics that have no entry of their own.
4. **Cross References**. At the end of many entries, there are *See also* notes that refer the reader to entries on related topics.

Format within Entries

Each entry begins with a list of the publications to be discussed by the essayist. Brief publication details are provided; normally dates are supplied for the first edition and the most recent revised edition, while paperback editions are omitted. In the text of each essay, the point at which each book or article receives its principal commentary is indicated by citation of the author's name in capital letters, although references to it may appear elsewhere in the essay. When more than one work by the same author is included, the name is capitalized at the beginning of the discussion of each book, followed by the date of publication in parentheses. Although the booklists in each entry proceed alphabetically by author, the order in which items are discussed has been left to the discretion of the individual essayists. The result is that a chronological approach has often been preferred, allowing discussion to reflect the evolution of a field of study; broader topics, however, have frequently found themselves best suited to thematic subgroupings.

Acknowledgments

Thanks are due to an array of congenial collaborators at Fitzroy Dearborn, and most especially to Robert M. Salkin, the commissioning editor, and Elizabeth Nishiura, my constant companions on this venture, and to their colleagues Alison Aves, Catherine E. Keich, Elizabeth Laskey, and Gretchen Willenberg. Much is owed also to a board of advisers who were lavish with good counsel during the planning stages. It remains only to acknowledge indebtedness to an extraordinary corps of contributing essayists. Some 200 strong, it is a group of considerable diversity: experientially, from doctoral candidates to senior faculty as near iconic as a relatively compact discipline allows; geographically, with preponderantly North American, Israeli, British, and Dutch contributors joined by others from a variety of countries with thriving Jewish Studies communities of their own, from Austria to Australia; and confessionally, with ordained contributors including rabbis of every stripe, a Franciscan friar, a Pentecostalist minister, and more. Their willingness to take time away from their respective projects to attend to these entries has regularly amazed, and collaborating with each has been a delight.

Rabbi Abraham ben David of Posquières (known as Rabad) was one of the most important and prolific rabbinic figures in southern France during the second half of the 12th century. Born in Narbonne, he founded and supported an academy in Posquières using his personal wealth. A son-in-law and student of Abraham ben Isaac Av Beit Din of Narbonne and a student of Moses ben Joseph and Meshullam of Lunel, Rabad was held in the highest esteem by later rabbinic luminaries such as Nahmanides, Solomon ibn Adret (Rashba), and David ibn Abi Zimra (Radbaz).

TWERSKY’S book is the definitive biography of Rabad and is a model for its genre. Twersky begins by noting the positions and spheres of influence that Rabad’s teachers occupied, by characterizing the nature of rabbinic scholarship in Provence and the flow of Rabad’s career and by depicting Rabad’s personality. Subsequent chapters identify and describe Rabad’s written works with particular emphasis on the glosses (*bassagot*) to Maimonides’ *Mishneh Torah*; outline the sources

that Rabad had at his disposal, including an important discussion of Rabad’s attitudes toward post-talmudic rabbinic works and commentaries as a source of halakhic precedent; and highlight noteworthy disciples, followers, and descendants of Rabad. The final chapter explores Rabad’s attitudes toward secular learning, philosophy, and Kabbalah. For Twersky, the glosses composed by Rabad to the works of Maimonides, Alfasi, and R. Zerayah ha-Levi, along with a series of topical halakhic monographs, form the core of Rabad’s creativity. In marked contrast to the assessments of 19th-century Wissenschaft scholarship, Twersky demonstrates that Rabad was familiar with philosophical teachings and terminology and was not hostile to rationalistic tenets and secular learning. Although a number of later kabbalists viewed Rabad as a link in the chain of esoteric studies and Rabad’s son Isaac the Blind was a leading Provençal kabbalist, Twersky questions the depth of Rabad’s commitment to this discipline and notes that, in any case, Rabad’s halakhic scholarship and writings existed as an entity completely separate from any kabbalistic teachings and conceptions.

SCHOLEM, as part of a comprehensive survey on the origins of mystical study in medieval Europe, maintains that a series of formulations and phenomena attributed to Rabad by kabbalistic tradition suggest that Rabad, no less than other contemporary Provençal talmudists such as Rabbi Jacob the Nazirite, was significantly involved in the transmission of esoteric teachings. For example, Rabad expressed a view concerning proper mystical intentions during prayer, and he is cited by his grandson Rabbi Asher ben David with regard to the identity of the highest *sefirah* (mystical emanation). In addition, Rabad refers to esoteric notions about angels and the demiurge.

Based on the way that Rabad is cited in talmudic commentaries and codes, SOLOVEITCHIK argues that Rabad’s *bassagot* to *Mishneh Torah* were little known and less influential in the medieval period than modern scholarship has assumed. Rabad was regarded by his contemporaries and successors primarily as the author of commentaries and other freestanding works, some of which have been lost. His intellectual independence led Rabad to free himself almost completely from the geonic orbit. Much of Rabad’s interpretational insightfulness was absorbed and transformed by Nahmanides and ibn Adret, while late medieval halakhic writings preserved mainly the criticisms of Rabad and other Provençal

talmudists, rather than their creativity. As a result, Rabad became known to later generations principally as the author of the *hassagot*, when in fact these *hassagot* were among the last things penned by Rabad. They were based largely on his earlier writings and were not meant to be systematic. Any evaluation of Rabad's impact on subsequent talmudic scholarship must take into account the full range of Rabad's rabbinic writings.

SILVER, in the context of an analysis of some of the issues involved in an early phase of the Maimonidean Controversy, compares the glosses of Rabad to Mishneh Torah, which Silver considers to be quite strident, to other contemporary critiques of Maimonides' halakhic thought. These include criticisms composed by Rabbi Moses ha-Kohen of Lunel and Rabbi Jonathan ha-Kohen of Lunel.

COHEN focuses on one of Rabad's topical treatises, *Ba'alei ha-Nefesh*, which deals with the laws and practices that govern family purity. In the final chapter of that treatise, Rabad enumerates a series of legitimate reasons for sexual relations between husband and wife. Cohen begins with a review of the scholarly assessments of Rabad's open discussion of the motivations for marital relations. Cohen notes that these assessments range from the claim that Rabad demonstrates a more permissive view of sexuality when compared to the mildly ascetic posture found within talmudic literature, to the suggestion that Rabad's approach was closer to the Aristotelian outlook of Maimonides, which adopted a relatively reserved approach concerning sexual relations. Cohen argues that by comparing the material in *Ba'alei ha-Nefesh* to discussions of conjugal sex in Christian writings throughout the medieval period, it is possible to understand better both the uniqueness of and the basis for Rabad's views. Cohen demonstrates that the four reasons given by Rabad correspond closely to those favored by Christian jurists in the mid-12th century. The reasons stemmed, at their core, from an Augustinian model, although, to be sure, Rabad stressed the relative merits of these motives rather than their sinfulness. Cohen's thesis has important implications for measuring the impact of Christian religious thought on medieval rabbinic literature in Christian Europe.

As an influential government official and outstanding Jewish community leader and as one of the most prolific and versatile writers of premodern Judaism, Isaac Abravanel has attracted extensive attention from scholars of Jewish literature and history. Much of this attention, however, has taken the form of articles on specific themes rather than larger monographic studies.

TREND and LOEWE's collection of essays contains some of the best in the spate of mostly popular studies written in the years surrounding the quincentenary of Abravanel's birth. Different articles examine Abravanel's biography and such important and challenging subjects as his biblical scholarship and political thought. Leo Strauss's investigation of the latter has proved enduring and provides a valuable case study in Abravanel's relationship to Maimonidean, medieval Christian, and humanist thought as well.

GAON's book—a doctoral dissertation published a half-century after its completion (without updating)—argues, in large measure convincingly, for Abravanel's unstated reliance in his Torah commentaries on biblical exegesis found in works of the mid-15th-century Franciscan scriptural interpreter Alfonso de Madrigal "el Tostado." The historical and intellectual overviews found in the first part of the book must be used with great caution; the author's precise aim and point of view in drawing the connection between Tostado and Abravanel remain elusive, and the value of the book is further limited by the appearance of many untranslated Latin and Hebrew passages. Still, Gaon's book constitutes the only full-

length account of a critical facet of Abravanel's sustained interaction with various strands of non-Jewish literature, works of Christian biblical interpretation among them.

NETANYAHU's book is the "great leap forward" in modern Abravanel studies. It remains indispensable especially for the vivid and generally dependable account of Abravanel's life and works contained in its first part. Here Netanyahu skillfully recaptures the drama of Abravanel's biography and the tumult of his times in a manner both academically rigorous and fully accessible to the general reader. This first part also intersperses an overview of Abravanel's wide-ranging literary corpus. Following the bio-bibliographic account comes the second part of the book, which seeks to reconstruct Abravanel's "world outlook." Its point of departure is Netanyahu's understanding that Abravanel was "the father of the [Jewish] messianic movements of the 16th and 17th centuries." Netanyahu's preoccupation with Abravanel's messianism is born of his Zionist orientation. In particular Netanyahu views Abravanel as a leader of a pre-modern Jewry that, in its expectation of supernatural deliverance, "breathed the atmosphere of dreams rather than reality." That is to say, he failed to actively undertake initiatives such as settlement of the land of Israel that would have placed the Jewish people's modern fate in its own hands. In all of this Netanyahu both overestimates the depth of Abravanel's messianic consciousness after the 1492 expulsion of Spanish Jewry and fails to substantiate his claims for Abravanel's decisive impact on early modern Jewish eschatological speculation and deed. Nonetheless, his book remains unquestionably the best choice for a detailed narration of Abravanel's life and for orientation into Abravanel's principal philosophic, historical, political, and messianic teachings.

BARZILAY synthesizes Abravanel's "antirationalism," a key component of his overall theological posture, viewed here from the peculiar angle (given Abravanel's predominantly Iberian religious formation) of Italian Jewish antirationalism. After sketching the emergence of this antirationalism in Abravanel's younger years, Barzilay unfolds Abravanel's more or less consistent rebuffs of philosophically oriented teachings as transmitted by such medieval predecessors as Maimonides and Gersonides. Following an impressive inventory of texts that attest Abravanel's opposition to, among other things, philosophic naturalism, allegorical interpretation, and soteriology, comes the surprising conclusion that Abravanel's antirationalism "seems to have been of a mere literary nature," a judgment that, if considerably overstated, does bear some weight.

REINES offers a sample of this antirationalism as it emerges in Abravanel's dialogue with his most revered medieval predecessor on the nature of prophecy. Reines describes with clarity Maimonides' naturalistic prophetology and Abravanel's rejoinder that prophecy is a miraculous creation by the special will of God, adeptly illuminating the highly technical topics attendant to this controversy in the process. Following his introductory essay, Reines provides annotated translations from Abravanel's commentary on the chapters devoted to prophecy in Maimonides' *Guide of the Perplexed*.

KELLNER's volume can be read profitably alongside Reines's since it, too, highlights Abravanel's tendency to take Maimonidean texts as a point of departure for theological

reflection. Kellner's main contribution in his introduction is to suggest a solution for an obvious difficulty: Abravanel's study of Jewish dogma ends up providing a sharp dissent from the project of creed-formulation, even as the vast majority of Abravanel's work on the subject animatedly defends Maimonides' entry in this field, his famous 13 principles of faith. Kellner's solution, which lays to rest a problem that had long bedeviled scholars, is that Abravanel defended Maimonides' dogmatic principles only as "heuristic devices," while Abravanel's attack on creed formulation is directed "not at the principles as heuristic devices, but as axioms or dogmas the holding of which is necessary in order to merit life in the world to come." Following his introductory essay, Kellner offers an annotated translation of Abravanel's *Principles of Faith*, the only translation of a complete work of Abravanel available in English.

LAWEE's article reflects new emphases in historiography on Abravanel, who is here pictured as a scholar stimulated by a range of Renaissance and especially humanist trends. The article's threefold aim is to explore the impact of Renaissance "historical thinking" on Abravanel, to illustrate the impress of Renaissance sensibilities and methods on Abravanel's biblical exegesis rather than on aspects of his theology, and to argue for the influence of humanist critical categories on Abravanel's exegetical thought processes prior to his arrival in Italy in 1492. This article introduces one side of Abravanel's multifaceted biblical scholarship, an unjustly neglected topic.

Conversely, FELDMAN expresses reservations regarding the depth of Abravanel's embeddedness in a Renaissance milieu. Focusing on the question of his attitude toward philosophy and granting that Abravanel "was aware of some of the newer trends and ideas of the Renaissance," Feldman nonetheless emphasizes Abravanel's "essentially medieval mind," which he contrasts with that of Abravanel's eldest son, Judah, author of the famous Neoplatonic tract *Dialogues of Love*. Feldman suggests that it is the son and not the father who represents a "new era in Jewish social and intellectual history." Some may find this depiction of an Abravanel "house divided" too neat (and conventional), but Feldman makes his case with a combination of care and unapologetic gusto.

Judah ben Isaac Abravanel was the son of Isaac Abravanel, the outstanding Jewish leader in 15th-century Portugal, Spain, and Italy, as well as a prolific Bible commentator. Judah was born in Portugal and was active in Italy as a physician, philosophical-religious writer, and poet. He is called Leone Ebreo in the 16th-century editions of his surviving book, *The Dia-*

logues of Love. This is an encyclopedic work in the form of three platonic dialogues between Philo and Sophia about love; it became popular in Italian, Latin, French, and Spanish. The authoritative studies of the author and his work are not in English. An English reader can, however, gain an adequate idea of the life of the writer, his work, and his influence from articles that should be generally available in university libraries with a respectable Judaica collection.

The greatest task for understanding Judah is to decide in which context he must be placed to be understood. Studies of Judah and his work have generally approached him either historically, as a recipient or transmitter of influence, or through philosophical analysis. Philosophical analyses have concentrated on connecting his statements either to ancient thinkers, especially Plato and Plotinus; to the medieval Islamic and Jewish philosophers, mainly Averroës and Avicenna; or to Renaissance Christian contemporaries, especially Ficino, Pico, and Bruno. More recently, he has been considered as a literary and rhetorical author.

GUTTMANN's generally authoritative reference work, dating from 1933, characterizes the *Dialogues* by contrasting it with the medieval thinkers discussed in his survey, as well as by connecting it with them. Judah derives from Hasdai Crescas a conception of love that animates the static structures of medieval Aristotelian conceptions of the universe. Knowledge in the *Dialogues* similarly becomes more than discursive knowledge and enables the unification of humanity with God.

MILBURN balances intelligent discussion of Judah's biography, of central arguments of the *Dialogues*, and of the book's influence on Italian, Spanish, and French thought and literature. This is still the article with which to begin studying about Judah.

NELSON's summary of the main arguments of the *Dialogues* frequently quotes the book, in Italian and English, to illustrate similarities and differences between statements in it and statements in Renaissance philosophical love treatises by Marsilio Ficino, Pietro Bembo, Baldassare Castiglione, and Giordano Bruno.

PERRY's introduction to this 1974 edition of an early French translation clearly and helpfully traces the argument of the *Dialogues*, without reference to external sources. The first chapter of PERRY (1980) clearly analyzes the arguments of the *Dialogues*, and the second discusses the importance of the dialogue form. Subsequent chapters examine the tradition that Perry considers the *Dialogues* to have begun in the writings of French, Spanish, and English poets: Maurice Scève, Pernet du Guillet, Antoine Héroët, Jorge de Montemayor, William Shakespeare, and John Donne.

PINES identifies and discusses Judah's references and allusions to specific medieval Arabic, Latin, and Hebrew philosophical texts. He shows that Avicenna's "Epistle on Love" is the Arabic book that resembles the *Dialogues* most closely, although it is not known to have been available to Judah. No Christian thinker is mentioned in the *Dialogues*, but the contemporaneous writings of Marsilio Ficino, the Florentine translator and commentator of Plato's Greek texts, obviously are behind some of Judah's statements.

IVRY shows how the *Dialogues of Love* reflects late 15th-century Jewish discussion of the relation of philosophy to faith. He contrasts Judah, the representative of the Neoplatonic tendency of Jewish philosophy in Italy, to Elijah Delmedigo, an Averroist, to show the continuing importance of Averroism. More precisely, Ivry shows ways in which Judah harmonizes Platonic with Averroistic assumptions, methods, and conclusions rather than conforming exclusively to platonism.

FELDMAN contrasts the opinions of Judah with those of his father, specifically the ways in which they discussed creation and immortality. Judah's dialogue form aroused interest among Christians by discussing cosmology and the relation of philosophy to prophecy in terms of Eros, taken from Plato's *Symposium*. In contrast, Isaac's commentaries and treatises, being in Hebrew and using the manner and the range of philosophical reference of earlier Jewish philosophers, sought to address a Jewish, and even specifically Sephardi, audience.

GERSHENZON examines the concept of the circle, through which Judah described the operation of divine love throughout the universe. She examines the Christian humanist writings, particularly Ficino's commentaries on several of Plato's dialogues, to which Judah clearly alluded. She also shows that Judah occasionally employed the arguments of Giovanni Pico della Mirandola, another Florentine contemporary, to dispute Ficino's formulations.

DETHIER argues that the ways in which Judah discussed the interaction of human and divine intelligence, taken from Averroës and Avicenna, define the cosmos as unified in a pantheistic way. His demanding, allusive analysis shows the similarity of the most important parts of the *Dialogues* to passages in Plotinus and Ficino and contrasts Judah's intellectual love of God with Spinoza's.

SCRIVANO uses newly discovered documents to reopen biographical questions. He also tries to understand the teachings in the *Dialogues* as a confrontation between Jewish thought and European culture.

LESLEY (1992) analyzes the rhetorical situation of Judah at the end of the 15th century in Italy. Judah tried to unify a Jewish audience that was divided by fundamentally incompatible intellectual tendencies. LESLEY (1993) reconstructs the authorial choices that Judah faced in choosing to write in a particular form of dialogue about philosophy and Kabbalah. Use of the dialogue genre and rhetorical argumentation antagonized Jewish philosophers.

SCHEINDLIN translates and interprets the most substantial other writing by Judah that survives, a poetic complaint about fate from 1503. The poem is addressed to Judah's son, Isaac, who was converted to Christianity in Portugal. Scheindlin believes that "the poem's address to the boy appears not to be a mere rhetorical apostrophe but an actual address meant to be read by the addressee," and this shapes his sensitive translation.

Abrogation refers to the temporary or permanent annulment of law and custom that has been rendered counterproductive or intolerable by changing circumstances. Common sense, inherited tradition, and judicial procedure alternately overturn and authorize the policies and programs of Judaism (Deuteronomy 17:8–11). Some interpreters deny that religious laws are abrogated per se since changes are legally justified (e.g., Eduyot 1:5); others demand that even biblical sanctions, if deemed unjust, be abrogated (e.g., Yebamot 89b). The dispute reveals a dilemma: regulated laws are mechanisms that refine custom, but regularized customs provide contexts in which law applies. This review considers studies of abrogation, obligation, and supererogation, bypassing discussion of the abundant polemical and apologetic exchanges with pagans, Christians, and Muslims on these issues of the scope of the law and its immutability.

The premise of JACOBS's elegant study is that a great variety of "opinions have had a voice in determining halakhah." He contends that any ordinance, except the most explicit of "blanket prohibition[s]" ratified by legislation, can be rejected or revised in "response to changed conditions and social needs"; other sanctions are "not abolished but circumvented" through legal fictions. But obligation deriving from nonlegal, aggadic sources invoking philosophy, mysticism, or moral psychology entails ambiguity: laws are "vehicles for the expression of . . . Jewish ideals and ideas," and yet are shaped by customary Jewish patterns of life to which they apply. The principle that custom can override law (Yebamot 12:1) suggests to Jacobs, perhaps too easily, that "the ultimate authority for determining which observances are binding . . . is the historical experience of the people Israel."

Abrogation in ritual and morality is probed by BROOKS. Citing the Mishnah and the Jerusalem Talmud, he explains how the spirit and underlying principles of Written Torah guide a legal process and dialectical exchange in Oral Torah. Brooks maintains that rabbinic “discourse educates and elevates one to new levels of holiness” while “allowing the law to continue to grow and encompass further areas of life in a practicable way.” Means and ends of sanctification are ambiguous: “all that people observe in everyday life . . . exists within the realms of choices laid out by the Bible.” On the other hand, this cogent but slim book adduces evidence that if one’s intention was not to further the spirit of the Torah (in its narrowest sense), the law in fact might be abrogated.

Whereas Kirschenbaum’s *Equity in Jewish Law: Halakhic Perspectives in Law: Formalism and Flexibility in Jewish Civil Law* (1991) surveys talmudic fairness and justice, KIRSCHENBAUM’s companion volume treats exceptions and extensions of equity. Custom and law apply differently in varying situations because the “minimal requirements of the scriptural letter . . . justify rabbinic guidelines that ‘deviate’ from scriptural norms in order to achieve scriptural ideals.”

BEN-MENAHM identifies exemplary rabbinic figures who violated religious sanctions that conflicted with moral imperatives. He distinguishes positions proposing correctness of law and custom in theory as distinct from determining their effectiveness in practice. A “norm allowing departure . . . validates judicial decisions based on extra-legal considerations.” According to this engaging study, judges may depart from previous abrogation as well as from prevailing rules.

WEINSTEIN gathers sources favoring the view that excessive devotion degrades, rather than enriches, religious law and custom. She posits that suspicions arise in the Talmud of attempts to combine humanity and divinity by making worship more prominent or rigorous than necessary. A pious individual imagines one can “better serve one’s Creator by adopting a more difficult way of life.” Weinstein warns that self-denial risks becoming self-aggrandizement by attracting attention, humiliating others, or diminishing the place of basic commandments. Opinions on ascetic behavior are presented ranging from legislating fasts that cause spiritual, if not physical, anguish to lifestyles shunning all but a few eccentric performances. Weinstein’s point of view contends that “personal religious expression” should result in “being an especially kind person who is concerned with the welfare of others” and in zealotry in civil but not ritual matters, since humans understand themselves and each other better than they do God.

SCHOLEM keenly elucidates the “problem of the validity of all previous tradition.” This crisis of early modernity comes to a head with the 17th-century messianic pretender Shabbetai Tsevi and his disciples, who claimed to anticipate, incite, or witness revolutionary transformation. A “sense of imminent catastrophe” prompted ancient exilic law and recent custom alike. A groundbreaking essay, “Redemption through Sin,” argues that contradictions between inner sincerity and outward deception in *converso* experience led radicals to declare that public “violation of the Torah is now its true fulfillment.” This attitude contrasts with the neutralization of messianism in a hasidic emphasis on salvation through quietist renewal instead of historical revolution. In all, traditional valorization

enables spontaneity in receptivity, allowing the anarchic breeze of mysticism and messianism to sweep through the well-ordered house of law and custom.

A vital historical account is presented in FISHMAN’s vivid study and translation of the Venetian rabbi Leone Modena’s 1623 enigma, *Kol Sakhal (Voice of a Fool)*. This anonymous essay, whose author’s identity Fishman confirms, sets out to revamp, if not refute, rabbinic Judaism. According to Fishman, Modena appealed to reason and common sense rather than mysticism and messianism, distinguishing sharply between unambiguous legislation and more customary practices and “voluntary enhancement of religious performance.” Fishman dissociates Modena’s proposal from subsequent Reform and Orthodox movements: Modena sought to affirm the law by streamlining but not undermining it. Fishman’s effort articulates a promising method of inquiry into texts that either “flirted with potentially disruptive approaches to interpretation or unequivocally violated the culture’s juridical boundaries.”

The Spanish Jewish mystic Abraham Abulafia broke with established kabbalistic circles that favored a long and rigorous course of study exploring the “true” nature of God. Abulafia’s meditative science of letters did not necessitate a systematic approach to God through the study of the hierarchy of sefirot. Rather, Abulafia believed that knowledge of God could be obtained immediately through a technique of meditation upon all the letters of the Torah wherein the name of God was hidden. The recovery of Abraham Abulafia as a historical figure is largely due to the work of two scholars: Gershom Scholem and Moshe Idel.

SCHOLEM (1941) and SCHOLEM (1974) represent the essential point of departure for any study of Jewish mysticism in general and Abraham Abulafia in particular. Scholem places Abulafia and ecstatic Kabbalah within a sweeping historical context and, more particularly, within the context of 13th-century kabbalistic literature. Scholem's two surveys of the history of Jewish mysticism guide the reader through the various schools of Jewish mysticism. Scholem also allows the reader an insight into reactions to Abulafia's meditative science of the combination of letters, where the letters of the Torah are transformed into a divine music or a spiritual language that moves the devotee toward the name of God manifest in all creation. Within Scholem's systematic studies of Jewish mysticism, however, Abulafia's impact upon other early kabbalists is largely unnoticed. One of Scholem's students, Moshe Idel, has added a number of key works addressing the history of Jewish mysticism and Abulafia's historical significance.

IDEL (1989), drawing on the author's doctoral dissertation (Hebrew University of Jerusalem, 1976), reveals Abulafia's role in introducing to Jewish mysticism a more intense interest in language as a means of exploring a new realm of knowledge about the universe beyond the domains of the natural sciences or philosophy. As the putative language of God and the physical universe, Hebrew became the focal point for such discussions. Abulafia's hermeneutical system applied to the Torah, which reflected the intellectual structure of the universe and God himself, and constituted a significant departure from existing kabbalistic thought. Even so, Abulafian Kabbalah still accepted Torah as an allegorical process moving the mystic toward divine and intrasefirotic knowledge.

IDEL (1988b) and IDEL (1988c) promote the most in-depth analyses available of Abulafia as the founder of ecstatic Kabbalah. While rejecting possible links between Abulafia and the Cathars, Idel does offer tempting suggestions of connections between Abulafia and Sufi mysticism. Idel attributes Abulafia's breadth of influence to subtle dialogues that generated a blend of kabbalistic and Sufi thought in the Middle East. The best of contemporary scholars dealing with Abulafia, Idel demonstrates Abulafia's creative exploration of Maimonidean thought to break with traditional speculative Aristotelian philosophy as the means to the knowledge of God. Abulafian mysticism avoided the need for aesthetic discipline in favor of a strengthened intellect. All the while, Abulafia, who increasingly perceived himself in messianic terms and at one point traveled to Rome intent on confronting the pope, envisioned Judaism as the universal religion and disparaged Christianity and Islam. He believed that only through mystical experience induced through the impassioned intellectualized permutation of Hebrew letters into music and colors could the human intellect momentarily merge with God. Abulafia used erotic images as metaphors for the ecstatic consummation of human experience in union and in harmony with God as active intellect. Contrary to traditional Sefirotic Kabbalah, Abulafian mysticism focused on the benefits for the mystic and rejected any possibility of human influence upon God.

IDEL (1988a) and IDEL (1995) address Abulafia's place in a key chapter in the history of Jewish mysticism, namely, the development of Hasidism in the 18th and 19th centuries. In these studies, Idel continues his break with Scholem's more tra-

ditional historical line in favor of a more phenomenological approach to Jewish mysticism and Hasidism. Consequently, rather than viewing it as a direct response to Sabbatianism, Idel interprets Hasidism as an evolving, emerging force, drawing largely upon non-Lurianic schools, elements of magic, and Abulafia's ecstatic Kabbalah.

Within the merging streams of Jewish religious experience, Idel interprets the history of Jewish mysticism as a positive, creative interaction of schools of thought rather than a negative response to a misplaced messianism. As such, Abulafian Kabbalah is intimately tied to essential Judaism and specifically to extreme devotion to Jewish law and the growth of kabbalistic literature. Although Idel's coupling of Gnostic texts with Jewish speculative literature is arguably very weak, his works offer the reader an absorbing record of mystical practices applied by the Abulafian school. Furthermore, Idel provocatively interprets modern Hasidism as a merging of two schools of kabbalistic thought, allowing for a theological elite but opening the possibility of ecstatic experiences to the masses.

KAPLAN's popularizing anthology is short on analysis, but it does provide the English reader with a selection of primary source materials for the life and thought of Abulafia, along with a number of other classic texts of Jewish mystical spirituality.

Uriel Acosta (or da Costa or d'Acosta) gained fame as one of the most significant Jewish freethinkers before the modern era and as a possible influence on a far more important Jewish radical, Baruch (Benedict) Spinoza. Knowledge concerning this tragic figure changed considerably in the late 20th century due to the amazing discovery made by H.P. Salomon of a surviving copy of Acosta's book attacking rabbinic Judaism. This work was burned when it appeared, and until Salomon's discovery scholars assumed the entire edition was lost. With the examination of this find, much of the earlier Acosta scholarship has been superseded. A large amount of material on Acosta is available in addition to that listed above, but it is either unpublished (most important is material in Howard Adelman's 1985 Brandeis University Ph.D. dissertation on Leon Modena), not available in English (including work by C. Gebhardt, I.S. Révah, and H.P. Salomon), or scattered in books on other subjects.

SALOMON and SASSOON is clearly the place to begin any serious study of Acosta. Their book opens with a relatively short introduction dealing with biographical, philosophical, and historic topics pertaining to the thought of Acosta. A small bibliography follows, which will be particularly useful to those with additional language skills. The heart of the book is the facsimile edition of Acosta's *Examination of Pharisaic Traditions* followed by an English translation from the original Portuguese. Here Acosta develops what might be called his "early heretical" position against rabbinic theology and metaphysics, striking for its somewhat neo-Karaite biblicist position. After Acosta's treatise comes the earlier refutation penned by his adversary, the Hamburg physician Samuel da Silva, *Treatise on the Immortality of the Soul*, here presented in English alone, the Portuguese original being available as a companion volume. This is one of many works by scholars of the Western Sephardi diaspora defending the rabbinic position on the immortality of the soul. After da Silva's work there follows a group of appendixes, the most important of which is Acosta's autobiography, published by the Dutch theologian P. Van Limborch. This work, assumed to be genuine by most scholars, was allegedly left behind when Acosta committed suicide. It tells of Acosta's unhappy life, but it also incorporates a theological position far more radical than that for which he argued in the 1620s. The volume ends with Acosta family trees and indexes.

BERGMAN's volume consists entirely of primary sources concerning Acosta. It opens with the same autobiography found in Salomon and Sassoon's appendix. Next comes the highly important "Eleven Theses against the Tradition," a small work attributed by most scholars to Acosta, though it was composed anonymously. This composition, which was sent to the Venice rabbis, appears to contain the earliest known version of Acosta's antirabbinic position. Following are several documents surrounding Acosta's excommunications, at least one of which does not properly belong in this context. Some readers will find useful the preface by John Whiston to his English translation of the autobiography (1740), and Van Limborch's attempt to defend Christianity against Acosta's attack on religion.

PORGES offers a detailed critique of the most complete work on Acosta before Salomon and Sassoon, C. Gebhardt's *Die Schriften des Uriel da Costa mit Einleitung, Übertragung und Regesten* (Amsterdam, The Netherlands: Bibliotheca Spinozana, 1922). For the most part the design of his comments is to correct biographical and historical details where he feels Gebhardt erred. There are also substantive discussions, however, particularly regarding the terms "Sadducee" and "Pharisee" as they are used in the literature of the Acosta affair and the nascent biblical criticism as expressed by Acosta and Spinoza.

SONNE (1932) attempts to demonstrate that a famous work of Jewish radical thought called *Kol Sakhal (Voice of a Fool)*, found among the papers of Rabbi Leon Modena in Venice, was in fact a formulation of Acosta's position. Modena had been assigned by the Venice rabbinate to refute the "Eleven Theses" and had various contacts with Amsterdam Jewry.

SONNE (1948) attempts to defend his 1932 thesis and to add evidence in the form of a letter from Modena to the Amsterdam physician David Farrar, whom Sonne believes was connected with the Acosta affair. Farrar was then being accused of heresy in Amsterdam, and Modena comes to his defense. The evidence for Sonne's original thesis and his attempt to relate the Farrar-Modena correspondence to Acosta have both been matters of controversy in subsequent literature.

FISHMAN deals with Sonne's questions about the relationship between Acosta's critiques and the positions found in *Kol Sakhal* that resemble Acosta's in some ways. Fishman uses recent historiography to delve deeply into a comparison of doctrines expressed in each of Acosta's works and those in *Kol Sakhal*, and she treats theological positions as well as historic relationships in some detail. Much may be learned from this volume about early modern Jewish skepticism in view of a well supported understanding of both the Sephardi and Italian contexts, which goes far beyond Sonne.

ALTMANN's article does not deal for the most part with Acosta himself, but it supplies critical background for understanding the Acosta affair in the context of Amsterdam Jewry and the Western Sephardi diaspora. Altmann deals with the related rabbinic treatises on immortality of the soul, explaining among other things why this topic raised the hackles of former *conversos* in Amsterdam, Hamburg, and Venice so much. Whether or not any individual treatise was directed at Acosta himself, it is clear that the Acosta affair set the agenda for much of the ongoing debate about the soul, in which Amsterdam Sephardi manuscript collections are so rich.

SASSOON's short article is an attempt to define Acosta's theological views and to relate them to present-day theological controversies. The author's desire to welcome Acosta back into the Jewish fold is reminiscent of the annulment of Spinoza's excommunication by some 20th-century Zionists who saw him as an ideological ally. Sassoon's argument is undermined by the more radical position of Acosta in his autobiography.

Born in Galicia, Poland, Shmuel Yosef Agnon became the first Hebrew-language author to win the Nobel Prize for literature in 1966. His writings reveal rabbinic, hasidic, and modernist influences, while his style—a lyrical mixture of irony and dreamlike fantasy—invites a myriad of interpretations, including some comparisons with his contemporary, Franz Kafka. A number of critical studies of Agnon are available in English.

BAND's volume is one of the earliest English-language texts to provide a resume of Agnon's works and a review of the available critical studies. Published during Agnon's lifetime, and therefore an incomplete record of the author's career, this book nevertheless offers a vast, detailed, and well-researched survey of Agnon's literary devices and achievements. Noting such important facts as Agnon's meticulous editing of his own works and his quest for literary perfection, Band creates a multifaceted portrait of the writer's productive life. This book makes frequent references to Agnon's works and is best suited for readers with some previous knowledge of his writings.

HOCHMAN provides a good, basic overview of Agnon's work and worldview that includes pertinent insights about Agnon's roots. Hochman discusses, for example, the importance of the shtetl, which was in a state of decline by the time Agnon reached adulthood in prewar Europe but remained an institution that haunted Jewish thought and behavior. In such works as *The Bridal Canopy* (arguably his most famous novel), Agnon alludes to the shtetl to express an ambivalence toward the past, while invoking an atmospheric tone "permeated by a consciousness of how precarious tradition itself is, as well as how tenacious." Hochman also shows that the characters in Agnon's works are usually passive and alienated, drifting through life in search of meaning and identity. On the one hand, these characters cling to the safe but stagnant world of their ancestors; on the other hand, they feel the powerful pull of contemporary society, which, although dynamic, is morally and spiritually empty. Paradoxically, the characters' neurotic energy, generated as they seek a purpose in life, illuminates their inner spiritual world.

FISCH has written a helpful critical overview and introduction to Agnon. Like Hochman, Fisch stresses both the Eastern European social and cultural milieu that Agnon left behind and his ambivalent embrace of the State of Israel. Fisch does not trace the chronological development of Agnon's works, focusing instead on certain themes and stylistic modes; elaborating on common qualities found in Agnon's plots; and analyzing the threads that unify his work. Despite the lack of a full chronology, Fisch does explain how Agnon's biography and literary style converge.

SHAKED mixes biography and criticism while investigating the effects of Agnon's personal life on his literary production. The critic discusses how Agnon departs from themes and values familiar to East European culture, even as he simultaneously uses sacred Judaic references in his writings. Shaked also demonstrates that Agnon's complex literary persona, particularly as expressed through his "narcissistic stories" of the 1930s, reflects both the importance that the novelist attaches to Jewish history and his dual allegiance to the Zionist and secularist movements of the early 20th century.

ABERBACH explores the "salient psychological themes" of Agnon's works in a critical (but not historical) study. Drawing heavily on the work of Freud and other preeminent psychoanalysts, Aberbach argues that the hopeless immaturity of Agnon's characters results from oedipal conflict. Similarly, Aberbach contends that Agnon frequently uses gender-role reversals ("masculinized women" and latently homosexual men) and love triangles to depict a world replete with guilt, loneliness, and inadequacy, a world in which "the soul is missing." In fact, Aberbach identifies schizoid elements in Agnon himself, asserting that the author evinces a "false face, detachment from people, childishness, egocentricity, and a sense of inferiority." The dreamlike quality of Agnon's works, Aberbach concludes, points to a preoccupation with inner reality.

HOFFMAN goes one step further than Aberbach, for her study integrates psychoanalytic concerns from earlier intellectuals such as Jung and Freud with the more contemporary emphases of deconstruction and gender studies. This highly

dense work places Agnon within the context of the 20th century, rather than discussing his intellectual debts to traditional literature, as Hoffman expounds on Agnon's use of language as a tool of modernist sensibilities. Hoffman offers refreshingly contemporary insights into Agnon's literary transformations, themes, and sources, and she shows how Agnon moves from his Eastern European origins to the broader canvas of Israeli life and culture by adapting his use of the Hebrew language. Hoffman further argues that the masculine/feminine imagery in Agnon's literature reflects patriarchal order. This book is not for the beginner; it demands knowledge of Hebrew language, literature, and culture, as well as a background in psychological and literary theories.

PATTERSON and ABRAMSON have edited an eclectic compilation of essays, which were originally presented at Mount Holyoke College in honor of the centenary of Agnon's birth. This book succeeds on many levels: it provides an introduction for the novice reader and deeper analyses for those already familiar with Agnon's style and messages. Aberbach analyzes the homosexual motif in Agnon's work, while Hoffman discusses the symbolism of the "Mad Dog" in Agnon's novel *Temol Shilshom* (*Only Yesterday*). Contributions from Israeli critics as important as the novelist Aharon Appelfeld help make this book unique, as they offer perspectives rarely available to the English reader. Appelfeld movingly describes his friendship with Agnon, who had an immense influence on the author and his contemporaries: "He showed us that Jewishness is not an anachronism. It is possible to write about Jews in small towns and be a universalist. Jewishness is not an artistic obstacle—it is a richness to be sought."

KATZ draws on discarded and overlooked items from Agnon's archives (in search, he says, of the "ur-text," or original text) to argue that all of Agnon's published works convey related themes and similar characters. Each text illuminates the others, ultimately revealing something about Agnon himself, who deliberately blurs distinctions between his private and literary personas. His fiction serves to solidify his literary identity, enhancing his mythic stature among his reading public, particularly in Israel, where he is viewed as a "national treasure."

Considering Agnon's legacy, it is questionable whether the reputation of such a "national treasure" needs embellishment. Over the years, Jewish literature in Israel and the diaspora has flourished, but later generations of Jewish and Israeli writers, no matter how successful or innovative, must continue to acknowledge Agnon as their movement's most prolific and creative pioneer.

Sarason, Richard S., *A History of the Mishnaic Law of Agriculture: Section Three, A Study of Tractate Demai* (Studies in Judaism in Late Antiquity, vol. 27), Leiden: Brill, 1979

The first 11 tractates of the Mishnah, known as Seder Zeraim, provide the primary source for agricultural law within Judaism. These tractates discuss the proper modes of producing, processing, distributing (to priests, Levites, and the poor), and consuming the produce of the Holy Land. Zeraim exists in Mishnah, Tosefta, and the Jerusalem Talmud; the Babylonian Talmud provides gemara only for the first tractate (Berakhot), which deals with blessings. This lack of Babylonian gemara is perhaps not surprising, as the laws pertinent specifically to the Holy Land, not to agriculture as such.

In the late 1970s and early 1980s, Jacob Neusner at Brown University directed a number of graduate students in a systematic study of Mishnah Zeraim. Their common purpose was to understand what the law meant to the framers of Mishnah. That is, they were studying the social, political, and theological roots of rabbinic Judaism. A number of the dissertations produced in that effort have appeared in the Brown Judaic Studies series. While Neusner's views on the fundamental themes of Mishnah may be controversial, this collection of studies remains the most thorough treatment in English of agricultural law in Judaism.

EVERY-PECK (1985) summarizes the work of his colleagues, particularly focusing on the history and theology of the development of the Mishnaic text. Five themes, he says, are addressed in Zeraim: production of crops under conditions of holiness; conditions under which produce becomes subject to sanctification; designation of produce to be an agricultural offering; care and handling of holy produce; and eating food under conditions of holiness. The fundamental worldview, based on Scripture, is that God owns the land and

has sanctified it; it, and its produce, are to be used accordingly. The major portion of the book classifies, tractate by tractate, the pericopes according to their "school" of origin: the "houses" (pre-70 C.E.), Yavneh (70 to 140 C.E.), or Usha (140 to 170 C.E.). This analysis reveals a shift from Yavnean concern with definitions of actions according to God's will to Ushan emphasis on human perceptions and intentions in determination of what is or is not permissible in sanctifying the land. In this way, Mishnah asserts that recent history (destruction of the Temple and the failure of Bar Kochba's revolt) notwithstanding, God's relationship to the land and to the people still holds. The people have the power to sanctify life and the land.

Common to all these studies in the Brown series is a form-critical approach to translation and exegesis, which stands in contrast to theologically based commentaries in traditional rabbinic sources. The authors' translations attempt to preserve formal traits of rhetoric. Interpretation is based on literary analysis, recognizing formal structures such as list, repetition, contrast, and dispute. Consideration of the arrangement of pericopes into larger units helps to discern the meaning of the whole tractate. Seven of the tractates in Zeraim deal with agricultural produce as related to Temple rites or tithing. JAFFEE treats the tractate on tithing (the first tithe, for the Levites), HAAS the tractate on the second tithe and its transportation to Jerusalem, and SARASON the tractate on doubtfully tithed produce. AVERY-PECK (1981) deals with the priests' portion of the harvest.

Three tractates address agricultural issues (that is, production) more directly. MANDELBAUM analyzes tractate Kilayim, dealing with permitted and prohibited mixtures of plants, animals, and fibers. The Mishnah supplements the scriptural sources by establishing criteria for distinguishing classes, defining what constitutes commingling, and determining how to keep categories distinct, all apparently with the purpose of maintaining an original orderly state created by God. BROOKS analyzes tractate Peah, which deals primarily with the harvest. The poor are entitled to gifts because they are without land yet under God's protection (much as the priests are). The offerings for the poor are treated in their order of separation during the harvest: the unharvested rear corner of the field; gleanings, forgotten sheaves, and separated grapes; defective clusters; and the poor tithe.

The sabbatical year (and the jubilee, the sabbatical of sabbaticals) have received more attention than the other laws of agriculture. While the call for fallow might have some ecological function, the sabbatical and jubilee had primarily socioreligious purposes. NEWMAN analyzes tractate Shebiit, which ordains a sabbatical for the land every seven years, analogous to the rest on the seventh day of creation. The laws of permitted and forbidden labor (beginning in the sixth year) and produce, and the requirement for remission of debts, are treated here. The reliance on scripture and the emphasis on the community's role in determining what constitutes sanctification together provided "a powerful statement that the holy life of Israel is eternal, that it remains essentially unaltered by the forces of history."

In contrast to the form-critical approach, which focuses on the historic development of a religious system, GRUNFELD writes strictly within a halakhic framework, presenting the current state of decided law. His main emphasis is on *shemittah* (the sabbatical year), the interpretation and application of its laws in modern times, instructions for observance within Israel, and implications for observant Jews elsewhere with regard to the produce of Israel. Like Newman and his colleagues, Grunfeld sees the purpose of the sabbatical as demonstrating the sanctity of the land, its produce, and people; it is an affirmation that God owns the land and cares for His people. Grunfeld sees the *shemittah* laws as part of the concerns of kashrut more generally; in fact, his treatment of these laws is also published under the title *Dietary Laws Regarding Plants and Vegetables, with Particular Reference to the Produce of the Holy Land*, as volume two of his compendium, *The Jewish Dietary Laws*.

FAGER addresses some of the same basic questions of Newman and Avery-Peck—how and why the jubilee exists—through the sociology of knowledge. He considers three social science models—structural functionalist, conflict, and symbolic—to consider the objective, expressive, and documentary meanings of the jubilee. He, too, concludes that the jubilee reinforced divine will, what ought to be in contrast to what is, with respect to relationships within society.

An *agunah* (plural, *agunot*) is a woman who cannot remarry because her husband is unable or unwilling to give her a *get* (Jewish divorce). The term *agunah* actually means anchored or tied down and is first found in verb form in the biblical story of Ruth (1:13). The original talmudic use of the word was limited to cases in which the man had disappeared and literally could not act as a legal instrument in the Jewish divorce proceedings. Recently, popular usage has expanded the term to apply to all cases of women who are unable to remarry because their husbands will not acquiesce and give the *get*. Because the rabbinic court cannot compel the husband to authorize the writing of the *get*, and only a man can initiate the proceedings, problems arise most frequently for women, although the term *agun* can be applied to men.

BIALE's book on Jewish law introduces the topic of divorce and the *agunah* in two separate chapters. The author clearly presents the dominant classical texts, explicating the focal issues and describing the problem. She traces the historical development of the law beginning with the early rabbinic attempt to decrease the vulnerability of the women left in this uncertain state. The complex conditions of these situations have created a vast literature of rabbinic precedent and case law, which is difficult to negotiate. Following Biale through her explication of intricate legal matters associated with *agunah*, the reader can acquire a significant appreciation of Jewish law, its history, and its intersection with daily life.

BULKA has written an easy-to-read book that draws from both his rabbinic knowledge and his psychological training to clarify Jewish procedures and grounds for divorce and to delineate the rights and responsibilities of the parties involved. A practical guide to divorce, this book attempts to preserve marriage as well as prevent bitter disruptions and acrimonious litigation. The solutions offered emphasize ethical and emotional concerns, and the author does not analyze the history or content of Jewish law.

The *JEWISH LAW ANNUAL* devotes a special issue to a wife's right to divorce. This scholarly volume includes a series of historical articles by scholars in the various fields of ancient and medieval history discussing divorce in different cultures. Most of the authors do not approach the contemporary scene or present practical solutions. Instead, they delve into past examples of the law and known cognate cases and prototypes. A number of articles by scholars such as J. David Bleich, David Novak, and M. Chigier, however, do face current problems with visions of halakhic and legal solutions informed by historical and legal precedents. The conclusions of these authors are not necessarily compatible. The articles are dense, but the effort required to assimilate their contents is hand-

somely repaid as they are filled with information that is otherwise very difficult to access.

Irwin HAUT, a lawyer and rabbi, has written an estimable book proposing a solution to the problem of the *agunah*. In a brief and reliable manner, Haut describes the Jewish law and presents the seriousness of the problem. The book includes a chapter on the search for equality in rabbinic responsa, a subject that is rarely treated in this context. Demonstrating his facility with comparative law, the author evaluates current civil and religious remedies and suggests a number of ways to resolve outstanding problems. Supported by his scholarship and experience in this area, Haut advocates that halakhic considerations incorporate a moral stance, and he optimistically looks forward to an enduring resolution.

RISKIN looks back into history to amplify the rights of Jewish women in divorce proceedings. He observes that early talmudic sources entertained the possibility that a woman might find her husband repulsive and seek a divorce, and, contradicting centuries of rabbinic responsa and many of his contemporaries, he argues that the geonic judgment allowing coercion of the husband to grant a divorce can still be applied in comparable modern cases. The book includes numerous relevant texts, translations, and a useful bibliography, all of which make the volume invaluable as a reference work.

BREITOWITZ has written an erudite and demanding book that compares the various secular and Jewish laws of divorce in the United States and focuses on procedures in Jewish contract law related to the *agunah*. The book is abundantly researched and provides hundreds of dependable footnotes. Breitowitz discusses New York *get* laws and explores concerns that arise in the U.S. context from the constitutional dictate prohibiting state interference in religious matters. As a resource the book is incomparable, filled with detail and analysis. Breitowitz's scholarship is apparent and should stand the test of time.

The only published description of the Canadian Jewish divorce law is found in SYRTASH's book on Canadian family law. Syrtash is a lawyer who was instrumental in changing the provincial and federal divorce acts to impart some protection to women bound by religious as well as secular laws. The section of the book dealing with Jewish divorce focuses on Ontario legislation and introduces the structure, format, and procedures of the federal law.

GREENBERG's chapter on Jewish attitudes toward divorce raises issues of ethics and equality. Beginning with a concise review of the topic, including a survey of the key talmudic text, the article assesses the positions of different denominations with regards to divorce. Greenberg casts her discriminating gaze at various solutions to the problem of *agunah*, and she seeks to acknowledge the importance of tradition without becoming an apologist for divorce laws that injure women. She raises the possibility of an amendment to the law that would enable a woman to "transfer a *get*," and she calls for an extension of the rabbinic law "limiting the husband's and expanding the wife's rights." Greenberg's arguments represent the views of many women whose devotion to halakhic Judaism is sorely challenged by the present process for divorce.

Rivka HAUT is an Orthodox activist whose essay reflects her years of experience working on behalf of *agunot*. Her piece delineates issues concerning rabbinic accountability and describes some important efforts to help *agunot*.

ARONOFF and HAUT describes many of the authors' experiences working with *agunot*. The book provides case studies presenting details about the abuses and other traumas suffered by *agunot* that have seldom been made available to a general readership.

GLOBE's short pamphlet also presents individual cases that illustrate the circumstances of *agunot*. The document focuses on cases in Israel and repudiates any contention that Israel is taking care of its *agunot*.

PORTER is a useful sourcebook and a collection of significant articles from all relevant sectors, including halakhic, secular, fictional, and journalistic sources from many parts of the world. The anthology contains selections from many of the authors listed above, and it recognizes that there are considerable areas of disagreement. It has a glossary, a useful bibliography, and a list of sources for help. Some of the essays are overpowering, but that is the nature of the topic.

Ahad Ha'am ("One of the People") was the pen name of the Russian Zionist Asher Ginzberg. He was the leader of cultural Zionism, as opposed to the political Zionism of Theodor Herzl. Ahad Ha'am viewed the mission of Zionism as the regeneration of the Jewish spirit in its restored homeland. He distinguished himself as an editor, an essayist, and one of the outstanding masters of Hebrew style.

NOVECK offers a useful and readable introductory presentation of the life and thought of Ahad Ha'am.

SIMON is an outstanding authority on Ahad Ha'am, and prior to writing this full-scale biography, he was the coauthor of a Hebrew study of the thinker as well as the translator into English of three volumes of his essays and letters. Simon's work is the most reliable interpretation of Ahad Ha'am's thought in English. Simon was also a disciple of the master since his student days at the University of Oxford and a personal friend from 1908 onward. The reader will have to determine for himself whether this friendship and admiration had a significant influence on the resulting portrait. At any rate, the picture that emerges from Simon's biography is that of a principled and austere keeper of the Zionist conscience whose fastidious vision of a morally regenerated Jewish people rose above the compromises and tumult of day-to-day politics.

ZIPPERSTEIN's portrait of Ahad Ha'am is diametrically opposed to that of Simon. Ahad Ha'am, according to Zipperstein, was politically ambitious, cunning, and duplicitous. He pretended to be a humble man, a mere journalist leaving policy decisions and leadership to others more worthy than himself. But his followers hero-worshiped him, and their adulation turned him into a secular, agnostic hasidic rabbi. Even his pen name Ahad Ha'am, "one of the people," is interpreted by Zipperstein as meaning one who is unique or special among the people, a snobbish leader of an intellectual elite. Thus what other scholars universally consider a modest pseudonym, Zipperstein views as a bid for leadership and primacy.

KORNBERG's collection includes 13 essays of generally high caliber in addition to the editor's introduction. These essays are divided into four groups, treating, respectively, Ahad Ha'am's role in the revival of Hebrew and as a Hebrew stylist; his political thought and activity; his controversies; and his influence and disciples. The first essay, by Alan Mintz, examines Ahad Ha'am's success as an essayist. According to Mintz, Ahad Ha'am's philosophical essays generally have a three-part structure. The thesis of an Ahad Ha'am essay opens with a striking challenge to accepted truths about human nature and history that is built around the tension between two concepts (priest and prophet, sacred and profane, imitation and assimilation, positive and negative). In the body of the essay these terms are elaborated by applying them either to various historic periods or across different realms of human activity. The essay concludes with the application of what has been described to Jewish history and to the contemporary Jewish situation. Mintz suggests that the structure of the essays is not only influenced by European models but also by the classical Jewish sermon. This is to say that Ahad Ha'am's model may have been homiletic midrash, with its preamble, or proem, which begins with a verse from the Hagiographa that, at first blush, is not at all related to the day's scriptural reading. As the preacher proceeds, however, it becomes quite obvious that the thought of the main text is clearly suggested, if not explicitly expressed. The obscure proem may have served as a device to stimulate greater attentiveness on the part of the congregation. Similarly, Ahad Ha'am would dazzle his readers with his acquaintance with the latest thinking in the sciences and social sciences and so establish his authority and gain assent to his viewpoint.

ROTH (1960a, 1960b) was the Ahad Ha'am Professor of Philosophy at the Hebrew University in Jerusalem for more

than 25 years. His evaluation of Ahad Ha'am is significant, and since his two critical discussions supplement each other, they may conveniently be considered together. Roth attempts to answer the question: What is living and what is dead in Ahad Ha'am? Ahad Ha'am, he concludes, was not a philosopher and had no philosophy of his own; he was, rather, a philosophically minded essayist and a man of singular moral courage. Thus, Roth notes, he wrote a letter in his old age to the leading Jewish newspaper in Palestine to express his horror and shame at the killing of an innocent Arab boy by Jewish youths in retaliation for Arab attacks on Jews. Survival, he held, was not the be-all and end-all of building a Jewish homeland. There were prices that were too high to pay; it made no sense to try building a utopian state if in doing so Jews sacrificed the ethical teachings that had always inspired them. There was no pressing need for another small, corrupt, and strife-torn Levantine country just to excel in the export of citrus fruit. "If this be the Messiah," Ahad Ha'am exclaimed in talmudic idiom, "let him come, but let me not see him!" Commenting on Ahad Ha'am's ideas and his theory of Judaism, Roth finds value in his call for a world Jewish cultural center in Zion, the revival of Jewish values, and the concept of creating the "Jewish moral superman" who stands in apposition to the "secular Aryan superman," who is sensuous, power-laden, and capable of great demonic force. The "moral superman" of Judaism is to be the exemplar of social justice, for Ahad Ha'am identified the ethics of Judaism with the Hebrew Bible's demand for absolute justice, in contrast with the ethics of Christianity, understood by him as the ethics of love. In Roth's view, Ahad Ha'am's greatness lay in his attempt to recall Jewry to its ancient moral ideals, which he identified with the morality of the prophets.

While Roth shows some concern about Ahad Ha'am's formulations, his main reservation is not with the position itself but with the coherence it gives to Ahad Ha'am's own presuppositions. He depicts Ahad Ha'am as greatly influenced by the evolutionism of Herbert Spencer and the Spencerian French psychologist Frederic Paulhan, so that he views Judaism not as an eternal metaphysical essence but as a living growth rooted in the psychological organism, which is subject to change. There is thus a "national creative power" in the Jewish people that manifests itself in the Jewish "spirit," which in the past expressed itself in a primarily religious culture. But what is not clear is why, on Ahad Ha'am's evolutionary principles, Jews should continue to be bound by this view. The "spirit" may well evolve or the "national creative power" create something unfamiliar.

Twenty-four centuries ago Aristophanes, surveying the flux of events, remarked, "Whirl is king." But for Ahad Ha'am "Whirl" is emphatically not king. The keystone of his thinking is the absolute character of the moral law and the absolute character of the Jewish commitment to it. But according to the evolutionism of Spencer that Ahad Ha'am avowed, there cannot be such a thing as an absolute. So Roth exhibits Ahad Ha'am impaled on the horns of a dilemma: if his general theory is true, we have to abandon his moral outlook; if his moral outlook is true, we have to abandon his general theory.

Akiba ben Joseph was an eminent Palestinian rabbinic scholar, Torah teacher, and founder of a school in Bnei Brak. When the Roman government forbade the teaching of the Torah, Akiba publicly ignored the prohibition and died a martyr's death.

FINKELSTEIN's work is a learned biography that is also a good read and in places is more gripping than most historical novels. Finkelstein offers a striking portrait of Akiba and his times, his religious philosophy, his hermeneutical system, his contribution to the development of Jewish law, and his efforts on behalf of the survival and perpetuation of Judaism after the destruction of the Temple by the Romans. With sensitivity he traces Akiba's parentage and humble beginnings, his personal character and diligence, his romantic marriage, his relations with his colleagues and Bar Kokhba, whom he proclaimed as the Messiah, and his final martyrdom.

Finkelstein's account is pieced together from traditions, stray statements, maxims, and legal and homiletic discussions scattered throughout the vast talmudic-rabbinic literature. The thread that holds this scattered material together is the author's socioeconomic interpretation of Jewish history during the Second Commonwealth and the Talmudic period. According to Finkelstein's debatable theory, from the time of the Maccabees onward, there was a double social struggle in Judaism: that between the organized patricians, or Sadducees, and the scholars, or Pharisees; and that within the Pharisaic party itself, between the faction drawn from the patricians and provincial elite and those who came from a plebeian background. Armed with these quasi-Marxist assumptions and tools, Finkelstein interprets the life and activities of Akiba, whom he identifies as a champion of plebeian views, defending the economically and socially oppressed.

The sociological approach to Jewish history championed by Finkelstein was criticized by Gedalia Alon in a lengthy review of *Akiba* in a Hebrew journal. Alon did not dispute that an individual's economic background is an important influence on his point of view. What he did question was Finkelstein's exclusive reliance on this criterion to the neglect of all other

factors. Jewish sages, like many others, he urged, frequently disagreed even when no economic issue was involved. In addition, the evidence, Allon maintained, is far more ambiguous and indecisive than Finkelstein represented it to be.

At times, Finkelstein accepts conjectures of other scholars as if they were proven and demonstrated beyond the shadow of a doubt. In a seminal lecture at the Hebrew University in 1929, Louis Ginzberg had suggested as a tentative hypothesis that for more than 150 years, up to the time of Hillel the Elder (an older contemporary of Jesus), leadership among the Pharisees was bipartisan, an aristocrat being president and a plebeian being head of the court, or vice versa. Finkelstein not only accepts this thesis as proven, but extends the principle of bipartisan leadership to a much longer duration, starting with Ezra and Nehemiah and ending with the compilation of the Mishnah at the beginning of the third century. Far too little is known about conditions during the Second Commonwealth to ascertain whether, for instance, Hillel was a typical plebeian and Shammai, who earned his livelihood as a carpenter, was a representative patrician. Despite these reservations, it can be said that Finkelstein has succeeded to a very large degree in sketching a fine portrait of a true religious genius who is described in the Talmud as "one of the fathers of the world."

NADICH relates the legends told by and about Akiba and his colleagues in classic rabbinic texts. The stories deal with the practical wisdom of the rabbis, the values they cherished, the standards of right conduct they advocated, and the sacrifices they made for the survival of Judaism. The volume is enhanced by a bibliography, a list of sources, and an index.

PRIMUS's work is a revision of a doctoral dissertation written at Brown University under the guidance of Jacob Neusner. Against the distinguished textual critic J.N. Epstein, who maintains that Akiba organized a collection of traditions that became the prototype of the Mishnah, Primus argues that neither the form nor the substance of the surviving material permits us to come to such a conclusion. Akiba's contribution to early rabbinic Judaism should be judged by the unfolding of the logic of legal concerns rather than by reference to the development of particular sorts of literature.

ALEKSANDROV argues that there is no indication in the sources that Akiba was the ideologue and instigator of the Bar Kokhba rebellion. Neither is there any indication in the sources that his numerous and wide travels were made to foment sedition and prepare for the rebellion as is contended by some modern Israeli scholars (Gedalya Allon, Samuel Yevin).

GUTTMANN contends that Akiba saved the Torah from oblivion in two respects: he was instrumental in organizing the oral tradition by subject matter, and he evaluated the vast material by arranging the halakhot (laws) in special compilations according to their importance in Jewish life as it evolved after the destruction of the Temple.

GOLDIN's thesis is that the ideal love relationship between husband and wife illuminates the intimate connection between Israel and God. Akiba interpreted the Song of Songs allegorically as Israel's proclamation to the Gentiles: I am His and He is mine.

SANDERS discusses Ephraim Urbach's thesis that the religious persecutions under the Roman emperor Hadrian

prompted a new understanding of suffering, since this suffering was inflicted not for sins but for keeping the commandments. Akiba, therefore, taught that "sufferings are beloved" because they bring cleansing and atonement for sin, and he was able to see his own martyrdom as an expression of his love for God.

A typical North African community, Algerian Jews were nonetheless unique in their almost complete French-style Westernization following the French occupation of 1830. Most of the community emigrated to France following Algeria's independence in 1962. Most of the relatively little research on Algerian Jews is in French and Hebrew.

The involvement of indigenous Algerian Jews in support of the American landing in Algiers in November 1942 is examined by AMIPAZ-SILBER. She describes the condition of Algerian Jews on the eve of World War II and how their life changed under Vichy rule with its anti-Jewish legislation, including the abrogation of their French citizenship. In this well-researched study, Amipaz-Silber details the establishment of the clandestine Jewish resistance movement and its contacts with U.S. representatives and examines the slow recovery of the political rights of the community following liberation.

Memories of Jewish-Muslim relations at home are examined by BAHLOUL on the individual case-study level: how Jewish and Muslim inhabitants of the same house in Sétif, eastern Algeria, remember in the 1990s their history as one of a multi-ethnic household, focusing mainly on the 1940s and 1950s. Bahloul, an ethnographer, is interested in collecting information about the lives of the various families and in the semantics and ethnography of memory. She examines the home and its memory as central to the construction of individual and group identity. Based mostly on interviews, the study provides a unique opportunity to examine close Jewish-Muslim relations and perceptions.

BRIGGS and GUÈDE conducted anthropological fieldwork among the Jews of the Algerian desert town of Gharadaia between 1947 and 1962, when the Jews fled upon the establishment of Algerian independence. The study describes the structure of the community, daily life, life cycles as relating to men and to women, education, religious practices, pilgrimage, and Jewish-Muslim relations. This is a unique study of a Jewish desert community that was quite different from those of the Frenchified coastal urban Algerian Jews. The absence of section titles and the lack of an index makes the location of specific topics difficult.

In his autobiography, CHOURAQUI provides his personal view of Jewish life in Algeria. Born in 1917 in Aïn Témouchent, Chouraqui describes his childhood and education against the background of his family's history and the condition of the Jewish community in Algeria, Jewish-Muslim relations, and Jewish-French relations. A lawyer and later a deputy mayor of Jerusalem, his memoirs reflect the life experience of an intellectual and political activist.

In this study of Jewish life in Algiers in the early 15th century, EPSTEIN uses more than 800 responsa by the Majorca-born Rabbi Simeon ben Zemah Duran, who fled to Algiers following the Iberian massacres of 1391 and served as chief rabbi there from 1408. Epstein examines the life of the Algerian community as reflected in Duran's responsa. Among the subjects dealt with are the political and social conditions of the Jews, taxation, cultural and religious issues, communal organization and institutions, education, and matrimony. Data on Duran and the rabbis who corresponded with him are also provided.

Based on interviews conducted in the mid-1970s with Algerian Jews from the small town of Batna who settled in Aix-en-Provence, France, following Algeria's independence, FRIEDMAN examines Jewish life in Batna and the life of these immigrants in France. Among the topics discussed are the influence of France on life in Algeria in general and the

influence of French Jews on Algerian Jews in particular, the rise of antisemitism in colonial Algeria, the relations of the Jews of Batna with their Muslim and Christian neighbors, communal organization, family life, and the condition of the community during World War II and the Algerian War of Independence. Data on occupations and marriages are provided, including breakdown by gender and religion (Jewish and Christian).

The personality and contributions of Rabbi Isaac ben Sheshet Perfet are the subject of HERSHMAN's book. The Barcelona-born Perfet escaped in 1391 to Algiers, where he served as chief rabbi until his death in 1408. Perfet's responsa are utilized to examine Jewish life in both Spain and Algeria. Among the issues discussed relating to Algiers are polygamy, marriage, synagogues, religious services, and communal organization. While only part of the book deals with Algiers, the book is an important source on this little-researched period.

ROSENSTOCK (1952) discusses Jewish involvement in Algerian economic life in the 18th and early 19th centuries. He focuses on two Livornese Jewish families, Bacri and Busnach, who benefited from special economic and political privileges thanks to their foreign origin. Rosenstock examines their role in commerce and the services they provided to the local authorities, including their involvement in goods obtained through piracy. The declining position of these families following French occupation in 1830 is also charted.

ROSENSTOCK (1956a) explores the economic and social conditions prior to and following the French occupation of Algeria in 1830. Among the topics covered are communal organization, education, commerce, population, religious life, and the changes that took place during the transition from Ottoman to French rule.

ROSENSTOCK (1956b) examines the integration of Algerian Jewry in the Jewish consistorial system of France following the 1830 French occupation of Algeria. Rosenstock describes the efforts by French Jewry to organize the Algerian communities on a similar pattern to the French communities and to integrate them into the French system. He discusses French Jewry's efforts to carry on reforms, especially in education, among Algerian Jews. The activities of French Jewish public figures and organizations are reviewed, as are the reactions in Algeria regarding this involvement.

SZAJKOWSKI (1948) examines the development of antisemitism in Algeria in the late 19th century and the involvement of socialists and radicals in this process. Szajkowski explores the implications of the granting of French citizenship to Algerian Jews, as well as issues of class struggle and the Dreyfus Affair, on the growth of antisemitism among settlers in Algeria.

SZAJKOWSKI (1956) examines the process that led to the granting of French citizenship to most Algerian Jews in 1870. Based on French and Jewish sources, Szajkowski considers the reorganization of the Jewish communities in Algeria following the French occupation in 1830 as well as the political struggle in France and in Algeria that led to the changes in organization and status of Algerian Jews.

The idea of allegory, a continuous or extended metaphor, developed in classical Greek rhetoric and criticism. Classical theories influenced, directly, the Greek-speaking Jews of Alexandria and, indirectly, medieval Jewish scholars in both Islamic lands and Christian Europe. Jews used allegory in poetry, storytelling, preaching, and correspondence and applied it to the interpretation of classical Hebrew and Aramaic writings. The allegorical method of exegesis was extremely productive—and controversial—throughout the medieval and early modern period, and modern literary scholars have revived the ancient and medieval traditions in their own attempts to explain Bible and Midrash. The following studies focus on the history of allegorical exegesis.

WOLFSON's monumental two-volume study of Philo, the cornerstone of the author's history of religious philosophy, laid the foundation for the modern study of Philo, whose theology, as expounded by Wolfson, used allegorical exegesis to harmonize the ideas of philosophy with the text of the Bible. Following a detailed analysis of the allegorical method, the

bulk of Wolfson's study attempts to reconstruct the doctrines of this harmonized philosophy. Wolfson notably minimizes the influence of Homeric exegesis on Philo by emphasizing Philo's connection with a native Jewish midrash. Readers should consult the *Studia Philonica* (1972–1980) and *Studia Philonica Annual* (1989–) for critical evaluations of Wolfson and more recent bibliographies.

DAWSON places Philo squarely in the Hellenistic, rather than rabbinic, world by examining Philo's method of exegesis together with the pagan exegesis of Homer, the gnostic myth making of Valentinus, and the Christian exegesis of Clement of Alexandria. The author de-emphasizes formal literary analysis, philosophy, and apologetics while stressing the function of allegorical reading within a society or culture. He argues that allegory was a vital force in Hellenistic cultural criticism and revision and shows that although Philo, Valentinus, and Clement had very different ideas about Scripture and applied different methods of interpretation, they shared the same desire to reshape their communities through the reinterpretation of authoritative texts. Dawson also includes a full bibliography.

KUGEL extends the history of allegorical interpretation from ancient Alexandria to medieval and Renaissance Europe. In contrast to Wolfson, Kugel argues that Jewish and Christian interpreters made the Bible into their Homer and used the tools of classical criticism to demonstrate the Bible's literary merit and uncover its hidden wisdom. He emphasizes influence but also notes conflict and tension: for example, Christians tried to suppress classical literature, but they also cited it, and they used allegorical methods both to turn the Bible into philosophy and to interpret Virgil as Christian doctrine. Kugel closes with a brief examination of midrash that contrasts the traditional rabbinic exegesis with the Hellenistic traditions.

TALMAGE explains the methods and motives of allegorical interpretation in medieval Jewish philosophy and the Kabbalah. He discusses the apologetic motive for using allegories but emphasizes that the exegetes held more positive convictions as well. Philosophers and kabbalists truly believed that the Bible and rabbinic literature contained wisdom that was intentionally hidden to protect the multitudes from misunderstandings. Talmage also tries to flesh out the mentality of the culture in which allegory flourished, contrasting Eastern and Western societies, comparing the Jewish traditions with those of Christianity and Islam, and citing examples from art and architecture as well as literature. Talmage includes a bibliography.

HALKIN focuses on the allegorical interpretation of the Song of Songs. He briefly characterizes early interpretations—by rabbis and church fathers—before discussing the medieval commentary of Joseph ibn Aqin and the philosophical tradition of Song of Songs commentary. Ibn Aqin's *Revealing of the Secrets* explains the Song of Songs as a story about the soul's love for the active intellect and the soul's desire for union. *Revealing of the Secrets* was the first commentary to apply this particular allegory consistently, and Halkin gives examples that illustrate its content and method. He also compares this text to the later commentaries by Moses ibn Tibbon, Joseph ibn Kaspi, Immanuel of Rome, and Gersonides.

SCHOLEM represents the Kabbalah as a revolutionary yet paradoxically conservative transformation of religion in which

the mystic expresses new, often radical, ideas using the traditional symbols of authoritative texts. To illustrate this process, Scholem discusses the kabbalistic theory of the Torah—as names of God, an organic unity, and a source of infinite meaning (or, at least, four senses, 70 faces, 600,000 aspects)—and then discusses kabbalistic myth and the creation of ritual. He emphasizes the importance of symbol, rather than allegory, but he also discusses the use of allegorical interpretation in the Zohar and the place of allegory in *pardes*, the fourfold interpretation of Scripture endorsed by the Kabbalah. Scholem's work is a classic, but the more recent work of Moshe Idel (e.g., *Language, Torah and Hermeneutics in Abraham Abulafia*, 1989) and Elliot Wolfson (e.g., *Along the Path*, 1995) should be consulted as well.

SAPERSTEIN argues that aggadic, or narrative, exegesis of the rabbis posed a particular challenge for the medieval Jewish scholar. The gross anthropomorphisms and strange stories in aggadah made it the object of antirabbinic criticism and a source of embarrassment for rationalistic Jews. He traces the history of Jewish response to this challenge—denying the authority of the aggadah, censoring offensive texts, or reinterpreting the texts—and then focuses on the commentary of Isaac ben Jedaiah. Saperstein examines Isaac's method of interpretation, emphasizing the different meanings of the Hebrew word *mashal* (allegory, parable, analogy, or metonymy) and distinguishing that term from *hash'alah* (metaphor or extended meaning). The author relates Isaac's method of interpretation to his theory of rabbinic language and esotericism. Saperstein also sets the commentary in historical context, reconstructing Isaac's philosophical views and legal interpretations and extracting material relating to contemporary Jewish life in 13th-century southern France.

STERN uses the idea of *mashal*—as parable or allegory—to analyze Maimonides' commentaries on biblical commandments. He argues that Maimonides' distinction between external and internal meanings in biblical stories and poems also applies to Maimonides' interpretation of the commandments, and Stern tests this theory by examining the philosopher's explanation of the rationale behind sacrifices, circumcision, and other laws. Arguing against the theory of Leo Strauss, who identifies Maimonides' dichotomy as a distinction between the exoteric and the esoteric, Stern claims that Maimonides' concept relates to the distinction between the welfare of the community—both social/political and intellectual—and the perfection of the individual.

ROSENBERG carries allegorical exegesis into the present age. Indeed, his book is an apology for allegory and a plea for allegorical reading. Following the lead of Philo, Maimonides, and Leo Strauss, and drawing from the theories of semiotics and deconstruction, the author interprets the stories of the Garden of Eden, the life of Abraham, and the monarchy of David as (interrelated) political allegory. He argues against advocates of source criticism and form criticism, as he contends that there is a literary unity in these stories that shows the conscious effort of an editor or redactor to advance a plot and present a specific argument. Although Rosenberg criticizes the theories of higher criticism, he does not reject its findings completely. Instead, he incorporates insights from these theo-

rists into his own literary analysis, an approach that helps him to sustain the representation of allegory as a rich, allusive, and surprisingly complex species of discourse.

For many scholar-critics, the “master story” of Jewish-American literature is the long 20th-century march toward assimilation. A literary experience that began amid the squalid conditions of a tenement Lower East Side continued as the sons of immigrants made their way to New York's City College and then into the cultural mainstream. Among this group, writers such as Philip Rahv, Irving Howe, and Alfred Kazin are emblematic of what came to be known as the “New York Jewish intellectuals.”

Their counterparts among writers of fiction—notably, Delmore Schwartz, Saul Bellow, Bernard Malamud, and Philip Roth—helped to bring the rhythms of “Yinglish” to a wide public, and it is this *voice*, rather than their controversial assessments of Jewish life in America, that may yet become the New York Jewish intellectuals' greatest contribution to American literature.

When the immigrant world receded into dim memory, there were those—Irving Howe among them—who felt that a distinctly Jewish-American literature was no longer possible. Subsequent events have proved them wrong, and there is any number now of younger writers who are distinctly Jewish-American—some who explore their fractured identity as the sons or daughters of Holocaust survivors; some who have returned to the richness of Jewish history and thought; and some whose magical realism reinvents the American shtetl.

Granted, Jewish-American literature no longer seems as “hot” or as fashionable as it was during the decades between 1950 and 1980, but that dimension of literary politics is not,

finally, as interesting as the work currently being done by dozens of talented and original Jewish-American writers.

GUTTMANN surveys the concerns and stylistic techniques that have energized Jewish-American writers from Abraham Cahan (whose 1917 *The Rise of David Levinsky* combined socio-realist description with a cautionary tale about American acculturation) to more recent writers such as Saul Bellow, Bernard Malamud, and Philip Roth. One of the earliest scholarly-critical explorations of Jewish-American fiction, Guttman's categories (e.g., the movement from acculturation to assimilation) and his close readings of individual works remain influential.

SHECHNER sees Jewish-American literature as it reflects the movement away from radical politics and toward the promises of psychotherapy. Concentrating on Isaac Rosenfeld and Philip Roth, along with a handful of others, his purpose is not to present a comprehensive historical survey. Rather, he is interested in identifying the changing cultural milieu certain writers experienced as Marxism became yet another god that had failed. He also describes how a selected group of literary intellectuals tried, with varying degrees of success, to forge new themes, attitudes, and "voices" in a culture more prone to gestures of accommodation than to postures of alienation. Shechner describes his work as a "study of the Jewish intellectual's quest for a firm base of judgment and identity and his failure to maintain a steady relation to the world, immune from the shocks of the moment and the short-term fate of values and behavior under conditions of change and uncertainty."

Kremer and Furman both represent recent efforts to widen the concerns of Jewish-American literature from immigrant adjustment and the psychic battles waged under the banner of "alienation" to long-delayed ruminations about the Holocaust or the State of Israel. KREMER argues that the imagination can constitute an act of "witnessing" and that Jewish-American writers can make—indeed, have made—a significant contribution to Holocaust literature. She concentrates on writers such as Saul Bellow, Bernard Malamud, Edward Lewis Wallant, Leslie Epstein, and Cynthia Ozick. Kremer's important pioneering study has been expanded and updated by BERGER, who focuses on fiction by the American-born children of survivors such as Melvin Jules Bukiet, Julie Salamon, and Thane Rosenbaum.

FURMAN argues that "the Jewish-American writers' relatively new exploration of the fictional possibilities of Israel greatly contributes to the renaissance today in Jewish-American fiction as a whole," and to that end he devotes chapters that combine sociocultural history with close readings of Meyer Levin, Leon Uris, Saul Bellow, Philip Roth, Anne Roiphe, and Tova Reich. A groundbreaking and important study, it contrasts the concerns (and inevitable tensions) that preoccupied earlier writers with those that shaped Jewish-American views of Israel after the Six-Day War.

WIRTH-NESHER's anthology of criticism assembles the best that has been thought and said on the subject of what can or cannot be properly called Jewish literature. International in scope, there is, nonetheless, insufficient material devoted to Jewish-American literature by such distinguished

writer-critics as Saul Bellow, Cynthia Ozick, and John Hollander. Wirth-Nesher's goal is less to offer readers an authoritative account of a subject still very much embroiled in controversy than to invite them into the debate: "By placing such divergent concepts of Jewish literature between the covers of one book, I have aimed to undermine any one essentialist view of Jewish culture, while at the same time tracing the distinctive features of the act of self-definition in recent Jewish literary history."

Am ha'arets, or "people of the land," is one of those peculiar social categories that has very little discernable content in itself but is instead a designation for an "other" outside of a Jewish "in-group." The reference appears numerous times in the Bible, often as a term by which Israelites are distinguished from either the indigenous people or from other colonizing populations of a land, especially Canaan. It is also frequently employed by the biblical authors to distinguish the Israelite populace itself from its own civic, military, and religious rulers. In later antiquity, the term is used throughout rabbinic literature to refer, exclusively and disparagingly, to the multitude of Jews who did not share emerging rabbinism's practices and prescriptions. It is in this latter usage that the term is most significant. With the ascendance of rabbinism in the early Middle Ages, the expression has, for the most part, become merely an epithet meaning "ignorant" or "uncultured" in a Jewish context.

The literature in English on the *am ha'arets* (plural: *ammei ha'arets*) is largely confined to one book, a small handful of articles, and LEVINE. While Levine's focus is the rabbis themselves, he makes frequent reference to the treatment in rabbinic texts of the *ammei ha'arets*—those for whom the rabbis reserve their most ferocious and vitriolic attacks. Levine reviews many of these acerbic remarks, as well as the earliest

scholarly theories regarding the identity of the rabbis' intended targets. Unlike those who have identified the *ammei ha'arets* with specific sects or groups known from antiquity (identifications for which there exists no substantial evidence), Levine proposes that the rabbis are merely lashing out at the large segment of the Jewish population of Palestine that was uninterested, unsympathetic, and/or downright hostile to early rabbinic incursions into traditional Jewish communal institutions and practices. Over time, Levine suggests, there was a marked improvement in relations between the two sides, which is detectable in later strata of the rabbinic corpus. Levine's brief excursus serves as a useful encapsulation of the literature on the topic and alerts the reader to a few pertinent archaeological discoveries as well. His willingness to treat rabbinic accounts as, generally speaking, historically reliable and sufficient and his assumption that the rabbis were significant communal authorities in the earliest centuries of their movement does, however, set him at odds with much contemporary scholarship on this period.

COHEN's brief treatment of the topic represents a more critical and appropriately cautious approach than Levine's study. Cohen notes that while many of the traditions about the *ammei ha'arets* are attributed to Palestinian rabbis, the largest and most vicious body of such traditions is found exclusively in the Babylonian Talmud—a fact that raises serious doubt about these traditions' authenticity. In addition, Cohen observes that there is no evidence of mass outreach or educational initiatives on the part of the early rabbis, and a good deal of counter-evidence suggests that winning the mass of Jews over to their worldview and practices was not a goal of the small rabbinic coterie in Palestine in the early centuries of this era. Thus, in Cohen's view, insofar as *am ha'arets* refers to the great majority of Jews in antiquity, the general attitude of the earliest generations of rabbis toward them appears to be one of disdainful disinterest.

The only book-length study on the *ammei ha'arets* in English is OPPENHEIMER. While the book is extremely helpful as a thorough compendium of rabbinic references to the *ammei ha'arets*, it is by no means adequate as social history. After a brief review of prior scholarship and a general summary of the uses and history of the term *am ha'arets*, Oppenheimer turns to an extended discussion of tithes and ritual purity—the conceptual contexts within which the earliest rabbinic traditions about the *ammei ha'arets* appear. He then delineates a distinction between two kinds of *ammei ha'arets*: those who were not careful about performance of the commandments (*am ha'arets le-mitsvot*) and those who did not engage in rabbinic Torah study (*am ha'arets le-Torah*). Much of the remainder of the study is devoted to proposals regarding relations between the *ammei ha'arets* and the pre-rabbinic and rabbinic circles of sages. The book ends with a brief survey of “Galilean” versus “Judean” traditions and a consideration of the significance of the *am ha'arets* material with respect to Samaritanism and nascent Christianity. Absent from this rabbinically learned study is any awareness of the great variety and vitality that characterized non-rabbinic Judaism in these centuries or a recognition that the rabbis were the minority newcomers (sectarians?) to the Jewish landscape of the day. Hence, Oppenheimer (even more than Levine) confers upon

rabbinic dicta the status of historical truth and presumes throughout his analysis the legal and ethical normativity of all things rabbinic. This rather considerable shortcoming severely limits the usefulness of this study to that of an erudite compilation of primary material.

Finally, two older journal articles are worthy of mention. NICHOLSON's survey of the uses of the term *am ha'arets* in the Bible aptly concludes that the term's meaning changes so much from one biblical context to another that equating it with a fixed content is utterly inappropriate. ZEITLIN's far more dated piece is significant as an early scholarly attempt to consider rabbinic and non-rabbinic sources in dialog with each other. Today, Zeitlin's article serves merely as an interesting example of previous theories about the *ammei ha'arets*, virtually all of which have been summarily discredited by later critical inquiry.

The ancient Near East is not easily synthesized into a single cogent literary, historical, social, or economic study without either oversimplifying or creating unwieldy tomes. The subject is vast and requires the command of numerous languages and disciplines. The regions that make up the ancient Near East are equally vast, including Mesopotamia, Egypt, *Anatolia, Iran, and Canaan*, to which some scholars would add the Aegean. Consequently, few works are able to bring together the expertise required for an intelligent comprehensive survey. With the rare exceptions noted here, the reader will benefit most by consulting works that limit their focus of study to one or two of the major regions.

ALDRED surveys the culture of ancient Egypt for the uninitiated in a readable and interesting manner. Moving chronologically from predynastic Egypt to the arrival of Alexander, he places in historical context the lives of pharaohs and commoners, taking periodic glances at their beliefs, art and architecture, and agriculturally based lives. Rich in photographic images, the work serves as an excellent introduction to the fundamental aspects of Egyptian culture. One of the work's greatest assets is its opening chapter on the loss and recovery of pagan Egypt, which outlines the discoveries and advances that aided in the Western realization of the character of ancient Egypt. The work moves beyond providing a mere historical skeleton of ancient Egypt by including in its final chapter extended discussions of Egyptian social groups, such as officers, military units, scribes, artisans, and peasants. Aldred includes a select bibliography for further research.

BOTTÉRO's essays highlight the living legacy of Mesopotamian "ways of thinking, analyzing, and organizing the universe." Bottéro sees here the first glimpses of what would become "Western" philosophy and science. An important contribution of this work is its discussion of the field of Assyriology. Bottéro is also noteworthy for his detailed description of the invention of writing and the eventual decipherment of cuneiform script. The book's approach is thematic and aims throughout to bring us closer to our cultural progenitors. Topics discussed include the divinatory sciences, the institution of divine kingship, law, sexuality, the religious system, the mythology of death, and "intelligence and the technical function of power." This work is distinguished by its thorough treatment of the intellectual history of ancient Mesopotamia.

GORDON and RENDSBURG offer one of the few surveys of biblical Israel as seen through the lens of the larger Mediterranean world. The work covers the patriarchal period, the Amarna Age, the importance of Ugaritic texts for shedding light on the Hebrew Bible, the development of the tribal league, monarchic and divided Israel, Mesopotamian invasions, and the eventual restoration of Jerusalem under Persian rule. The authors pay special attention throughout to the literary aspects of the Near Eastern texts in question and how they elucidate various aspects of the Hebrew Bible and its writ-

ers. One of the most important contributions of this work is its inclusion of Homeric literature for purposes of comparison with biblical and Near Eastern, especially Ugaritic, writings. Full of original insights, this work is immensely readable.

HALLO and SIMPSON outline the "political and cultural development of pre-classical antiquity," by which they intend primarily Mesopotamia and Egypt. The work covers the history of ancient Mesopotamia from the dawn of civilization to the conquest of Babylonia by the Persians in the sixth century B.C.E. Their treatment of Egyptian history covers the period from the appearance of writing, around 3000 B.C.E., to the conquest by Alexander in 322 B.C.E. The authors place emphasis on the political history of the two superpowers of the ancient world, while considering also the culturally, socially, and economically influential forces that shaped the respective entities. The resources that inform this work are more textual than archaeological. The book provides copious dynastic lists, photographs, and maps. Throughout the work there are demonstrations to be found of the authors' belief in the "underlying unity of the 'Ancient Near East.'"

KRAMER's unique study of the people credited with the invention of writing and a host of other cultural achievements has done much to put the great Sumerian culture on the map. While focusing on the various aspects of Sumerian culture, Kramer pays special attention to how the Sumerians contributed to the progress of world civilization. Among other things, the work discusses schools, international affairs, historiography, law, justice, social reform, agriculture and horticulture, cosmology and cosmogony, ethics, medicine, literature, and kingship. Kramer takes pains to point out many biblical parallels, though many of them are somewhat strained. Photographs, sketches, and maps assist the reader, as do an abundance of translations. While the book is in need of an update, it remains a classic first introduction to the Sumerians.

KUHRT's work is magisterial and exhaustive, providing informative background essays on various aspects of the greater Near East as well as countless maps and diagrams. While primarily a historical and, hence, chronological outline of rulers and events, the volumes also provide rich archaeological documentation for the periods in question. Filled with original insights into the many historical problems, the treatment is evenhanded and extraordinarily, even incredibly, readable. Kuhrt covers the civilizations of Mesopotamia and Egypt especially well, providing an excellent historical context for understanding the rise of biblical Israel. Her placement of biblical Israel within the larger Levant is indicative of a mastery of the historical context and is especially useful since it removes the Israelites and the Hebrew Bible from an isolation that all too often marks scholarship on the subject. Kuhrt's work highlights the continuities and interactions between periods and peoples of the ancient Near East.

OPPENHEIM offers a masterful, though dense, treatment of ancient Mesopotamia. The author's pessimism concerning the ability to reconstruct accurately ancient Mesopotamian culture is evident in the title and in the author's famous essay "Why a 'Mesopotamian Religion' Should Not be Written." Paradoxically, however, the work contributes so much to our understanding on the subject that it has yet to be rivaled. Oppenheim surveys the social and economic fabric, scribal

activity and the various types of written sources, mathematics, astronomy, medicine, crafts, and the divinatory arts, as well as the differences between Babylonian and Assyrian cultures. He also offers an analysis of Mesopotamian psychology.

SASSON brings together the world's most prominent ancient Near East scholars for contributions on the subjects of their particular expertise. The encyclopedic format of the volumes allows readers ready access to up-to-date information on the most important aspects of ancient Near Eastern history and culture. Unique to these volumes is the extensive treatment of mid-Euphrates and Syrian sites such as Mari, Emar, Alalakh, and Ebla. The volumes include bibliographic references and indexes, and are divided into thematic units on the ancient Near East in Western thought, the environment, population, social institutions, history and culture, economy and trade, technology and artistic production, religion and science, language, writing and literature, and visual and performing arts.

The collection of essays edited by SHAFER touches upon the most fascinating aspects of ancient Egyptian religion, including in-depth analyses of Egyptian concepts of the divine, the gods, divine kingship, cosmogonies, and cosmology. It also delves more deeply than most treatments into such related subjects as concepts of order and misfortune, piety, decorum and morality, magic and divination, and experientiality. A host of well-known scholars are brought on board to tackle these issues, and the result is a readable exploration of the most salient aspects of Egyptian religion. While it is not meant to be exhaustive, the work serves as an excellent foray into the subject. Highly spiced with photographs, it also offers a useful bibliography.

SILVERMAN gathers 13 Egyptologists to explore the chief elements of ancient Egyptian culture. Space is devoted to all the major topics, including kingship, religion, pyramids and temples, the solar cult, gods and goddesses, beliefs and rituals, hieroglyphs, engineering, and astronomy. This collection of scholarly essays represents the latest thinking on these and other issues relating to ancient Egypt. Though useful and interesting as an introduction to ancient Egypt, the tome's hefty size makes it a cumbersome textbook.

SNELL's unparalleled work provides as exhaustive a history of the social and economic forces that influenced the lives of kings and commoners from Egypt to Anatolia as the non-technical reader could possibly desire. Unique to this work is Snell's effort to broaden the context of the ancient Near East by devoting discussion to comparisons with China, Etruria, India, and Greece. The book moves chronologically, pausing every five centuries or so to consider synchronic comparisons. The epilogue contains a useful review of previous social and economic studies of the ancient Near East, and the bibliography and footnotes are copious. Snell covers everything from trade and money to animal management and demography and focuses on the everyday life of the ancients. Bringing to bear a vast array of archaeological and textual evidence, he achieves a thoroughly intelligent restoration of the cultures of Western Asia.

The word "angel" is derived from *angelos*, the Greek term adopted to translate the Hebrew appellation *malakh* (messenger). As it originally appeared in Scripture, *malakh* could indicate any messenger whether human or heavenly, bearing good tidings or ill. Within a relatively short time, however, the term came to designate, more or less exclusively, the heavenly creatures acting in the service of (an increasingly transcendent) God.

A significant portion of the speculative lore surrounding angels is concerned with the origins and activities of the "fallen" angels—typically known as "demons." Derived (and freely adapted) from the Greek *daimon*, the classification of demon has variously been applied to destructive or malicious spirits (*mazzikin*); Babylonian sprites (*shedim*); the "evil inclination" (*yetzer hara*); and, of course, the fallen angels (commonly traced to the *Nephilim* of Genesis 6:4). Certain angelic figures, such as Satan and the Angel of Death, are viewed as ambiguously possessing both celestial and diabolical qualities.

Names, descriptions, and taxonomic designations for virtually innumerable angels and demons are readily found in a wide variety of scriptural, pseudepigraphic, rabbinic, and mystical texts. Accordingly, there exists an extensive array of tex-

tual viewpoints regarding the roles such creatures play in Jewish thought and related traditions. The ten texts selected here as representative of recent scholarship may be roughly grouped into four categories: general introductions (Isaacs, Langton, Davidson, van der Toorn); source materials with commentary (Odeberg, Newsom); comparative studies (Fossum, Gieschen); and systematic-exegetical studies (Schäfer, Olyan).

ISAACS is a useful beginning text for students and the general reader. The book's introduction boasts "sections on angels in the Bible, Talmud, Midrash, liturgy, Jewish philosophy, mysticism, and chasidic lore" as well as entries on "good and fallen angels, . . . the role of Satan, demons and evil spirits." This inventory, however, suggests much more than Isaacs is, in fact, able to provide in the space of this slim volume. The book is nevertheless an accessible (albeit considerably foreshortened) overview of Jewish perspectives on both angels and demons, containing "notable quotations and stories" that range from ancient tradition to present-day superstitions.

Researchers and students seeking a more specific, comprehensive resource regarding Jewish demonology will find that LANGTON's study remains one of the most informative introductions available. Inevitably, the 1949 text occasionally contains passages and perspectives that seem out-of-date or problematic. Readers may even contend with the book's leading premise—namely, that one can trace the evolution of a single, undifferentiated Jewish and Christian doctrine of demonology from ancient Semitic beliefs through the Hebrew Bible and Jewish apocryphal writings to the New Testament. Langton's evolutionary bias, however, provides an advantage of sorts to the text, which plainly recognizes the demonology of the New Testament as directly indicative of first-century Jewish beliefs and precedents. Moreover, the book provides fine, detailed expositions of the syncretic influences upon Jewish demonology while also giving extensive scriptural and rabbinical illustrations of the figures under consideration (Azazel, Lilith, Satan, the shedim, etc.).

DAVIDSON remains the best, most scholarly book of its kind. Consistently informative and responsible, this resource is also engaging and eminently useful for the specialist and casual reader alike. The extensively cross-referenced entries are culled from a rich and disparate body of sources. In addition to canonical, apocryphal, and mystical texts from Persian, Jewish, Christian, and Muslim traditions, the impressive bibliography also includes a great deal of the dubious (although fascinating) lore of occultism, as well as indispensable literary treatments by Dante, Milton, Blake, and others. Considered in its entirety, Davidson's book is a noteworthy chronicle of the power that angels and devils of all sorts have long held over the human imagination.

Another extremely helpful reference work—particularly for researchers whose primary focus is biblical scholarship—is the impressive *Dictionary of Deities and Demons in the Bible*, edited by VAN DER TOORN. Although restricted to article entries on demons and deities whose names can be found in the Bible (including the canonical Apocrypha), the book functions as an in-depth and inclusive "scholarly introduction to the religious universe which the Israelites and the Early Christians were part of." Indeed, the work features a broad, comparative perspective and offers entries not only for foreign

deities (Baal, Marduk, Thoth, Zeus), but also for the numerous names and epithets of God (including metonymic designations such as "Face"), for various deified phenomena (Day, Death, Moon, Stars), for transfigured or glorified biblical characters (Enoch, Moses), and for miscellaneous spirits and heavenly beings of all kinds. Each entry begins with a detailed etymology and proceeds to an elaborate sociohistorical contextualization of the figure under consideration, both in terms of its originating background (Canaanite, Babylonian, Egyptian, Greek, etc.) and its biblical appropriation. Van der Toorn's excellent general articles on angels and demons should be among the first consulted for the beginning reader interested in these topics.

It is generally acknowledged that ODEBERG's problematic translation of 3 Enoch—one of the principal works of angelology in early Jewish mysticism—has been superseded by that of P. Alexander in Charlesworth's two-volume *Old Testament Pseudepigrapha*. Nevertheless, Alexander himself asserts that "despite its weaknesses [Odeberg's volume] remains valuable." In fact, Odeberg's excellent introduction continues to provide readers with essential, in-depth discussions of 3 Enoch's exceptionally elaborate angelology and demonology. Particularly important is his elucidation of the mysterious and powerful angel Metatron—the central figure of the text—who is explicitly identified with the biblical character Enoch (Genesis 5:18–24).

NEWSOM supplies readers with a remarkable critical edition of the Qumran angelic liturgy known as the *Shirot 'Olat Ha-Shabbat*. Through the guidance of her meticulous reconstructive commentary, she makes it possible for advanced readers to trace the "form, content, and function" of these extremely fragmentary manuscripts. Readers lacking a rudimentary knowledge of Hebrew will encounter occasional difficulties with Newsom's text. The author's introduction—which includes a chapter on the detailed "priestly angelology" of this Qumran composition—is a helpful orientation to the fragments and their specifically liturgical context, which is described as "something like the cultivation of a mystical communion with the angels."

FOSSUM and GIESCHEN undertake thoroughgoing literary-historical examinations of Jewish and other Near Eastern angelologies in order to illuminate studies of related traditions. Their respective endeavors, therefore, are genuinely (and strikingly) comparative in nature, with angels and angelic characteristics serving as the primary means of exchange between disparate belief systems. Fossum's leading thesis is that the disputed theory of the Jewish origin of Gnosticism is sustained by a demonstration of the angelic—and thus Semitic—morphology of the Gnostic demiurge. Closely related to Fossum's project is Gieschen's, in which the evidence for an early "Angel Christology" is sought in the antecedent Jewish traditions of "angelomorphic divine hypostases" and "angelomorphic humans" (said to include "Patriarchs, Prophets, Kings, Apostles, and Elect Ones"). It is perhaps helpful to note that Gieschen studied under Fossum and that both authors share premises concerning the adaptability of Jewish angelic beliefs that are not universally conceded.

SCHÄFER provides a systematic investigation of the roles of God, angels, and human beings, as depicted in the documents

of early Jewish mysticism. Close readings are given to five significant works of the *merkabah* (“throne-chariot”) tradition: Hekhalot Rabbati, Hekhalot Zutarti, Ma’aseh Merkabah, Merkabah Rabbah, and 3 Enoch. Each text (or “macroform,” Schäfer’s preferred term for the “superimposed literary unit” of a composition with variable manuscripts) is explicated through a three-part analysis of its descriptive accounts of (1) God, (2) angels and the celestial hierarchy, and (3) the actual mystical experience of the individual human subject. Throughout, Schäfer offers substantial, well-argued interpretations of the various names of God and the angels, the functions of the angelic heavenly praises, and the evolving significance of theurgic magic in mystical praxis.

OLYAN’s astute exegetical study opens with an extremely helpful survey of recent scholarship concerning the origins of speculative “notions about angels.” His own analysis then proceeds with the most compelling of these hypotheses; namely, that discussions of angels gradually emerged out of the scrupulous rabbinic exegesis of the Hebrew Bible itself. Gracefully and systematically, Olyan demonstrates the “exegetical origins” of angelic designations through his own careful exegesis of various biblical cruces, each of which is shown to contain suggestive theophanic or angelophanic intimations. Strongly argued and subtly nuanced, this is a thoughtful, highly readable introduction to a far-reaching cluster of topics.

Animals, Treatment of

Bleich, J. David, “Judaism and Animal Experimentation,” in *Animal Sacrifices: Religious Perspectives on the Use of Animals in Science* (Ethics and Action), edited by Tom Regan, Philadelphia: Temple University Press, 1986

Contrary to the beliefs of many people, Judaism has beautiful and powerful teachings about the need to show compassion to animals. The following are a few examples: Moses and King David were considered worthy to be leaders of the Jewish people because of their compassionate treatment of animals when they were shepherds. Rebecca was judged suitable to be a wife of the patriarch Isaac because of her kindness in watering the ten camels of Abraham’s servant, Eliezer. Of course, many Torah laws mandate proper treatment of animals. One may not muzzle an ox while it is working in the

field nor yoke a strong and a weak animal together. Animals are to rest on the sabbath, the importance of this concept being suggested by its inclusion in the Ten Commandments. The psalmist indicates God’s concern for animals, for “His compassion is over all his creatures” (Psalm 145:9). Additionally, there is a precept in the Torah to emulate the Divine compassion, as it is written: “And you shall walk in His ways” (Deuteronomy 28:9). Perhaps the Jewish attitude toward animals is best summarized by Proverbs 12:10: “The righteous person considers the soul (life) of his or her animal.” In summary, the Torah prohibits Jews from causing *tsa’ar ba’alei hayim* (any unnecessary pain, including psychological pain, to living creatures). The works below expand substantially on this brief analysis.

COHEN provides a comprehensive, well-documented study of the “bases, development and legislation in Hebrew literature” related to the treatment of animals. This pioneering book refutes the philosopher Schopenhauer’s assertion that the theory that animals have no rights is rooted in Judaism by presenting an abundance of Jewish teachings and stories to show that *tsa’ar ba’alei hayim* “is a Biblical concept and therefore embodied in Israel’s institutional life.” The book is very well organized and documented (the notes span nearly half the book). However, Cohen does not relate Jewish teaching to current abuses of animals. Instead, he concludes by defending *shehitah*, Jewish laws related to the slaughtering of animals and the consumption of meat.

SCHOCHET provides an extremely comprehensive, well-documented work (there are more than 1,500 notes) that covers all aspects of Jewish teachings related to the treatment of animals. The book is chronologically divided into three composite portraits: biblical, rabbinic, and medieval and modern. Many Jewish teachings on the proper treatment of animals are discussed, but the author states that Judaism considers animals as “useful property” and as “delicate tools” for the use of people. He also hedges about whether laws related to animals were given out of compassion toward animals or for other reasons, such as the preservation of species or to make animals more useful to people. While vegetarianism is called “the pristine scriptural ideal,” the author also states that the practice “lacks mass appeal and fails to yield authority.” He fails, however, to address the realities involved in the mass production and the widespread consumption of meat and their relationship to basic Jewish values.

KALECHOFSKY provides a wide variety of insightful essays by Jewish classical and contemporary writers on issues related to the modern treatment of animals. Many of the essays make a strong case for an end to the exploitation of animals. Part one (“The Way We Think”) features an essay by Jacob S. Raisin on the “Humanitarianism of the Laws of Israel” that provides an excellent summary of Jewish teachings on compassion to animals. The essays in part two (“The Way We Eat”) show the connections between Jewish teachings and vegetarianism. Especially valuable is an essay, “Vegetarianism from a Jewish Perspective,” by Orthodox scholar Rabbi Alfred Cohen, that indicates that Jews need not eat meat today. Part three (“The Way We Are Now”) is mainly composed of essays that provide moral and scientific arguments against vivisection.

The editor contributes introductions to each part that give a valuable overview of the issues to be discussed.

BLEICH brings excellent credentials as a scholar of Jewish law to his comprehensive essay. With great thoroughness, he considers Jewish teachings on compassion for animals as a prelude to his discussion of the permissibility of animal experimentation. It is significant that Bleich, a highly respected Orthodox nonvegetarian rabbi, makes strong statements on Jewish responsibilities toward animals; for example, "Judaism must perforce view compassion toward animals as a moral imperative," and "Judaism most certainly does posit an unequivocal prohibition against causing cruelty to animals." He concludes that animal experimentation is permissible when such experiments are directly connected to the preservation of human life, but experiments cannot be allowed for strictly educational purposes.

For the period from the beginning of the Roman Principate until the rise of Islam, a few modern authors examine pagan hostility to Judaism, but most deal with Christian anti-Judaism. Among the latter, most concern themselves with early Christianity—before the end of the early rabbinic period (c.200 C.E.). Others examine later Christian anti-Judaism, and some the entire period.

One can find all the relevant texts having to do with Greek and Latin authors' views on Jews and Judaism in STERN's work. The texts appear here both in the original languages and in English translation, along with Stern's analysis. A reading of these texts shows that real hostility begins early in the Principate, but that earlier pagan writers had often either expressed sympathy for the Jewish way of life or merely commented on it objectively. Stern concluded that, in spite of hostility toward Jews, Jewish ideas and even the Jewish lifestyle had spread widely in Mediterranean societies. GAGER goes beyond Stern to demonstrate, in an excellent discussion, that pagan writers were normally well-disposed toward Jews and Judaism, and that major hostility appeared only in the period from circa 35 until circa 135 C.E.—that is, the time during which there were three Jewish revolts, two in Judah and one apparently empire-wide, against Roman rule. Even during this time, Gager shows, there were still pagan voices that spoke "against the stream." Furthermore, there is considerable evidence throughout the early Principate of pagans converting to Judaism or otherwise adopting Jewish ideas or practices. Thus Christian anti-Judaism is not the carrying over of pagan anti-Judaism into Christianity. Gager begins with the *Adversus Judaeos* literature and brings in evidence from Syrian Christianity in the fourth century that shows that even at that time all Christians cannot be said to have maintained a uniformly hostile attitude toward Jews and Judaism. He also finds varying degrees of hostility or even of accommodation in the New Testament. In a lengthy discussion of Paul, Gager proposes that Paul never intended to deny salvation to Jews as Jews but only insisted that gentiles need not become Jews to attain salvation. This explanation of Paul has not met with wide acceptance, and Gager is perhaps too inclined to emphasize the positive aspects of early Christian literature.

While Ruether was not the first Christian author to face the problem of the endemic nature of Christian anti-Judaism, she did so in a way that attracted attention and focused later

debate. It seems best, therefore, to begin with her work and then to discuss others in chronological order.

RUETHER first presents an adequate discussion of pagan anti-Judaism, finding the pagan attitude toward Judaism ambivalent. She then proposes that this anti-Judaism cannot be the source of Christian anti-Judaism, which rested on a distinctively theological base. She examines the New Testament thoroughly and notes that it is general Jewish rejection of the Christian claim of Jesus' messiahship and lordship that leads to Christian claims of Jewish perversity and of Christian superiority to Judaism. The New Testament thus places the blame for the death of Jesus on Jews and endorses a Christology that is inescapably antisemitic. Next Ruether discusses the patristic literature of the *Adversus Iudaeos* type, where she finds a more systematic hostility, but one based on the New Testament.

This literature reads the Hebrew Bible in such a way that all the prophetic denunciations of wickedness are taken to apply to Jews, whereas all the prophecies of hope apply to gentile Christians. Jews are condemned for not following their Torah, but Christians are said to fulfill the Torah in a spiritual way. Following this, Ruether shows how this theological anti-Judaism became social policy once the empire became Christian early in the fourth century, and finally she proposes that modern Christianity could reverse its centuries-long anti-Judaism by emphasizing a theology of covenant.

BARRETT, in a book that was originally a lecture series in Germany, gives a fine review of scholarship on John in brief space and then addresses the relation of the Gospel of John to Judaism. Somewhat anticipating the theory of Raymond Brown (below), he understands the root of Johannine hostility to Judaism to lie in arguments between Christian Jews and other Jews that led to expulsion of the Christians from a synagogue. Barrett also makes the Jewish elements in the gospel clear. Uniquely, he finds the intellectual source of both Judaism and anti-Judaism in the gospel in John's own experience of both the reality of Judaism and the opposition between Judaism and Christianity. Thus the situation of Judaism, as of other elements, in John is paradoxical.

MEEKS and WILKEN approach the topic in a new way by examining the history of Jewish-Christian-pagan relations in one place—Antioch in Syria—over a period of several hundred years. First they sketch the history of Jews in Antioch—a large community that experienced some episodes of persecution during the period when there were Jewish revolts but that otherwise had apparently harmonious relations with their pagan neighbors. After Christianity began to spread in Antioch, there seems to have been no local conflict between Jews and Christians, and indeed from writers circa 110 and again circa 385 there is evidence of non-Jewish Christians' adopting Jewish practices. Christian leaders opposed this tendency. When Julian "the Apostate"—the Roman Emperor residing in Antioch—tried in the late fourth century to restore pagan religion to what was by then a Christian empire, he sought the support of Jews by also planning to rebuild the temple in Jerusalem so that Jews could again sacrifice to their god there. This pitted Christians against Jews, and John Chrysostom's sermons that so viciously attack Judaism come from this period. The book contains

Chrysostom's anti-Judaic sermons as well as letters of about the same date from Libanius, a prominent pagan, to the Jewish patriarch. The letters are friendly and contrast strongly with Chrysostom's sermons. The book traces developments down to the early seventh century, when the Christian majority drove all the Jews out of Antioch.

The implication of Meeks's and Wilken's study is that Gager was correct in separating Christian anti-Judaism from possible pagan influence, but they further show that it was political events (not theology) that turned the Antiochene Christians against their Jewish neighbors, and that at least one early Christian community was not overtly anti-Judaic, whatever the Christian scriptures and leaders such as Chrysostom might say.

SANDMEL, in as irenic a way as possible, asks whether there was antisemitism or anti-Judaism in the New Testament, and he finds it everywhere, especially in the Gospels. The most notable points are that the New Testament makes Jews guilty of killing Jesus, even if they did not do the deed themselves, and that Paul makes of the Torah a useless and even vile thing. Sandmel's treatment is somewhat weakened by his tendency to cite many points of theological difference between Jews and Christians—such as the definition of Messiah (Christ)—as elements in early Christian antisemitism.

BROWN proposes a new understanding of the Gospel of John that reveals the social origins of the anti-Judaism there. According to Brown's theory, which has been widely accepted, one can see in John the history of a degenerating relationship between a minority of Christians in a Jewish congregation and the majority. At first there is a difference of opinion over the significance of Jesus, with many in the majority accepting that he was a good man who could perform healings. Later, the insistence of the Christians that everyone agree with them made it dangerous to be a Christian openly, so that there came to be a group of "crypto-Christians," and the majority expelled the Christians from the congregation. After this, the Christians turned more and more to non-Jews to seek converts and began to condemn Jews as a group.

The volume edited by DAVIES contains essays that respond to Ruether's book. The essays that consider late antiquity discuss the relation of pagan to Christian anti-Judaism, the Christian Christological rationale, how the Jews are presented in the Gospels and the Book of Acts, and anti-Judaism in the patristic period. The discussions of Matthew, Paul, and the patristic period are especially helpful, but the other discussions seem to betray some Christian defensiveness.

The volumes edited by RICHARDSON and GRANSKOU and by WILSON (1986) are the product of a seminar within the Canadian Society of Biblical Studies on the topic of early Christian anti-Judaism. They deal with relevant Christian—and to some degree Jewish—literature up until the year 200. Most of the essays explain what some might take to be anti-Jewish aspects of early Christian literature as being either directed to specific opponents (and thus not to be generalized) or the product of a particular situation where there was some hostility or competition between Christians and Jews. Several of the essays contain very keen observations, but the overall effect of the two volumes may be to obscure some of the harsher anti-Judaic tendencies in early Christianity.

SANDERS (1987) grapples with the problem in Luke and Acts (written by the same author) that the narrative often shows favorable or mixed interactions between Christians and Jews but that in the speeches—whether of Jesus in Luke or of the Apostles in Acts—Jews are routinely condemned. He notes that in Jesus' first speech and in Paul's last, Jews are condemned for not accepting Christianity, and furthermore that both speeches claim that this Jewish mistake was foretold in scripture, and Sanders concludes that the speeches present the author's attitude and that the author used the narrative to present a progressive justification for the condemnation in the speeches. Thus he finds Luke and Acts pronouncedly antisemitic.

BRAWLEY argues that Luke-Acts does not represent a theology of Christian supercessionism, that in fact the author tries to show how Judaism has its proper fulfillment in Jesus' messiahship. He proposes that the author was trying to reconcile feuding Jewish Christians and gentile Christians and to justify Paul's version of Christianity.

MacLENNAN focuses his attention on four *Adversus Judaeos* texts—the *Epistle of Barnabas*, Justin's *Dialogue with Trypho a Jew*, Melito's *Paschal Homily*, and Tertullian's *Answer to the Jews*—all from the second century. He emphasizes the particular situation of each text, bringing in archaeological evidence where it is available. In the end he finds that none of the texts is originally anti-Judaic, since each one is related to a particular Jewish situation, not to Judaism generally. In some cases, this seems to obscure the harshness of the rhetoric in these works.

SANDERS (1993) pays attention to what can be known about relations, not attitudes. He also brings in archaeological evidence, and he tries to understand everything in sociological perspective. Thus he strives for explanation as well as description. He understands the early Jewish sporadic persecution of Christians in terms of modern deviance theory and shows that most likely, every occurrence of such persecution closely followed a threat to Jewish identity (an exact dating is not always possible). He further shows that outside the context of Judea, there was little contact between Jews and Christians, but there were vigorous disagreements between Jewish Christians and gentile Christians. He understands this situation as the progress of disparate segments of a new religious movement groping toward just the level of accommodation and opposition to the larger society that will produce success.

While not discussing all the above works, TAYLOR attacks the underlying thesis of many of them, which is that Christian anti-Jewish statements grew out of specific situations. She agrees rather with Ruether that early Christian anti-Judaism has a symbolic or theological base, and she argues that to ignore that base in favor of the "conflict" model is to fail to come to grips with the heart of Christian anti-Judaism. Her slim volume merits most serious consideration.

WILSON's (1995) work, finally, has its greatest strength in being in effect a compendium of sources on early Jewish-Christian relations. It is also particularly valuable in presenting clearly the anti-Judaism of Luke-Acts and of Melito, in defining different types of Jewish Christians, and in detailing Christian appropriation and reinterpretation of Judaic tradition.

Perhaps the most important aspect of the works reviewed here is Christian willingness to confront the issue, even if the explanations that Christian scholars give often seem to absolve early Christian writers of antisemitism. The problem will doubtless continue to attract scholarly interest.

Anti-Judaism in the Middle Ages, as at all times, was complex, dependent upon a variety of factors, and extremely volatile. Much like the later antisemitism associated with racial discussions in the 19th century, anti-Judaism was a manifestation of social, political, economic, and religious tensions, many of which had little to do with Jews inherently. Anti-Jewish sentiment and action were often the culminating expressions of attempts to define the medieval community by exclusion. After long periods of what might be termed "normal" relations, Jews could frequently be subject to legal and social discrimination and physical and spiritual attack. Notwithstanding recent discussions about how Jews fared in Islamic as opposed to Christian lands in the Middle Ages, it seems clear that the fate of Jews and Jewish communities everywhere was subject to the transformations within the host communities in which they resided, and could variously be good or bad at different times.

Anti-Judaism might be the manifestation of thought-out processes such as legal decrees that, among other restrictions, prohibited Jews from attending public baths; forced Jews to

pay poll taxes; forced Jews to wear distinguishing clothes or markings; prohibited Jews from being in certain places at proscribed times; forced Jews to attend conversionary sermons; restricted Jewish religious practices; or hindered full Jewish participation in legal processes. But anti-Jewish actions could also result from more spontaneous outbursts among various strata of the population, resulting in expulsions, such as those in England, France, and numerous cities and territories in Germany; in massive pogroms throughout Islamic lands, for example in the Iberian peninsula and North Africa throughout the high Middle Ages; and in the violence of the Crusades.

Anti-Judaism could be a popular or an elite phenomenon: scholarly tracts could be written by theologians and legal scholars; anti-Jewish legislation could be drafted and enforced by territorial lords and monarchs. Often such "elite" culture could stimulate popular action against Jews. But popular culture in the form of stories, myths, and artistic representations might also disparage Jews and lead to serious consequences for Jewish communities.

The modern study of medieval anti-Judaism has been greatly affected by the perspective of 20th-century events and historiographic considerations. The multitude of books available on the subject, of which the following is only a very narrow sampling, exhibit a variety of understandings of Judaism and anti-Judaism and a diversity of sources and methods that reveal a great deal about Jewish culture as well as developments within non-Jewish society. The following studies show how Jews fared particularly in the European Middle Ages but also consider the intellectual and social milieu in which the Jews were conceived and written about.

TRACHTENBERG's classic text examines the demonization of the Jew in medieval Europe, particularly in associations of the Jews with the Devil; the image of the Jews as sorcerers, magicians, and poisoners; and the Christian theological attack against Jews as infidels and usurers. Trachtenberg is particularly interested in exploring the nature of medieval superstition and the ways in which medieval folk ideas have helped inform modern antisemitic representations of Jews and Judaism. The book examines the period between the 11th and 16th centuries, focusing more on popular and less on learned manifestations of anti-Judaism, and includes written sources as well as evidence gleaned from graphic arts. Not surprisingly, Trachtenberg finds that the accusations leveled against Jews had less to do with any Jewish practice of magic than with the beliefs and practices current among Christians.

PARKES's old but still important book spans late antiquity and the early Middle Ages. He surveys the position of the Jews in the Roman world, the clash between Christianity and Judaism (focusing in particular on the part played by Jews in the persecution of early Christians), and the position of Jews, especially their legal position, in Christian societies from the late Roman empire, the Byzantine empire, and the Visigothic kingdom. The volume also includes useful appendixes and extensive indexes.

EIDELBERG offers introductions to and translations of four Hebrew chronicles of the Crusades: *The Chronicle of Solomon bar Simson* written sometime in the early 12th century, which details the events of the attacks on the Jews in the First

Crusade; *The Chronicle of Rabbi Eliezer bar Nathan*, which also chronicles the events of the First Crusade and seems to borrow from a parent source some of the same information as the previous chronicle; *The Narrative of the Old Persecutions*, or *Mainz Anonymous*, which also deals with the First Crusade, but offers additional information not found in the first two chronicles; and *Sefer Zekhirah*, or *The Book of Remembrances*, of Rabbi Ephraim of Bonn, a popular account by an important 12th-century scholar detailing the Second Crusade. The volume includes a general introduction to the subject and extensive explanatory footnotes.

CHAZAN offers a thorough presentation of the First Crusade and the Jews, including a general background to the Crusades and Jewish-Christian relations; an overview of the sources available (Christian and Jewish); a closer look at the actual violence and patterns of Jewish response; a study of the later Crusades; and a consideration of the position of the Crusades in the history of European Jewry. The volume includes extensive notes, bibliography, and index. Although Chazan rejects the idea that 1096 and the First Crusade marked a sharp turn in the Ashkenazi experience, he does argue that study of these events opens a number of broader questions regarding the history of the Jews in northern Europe during the Middle Ages, particularly the striking new developments of the 12th and 13th centuries.

Through an examination of a variety of manifestations of anti-Judaism in the Middle Ages, including legislation, politics, economy, religion, and irrational fantasies, LANGMUIR argues forcefully that Jews became the target of unusual hostility in northern Europe in the 12th and 13th centuries. Of particular interest is Langmuir's attempt to understand anti-semitism more broadly through the medium of medieval manifestations of anti-Judaism and his analysis of the role of the irrational in medieval anti-Judaism.

COHEN investigates the theological status of the Jew in medieval Europe, noting that it is part of an elaborate web of Jewish-Christian relations. Of particular interest to Cohen is the importance of the Dominican and Franciscan friars who "directed and oversaw virtually all the anti-Jewish activities of the Christian clergy in the West." Cohen seeks to account for the anti-Jewish ideology of the friars and to understand it within the evolution of medieval Christian self-consciousness. He focuses on the emergence of anti-Judaism in mendicant theology, on the ideological refinement of anti-Judaism in the thought of Pablo Christiani and Raymond Martini, and on the development of mendicant anti-Judaism as reflected in the writings of Ramon Lull and a variety of other preachers. Cohen's book represents intellectual history at its best, with sharp analysis of medieval mendicant writing and broad understanding of the development of medieval culture.

OBERMAN, one of the great intellectual historians of the later Middle Ages and the Reformation, makes a sophisticated and important contribution to the discussion on anti-Judaism in the early formative years of Protestantism that offers a very detailed analysis of the theological and intellectual writings and arguments of a wide variety of central Reformation figures. Often this analysis results in a major reassessment of a particular author's position regarding Jews. The book offers

also an important synthesis of material that has not often been taken as a whole or written about with great nuance. Oberman provides a useful biographical section on the primary scholars he examines as well as very thorough footnotes throughout. He discusses as well the later developments of what he calls the "Third Reformation," as he assesses the degree that one can speak about anti-Judaism and tolerance in early modern and, by extension, modern Europe.

In his very readable, well-researched, and suggestive study, HSIA attempts to understand the development and eventual decline in Germany of the legend of the Jewish ritual murder of Christian children for sacrificial purposes. According to Hsia, ritual murder accusations became widespread throughout Europe in the 13th century and reached their climax in the 15th and 16th centuries. They were particularly widespread in Germany. Rather than an attempt to refute the charges laid against Jews, Hsia uses the accusations as a means to "elucidate the production of social knowledge in its specific historical structure and to explain how cultural symbols acquired their power and signification." Hsia analyzes the major ritual murder trials leading up to the Reformation, and then assesses the effects that the Reformation, with its emphasis on religion over magic, had on ritual murder accusations. For Hsia, the Reformation brought about a divergence of learned and popular discourse about ritual murder, with popular culture retaining much of its earlier anti-Jewish virulence and learned culture becoming more legalistic and less persuaded by "popular superstitions."

The German journalist Wilhelm Marr coined the term "antisemitism" in 1897 as a synonym for "Judenhass" (Jew-hatred). Encompassing racial and political ideologies in addition to the many ancient accusations against Jews including deicide, antisemitism has protean meanings. Crossing the disciplines of history, anthropology, sociology, political science, literature,

psychology, and economics, the following six books explore antisemitism in Europe, the United States, and Asia. The half-dozen representative titles discussed here have been selected both for their intrinsic merits and for the diversity of their respective concerns and methodologies. Literature on the subject has been monitored in recent years in the excellent series *Antisemitism: An Annotated Bibliography* (New York: Garland, 1987–), edited by Susan S. Cohen for the Vidal Sassoon International Center for the Study of Antisemitism of the Hebrew University of Jerusalem.

WISTRICH offers a remarkably comprehensive overview of "the entire history of anti-Semitism from its beginnings until the present day, in a form accessible to the non-specialist reader." His collection contains an eight-chapter historical survey, from antiquity to beyond the Holocaust; six chapters of regional surveys ranging across Britain, North America, France, and Eastern Europe; and finally a section on the Middle East. Instead of providing a universal explanation for the phenomenon of antisemitism, Wistrich highlights the variety of stereotypes, fantasies, and obsessions that have revolved around Jews for more than 2,000 years. Analyzing economic, theological, cultural, and political beliefs, he explains antisemitism as simply the world's longest existing hatred. He argues that as early as the third century B.C.E., one can find the development of the main tenets of antisemitism: that Jews sacrificed non-Jews as part of religious rites, were snobbish and misanthropic, and produced nothing of value as a people. Yet, Wistrich maintains that meanings of antisemitism have not remained static through history. To strengthen his argument, Wistrich examines the different uses of antisemitism by Egyptians, Romans, Greeks, and Christians. Importantly for the contemporary reader, Wistrich analyzes how Christianity leveled charges of deicide and satanism against Jews. As a result, theological antisemitism, which held a component of inherited guilt for the death of Christ, was adopted by various Nazis, Bolsheviks, Muslims, and African Americans to justify their antisemitic beliefs. Existing as a "miasma of nightmarish paranoia, millennial fantasy, homicidal hatred, and sheer political cynicism," Wistrich asserts that antisemitism will continue to remain a destructive and divisive ideology for humankind.

RUETHER remains the most striking exploration of antisemitism within Christian theology. In her first chapters, she delves into ancient Greek, Roman, and Egyptian societies to show how non-Christian "pagan hate" for the Jews was not theological, but was rather a "consequence of religious sociology." Consequently, Ruether argues that antisemitism within Christianity is not an extension of classical antisemitism, but instead it is deeply rooted in the rejection of the Jews found in the New Testament Scriptures. Exploring the Christian Roman Empire, the Crusades, the Age of the Ghetto, the Enlightenment, and the Holocaust, Ruether contends that the Christian Church can not separate itself from its antisemitic heritage found in the New Testament and the negation of the Jews by the church fathers. Concerned with the historical culpability of Christianity against Judaism, Ruether calls for reforms in current Christian theological curricula in order for Christians to live without the need to destroy the teachings and people of Judaism.

KATZ chronicles the rise of modern antisemitism in intellectual thought from the end of the Middle Ages to the racial ideology of Nazi Germany. Importantly, Katz asserts that antisemitism, as a racial ideology, manifested itself as early as 1790. Unlike other scholars who date the emergence of racial antisemitism during the latter half of the 19th century, Katz attributes the initial development to antisemitic polemicists who took Johann Andreas Eisenmenger and Voltaire's writings out of context. Consequently, Katz argues that the bastardized versions of Eisenmenger and Voltaire's writings negatively influenced the social image of the Jew in Europe. Although Jews did receive rights during the period of emancipation, Katz suggests that "anti-Jewish animosity grew in strength, paradoxically just when in the wake of the Enlightenment and modern rationality one might have expected it to disappear." Katz not only traces the rise of modern antisemitism on an intellectual level; he also analyzes the political, cultural, and social attitudes toward Jews prevailing before, during, and after emancipation.

GILMAN analyzes the complex stereotypes of the male Jewish body found during the Christian Diaspora "as a means of comprehending the status as well as the representation of the Jew." In a series of essays, Gilman focuses on the stereotypes surrounding the foot, circumcised penis, nose, voice, skin color, and sexuality of Jewish men. Gilman argues that the representation of the Jewish male in society is the key to understanding the essence of Christian Jew-hatred and, consequently, racial antisemitism. Interpreting stereotypes of the Jewish body and psyche in speech, social constructs, psychology, gender, and race, Gilman demonstrates how the Jew is seen as "an Other, one of the 'ugly' race." Importantly, stereotypical images emerged when the science of race secularized many of Christianity's religious notions of the Jew. In addition, he contends that these stereotypes have led to the construction of the Jew's own identity, a blend of myth and realities producing a constructed difference between the sense of Jew and non-Jew in society.

DINNERSTEIN is the "first comprehensive scholarly survey of antisemitism in the United States." Providing a comprehensive overview from the colonial era to the present day (1607–1992), Dinnerstein devotes many of his chapters to 20th-century developments: post-World War I, the Depression, World War II, Southern antisemitism, and African American antisemitism. Dinnerstein dates the emergence of antisemitism in the United States to the last third of the 19th century when immigration soared; however, he asserts that a deeply ingrained hostility toward Jews already existed in the United States due to Christian theology. Dinnerstein argues that Christian heritage and teachings permeated U.S. society so thoroughly that even secular persons were influenced by Christian attitudes and beliefs. Yet he makes the distinction that to be Christian in the United States usually meant to be Protestant, and therefore Catholics also found themselves victims of discrimination. Moreover, Dinnerstein notes that Jews and Catholics have not been the sole targets of discrimination in the United States. The treatment of those considered racially different (African Americans, Asians, Native Americans, etc.) has been more severe than the treatment of those who were defined as whites. Dinnerstein notes, however, that many of

these minority groups, notably African Americans, have engaged in antisemitism. After his analysis of Christian-Jewish relations and black-Jewish relations, Dinnerstein ends optimistically, asserting that antisemitism in the United States has been declining and will continue to do so.

GOODMAN and MIYAZAWA explore the existence of antisemitism and philosemitism in modern Japanese history. Although there are few Jews in Japanese society, Goodman and Miyazawa assert that the Japanese are both appalled and fascinated by Jews. With chapters ranging through all of modern Japanese history, the authors analyze the concept of the Jew in Japanese culture. Goodman and Miyazawa argue that the Japanese practice an antisemitism that is solely found in literature and thought, because they do not construct physical or social barriers to those Jews who live in Japanese society. Contending that the Japanese are a people with an "ethnic nationalist xenophobia," the authors explain how the Japanese notions of Jews stem from a 1000-year-old tradition of using images of all foreigners—the "other"—to define "Japaneseness." However, Japanese Christians in the early 20th century found racial and historical links between the Jews and the Japanese. Paradoxically, Goodman and Miyazawa state that while the Japanese see the Jews as the "other," who should therefore be feared and hated, the Japanese also see themselves as having a bond with God's "chosen people," who therefore should be admired and emulated. Citing many examples that illustrate the dual image of Jews in modern Japanese history, Goodman and Miyazawa contend that Japanese attitudes towards Jews reflect wider aspects of Japanese culture and history. By analyzing the dichotomy of Japanese antisemitism and philosemitism, Goodman and Miyazawa's book helps one understand "modern Japan, its development, its character, and its future promise."

Once viewed as the poor relation of biblical literature, apocalyptic has been a subject of increased scholarly interest during the last two decades of the 20th century, with a particularly lively debate as to the origins of this genre of writing still ongoing. This interest seems likely to be maintained with the release of further material from Qumran.

STONE's book is a useful introductory guide to Judaism from the time of Ezra to the Jewish Revolts. Of particular relevance to apocalyptic are the chapters on the third century B.C.E. and the intellectual and cultural milieu in Palestine that led to the development of the apocalypse genre. Sections of the book also are dedicated to Enoch, apocalyptic origins, and the Qumran scrolls, as well as related topics such as pseudepigraphy and eschatology. Compact and lucid, this is a fine starting point for the general reader.

RUSSELL's book is in some respects dated but is still a useful source of reference for the general reader interested in the Jewish apocalyptic writings in the period from 200 B.C.E. to 100 C.E. Russell argues that apocalyptic writing arose out of the decline of traditional prophecy as the prophetic canon hardened around 200 B.C.E. At the same time, he claims, apocalyptic writing remains firmly embedded in prophecy. Both of these assertions would be accepted today by the vast majority of commentators, with the caveat that apocalyptic writing also belongs to a learned tradition, an aspect of the genre that receives less attention from Russell. Nevertheless, this remains an important book for its thorough treatment of the relationship between prophecy and apocalyptic writing.

COLLINS (1984) provides the best introduction to apocalyptic literature as a whole. He begins with important definitions of the terms "apocalypse" and "apocalypticism" and also gives some idea of the intellectual matrix and social settings from which they are derived. Thereafter, he adopts a largely chronological approach. Chapters focus particularly on Daniel and the early Enoch literature (as the earliest examples of true apocalypses); related genres such as the oracles and testamentary literature; and, importantly, the Jewish apocalyptic literature that emerged out of the destruction of Jerusalem in 70 C.E. and the diaspora. Again, this is a lucid work, accessible to nonspecialists but containing the best results of modern scholarship.

COLLINS (1997) also provides the best introduction to apocalyptic literature in the Qumran writings. Here, he approaches the subject of apocalypticism thematically, considering in turn topics such as creation and the origin of evil, the periodization of history in apocalyptic literature, messianic expectation, and resurrection. An outline of how each

of these ideas is reflected in the apocalyptic literature from outside Qumran is provided, followed immediately by an examination of their occurrence in the Dead Sea Scrolls themselves. The concluding chapter, "The Apocalypticism of the Scrolls in Context," gives a fine, compact summary of the relationship between the scrolls, early Judaism, and formative Christianity (arguing convincingly against the minority of scholars who have attempted to see in the scrolls the authentic record of the latter).

COLLINS's (1979) collection of essays in the Semeia series is of particular importance for its presentation of A.J. Saldarini's essay "Apocalypses and 'Apocalyptic' in Rabbinic Literature and Mysticism," which discusses the reasons why Jewish apocalyptic literature appears to have died out following the revolts against Roman rule in the first and second centuries C.E. Saldarini argues that apocalyptic at this time was effectively transmuted into *merkabah* and *hekhlot* mysticism, and he goes on to discuss examples of these genres that fulfill the criteria for being termed an "apocalypse." Saldarini's essay concludes with an excellent bibliography for further reading in early Jewish mysticism and apocalyptic.

HANSON's work and its influence on subsequent discussions of the origins of the apocalyptic literature can hardly be underestimated. His basic thesis is that apocalyptic writing was born out of a conflict between a priestly (establishment) party and a disenfranchised visionary party in the early Persian period. It was the latter who were responsible for the prophetic literature (e.g., Joel, Zechariah 9–14, Isaiah 56–66), which is often argued to be behind the apocalyptic writings. Hanson's position has been strongly criticized in recent years but remains a landmark in the development of scholarly thought in this area, and almost any extended work on the origins of apocalyptic will make reference to it.

LAMBERT's work is an approachable consideration of the evidence that the Jewish apocalyptic genre may owe part of its origins to Persian (Zoroastrian) texts or to Babylonian *ex eventu* prophecy. An affirmative response to this question is put forward particularly in the case of the Book of Daniel, one of the earliest Jewish apocalypses.

ROWLEY's work, while in some respects dated, remains useful. This is particularly true of the first three sections, which focus on the rise of apocalyptic and then, in chronological order, give a *précis* of the main apocalyptic works from the third (or second) centuries B.C.E. to the end of the first century C.E. For Rowley, apocalyptic is the "child of prophecy and yet diverse from prophecy": a genre of consolatory literature arising out of the Antiochene persecution but using the prophetic idiom and incorporating foreign (notably Zoroastrian) elements.

COGGINS and associates' collection of essays is of importance for its presentation of M.A. Knibb's "Prophecy and the Emergence of the Jewish Apocalypses." This essay is an important and balanced review of the evidence surrounding the origins of apocalyptic literature, and it is ideal reading for a newcomer to the subject. Topics such as the difference between the terms "apocalypse," "apocalyptic," and "apocalypticism" are thoroughly dealt with, as well as the more significant theories such as Hanson's argument for the development of apocalyptic from "visionary" prophecy and von

Rad's suggestion that apocalyptic has its origins in wisdom literature rather than prophecy. The author's premise, that apocalyptic writing may be seen as a development of prophecy but in a learned or "scribal" tradition, is lucidly argued and reflects the current scholarly consensus on the subject.

Much of the extant Jewish literature written between 300 B.C.E. and 200 C.E. can be classified either as Apocrypha or Pseudepigrapha, but the line between the two categories is not universally agreed upon. Generally speaking, the term *Apocrypha* (Greek for "hidden works") designates those texts, mostly composed in Hebrew or Aramaic, that were included in the Septuagint (the Jewish translation of the Hebrew Bible into Greek) but were later excluded from the Jewish canon of Scripture. Many of these books are today considered deuterocanonical (secondarily added to the canon of inspired Scripture) by Roman Catholics, and each of the others is regarded as authoritative by some group of Eastern Orthodox Christians. *Pseudepigrapha* (Greek for "falsely attributed works") is a modern designation for a much larger group of books that were mostly composed by Jewish authors in the name of biblical heroes. These books were sometimes reworked by the Christian communities that preserved them but which generally did not consider them inspired Scripture. The books of 3 and 4 Maccabees, 1 Esdras, Psalm 151, and the Prayer of Manasseh (which were included in the Septuagint) and 2 Esdras (which was not) are sometimes numbered among the Apocrypha, but because of their disputed canonical status they are often classified as Pseudepigrapha.

The invaluable *Parallel Apocrypha* includes the Catholic *New Jerusalem Bible*, where the arrangement of the books is based on the Septuagint, so the deuterocanonical books (Apocrypha) are found in their traditional places among the books of the

Hebrew canon. This arrangement is advantageous for the purpose of reading the Greek additions to Esther and Daniel in their original contexts, and it reveals something about how these books are thought to relate to the Hebrew canon (e.g., Tobit and Judith are grouped with Esther, Baruch with Jeremiah and Lamentations). Each book is accompanied by a concise introduction and detailed, illuminating annotations. Besides giving textual variants and alternative translations, these notes provide a good deal of historical, linguistic and philosophical background information and a modicum of literary analysis. Nevertheless, they are not free from Christian theological biases. The translations of the Apocrypha, however, reflect very accurately the Greek of the Septuagint, and an effort has been made to render key terms consistently. In some books (e.g., The Wisdom of Solomon), fidelity to the Greek has led to some awkward English constructions, but in general the translations manage to combine literalness with readability.

THE NEW INTERPRETER'S BIBLE, though not intended primarily for a Roman Catholic audience, also follows the order of the Catholic canon and does not include the books of the Apocrypha excluded from that canon. At the time of this writing, not all of the volumes containing books of the Apocrypha were yet available, but the series promises to be an invaluable reference tool when it is complete. *The New Interpreter's Bible* (NIB) presents two parallel translations for each book; for the Apocrypha these are the New Revised Standard Version (NRSV, the translation most often referred to by Christian biblical scholars) and the New American Bible (NAB, a less literal translation popular among American Catholics). The translations are divided into short sections, each accompanied by a fairly extensive scholarly commentary. Theological "reflections" are set apart from the running commentary, which is considerably more detailed than the notes in the NJB (or any other annotated Bible), but is nevertheless aimed at the general reader. The comments of Robert Doran on 1 and 2 Maccabees are especially clear and thoughtful.

METZGER provides the most complete collection of the Apocrypha (including the books not included in the Roman Catholic canon) in a separate volume from the canonical Scriptures. The translations follow the stylistic and methodological guidelines of the Revised Standard Version (RSV): using all available texts, they aim to produce an accurate reflection of the original without compromising readability. The annotations are brief and are mostly taken up with citing variants and biblical parallels, but sometimes they illuminate difficult passages. A slightly updated version of this work can be found in the Apocrypha section of the *New Oxford Annotated Bible with the Apocrypha* (NRSV), ed. Bruce M. Metzger and Roland E. Murphy, New York: Oxford University Press, 1991.

CHARLES'S two-volume work is a milestone in the study of the Apocrypha and Pseudepigrapha: it is the first English translation of many of those works to be based on critical editions (for which Charles and his contributors were often themselves responsible). The Apocrypha volume contains most of the books included by Metzger, but the Pseudepigrapha volume is lacking many books found in the modern collections. Oddly, the latter volume does include the Mishnaic tractate Avot as well as the Story of Ahikar (a non-Jewish legend with

affinities to Daniel 1–6, Esther, and Tobit). The style of the translations is generally graceful, if somewhat archaic, but the editor's principle of translating a hypothetical original text rather than following any of the extant versions seems dubious today. The extensive notes provide valuable information about the readings of the various versions, but they may be too technical to be helpful to the nonexpert. Perhaps the most dated aspect of Charles's collection is the patronizing attitude toward Judaism that comes across in many of the translators' introductions and notes.

Despite its misleading title, SPARKS provides a handy, single-volume collection of most of the complete books of the Pseudepigrapha. The accuracy and readability of the translations vary somewhat depending on the translator, but the volume is well-edited from a stylistic point of view. Sparks's aim is to provide the general reader with a smooth English translation of the Pseudepigrapha, unencumbered by scholarly annotations. Books that exist in multiple versions are represented by an eclectic type of text that does not give preference to any one version; only the most significant variants are noted. Because there are no interpretive notes, some translators compensate by adding interpretation to their translations, while others allow confusing passages to stand without explanation. In spite of its shortcomings from a scholarly point of view, Sparks's collection offers the most consistently accessible translations of the Pseudepigrapha.

The only complete translation of all the major Jewish and Christian pseudepigraphical literature of the modern period (apart from the Dead Sea Scrolls), including fragments of lost works quoted by later authors, is that of CHARLESWORTH. His approach is geared primarily to scholars, but the first-time reader of the Pseudepigrapha can also benefit from its thoroughness. Each book or fragmentary work is accompanied by an introduction that presents essential background information on the text and by extensive interpretive notes. Variant readings are clearly indicated, and if two significantly different versions of a text exist, the translations are printed side by side. Cross-references and biblical parallels appear in the margin. Hence, a page of Charlesworth's *Old Testament Pseudepigrapha* can manifest a layout almost as densely packed as a page of Talmud, making his collection more daunting than Sparks's. It may also be noted that the editor has not imposed stylistic restrictions on the work of the various translators. In any event, Charlesworth's translation is indispensable to anyone with a serious interest in the Pseudepigrapha.

The Jewish Apocrypha and Pseudepigrapha form a group of compositions dating from the period 300 B.C.E. to 200 C.E.

NICKELSBURG offers the best general introduction to the Apocrypha and many of the Pseudepigrapha and also to their historical background. Most chapters begin with a historical survey of a particular period and proceed to discuss several works that were written in that context, often from widely divergent perspectives. The analysis of the texts, however, tends to be more literary than historical-critical, focusing on the peculiarities of each work that are likely to strike a first-time reader. In two chapters Nickelsburg departs from his chronological organization to compare works that share a common provenance (Egypt) or purpose (the exposition of biblical texts through expansion). While not comprehensive, Nickelsburg's book is engaging, thorough, and concise in its treatment of the most important Apocrypha and Pseudepigrapha.

STONE classifies the Apocrypha and Pseudepigrapha by literary genre, with a different scholar introducing each genre. This approach emphasizes the diversity of the texts under discussion and allows for a detailed comparison of similar works. Many of these texts contain elements of several genres, and therefore they receive differing, and even contradictory, treatments by two or more authors. Further, some chapters cover so many works that they are necessarily quite superficial, while other genres are represented by only a few examples that are explored in depth. The chapters titled "Historiography," "Testaments," and "The Sibylline Oracles" are especially useful as supplements to Nickelsburg's introduction.

FREEDMAN's dictionary contains introductions to each of the apocryphal and pseudepigraphical works as well as useful general essays on both categories of literature. The entries on the Apocrypha tend to be more detailed than those on the Pseudepigrapha because the former have received more attention from biblical scholars. All the entries, however, provide at least such basic information on a work as its genre, provenance, approximate date, and transmission history, as well as a summary of its contents.

For readers who want to get a general impression of the Pseudepigrapha, de JONGE's collection is a good point of entry. He has selected 12 pseudepigraphical works with broad appeal and asked leading scholars to translate excerpts from them and explicate these passages in a running commentary. Most of the scholars give a good general description of the work before presenting the excerpts, but the passages they choose do not always convey an accurate sense of the whole. Nevertheless, de Jonge's approach may be helpful to someone trying to decide which of the Pseudepigrapha to explore in depth.

Perhaps the most appealing genre of the entire apocryphal and pseudepigraphical literature is the so-called Jewish novel, the subject of WILLS's enjoyable book. Although the books he focuses on (both the Hebrew and expanded Greek versions of Daniel and Esther; Tobit, Judith, and Joseph and Asenath) are not much longer than modern short stories, Wills argues that they reflect the same artistic impulses as Hellenistic novels. In particular, the centrality of women characters and the attention to internal psychological states set the novels apart from other Jewish literature of the period. Although Wills employs a broad spectrum of literary theories and comparisons to interpret the novels, his discussions are lucid and his terminology is always clearly defined.

The most distinctive and extensive of pseudepigraphic genres is the apocalypse, to which COLLINS (1998) is the best introduction. Most scholars accept Collins's definition of apocalypse as "a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial, insofar as it involves another, supernatural world." After establishing the antecedents and social contexts of apocalyptic literature, Collins introduces each individual apocalypse, giving particular attention to the social and historical reality it reflects. Proceeding chronologically, he traces the development of the apocalypse genre, showing how it gave rise to related literature such as the Testaments and Sibylline Oracles. He also examines the influence of apocalyptic ideas on the Qumran sect and early Christianity.

COLLINS (1997) also provides an excellent introduction to the wisdom literature of the Hellenistic period, especially the important apocryphal books of Ben Sira and the Wisdom of Solomon. The introduction contrasts the general outlook of these books with that of Proverbs, Job, and Kohelet; the most important difference is that the Hellenistic books assume that the Torah is the primary source of wisdom, at least for Jews. The chapters on Ben Sira illustrate how the author, writing in Hebrew around 180 B.C.E., probably in Jerusalem, reworked the traditional forms and insights of Hebrew wisdom under the influence of Hellenistic culture. Collins argues that the apologetic and sometimes polemical tone of the Wisdom of Solomon reflects the struggle of an educated member of the Jewish community in Alexandria to uphold the values of his own culture as a model of the philosophical life valued by the elite of the dominant culture.

HARRINGTON contextualizes two difficult but very important historiographic works, 1 and 2 Maccabees. He uses the canonical Book of Daniel as a point of entry into the history of the Maccabean revolt, proceeds to the more novelis-

tic account in 2 Maccabees, and afterward turns to the relatively dry 1 Maccabees. Gradually he fills in by this means a rough sketch of Jewish history from about 175 to 134 B.C.E., emphasizing how the various sources present the events rather than "what really happened" (about which one can only speculate). The reader is left with a vivid sense of the significance of this period for the formation of Judaism.

Apostasy is a pejorative term for the act of rejecting one religion in favor of another. In the Jewish/Christian case the Library of Congress subject heading is "proselyte" for a Christian who adopts Judaism and "convert" for a Jew who becomes a Christian. Apostasy may be thought of as an extension of structural assimilation into political, economic, and kinship institutions, in which Christianity is the regnant culture, as much as it may be viewed as joining a Christian religious community. Thus, the literature on religious apostasy is subordi-

nate to that on assimilation, although the latter rarely deals with conversion. The literature on religious intermarriage, a meshing of Christian and Jewish kinship groups, is subordinate to both the assimilation and the apostasy literatures.

ROTH traces the conversion of Jewish leaders and tens of thousands of laypersons to Christianity in 14th- and 15th-century Spain, presenting problems in Jewish family law and around the conditions of return to Judaism for *conversos* who left Spain. By the 15th century the number of *conversos* was so large that distinctions were introduced between New and Old Christians, and conflict erupted between Jews and *conversos* over Jewish communal property. The friars' missionary efforts played no small role in this process, but so did the gradual decline in the quality of Jewish leadership, and Roth challenges the notion that large numbers of *conversos* continued Jewish practices.

KATZ authored a number of major historical studies of the assimilation of Western and Central European Jewry into their wider societies over the past 500 years. Here he describes the social and judicial separation between Jews and Christians, the issues arising from the Jews' talmudically imposed obligation to uphold the law of the land, and the way in which Jewish law affected economic relations between the groups. Katz further shows how in many cases the apostate was treated as a "sinning Jew" who did not lose his Jewish identity, a matter that raised problems with respect to spousal relations and to inheritance. The Jewish conception that gentiles were subject only to the Noachide laws is shown to have provided a basis for tolerance in the midst of exclusiveness. When Jews were coerced to apostatize, the rabbis are seen to have called increasingly for martyrdom. Ghettoization in the 16th century was accompanied by notions of essential differences between Jews and Christians calculated to make proselytization untenable. The 18th century, was characterized by an increasing sense of common humanity and tolerance between the communities.

MARRUS explains how the emergence of civil society in France during the 19th century occasioned greater social interaction between the Jewish and Christian communities. The antireligious sentiment in France is shown undermining Judaism as a faith and paving the way for conversions. The Jewish community was organized under a Consistoire Centrale, supported both by communal donations and government allocations, which supported the politics of assimilation. In this environment there developed political antisemitism epitomized by the Dreyfus case at the end of the 19th century. This environment also planted seeds of Zionist Jewish nationalism.

ENDELMAN has edited a collection of important papers dealing with issues of Jewish apostasy in the modern period. It includes an excellent report by Deborah Hertz titled "Seductive Conversion in Berlin, 1770-1809." Working with records archived by the Nazi Agency for Genealogical Research, she is able to estimate numbers and rates of conversion of Jews to Christianity in Berlin from the late 18th century until the establishment of the Third Reich. Endelman's own article examines conversion in Germany and England from 1870 to 1914, especially in relation to occupational advancement. William McCagg traces the number of Christians of Jewish descent in Hungary during the early 20th century in relation

to the national aim of "magyarization." Michael Stanislawski classifies Jewish apostates in czarist Russia in the late 19th and early 20th century by their social status and their motives for seeking conversion. Jeremy Cohen returns to Christian Spain for biographical accounts of Moses, who became Petrus Alfonsi; Judah ben David ha-Levi, who became Hermann of Cologne; and Saul of Montpelier, who became Pablo Christiani. Cohen discusses the significant role they played appealing to Spanish Jewry to convert.

A more contemporary autobiographical account is that of COHN, who describes his spiritual journey from Hungarian rabbi to founder of a Williamsburg mission to the Jews. ZOLLI, rabbi of Trieste and then chief rabbi of Rome, is a more academic than pastoral figure who describes a turbulent period of hiding from the Nazis in Rome during World War II, followed by a return to his pulpit, where he experienced a vision of Jesus calling to him at the end of a Yom Kippur service. By far the most sensitive and penetrating exploration of the soul of a contemporary convert is TEC's biography of Oswald Rufeisen, a Polish Jew who survived the Holocaust wearing a Nazi uniform and went on to become a Catholic monk living in a monastery in Haifa. Known to the wider world as Brother Daniel, Rufeisen's case gained notoriety through his unsuccessful efforts to persuade the Israeli courts to recognize him as a Jew by nationality.

KLAUSNER turns from the psychological study of individual converts to the sociological problem of mass religious conversions in which an entire society changes its religion. While aiming, ultimately, to understand the conversion of American Jews to Christianity, he explores a series of comparative cases such as the conversion of Egyptian Copts to Islam in the medieval period. The work explores autobiographies of Jews who became Christians and Christians who became Jews, and statistical data from the 1990 National Jewish Population Study on Jews who converted to Christianity and Christians who converted to Judaism is analyzed.

RAUSCH traces the history of Hebrew Christianity from its beginnings in the first century C.E. to its contemporary form as Messianic Judaism. Through doctrinal vicissitudes it has attempted to define a form of Judaism that includes a commitment to Christ along with the retention of some Jewish religious practices. The boundary between it as a separate movement and as a variant on Christian missions to the Jews has shifted from time to time. In its current incarnation as Messianic Judaism it has institutionalized specific centers of worship, some of which are federated in the Union of Messianic Jewish Congregations, and it tends to include a deep interest in Israel as a herald of the Second Coming. Leaders and followers have included both Jews who have "completed" their Judaism through acceptance of Christ and Christians who seek to reconstruct the historical Jewish roots of Christianity.

Isaac Arama is best known for *Akedat Yitshak*, his philosophical and ethical commentary on the Torah. First published in Salonika in 1522, it has since appeared in many editions. It is usually printed along with *Hazut Kashbah*, Arama's polemical essay against Averroistic tendencies in the Jewish communities of Spain, and his commentaries on the Scroll of Esther and the Book of Job.

MUNK has offered the only English translation of *Akedat Yitshak* to date. Unfortunately, the work is "translated and condensed," making it difficult for the reader to appreciate fully Arama's original text.

HELLER WILENSKY's essay, a summary of arguments from her doctoral dissertation, published in Hebrew as "R. Yitshak Arama umishnato haflosofit" ("The Philosophy of Isaac Arama," 1956), is an excellent articulation of Arama's defense of the traditional doctrine of creation ex nihilo. Following the approach of Harry Wolfson, she systematically presents the philosophical and theological ideas scattered throughout Arama's commentaries. This article remains the finest comprehensive exposition of Arama's philosophical ideas.

PEARL offers a thorough but uninspired exposition of Arama's thought. Situating the philosopher within the general context of medieval Jewish culture, Pearl argues that he was

a minor and unoriginal thinker interesting mainly for the fervor with which he defended traditional Jewish ideas. Although Pearl published his book almost 20 years after Heller Wilensky's major study, he does not refer to her work, nor to any secondary literature on medieval philosophy published after 1954.

In her excellent survey of medieval Jewish philosophy, SIRAT provides a fine summary of Arama and his six principles of faith—creation, divine omnipotence and miracles, prophecy and the revelation of Torah, providence, penitence, and the immortality of the soul—in the context of the debate in late medieval philosophy over Maimonides' 13 principles.

Both FELDMAN and FOX provide nuanced readings of Arama as a philosophical commentator on the Bible, pointing to the significance of the genre of philosophical exegesis that flourished in the medieval period. KELLNER shows how the reaction of people such as Arama against the Jewish Averroists became increasingly sophisticated, using Aristotelian methodology to undercut what was perceived in Aristotelianism as inimical to the faith.

Archaeology, the discipline that attempts to reconstruct the culture and history of antiquity through the excavation and reinterpretation of the material remains of ancient societies, is a relatively new field of study whose beginnings go back to the discovery of Troy by Heinrich Schliemann in 1870. The first to make a genuinely scientific endeavor of Syro-Palestinian or biblical archaeology was Flinders Petrie, who excavated at Tell el-Hesi in 1890. Until 30 years ago, Syro-Palestinian archaeology was the province of biblical scholars, who were principally concerned with demonstrating the historical value of narratives of the Hebrew Bible. Sites associated with early rabbinic Judaism or early Christianity received little attention by comparison, and remains from the Arab and Turkish periods were all but ignored. Today archaeologists working in the Middle East have much broader humanistic goals. The pace of excavation in the region quickened with the establishment of the State of Israel, whose Department of Antiquities oversees all archaeological projects in the country, as do similar departments in their respective countries in the Middle East.

STERN has edited a four-volume work that describes the results of excavations at 420 archaeological sites in Israel, Jordan, Syria, and the Sinai. Two hundred five archaeologists contributed the articles, most reporting on sites they excavated. The chronological scope of the articles extends from the beginning of human occupation to the Ottoman period (16th to 20th centuries C.E.). The reports are augmented by 4,000 charts, plans, maps, drawings, and photographs. Especially helpful to the nonspecialist is the glossary of archaeological, geographic, architectural, and art-historical terms found in the fourth volume.

Those interested in Syro-Palestinian archaeology mainly because of links with the Bible may find these volumes a disappointment. Although there is reference to a site's biblical connections, these volumes are not concerned with relating the archaeology to the Bible. For a connection to be made between an archaeological site and the Bible in these volumes, it is necessary that there be clear archaeological evidence of a connection. For example, the article on Sinai never mentions the Exodus because 13 years of careful excavation throughout the Sinai by several Israeli teams yielded no evidence of a mass migration through the Sinai Peninsula in the Late Bronze Age.

Most of the articles that appear in these volumes were written by the archaeologists responsible for the most recent excavations at the site about which they are writing. Discussion of the significance of the finds is minimal. The approach is technical and descriptive; those expecting a work directed at a more general audience will have to look elsewhere. These volumes reflect the sophistication of archaeology today, which is a scientific discipline in its own right. Its goals are not directly linked to solving problems of biblical interpretation, although biblical scholars cannot afford to ignore the work described in this encyclopedia. This is a most valuable reference work that archaeologists and biblical scholars will find essential in their research.

KENYON provides a more concise statement of the progress of archaeological investigation in the Syro-Palestinian area. She was responsible for the introduction of the methods of excavation and recording that are today's standard in Syro-Palestinian archaeology. The book presents data covering the

beginnings of settled life in the region (9000 B.C.E.) to the exilic period (6th century B.C.E.). Its concern to reconstruct the history of the region with archaeological data reflects the dominant concern of Syro-Palestinian archaeologists as late as the 1970s. The volume is well illustrated with photographs and drawings. That this book went through four editions attests to how helpful students of archaeology have found it. It is a classic in the discipline.

While the goals of archaeology have broadened since Kenyon's time, her contribution to the methodology of excavation and recording has been decisive. Field archaeologists today still use procedures that she developed during her excavations at Tell es-Sultan (Jericho). What has changed since Kenyon's day are the techniques of interpreting the material recovered during excavation. These new techniques have enabled archaeologists to learn more from a site than the mere history of its occupation.

MAZAR offers readers a more current summary of archaeological activity in Israel and Jordan. This important Israeli archaeologist surveys the results of excavations at sites occupied in periods from the Neolithic Age (10,000 B.C.E.) to the end of Iron II (586 B.C.E.). Mazar's decision to end with Iron II unfortunately left much of the biblical period and all of the Second Temple period out of the discussion. Though Mazar describes archaeology as a "professional and secular discipline" that is "free from theological prejudices," his interpretation of the data sometimes does center on the question of the historicity of the Bible's narratives. For example, he asserts that details in the patriarchal narratives (Genesis 12–50) derive from Middle Bronze Age culture. Mazar is scrupulously fair in his treatment of the views of other archaeologists. In fact, the irenic tone of his book does not always make it clear how divergent are the interpretations of archaeological data.

The tone that Mazar tries to create in this work reflects the separation of the departments of archaeology and biblical studies in Israeli universities. This allows archaeologists to pursue their work independently of the agenda of biblical scholarship. The decision to take this approach has made it possible for Syro-Palestinian archaeology to make important contributions to understanding the world of antiquity, although Mazar himself tends to focus on the reconstruction of Israelite history.

FRITZ presents not just a summary of the progress of archaeological excavations, he also devotes about one-third of his work to introductory matters of geography, chronology, the methods of excavation, and the history of archaeological research in the region. While his summary of archaeological excavations is less thorough than those of Kenyon or Mazar, Fritz is more extensive. He includes a brief discussion of the Hellenistic and Roman periods.

This is a fine survey that can serve as a college textbook or as an introduction for the general reader interested in Syro-Palestinian archaeology. It is a manageable volume that acquaints readers with a discipline whose massive detail can overwhelm the beginner. The book contains 58 maps, drawings, and photographs, although still more helpful are the bibliographies that direct readers to more comprehensive works by leading archaeologists and historians.

The relationship of archaeology to biblical studies is an important methodological concern. DEVER, a leading advocate for archaeology's independence from biblical studies, still recognizes the contribution that archaeology can make to illuminating the biblical text. The first of the four essays in his book sets out Dever's views on how archaeology reveals the world of the Bible. The next two essays discuss two periods of biblical history that have been notoriously difficult to reconstruct: the settlement period and the period of the United Monarchy. The final essay deals with archaeological insights into ancient Israel's worship.

The discussion is fair, informed, and stimulating, though some familiarity with Syro-Palestinian archaeology is necessary to appreciate Dever's writings, the most controversial of which deals with the Israelite settlement in ancient Canaan. Here Dever reviews the current hypotheses that attempt to describe the settlement, none of which is completely persuasive. Dever does not suggest another alternative but rather proposes a synthesis that argues that Yahwism was the result of a new ethnic consciousness in central Palestine following the collapse of Canaanite society in the 12th century B.C.E. He takes pains to show how this conclusion can be integrated into a religious faith that believes the Israelite settlement in Canaan to be the work of God.

FINKELSTEIN has edited a volume of essays by Israeli archaeologists who offer studies on the transition from early Israelite society to the monarchy. The Bible itself does not offer a clear description of the socioeconomic considerations that led to the establishment of the ancient Israelite state. An important feature of several of the essays is the setting of this transformation in the larger cultural and political processes of the region. These essays offer a sociological model for understanding this transition as a supplement to the theological perspectives in the biblical text. The emergence of the Israelite national state, then, is seen as a process with discernible socioeconomic contours that are reflected in the archaeological record.

BARTLETT has edited a collection of essays covering much more of the history of ancient Israel, early Judaism, and early Christianity. Among the important topics treated here are the early settlement of Israel, early Israelite religion, the Dead Sea Scrolls, the Temple in Jerusalem built by Herod, and early Christian churches. One notable omission, however, is an article dealing with the synagogues. These essays show that archaeologists today are not focused solely on the reconstruction of history but have much broader social, political, and religious concerns. These are excellent studies that describe the results of important excavations.

For a long time, archaeologists working in Israel focused on sites from biblical antiquity since they wanted to show the historical reliability of Scripture. Sites related to postbiblical Judaism and early Christianity did not receive as much attention since theological rather than historical questions were deemed primary regarding these two religious traditions. MEYERS and STRANGE show the significance of archaeology for the study of Judaism and Christianity in Roman and Byzantine Palestine. They also introduce an important new idea in the interpretation of archaeological data: regionalism. This concept is illustrated by analysis of data that makes up

the cultural profile of ancient Galilee. Other topics covered in this survey are the languages of Roman Palestine, burial customs, art, and architecture. The authors conclude their work with reflections on the importance of the land of Israel in rabbinic and early Christian theology. Meyers and Strange provide a readable and informed summary of archaeological projects related to Roman and Byzantine Palestine. The book helps the reader appreciate the broader cultural goals of contemporary archaeology. The authors show how interpretation of the archaeological record can recreate the world of antiquity in a way that analysis of texts alone simply cannot.

When archaeologists began work on sites from the rabbinic period, their attention was drawn in particular to the excavation of synagogues. LEVINE has edited a collection of essays that show how the results of these excavations have raised new questions and have provided a new understanding of the contours of early rabbinic Judaism in Palestine. In particular, the essays deal with the origins of synagogue architecture and the dating of these structures. A specific issue that is still controversial is the dating of the synagogue at Capernaum. At one time, a consensus that dated the structure to the second or third century C.E. provided a benchmark for dating similar synagogues in Galilee. Loffreda's report on the most recent work on Capernaum, included in Levine's collection, indicates that the synagogue dates from the fourth or fifth century C.E., although essays by others in the volume voice vehement opposition. This well-illustrated compilation also testifies to the diversity of religious and aesthetic sensitivities among the Jews of Roman and Byzantine Palestine. Analysis of rabbinic texts alone does not show the religious diversity of Judaism in late antiquity in precisely the same way as does analysis of the material remains. This makes it clear that archaeology is not an interesting sidelight but an absolute necessity for a balanced view.

Little is known about the synagogue architecture of late antiquity, but since 1958 a number of ruins have come to light. Currently, there are excavations being carried out at Sardis (Turkey), Stopi (the former Yugoslavia), Ostia (near Rome), Hamman-Lif (near Tunis), and Dura-Europos (Syria). The Stopi and Ostia remains represent the only universally accepted synagogues discovered on the European continent. The synagogue at Ostia was discovered in 1961 during construction of a new autostrada to the Leonardo da Vinci Airport. In Sardis, archaeologists stumbled upon the exceptionally important remains of an ancient synagogue in the course of routine excavation in 1958. Because of recent excavations, a wider range of works that discuss the layout and architecture of synagogues in the diaspora has begun to appear. Indeed, many Jewish buildings unearthed have uncertain origins and their exact dating cannot be determined nor can their use specifically as a synagogue be ascertained. Many excavated synagogues have only a mosaic remaining, a tribute to a people who, despite many wars and much strife, continued to decorate their places of worship. One interesting architectural detail common among all five of the diaspora synagogues mentioned is that the interiors of the buildings are extensively decorated while the exteriors are notably nondescript, making much more difficult archaeologists' determination of whether a building was a synagogue or not.

DE BREFFNY states that, "Halakah, the laws, rules, and regulations which govern every phase of Jewish life and human relations, not only of religious but also domestic, social and political, govern only some specific aspects of synagogue design and are silent regarding the style and plan of the building." He notes, however, that according to the Tosefta, the synagogue was to be built on ground higher than that of surrounding buildings and it was to have windows that faced Jerusalem, with gates that opened toward the east. He discusses synagogue orientation and placement of the Torah ark, illustrated by the case of the synagogue at Dura-Europos (third century C.E.), where the wall containing the niche for the scrolls faced Jerusalem. While not restricted to ancient synagogues, this work contains illustrations of the layout of the synagogue at Sardis, photographs of many ancient synagogues, and a brief description of the synagogue at Stobi.

FINE provides a companion volume to the comprehensive exhibition on ancient synagogues mounted by Yeshiva University Museum in New York. A chronological history and a map of ancient synagogues in Israel precede the main text. The book supplies not only an archaeological introduc-

tion but also detailed drawings and photographs of ancient synagogue architecture. Of particular interest is his explanation of archaeological methods. Diaspora synagogues are briefly described in chapter one, along with a list of synagogues currently unearthed. The entire work is devoted to architecture of late antiquity in the Greco-Roman world, and the illustrations and photographs add greatly to an understanding of these structures.

FOSS discusses Sardis from 284 to 616 C.E. Although his treatment of the synagogue is brief, he furnishes the reader with a basic description of the colonnaded forecourt, the stucco walls, mosaic floors, and central fountain. There is further brief description of the various additions that took place from the fourth to the seventh century C.E. and much on the city of Sardis as a whole.

HANFMANN's work is a collection of essays that details results of archaeological digs at Sardis from 1958 to 1975. Of particular note is the essay entitled "The Synagogue and the Jewish Community," which describes the excavations, the forecourt, and the main hall of the Sardis synagogue as well as menorahs and inscriptions found there. The original plans and the early stages of synagogue construction are also clarified. A rich bibliography precedes the main body of the work, and the appendix contains notes to each chapter and a section devoted to illustrations and photographs.

KRINSKY divides her book into two parts. The first part presents general background material on the design of European synagogues. The second part offers descriptions of specific European synagogues that represent various architectural designs and styles. Of special note will be descriptions of the synagogues at Stobi, Sardis, Ostia, and Dura-Europos. The chapter titled "The European Synagogues from Antiquity to Modern Times" deals with rules regarding the location and characteristics of synagogues. The work is richly illustrated, and each chapter is followed by extensive notes.

LEVINE's collection of essays pertains to various synagogues around the world. Taken together, they provide a valuable overview of the archaeological and historical considerations at issue. G. Foerster's essay, "A Survey of Ancient Diaspora Synagogues," provides detailed descriptions of the floor plans at Stobi, Ostia, and Hamman-Lif. Levine admits that the magnificence of the synagogue at Dura-Europos "is not the building itself, but its art." The essay by A. Seager, "The Synagogue at Sardis," provides a detailed description of the layout of the Roman bath-gymnasium complex of which the synagogue is part.

WHITE argues that "the development of normative synagogue architecture through the fourth century C.E. paralleled (rather than preceded) that of Christian church building." This is proved by excavation at Dura-Europos. Chapter four details the transformation of a synagogue from residential domicile to house of worship. The synagogue at Sardis, with its basilican hall, was not originally a synagogue either and may well have been a private dwelling. White provides schematic plans of several synagogues, including Dura-Europos, Sardis, Stobi, and Ostia. There is limited detail on architectural design, but the floor plans offer the reader a clear picture of these early synagogues. Each synagogue is presented under a separate heading, and the significance of each is well demonstrated.

WIGODER suggests that toward the end of the second century C.E. the Roman attitude toward Jews relaxed and “relations with the Jewish community became more peaceful, the economic situation improved, and the next century saw a spate of building.” He describes the orientation and interiors of synagogues and provides photographs depicting both the rich detail of the construction and the decorative mosaics. Of note are the plates showing model reconstructions of the synagogues at Dura-Europos and Sardis as well as column details in the Ostia synagogue.

WISEMAN supplies an in-depth description of the excavation and the architecture of the synagogue at Stobi. Distinctive here is the way in which this structure utilized some of the remaining walls of an earlier synagogue associated with Tiberius Claudius Polycharmus, “the father of the synagogue at Stobi.”

The important works on synagogue architecture can be divided between historical works and photo essays. Both broad surveys and more localized studies are available. In the historical studies, the illustrative matter tends to be sparse and technical, but scholarly analysis abounds; by contrast, in photo essays one finds illustrations of the highest quality, often alongside texts of slender significance. Therefore, readers will fre-

quently find it helpful to use histories and photo essays together, for a survey may have only one dimly-lit photograph of an interior, while a plate in a popular photo essay may show under good light many salient details that one might otherwise miss. It should also be said that there are a number of works that bridge these two categories quite effectively.

The two classic works on synagogue architecture, which set the standard by which all others must be judged, are WISCHNITZER (1955) and WISCHNITZER (1964). These comprehensive and deeply serious volumes discuss the synagogue in its U.S. and European manifestations, respectively. Wischnitzer is known primarily for her work on iconography, and she applies the same acuity of vision as she situates each historical stratum of synagogue architecture within its appropriate social and intellectual context.

KRINSKY continues Wischnitzer’s work in a well-conceived geography of Europe’s synagogues. The most up-to-date work of architectural history reviewed here, Krinsky’s book is organized by locale, and it includes a fine introduction as well as a useful bibliography for further research. The illustrations are disappointingly small and undistinguished, but still this work has great merit.

The books by DE BREFFNY and by WIGODER share a similar tone, which is substantially different from that of Wischnitzer. While Wischnitzer strives to place specific synagogues in historical context, De Breffny and Wigoder are interested, each in his own fashion, with the history of the synagogue as a sort of case study that illuminates the larger history of Jews from ancient to modern times. Thus, individual synagogues serve as illustrations for a broader historical lecture so that a synagogue used by the Jews of Spain becomes an opportunity for discussing the Spanish Jewish experience more generally. De Breffny features historical and contemporary photographs in his book, while Wigoder relies on photographs of the scale models of selected synagogues from Tel Aviv’s Diaspora Museum. Both books are useful to scholars, but they are also suitable for general audiences.

Another classic and extremely useful work is PIECHOTKA’s volume, which includes rare archival photographs of a specific class of synagogue structure, the wooden synagogues of Poland built from the late Middle Ages until World War II. These buildings were among the most architecturally fascinating, iconographically rich, and theologically complex edifices ever produced by Jews, and the photographs and architectural drawings in this book are an invaluable record of monuments that have been destroyed. The text, while sparse, contains as much information as one is now likely to find on these buildings.

KADISH writes a social history as well as an architectural history. Her well-written and finely illustrated volume does not attempt to cover all of synagogue architecture worldwide nor in a single country. Instead, it chronicles through architectural history the singular Jewish experience of London. Kadish’s analysis has both breadth and depth, and it is sensitive to the nuance of social class, the character of individual neighborhoods, and intrareligious politics. The work should be considered a model for the next wave of scholarship in this field.

KAMPF’s work is a product of its period—it is a positivist paean both to modernity and its redemptive possibilities, and

to the Reform movement for its contributions to spiritual expression through architecture. Some readers may consider this perspective a flaw of the work, but nevertheless this is a beautifully produced book with superb black-and-white photographs, and it is certainly useful to scholars investigating this recent chapter of architectural history. Indeed, Kampf's book is a great boon, for it records a reaction expressed when these synagogues were new structures; unfortunately, similar documents are not available for synagogues built in earlier periods.

FOLBERG's opulent photo essay is so gorgeous that the reader may forgive the paucity of its text. The synagogues are often portrayed as unoccupied, testifying to the attrition or erasure of Jews in the areas in which the edifices are found. At the same time, the photographs of the buildings signify the presence, both liturgical and aesthetic, of Jewish culture and history. Thus, the volume captures the essence of the synagogue as a sacred space in a manner unparalleled by other, albeit more scholarly, works.

Aristotelianism

The heritage of philosophical thought bequeathed by Aristotle and its relationship to Jewish thought is tangled and often strongly opposed or rejected outright, and this for three primary but essentially linked reasons—Aristotle's doctrines of causation, necessity, and matter. Because Aristotle was convinced of the eternity of matter, his system neither needed nor allowed for a creator God, but posited merely a sufficient cause or force to set matter in motion, a force, one might be led to surmise, that would be subjected to change itself by the activity of setting things in motion. Further, necessity, ordering the intelligible regularity of cosmic events, linked together the chain of being, leaving no place within the scheme for outside intervention. These three items—the non-necessity of creation, the suggestion or hint of alteration within the first cause, and the impossibility of outside intervention—are all widely perceived to be deeply antithetical to Jewish religiosity. During the heyday of Jewish philosophy in medieval Europe, however, Aristotle's philosophy *was* philosophy and it could not be ignored. The system of philosophical theology developed in the late 12th century by Moses Maimonides is certainly prototypical of the kind of tension this complex situation engen-

dered. To this day traditional opinion is divided as to whether this attempt is irredeemably heretical because it is entirely Aristotelian or whether it is the very model of conventional orthodoxy because it is actually a shrewd attack on Aristotle's system. Beyond a relatively brief period of glory at the beginning of the late Middle Ages, and due to this supposition of fundamental irreligiosity, Aristotelian philosophy is represented in the history of Jewish philosophy and religion almost wholly negatively or, at best when it is affirmed, with pronounced suspicion or hedged about with defensive gestures.

FOX's very evenhanded treatment of Maimonides deals with Maimonides' relationship to Aristotelian philosophy and theology with a fine appreciation for the whole of Maimonides' thought. Of particular interest are Fox's summary of the history of the question of this relationship within Jewish thinking and the sections dealing with Maimonides' metaphysical cosmology, specifically his accounts of divine causality, creation, and petitionary prayer, accounts that set Maimonides at odds with Aristotle. Fox takes the view that Maimonides was a thorough and unapologetic Aristotelian in all cases concerning the sublunary cosmos. Beyond the reach of human experience or prior to the instant of creation, however, Maimonides argued against Aristotle in favor of Plato (actually Neoplatonism) or prophetic insight. Indeed, medieval Aristotelianism as a matter of course combined some form of a Neoplatonic emanation scheme with Aristotle's notion of the eternity of matter.

SIRAT's account of Aristotelianism and its relationship to the development of Jewish philosophy is one of the few sustained treatments of the topic. It is important to bear in mind, especially with regard to the development of Jewish mystical thinking, that the texts of Aristotle along with commentaries were preserved through the early Middle Ages by Muslim philosophers. Prior to their translation into Latin or Hebrew they already had been used extensively in Arabic by Muslim, Christian, and Jewish Neoplatonists. Thus, a certain philosophical syncretism developed, combining an emanative scheme of orders or levels of creation with the notion of the eternity of matter. As Sirat points out, what distinguished an Aristotelian philosopher from a philosopher of another school was the greater number of strictly Aristotelian doctrines held and affirmed. The bulk of Sirat's chapter on the topic deals with the thought of the first strictly Aristotelian Jewish philosopher, the 12th-century Spanish scholar Abraham ibn Daud. She explains how the purpose of ibn Daud's text, *The Exalted Faith*, is to answer questions on the subjects of free will and determinism, and this in two sections: the first on proofs for the existence of the Prime Mover and the second on revealed religion. These two areas of inquiry, according to ibn Daud, come to the same thing. The world's amenability to scientific explanation, its intelligible causal relations as expression of the first cause, cannot be contradicted by revelation, and in truth biblical texts confirm and express the same truth as reason. Philosophy, meaning for ibn Daud the physical sciences, and religion are in fundamental agreement. Sirat is particularly helpful in explaining how the notion of form, passive and receptive in Plato, is transformed into an active and potent principle by the conjunction of Neoplatonism and Aristotelianism. It is this transformation that allows

Platonism and Aristotelianism to coexist fairly harmoniously in an emanative system. In this system, the eternity of matter is now understood as matter's position in a causally linked and teleologically ordered chain of emanations from an all-encompassing source, and matter is now derivative as well as originally "in" its eternal source.

GUTTMANN's chapter on Aristotelianism is the most detailed and exhaustive and therefore the most difficult summary of this complex subject. For the fullest understanding of his narrative, the reader should first peruse the prior chapters on the Kalam (Islamic philosophical theology) and Neoplatonism, for Aristotelianism figures within both. Guttman begins with a very helpful overview of what he considers to be the source of a problem that will only increase in complexity, a dissonance between a "philosophical religion," intellectualist in orientation (that is, more forcibly Aristotelian), and revealed religion. "Jewish Aristotelians attempted to reconcile the oppositions on the basis of the Aristotelian system," a method that found its most successful champion in Maimonides and thereafter fell into disfavor. Following his general summary, Guttman proceeds to discuss in greater detail particular problems such as the relationship of soul to body, the system of emanations and its connection to its source, the natural or supernatural relations of cosmic forces, and free will and predestination. These details are amplified as Guttman examines the function of Aristotelianism in the thought of Abraham ibn Daud and Maimonides. The chapter concludes with a section on the 14th-century theologian Hasdai Crescas, who opposed Aristotelianism's concepts of space and infinity, which maintained the possibility of a vacuum, and Aristotelian necessity in favor of a voluntaristic notion of God's will. In this mode of thought, creation becomes the offspring of goodness rather than necessity.

It is difficult to define the category "Jewish ceremonial art": does it refer to ritual objects made by Jews, or for Jews, or does it include both types of cultural production? Such artifacts may also be cataloged in a variety of ways—by type of object, material of construction, or intended use; some analysts would also separate "folk" objects from "high" art. Scholars in this field debate why the aesthetic impulse of Jewish culture, when turned to the plastic arts, has primarily created objects that the majority culture might well regard as "minor," and they seek also to understand the relationship of Jewish ritual art to secular objects or to the Christian or Muslim liturgical objects that sometimes have influenced the style and form of Jewish creations. Additionally, scholars study how new vessels for new rituals may affect interpretations of Jewish ceremonial art.

The volumes by JACOBS and WOLF and by KLAGSBALD represent the most common approach to discussing Jewish ceremonial art: via the museum catalog. In these works, individual items are described and attributed to various locales—sometimes the categories are as broad as "Sephardi" or "Ashkenazi," and sometimes they are rendered more precisely. Read together, these two texts demonstrate the historical evolution of ideas about the role of the curator: while Jacobs and Wolf simply identify the objects in an exhibition, Klagsbald emphasizes description, comparison, and historical context, thus reflecting a greater cognizance of the intimate relationship between Jewish ceremonial art and Jewish history, which cannot be merely reduced to the object's liturgical purpose or aesthetic sensibility.

ROTH and SED-RAJNA both depart from the catalog format as they each present chapters on ritual objects within their magisterial and comprehensive surveys of Jewish art. These books share common themes—the functional properties of Jewish ritual art and the aesthetic elaboration of functional objects. Recognizing that Jewish tradition uses certain objects for the celebration of holidays and life-cycle events, these authors chronicle the ways in which various Jewish cultures have produced the required ritual items. Roth generally describes high art and fine examples, while Sed-Rajna is more interested in popular or folk creations. Both authors tend to use particular works of Jewish art to illustrate more general conclusions about Jewish praxis. These books are descriptive surveys, and they do not proceed to investigate essential questions concerning ceremonial art as the internal expression of Jewish cultural development in the diaspora.

As the title of his book implies, KANOF studies Jewish ceremonial art to illuminate Jewish practice, rather than placing ritual objects in the context of the communities that produced them. After dispensing with history in the introduction, Kanof organizes his book thematically by holidays, life-cycle events,

and sacred space. The objects described serve as illustrations in a primer on Jewish observances, and differences between objects from different times and places are only considered when they illustrate the particular liturgical requirements of the communities that made them. Kanof does analyze contemporary Jewish ritual art, but he defines it as a new aesthetic approach to eternal ritual needs—old liturgy in new vessels. Therefore, he fails to consider how liturgical reform and innovation may affect the form of ceremonial objects. This omission may seem particularly egregious given that Kanof himself is rooted in the Reform tradition, but the book was produced in an era when Reform was presenting itself as conservative and mainstream rather than revolutionary.

GUTMANN's collection of essays represents a sampling of the opinions and preoccupations of mid-20th-century scholars of Jewish art. It considers the "problem" of the second commandment (which prohibits the creation of images), the origins of various ritual objects, and the relationship of ceremonial objects to Jewish custom. The anthology focuses on religious phenomenology more than historical context, although a couple of the articles do examine subjects (such as guilds, commissions, and artists' identities) that illuminate the social, as well as the liturgical, significance of ritual objects.

GROSSMAN's catalog does not merely describe objects or simply place them in historical context. Instead, she addresses certain essential issues related to Jewish ritual art, explaining how and why the collection in the Smithsonian Institution was created. The book offers an important historical and socio-anthropological analysis of significant objects that Jews collect and display, and it contemplates how the Smithsonian Institution's status as the official site of U.S. culture affects perceptions of the items in the collection. Grossman examines the meaning of ritual art both for the Jews who originally used the objects and for the latter-day Jews (and non-Jews) who exhibit them as symbols of cultural identity.

The catalog from the ISRAEL MUSEUM raises issues of cultural identity similar to those considered by Grossman as it explores how the form of the Hannukah lamp incorporates architectural motifs and monuments from the wider secular environment. The text raises, although less explicitly than Grossman's catalog, issues of the relationship between majority and minority societies, comparisons between grassroots and "high" culture, and the place of the "profane" in cultural productions intended for holy purposes. The catalog leaves unexplored, however, how this particularly transparent example of cultural borrowing affects perceptions of the anti-assimilationist holiday of Hannukah. Despite this omission, this work, like Grossman's, helps to bring the insights of the emerging discipline of cultural studies to the analysis of Jewish ceremonial art.

Relatively recent archaeological discoveries of synagogues have paved the way for the study of Jewish architecture in late antiquity, which, in turn, has revealed much about developments in Jewish art during this period. WHITE (1990) compares the parallel architectural developments in various ancient houses of worship during the first four centuries of the Common Era and focuses particular attention on Jewish, Christian, and Mithraic remains at Dura-Europos in Syria. WHITE (1997) offers more archaeological and epigraphic data to support his conclusions. Chapter four of his first volume and section three of his second volume focus on Jewish materials. His interest in relating archaeology to larger questions of social history has promising implications for future study of art in antiquity.

GOODENOUGH's pioneering and encyclopedic analysis, which appeared in 13 volumes (1953–1968), is a key text in the study of ancient Jewish art. Published under the same title

in 1988, Jacob Neusner's single-volume introduction to and selective abridgment of volumes one, four, eight, nine, and ten makes the materials (including 91 illustrations) accessible to a much wider audience. One prominent theme in Goodenough's discussions concerns the relationship of Jewish artistic expressions to rabbinic opposition to art (cf. Exodus 20:4–6, Deuteronomy 4:15–18, 5:8–10, 27:15; contrast Exodus 31:1–11). His work certainly demonstrates that rabbinic teaching was not followed uniformly by diaspora Jews in the early centuries of the Common Era. It also raises lingering methodological questions both about interpreting the sometimes contrasting literary (e.g., rabbinic) and archaeological (e.g., synagogue artwork) evidence and about appreciating diversity of Jewish expression during this period. Goodenough also sees a connection between the mystical religion of Philo of Alexandria and the first followers of Jesus of Nazareth (i.e., Christian origins), on the one hand, and the Hellenistic Jews who, ignoring rabbinic prescriptions, made many splendid works of art, on the other. In studying their art, Goodenough also tries to learn about the mystical character of these Jews' religion that, in his view, gave rise to such creative expression. When evaluating issues of continuity and change in Judaism of this period, he examines the use of both distinctively Jewish (e.g., shofar) and Greco-Roman (e.g., astrological) symbols in synagogues. In this endeavor Goodenough is concerned not simply with interpreting Jewish art in light of biblical narratives or interpretations in rabbinic writings. Rather, he offers a comparative analysis of Greco-Roman and Christian evidence to ascertain the contemporary symbolic significance of various images for these Jewish communities.

Although Goodenough's work merits the lasting legacy of having opened up a new body of evidence that continues to attract scholarly attention, some of his interpretations have justifiably received pointed criticism. For example, URBACH rightly questions Goodenough's theses that prohibitions of Jewish art were absolute before 70 C.E. but of little or no consequence thereafter and that the spheres of influence of the Jewish "sages" (who allowed art) and the Sages, i.e., rabbis (who opposed it), were completely separate. On the latter point, funerary inscriptions on Jewish sarcophagi reflect contrasting perspectives on art—that is, copious ornamentation or a lack thereof. The fact that these sarcophagi were, nonetheless, buried in the same locations attests to an even wider diversity of opinion on this subject in Judaism. More significantly, Urbach offers an economic explanation for the prevalence of Jewish art in late antiquity: after the destruction of the Temple and the Bar-Kokhba revolt, much of the rural Jewish population migrated to cities. Because a larger number of Jews were exposed to life in the Greek polis, there was greater interaction with Greco-Roman and, later, Christian art. Moreover, Jewish craftsmen often found themselves in the sometimes precarious position of needing to work for non-Jews. An intriguing variety of rabbinic responses—ranging from outright condemnation of art to the giving of extraordinary dispensations to Jewish artists—attests to the then widely recognized and debated problem of Jewish artists' ostensibly assisting in the making of idols for pagans.

Continuing, expanding upon, and updating the work of Goodenough, HACHLILI (1988) discusses Jewish art and

architecture in the land of Israel in the Second Temple period (part one) and in late antiquity until the time of the Arab conquest in the seventh century C.E. (part two). The second part of the volume deals exclusively with evidence from synagogues and includes chapters on iconography and symbolism; origins and sources of Jewish art; a comparison of Jewish and Christian art; distinguishing features of Jewish art; and the dating of synagogues. HACHLILI (1998) complements Hachlili (1988) and discusses Jewish art and architecture in synagogues of the diaspora. In general, Hachlili offers a balanced presentation of Jewish art, recognizing both decorative and iconographic functions as well as local influences and more wide-ranging motifs in synagogues. Of particular interest is her thesis that the same "general pattern books" were used by Jewish, Christian, and pagan artists and her support for Urbach's contention that Jewish artists worked regularly for non-Jewish as well as Jewish clients. Like Goodenough, however, Hachlili puts forth some controversial hypotheses. She maintains that in the Second Temple period Jewish art was limited to "aniconic, non-figurative designs." Only in the third century C.E. did art come to have symbolic significance, in part as a reaction to Christian influences. Like Goodenough, Hachlili posits that Jewish objects and elements (menorah, Ark of the Covenant) are said to have had a symbolic value, but unlike Goodenough, she claims that non-Jewish ones did not. Finally, Hachlili argues "that during late antiquity there evolved a specific Jewish art." Accordingly, Jewish artists always assumed a distinctively Jewish framework into which Oriental, Greco-Roman, and Christian elements were incorporated. Hachlili notes that what often differentiates Jewish art, especially in the diaspora, is the addition of Jewish symbols (frequently the menorah) to non-Jewish artistic motifs. Both of Hachlili's volumes include many photographs and illustrations.

Three other books merit brief mention here. Most pertinent for this subject in LEVINE are essays by Joseph Gutmann, Gideon Foerster, and Bezalel Narkiss; those by Foerster and Narkiss are complemented by illustrations at the end of the volume. Gutmann surveys the state of research subsequent to that of Goodenough on the Dura-Europos synagogue paintings (240s C.E.). Foerster examines the art and architecture of the synagogue in its late Roman setting and maintains that "Galilean synagogues . . . are a local, original, and eclectic Jewish creation," reflecting diverse influences of the second century C.E. Finally, Narkiss discusses pagan, Christian, and Jewish elements in the art of ancient synagogues. Particularly notable in Narkiss's essay is the Christian influence on Jewish art and vice versa: clearly neither Christians nor Jews lived in isolation from one another or from the influence of the greater Greco-Roman milieu. GUTMANN (1973) includes seven essays by seven scholars, including Gutmann, on various aspects of the paintings at the Dura-Europos synagogue. GUTMANN (1989) contains 17 of his other essays and articles (originally published between 1961 and 1988) on a variety of subjects related to Jewish art.

Little has been written about Jewish asceticism, perhaps because it has been assumed generally that Judaism is devoid of or opposed to ascetic practices. As interest in the study of the human body generally and of asceticism specifically has recently grown, however, scholars have turned their attention to the ascetic aspects of Judaism. The following survey covers early reports of Jewish ascetics, as well as a pioneering study of Jewish asceticism and several more recent endeavors.

Perhaps the most famous descriptions of Jewish asceticism are by PHILO, a first-century C.E. Alexandrian Jew and a noted Platonist. In his writings he describes a group of Jewish ascetics called the Therapeutae who practiced celibacy, followed a rigorous regimen of eating sparingly and infrequently, and spent much of their time in prayer and study. Philo has also left a written account of the best-known group of Jewish ascetics in late antiquity, the Essenes, whose practices included, at least for some, celibacy and the renunciation of private property. (See JOSEPHUS for another

description of the Essenes by a contemporary of this Second Temple sect.)

Some 19th-century scholars suggested that those figures identified as "hasidim" in Second Temple and rabbinic literature were actually Essenes. For these scholars, the main implication of this identification was that nascent rabbinic Judaism was more heterodox than traditionalists would admit. Such an identification would also mean, however, that at least some Essenes traveled and were esteemed in the circles from which rabbinic Judaism grew. This fact, in turn, would imply a positive rabbinic attitude toward the ascetic practices of the Essenes. BÜCHLER vigorously rejects the identification of hasidim with the Essenes. He determines the characteristics of the hasid by examining the use of the term in both the Psalms of Solomon, written shortly after the beginning of the Roman occupation of Palestine in 63 B.C.E., and rabbinic sources. He concludes that in both contexts the hasid is characterized by extreme kindness and generosity toward others rather than by acts of self-denial. The conclusion to be drawn from Büchler's study, therefore, is that rabbinic praise of the pious does not include the celebration of asceticism, at least in its primary forms of self-denial.

More recently, however, scholars have reconsidered the question of asceticism within rabbinic Judaism, contending that, under the influence of Christianity, most studies of asceticism have focused on celibacy, thus excluding rabbinic Judaism, with its commitment to the commandment to "be fruitful and multiply," from analysis. In fact, contemporary students of asceticism have come to recognize increasingly that asceticism may exist in many different forms. FRAADE (1986) reviews earlier discussions of Jewish asceticism and then offers his own definition, which is broad enough to include behaviors other than celibacy in its purview but not so broad as to be meaningless. In light of this relatively expansive understanding of asceticism, Fraade reviews the evidence related to asceticism in pre-rabbinic and rabbinic Judaism. He finds scattered evidence of ascetic behavior in pre-rabbinic literature and evidence of what he calls "ascetic tensions" in rabbinic literature itself. In other words, he argues that although ascetic behaviors such as celibacy were not adopted by the rabbinic community, there were those within that community who were inclined to ascetic practices. FRAADE (1990) translates and comments on some of the central biblical and rabbinic texts relating to the nazirite, the clearest example of an ascetic persona in the Bible.

Perhaps the broadest, most ambitious study of Jewish asceticism is that of BIALE. Beginning with the Bible and ending with Woody Allen and Philip Roth, Biale identifies the rich variety of attitudes towards sexuality within Judaism. Most importantly, he emphasizes the degree to which rabbinic Judaism expressed ambivalence about sexuality, and he shows how that ambivalence resulted in limited celibacy among both Jewish mystics and some 18th-century hasidic circles. His discussion of the way in which, for the kabbalists, male-female sexuality is merely a reflection of the erotic union of the male and female aspects of the Godhead as well as an instrument for its realization is particularly fascinating. While in one sense this view heightens the significance of human sexuality, it also shifts the erotic focus of the kabbalistic male from the

human to the heavenly realm, reducing his wife to the status of a necessary earthly means of achieving a cosmic end.

Talmudic attitudes toward sexuality are explored at some length by BOYARIN. He begins from the perspective that Judaism is much more “embodied” than Christianity; that is, Judaism, at least in its biblical and rabbinic formulations, views the human being as a body animated by a spirit rather than as a spirit trapped in a body. This perception is consistent with Judaism’s emphasis on the importance of works generally and of procreation specifically, but the emphasis on embodiment leads to a stratification of the genders that gives greater status and power to males than it does to females. In particular, males are entrusted with the study and interpretation of Torah, the central commandment of rabbinic Judaism. The Talmud describes how in pursuit of study men often spent many years away from their wives and children, becoming, as Boyarin puts it, married monks. More provocatively, Boyarin notes the degree to which Torah study is eroticized in rabbinic sources, with the Torah being described as God’s daughter and Israel’s bride. In this sense, Torah is “the other woman,” who draws scholars towards her and away from their flesh-and-blood mates. Thus, while rabbinic Judaism esteems the physical and regards procreation as God’s will, it also creates a never-resolved tension between this obligation and that of Torah study.

As Biale and Boyarin imply, a crucial difference between Jewish and Christian ascetics is that Christians may choose celibacy, enabling them to remain solitary and familiarly unencumbered, while Jews may not avail themselves of this option, and therefore any asceticism on their part inevitably affects their families as well. DIAMOND has analyzed a number of talmudic narratives that consider the effects of the Jewish ascetic on his family. While a number of these texts are neutral or hostile towards the ascetic’s impositions on his household, some narratives imply that he is doing his loved ones a service by assuring them a greater portion in the world to come. Once again, then, rabbinic sources reflect a deep ambivalence about asceticism.

While few works discuss biblical and rabbinic asceticism, even fewer deal with asceticism in the medieval and early modern periods. A notable exception is JACOBS, even though his work does not deal exclusively or even mainly with asceticism; its goal is rather to paint a vivid picture of Jewish saintliness throughout the ages, and ascetic behavior forms an important part of that portrait. In a chapter entitled “Saintly Extravagance,” Jacobs describes the extremes to which Jewish saints, including hasidic masters and Lithuanian devotees of the Musar movement, went in matters of eating, sleeping, and sexual and social relations in order to attain and maintain their saintly state. His work clearly shows that at least among the Jewish spiritual elite, many forms of asceticism have been embraced as means toward the achievement of spiritual perfection.

The term *Ashkenazim*, referring to Jews of North European descent, came first to be associated with the German lands and was later expanded to differentiate the culture, language, religious rituals, and other customs of Central and Eastern European Jews from those of the Spanish-Portuguese Sephardim. Until the 18th century, Sephardim were more numerous and more influential than Ashkenazim. Since that time, however, the position has been reversed, the disproportionate devastation of the Ashkenazim in the Holocaust notwithstanding.

The Ashkenazim originally settled an area of the land near the Rhine River that they called Loter (Lorraine) in about the 6th century C.E. By the 14th century their presence had expanded to encompass all the lands known now as Germany as well as parts of France, Austria, and Italy. Thereafter they moved primarily eastward to Poland, the Czech, Slovak, and Hungarian lands, Lithuania, the Ukraine, and Belorussia. From the Middle Ages to the age of the Enlightenment, the Ashkenazim in the cities frequently lived in a Jewish quarter. Eastern European Ashkenazi demography also featured the predominantly Jewish village, or shtetl. Torah and Talmud study were highly valued in both the cities and the villages, and centers of learning moved eastward from the Germanic lands through Poland and Lithuania as the Ashkenazim settled in these areas. From the 18th through the 20th century, Ashkenazim emigrated primarily to England, the Americas, Palestine/Israel, Australia, and South Africa.

WEINREICH presents a partial account of Ashkenazi Jewry through the history of the primary Ashkenazi language, Yiddish. He believes that “the history of Yiddish and the history of Ashkenaz are identical.” Although his study focuses primarily on issues of structural linguistics, several chapters offer a clear description of how the Ashkenazim moved from the Germanic lands eastward and spread the use of Yiddish. Weinreich describes Jews in lands apart from Germany originally using other languages, with Yiddish slowly growing to achieve dominance as the Jews from the Germanic lands migrated to other areas in Europe and Eurasia. Weinreich uses maps and diagrams to show centers of Ashkenazi culture shifting from Worms and Regensburg to Prague, Brest-Litovsk, Krakow, and Vilna. For a general history of Ashkenazi migrations, these chapters serve as a particularly helpful and stimulating discussion.

PATAI offers an extremely useful survey of the main distinguishing features of Ashkenazi, Sephardi, and Oriental Jewry. In the first section of the book, he deals with issues of demography, migrations, language, and differences in culture and folk beliefs. His article on Jewish languages is particularly interesting and comprehensive. The second major division of the book deals with specific diaspora communities, Ashkenazi, Sephardi, and Oriental. In his extensive treatment of the Ashkenazim, he emphasizes the largest contemporary communities outside Israel, such as those of France, England, Russia, Argentina, and the United States. Although his book does not cover much of the traditional Central and Eastern European heartland, Patai is still able to balance his study between the historical development of Ashkenazi cultures and their current demographic features and status. In addition to the essays on Ashkenazim and Sephardim, the book also includes special sections on less well-known Jewish communities, such as those of Iraq, Iran, and the Caucasus. Because of its coverage of such a wide variety of Jewish communities, this book successfully points out the most distinctive features of Ashkenazi culture in contrast to those of other communities. In some cases, however, readers should watch for overly generalized statements about Jewish accomplishments in specific cultures.

AGUS focuses on the history of the earliest Ashkenazim, the German and French Jews in the tenth and 11th centuries. He posits that during this era, a “process of selection” occurred that guaranteed that the strongest members of the Jewish community would survive and thrive despite the constant chaos around them. The book is divided into 11 chapters, each of which explores a particular feature that helped to ensure the survival of the Franco-German Jewish communities. Agus devotes several chapters, for example, to business and trade and describes how Jewish merchants from different communities worked together and provided shelter for each other. He also provides detailed explanations of Jewish administrative autonomy, the strong community organization that created some kind of security, and the Jewish communities’ relations with the gentile nobles who relied on them for business. Agus bases his study on rabbinic responsa, archival holdings, and other primary sources in addition to a vast variety of secondary literature. Although readers should be cautious about the Social Darwinist interpretations that Agus offers, this book

is most valuable for understanding the roots and later growth of the Ashkenazim and their culture.

ISRAEL offers the most comprehensive history of European Jews, both Ashkenazi and Sephardi, for the early modern period in Europe. His discussion includes all relevant Eastern and Western European nations. He claims that, the great migrations eastward notwithstanding, Western European Jewry was also exceptionally vibrant during this period. Israel focuses on the economic and political roles conceived for Jews by ruling classes in different nations. He explains in detail the privileges granted to Jews by Rudolf II of Bohemia and by the Polish nobles in the late 1500s. He also deals with Jewish cultural and political autonomy, particularly in Poland, Lithuania, and Germany, and he argues that it was during the period 1550 to 1750 that Jewish culture experienced its highest level of cohesion and autonomy in Europe. Another highlight of this book is his extensive discussion of the role of Jewish financiers and military suppliers in different rulers’ courts. Israel does a particularly good job of balancing materials on Jewish economic and cultural development and juxtaposing the history of Jewish autonomy with the history of the different nations in which they settled. The book contains extensive bibliographies of primary and secondary published sources and archival documents.

ZIMMELS offers a compelling study of the differences between theological beliefs and religious practices of Ashkenazim and Sephardim. His book is divided into three parts: a general survey and history of Ashkenazi and Sephardi religious thought; an outline of the most important divergences in the two subcultures; and a selection of topics covered by rabbis of both communities in their responsa. In the first section, Zimmels discusses the relations between Ashkenazi and Sephardi rabbinic leaders and documents 1,000 years of cultural exchange, influence, and tension. The remainder of the book details differences in practice, for example, in Hebrew pronunciation and script, or in customs relating to birth and death, marriage and divorce, or festivals and fasts. The communities’ respective stringencies and leniencies are given special attention. The book is clearly intended for specialists, and it is well supported by extensive annotations. However, the lay reader also will find much of interest in this absorbing and felicitously written narrative.

SHULVASS focuses primarily on little-known aspects of Ashkenazi history. The essays in his book touch on both Western and Eastern European Jewry, the Ashkenazim in Italy, and the medieval Ashkenazi migration to Constantinople. Shulvass believes that the study of the “problems of communal reorganization and acculturation” faced by Ashkenazim “when they established a new life in Eastern Europe, in Italy, and on the Balkan peninsula” can provide significant insight into later Jewish migration to North America. He organizes his essays into three main topics: Germany and Western Europe, Eastern Europe, and Italy and farther south. After essays on the Ashkenazim during the crusades and the medieval Ashkenazi community, Shulvass reviews the rich history of the Ashkenazim in Poland, Lithuania, and Russia. Shulvass’s essays on Eastern European Jewish history and Torah study provide a usefully concise overview of Jewish life in all the Eastern European

lands. The other essays in his book focus on the Ashkenazim who chose to migrate to Italy, beginning in the 13th century C.E. He describes the strong cultural differences between the Ashkenazi emigres and the Sephardi and Italian Jewish communities in Italy. Shulvass writes in a colloquial, easy-to-read style, and his book is perhaps best for nonspecialists, for it does not include an index or footnotes.

SZAJKOWSKI also focuses on little-known aspects of the Ashkenazi experience. He deals with the strong cultural differences and disagreements that emerged among three distinct Jewish communities in France over the course of five centuries. Well buttressed with extensive references, Szajkowski's article explores issues of trade as well as culture among the Sephardi, Ashkenazi, and Avignonese Jews. He shows that the Sephardim at times had greater privileges in trade than the Ashkenazim. The article also offers details about the reactions of different Jewish communities to the antisemitism of Enlightenment figures such as Voltaire as well as members of mainstream Catholic French culture. The article ends with a study of the growth of the Ashkenazi population in France prior to World War II.

Assimilation denotes the complete absorption of a minority into the dominant society. This essay will examine several critiques of the assimilation concept. In their 1947 tract, HORKHEIMER and ADORNO discuss with irony the difference between the liberal and the antisemite. According to

Horkheimer and Adorno, for the liberal, the "Jewish question" was a mere pretext for discussion, while for the antisemite, the "Jewish question" was the most critical issue of the day. Liberal toleration was predicated on the belief that emancipation would eventually lead to the elimination of all cultural differences between Jews and gentiles and lead to the complete absorption of the Jews. Jews are seen as being part of a universal humanity who should erase the uniqueness of their culture. Antisemites, however, resent the continuing existence of Jewish cultural differences and the failure of Jews to completely assimilate. Antisemites have a consistent position: one of hatred. Liberals, on the other hand, are inconsistent.

ERSPAMER's study argues that those who seek to enter into a dialogue with "Otherness" must first resolve a dialogue within themselves. Efforts toward resolving this internal dialogue often result in an attempt to make the "Other" more similar to the self rather than an appreciation of the otherness for what it is and a resolution of the difference in a spirit of mutual respect.

ARENDT (1951) analyzes the internal contradictions inherent in the position of 18th-century advocates of tolerance: "The particularly tolerant, educated, and cultured non-Jews could be bothered socially only with exceptionally educated Jews. . . . Jews were exhorted to be educated enough not to behave like ordinary Jews, but they were, on the other hand, accepted only because they were Jews, because of their foreign exotic appeal." SCHOLEM contends that the willingness of reform-minded Germans to promote Jewish equality over the centuries came about "under the presupposition that Jews were willing to give themselves up as *Jewish* to an ever more progressive extent." To desire to "tolerantly" bring about the assimilation of the minority leads to an intolerant backlash when members of the minority group refuse to comply.

KRISTEVA points out that "the absorption of otherness proposed by our societies turns out to be unacceptable to the contemporary individual, jealous of his difference—one that is not only national and ethical but essentially subjective, insurmountable." Neither the principles of the antisemites nor those of the advocates of assimilation were acceptable to the Jewish community as a whole. According to SARTRE in his landmark study, the antisemite wishes to deny the Jew status as a human being and "leave nothing in him but the Jew, the pariah, the untouchable," whereas tolerant liberals wish to deny the Jews status as Jews and leave nothing in them but the human being, "the abstract and universal subject of the rights of man and the rights of the citizen." This leads to a difficult situation because, as Kristeva puts it: "A new homogeneity is not very likely, perhaps hardly desirable."

ARENDT (1978) points out that emancipation should have been "an admission of Jews as *Jews* to the ranks of humanity, rather than a permit to ape the gentiles or an opportunity to play the *parvenu*." In the absence of such full acceptance of otherness, Arendt argues, pariahdom is preferable to conformity to an unjust society. It accords a stance from which to criticize that society. The *parvenu* is not "born to the system, but chose it of his own free will, and . . . is called upon to pay the cost meticulously and exactly, whereas others can take things in stride." For Arendt, the question of being a *parvenu* or a pariah is nothing less than a choice between social ambition and political consciousness. Only a pariah can develop a true political

consciousness because only pariahs can affirm their political identity and push for minority rights. Pariahs tend to be resisters, whereas parvenus are liable to be politically malleable.

Historically, Jewish outlooks on astrology have been as diverse as those of other cultures. While ancient and premodern scientists often treated astrology along with astronomy as a legitimate area of investigation, it eventually lost its place in the canon of mainstream science. And while many religious thinkers—even those denying fatalism—have embraced astrology as part and parcel of their theological world-views, many others have rejected it as a form of idolatry.

ALTMANN provides a useful reference guide to biblical, apocryphal, talmudic, midrashic, and later scholarly sources on astrology, including both philosophical and kabbalistic literature. Moving through the bulk of significant resources, he compiles a list of relevant figures and texts, drawing attention to a variety of passages and providing examples of many of the astrological beliefs held by Jews through the ages.

In his dissertation, NESS draws upon historical and archaeological data to argue that the Jews of late antiquity integrated many aspects of the surrounding polytheistic astral religion into their faith, but this synthesis was tempered by their commitment to monotheism. In effect, Ness asserts that the pagan astral gods were absorbed into Judaism during this period as astral angels subordinate to the single God of Israel. After charting the development of astrology from its origins in Mesopotamia through its treatment in the Greek world, Ness turns to an examination of this phenomenon in the Jewish world of late antiquity, and he ends his study with an analysis of a variety of Jewish "zodiac mosaics" that test his broader thesis. This study includes a very useful bibliography as well as extensive footnotes.

In the context of a chapter on Neoplatonism, SIRAT addresses the issue of astrology and Israel in the medieval context. While Sirat concludes that there is no particularly Jewish astrology, the reader is introduced to a number of uniquely Jewish applications of astrology, including a discussion of the talmudic claim that "Israel does not depend on a star" and the role of this statement in the medieval debate between Abraham bar Hiyya and Judah ben Barzillai regarding the status of astrology's permissibility and/or efficacy from a Jewish perspective. Sirat divides astrological discussion in Jewish texts into two main categories: using astrological information to chart Israel's historical progress toward the era of the Messiah; and turning to astrological considerations to explain some of the divine commandments. In light of these two groupings, Sirat offers details of the cosmologies and the ethics of Abraham bar Hiyya and Abraham ibn Ezra as examples of predominant Jewish proponents of astrology.

In his extended essay on astrology in Abraham ibn Ezra, LANGERMANN (1993) presents a picture of a Jewish figure whose astrological views reflect the general 12th-century Spanish intellectual culture, in which "astrology provided one of the primary mechanisms for naturalistic explanation." At the same time, however, Langermann cautions that ibn Ezra's astrological views may sometimes be overemphasized in assessments of his biblical commentary and overall thought. This latter point notwithstanding, Langermann makes clear the extent of ibn Ezra's astrological knowledge and analyzes his employment of astrological details in his exegetical work. Langermann considers ibn Ezra's discussions of climatological celestial influences and "astrological geography" (the idea that the land of Israel, by virtue of its spatial relation to a certain special celestial configuration, is holier than other places). The article also reviews ibn Ezra's claims about the impact on one's soul of stellar configurations at birth as well as his frequent explanations of biblical commands along astrological lines. Additionally, Langermann explores the extent to which ibn Ezra equates Jews and non-Jews with respect to celestial influence, noting his differences from Yehuda Halevi on this issue.

For an English translation of one of Abraham ibn Ezra's astrological works, see LEVY (1939) and LEVY (1927).

STERN presents a more detailed discussion of the use of astrology to ground the rationale of biblical commandments. In addition to exploring a variety of related issues, Stern's essay specifically addresses the debate between Maimonides and Nahmanides on the role of astrology within Judaism: where

Maimonides contests the truth and efficacy of astrology, Nahmanides supports them. Maimonides, focusing on the Sabian historical context of the early Israelites, sees certain commandments (specifically, the *hukkim*—that group of biblical prescriptions, such as the sending of a scapegoat, whose reasons are not apparent) as designed to wean Israel away from inefficacious pagan astral practices (where the name *hukkim* according to Maimonides highlights their role as negating the *hukkot ha-goyim* or “customs of the nations”). Nahmanides, instead, sees the *hukkim* as an acknowledgment within the Law of the efficacy of astral powers: for Nahmanides, the reason the Law prohibits certain forms of astrology and idolatry in general is precisely because they do represent real forces in the world. In effect, Stern discerns within Nahmanides’ treatment of the *hukkim* a “vigorous anti-Maimonidean defense of the veracity of astrology.”

Turning to Maimonides’ views of astrology, FREUDENTHAL stresses the importance of distinguishing between “natural astrology” (the schema of Aristotelian cosmology and science), which Maimonides does not contest, and other types of astrology, which the philosopher rejects. By tracing the roots of astrology in medieval science, Freudenthal usefully reminds the reader who is unsympathetic to astrology that Maimonides’ own opposition must be evaluated in its historical context, rather than according to modern standards. The author emphasizes that Maimonides’ view was intellectually anomalous in his time, at odds with the beliefs of many mainstream rabbis and scientists, before offering two rationales for Maimonides’ repudiation of astrology: first, astrology contradicts the fundamental notions of free will and “indeterminism” in Maimonides’ thought; second, astrology is not compatible with Maimonides’ epistemological skepticism.

LANGERMANN (1991) also evaluates Maimonides’ unequivocal renunciation of astrology, dividing the philosopher’s arguments along two major lines. First, Maimonides argues against astrology on the basis of a distinction between real science and pseudo-science—while true Aristotelian science is characterized by a firm grounding in first principles, the pseudo-science of astrology operates on the principle of induction (*tajribah*), drawing conclusions through repeated observations alone. The second line of argument that Langermann delineates in Maimonides’ thought centers on the relationship between astrology and the forbidden practice of astral worship. Committed to defending God’s unity and transcendence, Maimonides charges that the astrologers have wrongly confused physical astral powers with nonphysical efflux (*fayd*), and therefore they have mistaken the merely physical influence that the stars have on the earth for a far greater power. Furthermore, this very mistake has led to false reverence for the stars, which, in turn, has lent undue support to astral worship. Langermann concludes by examining how Maimonides’ view of free will relates to his rejection of astrology. Langermann denies, however, that Maimonides’ opposition to astrology is based on his rejection of determinism. The paper includes invaluable references to the primary and secondary scholarly literature as well as to pertinent manuscripts.

Australia was the last continent where a Jewish community was established. Jews, estimated to number between six and 14, arrived as convicts on the First Fleet, which established the first European settlement on the continent in January 1788. Until 1933, the Jewish community, always numbering about 0.5 percent of the population, was predominantly British in origin and Orthodox in the British United Synagogue mold. Between 1933 and the early 1950s the size of the community doubled, from approximately 26,000 to approximately 52,000, chiefly through the extensive immigration of prewar German Jewish refugees and postwar Holocaust survivors. This growth resulted in a considerable religious diversification of Australian Jewry; a successful Jewish Reform movement was established at this time, and the Orthodox spectrum broadened to include strictly observant communities and other synagogues defined by their Religious Zionist orientation. The first full-time Jewish day schools were established in the 1940s in Sydney (Moriah College) and Melbourne (Mount Scopus College), the two main centers of Australian Jewish life. From the early 1950s until the end of the 1990s, the Jewish population of Australia doubled again, to approximately 105,000, through heavy immigration and internal growth. By 1999 there were approximately 65 synagogues in Australia, approximately 55

Orthodox (of varying types) and approximately ten Reform. There were no Conservative or Reconstructionist synagogues. More notably, Australia contains no fewer than 18 full-time Jewish day schools, with more than 10,000 students. Rates of intermarriage and assimilation among Australian Jews are remarkably low by diaspora standards, and Australia appears to be a diaspora community with a promising future.

New Zealand has always had a much smaller Jewish community than Australia, numbering no more than a few thousand. Refugee immigration during the Nazi period was minimal, and by the 1960s the community, centered in Auckland and Wellington, was in some danger of extinction. However, the recent immigration of ex-Soviet Jews and the foundation of day schools in Auckland and Wellington have contributed to a revival of the community, now numbering about 4,000.

Before the 1970s, histories of the Jews in Australia and New Zealand tended to be old-fashioned congregational narratives, often written by well-meaning amateurs. Since then, and especially since the mid-1980s, there has been an explosion of academic research on this subject, only some of which is highlighted here. The excellent *Australian Jewish Historical Society Journal*, published biannually, contains many articles, often on religious history, and reviews of all relevant new books. The main theme that has emerged from recent writings has been the sui generis but very successful adaptations of Jewish immigrants to the remote conditions of Australia. Most recent scholarship has discussed political and social questions; issues concerning the development of Judaism as a religion in Australia have perhaps been neglected, although as this survey shows, not ignored.

ARON and ARNDT have written a sophisticated commissioned history of the Melbourne Hebrew Congregation, a long-established synagogue associated with Melbourne's Jewish elite and old families, which recognized (until 1989) the British Chief Rabbi as its ultimate head. The authors trace the congregation's evolution into a less Anglo-Jewish, more broadly based institution under the impact of European immigration.

GOLDMAN, an English-born Orthodox rabbi in Melbourne from the 1930s until the late 1950s, wrote pioneering histories of Jews in Victoria (the state of which Melbourne is the capital) and in New Zealand. His history of New Zealand—now, unfortunately, a scarce collector's item—is a well-written general account, touching on all aspects of the development of the community.

The two volumes edited by GLUCKMAN and GLUCKMAN contain nearly 100 essays by Auckland Jews, ranging from general communal histories to individual biographies and reflections on the future of New Zealand Jewry. Perhaps ten of the articles deal directly with New Zealand Judaism and its evolution.

MOSENSON's work is a history of the Jewish community in Western Australia. Remote not merely from the world's centers of Jewish life but also from the well-established communities of Melbourne and Sydney, Western Australia's community nevertheless developed in a way that was recognizably similar to Jewish societies in eastern Australia. Recently, Western Australia has experienced very rapid growth

in its Jewish population, due especially to the heavy settlement of South African Jews.

PORUSH was a distinguished Orthodox rabbi who led Sydney's Great Synagogue in the postwar decades. The Great Synagogue, located in central Sydney, is often regarded as the most prestigious synagogue in Australia. Porush traces the history of the "Great" from the early 19th century to the 1970s, skillfully combining personal reminiscences with wider material on the evolution of Australian Jewry, especially in New South Wales.

Victoria has been the largest and most dynamic Jewish community in Australia during most of the 20th century, originating many trends imitated elsewhere. It is notable for the size and piety of its Orthodox community and for the quality of its secular Jewish leadership. RUBINSTEIN's history of the Victorian community was written on the 150th anniversary of European settlement in Melbourne, and it covers all aspects of religious life.

The two-volume history of Australian Jewry by RUBINSTEIN and RUBINSTEIN totals more than 1,200 pages. It is arranged thematically, with more than 200 pages devoted to the development of religious life. The history of each synagogue is given, and an account of all significant rabbis as well as a broader picture of the evolution of trends in Australian Judaism is included.

RUTLAND's book covers the whole history of the Australian Jewish community in all its aspects from 1788 until the late 1980s in nearly 500 pages. Great stress is placed on the broadening of the community as a result of the arrival of Holocaust refugees and survivors. The second edition of this work contains a 12-page summary of events from the mid-1980s until the mid-1990s.

Studies of the Jewish community (*kehillah*) can be incredibly dry when approached from the vantagepoint of the many rabbinic and lay officials and their sundry tasks. A fascinating fundamental question, however, lurks behind these various studies that gets to the heart of matters of Jewish identity and survival: How much control did the Jewish community and/or the rabbis really have over the members of the community? That is to say, were the various sanctions and punishments described in the rabbinic literature and communal enactments (*takkanot*) actually carried out and, if so, by whom—the rabbis, the lay leaders, or the secular authorities?

There are several basic questions concerning the Jewish community that need to be answered not out of a sense of revisionism (which can be intellectually stimulating) but to honestly come to grips with the forces that controlled Jewish destiny over the centuries. First, what were the origins of the Jewish community? Do the various Jewish communities around the world represent examples of a universal continuity inspired by internal influences and rabbinic traditions, or do they reflect radical departures based on significantly different local circumstances? Second, can traditional Jewish communities be described as democratic? Or was leadership in the control of an intellectual or financial elite that allowed for very little popular input? Third, were the communities controlled by rabbinic or lay leaders? Although many of the sources were written by rabbis, did their ideal depictions of Jewish society reflect the political realities? These questions, often unstated in the hundreds of studies of various Jewish communities, are of more than academic interest because, whether discussed implicitly or explicitly, they probe the basic issues of Jewish originality, adaptation, and assimilation in addition to the specific problems of leadership, authoritarian or voluntary, and coercion, especially in matters of corporal and capital punishment. These matters are all connected to larger questions of whether the Jews constituted a polity since the destruction of the second Temple and whether they developed political theory and institutions during that period. These questions inform the often torturous discussions today about the nature of Jewish communities around the world, particularly in light of attempts to resuscitate Jewish political sovereignty in the State of Israel, an effort that has been marked by some success over the years.

AGUS presents an important but dated survey of the life of a major rabbinic figure, several studies on Jewish community self-rule, and a translation of a digest, often cited by later writers, of Rabbi Meir's responsa. Agus's book is marred by the outrageous theory that contends that questions about the ori-

gins of European urban societies can be explained by long-standing and unchanged democratic, free, just, and egalitarian Jewish influence on the development of aspects of these Christian institutions. Agus resolves important questions about rabbinic authority by concluding that the rabbis, unaided by secular authorities, wielded great moral authority in their communities. It was, however, the lay Jewish leaders who claimed coercive powers, including corporal punishment. Much of Agus's theory, however, is based on what seem to be tendentious assumptions about the dating of materials and parallelisms, which can hardly be evidence for influence. Reviewing Agus in *Speculum* (1967), the eminent medievalist Robert Sabatino Lopez notes, "The truth, [Agus] implies, is that the Jews have invented everything and surpassed everybody."

BAER, in one of his major ingenious but usually contradictory studies, tries to argue that Jewish communal organization was an immanent creation of Jewish history. He attempts to revise the then-current view that undermined the essential rabbinic aspects of the Jewish community and attributed them to external medieval contingencies. He argues that rabbinic law does recognize an organic communal unit. He also argues that the community, nevertheless, was never viewed by the sages of the Talmud as an autonomous unit with the right to make decisions by majority rule. It was, however, a concept found in ancient nonrabbinic Jewish literature, an assertion that he supports with extrarabbinic (Christian) texts and rabbinic archaeological inscriptions. Baer thus asserts that the idea of a *kehillah kedoshah*, a holy community, can be traced back prior to the destruction of the Temple and through talmudic literature, an assertion he seems to have negated earlier. Baer champions both the democratic and original nature of the Jewish community, demonstrating how it anticipated any such Christian developments in Europe, which by the 12th century overtook Jewish developments and influenced them. But like so many Jerusalem historians Baer resolves the tension between internal (acceptable) influence and external (unacceptable) influence by suggesting that the Jews ultimately only borrowed from the Christians those features that were inherent in earlier aspects of Judaism, in this case communal organization, making Christian culture nothing but a cryogenic freezer for storing Jewish artifacts until it was time for them to be revived as the situation required.

BARON, who, following Graetz and Dubnow, produced the greatest synthesis of Jewish history in the second half of the 20th century also published a classic three-volume study on the history of the Jewish community. The first volume traces the history of the Jewish community from biblical to modern times, the second examines specific themes, and the third contains notes and a bibliography of valuable sources on every pertinent subject. Baron's work is both balanced and blunt. He emphatically dismisses rhetoric about democratic features attributed to the Jewish community, preferring terms such as oligarchy, and acknowledges the lack of information concerning the origins of the Jewish community, the limited role of rabbis in Jewish communities, and the influence of external factors. Despite his profound attempt to minimize the role of the rabbis and traditional rabbinic law in Jewish communities and to stress the role of the wealthy members of the community, Baron accentuates the religious nature of the Jew-

ish community. His descriptions of floggings, bans, and even capital punishment, however, may (following his own cautions) reflect more rabbinic theory than actual practice. Rabbinic theory, it must be remembered, was based not only on a polemic against powerful lay leaders but also on one against Christians who tried to diminish the dignity of Judaism by claiming, with allusion to Genesis 49:10, that the scepter had departed from Judah. Baron pays significant attention to the role of women, negating the presence of separate seating in early synagogues and affirming the role of women leaders of synagogues.

BONFIL studies the relationship between rabbis and lay leaders in early modern Italy. He notes the tension between established precedents, such as calling priests to the reading of the Torah first, and the desire of the rabbis to alter such traditions to enhance their prestige, e.g., by being called before the priests. Bonfil notes that in the serious matters of rabbinic authority such as adjudication, however, the authority of rabbinic autonomy, especially as a court with jurisdiction, was not recognized and that the rabbis functioned as judges only in matters of arbitration agreed upon in advance by both parties. The reason, he notes, was due to church objections to Jewish jurisdiction. According to Bonfil, the Jewish community also placed many obstacles in the way of the rabbis, such as decreasing their income and instituting an ever-higher minimum age of ordination, in order to limit their authority and their ability to control the community, sometimes by means of radical devices such as excommunication.

ELAZAR has collected a series of essays by leading scholars that focus on the central questions of rabbinic and communal authority throughout Jewish history. Bernard Susser and Eliezer Don-Yehiya note clearly the political agendas of authors when writing about Jewish political theory, especially regarding the use of the coercive powers of the host regime by an autonomous medieval community, which they characterize as a novelty in Jewish history. The juxtaposition of autonomous and host, however, seems to be slightly contradictory. Menahem Elon's essay touches on all the important historical matters related to questions of authority; however, his conception of historical development seems somewhat lacking in nuance. He posits monolithic centers of Jewish influence, massive transformations, and excessive communal autonomy, which he then goes on to undermine in more nuanced terms. Elon, like so many others who deal with the question of the use of force by the Jewish community to impose its will, cannot square theoretical with practical matters and so sidesteps the fundamental question by resorting to the expedient explanation of the community relying on moral authority. Gerald Blidstein provides one of the most thorough discussions of the basic texts about Jewish communal authority as well as the secondary literature.

FINKELSTEIN's classic study of the Jewish community introduces and reports in both English and Hebrew the basic texts of medieval Jewish communal life. Despite sound agnosticism on many of the important questions about the development of the Jewish community, Finkelstein, nevertheless, allows apologetics to fill some of the historical gaps. He does, therefore, see the Babylonian talmudic academies as exercising centralized authority over the Jews, a position that may

reflect more the aspirations of talmudic texts or Finkelstein himself than the reality of the period. He emphasizes that the origins of the Jewish community in Europe are obscure and that the Jews there had to develop their own courts, which administered civil and some aspects of criminal justice, again taking a moderate position in light of many of the more encompassing aspirations described in the rabbinic literature. He notes that there was no clear definition of the authority of the rabbis and traces some of the obscure origins of rabbinic authority outside of Palestine. In Babylonia these included simple recognition by the litigants in each case, authorization by the exilarch, or acceptance by the secular authorities. In Europe, however, the sources of rabbinic authority are less clear. Finkelstein suggests that it may have derived from early communal vows to of obedience or an ancient authorization by authorities in Palestine. Such a problem, he notes, was occasionally addressed by rabbis who attempted to introduce the institution of ordination in Europe. Classic examples of Finkelstein's apologetic include the artful dodge on the question of rabbinic authority by saying that the rabbis had no need for police power or physical force. Similarly, in referring to the 13th-century edict against wife beating by the French rabbinic authority Peretz bar Elijah of Corbeil, Finkelstein concludes, "This crime was one that rarely, if ever, gave trouble to the Jews of the Middle Ages." Responding to the same edict, Louis I. Rabinowitz notes in his *Social Life of the Jews of Northern France in the XII-XIII Centuries* (1938) that "the prohibition may have been the result of an addiction to the habit" and refers to "the prevalence of the custom of wife-beating." Similar apologetics on the parts of Finkelstein emerge when he discusses monogamy among the Jews and the medieval rabbis' ability to limit the unfair advantage the brother-in-law held over a childless widow, a position certainly belied by current practice today, which leaves many women chained as *agunot*.

GITELMAN collects several important essays that attempt to probe traditional Jewish texts for signs of political theory but usually find them wanting. Central to many of the essays is the attempt to wrestle with the question of the developmental nature of the texts and the applicability of traditional theoretical texts to real situations. In other words, the authors address the lack of not only a clear theory but a clear precedent so that over the ages Jewish communities had to formulate, often from scratch, principles such as discretionary powers to override traditional laws. Such a power to deal with immediate threats was indeed often seen as extending beyond the prerogatives of the court to members of the community.

KATZ is a classic study of a Jewish community, in this case the Jewish community of Eastern Europe at the end of the Middle Ages and the beginning of the modern period, the 16th to the 18th centuries. Key to Katz's book is precisely the question of the role of traditional Jewish law and rabbinic authority in the management of the community. As a result, he provides a magisterial account not only of the traditional texts but of the ways in which the Jewish community departed from them, both in matters of the rights of the minority, the development of customs, and the role of communal enactments. Katz's writing is incisive and his observations often stunning; in particular he notes many of the paradoxes of Jewish life.

One such example is the extent of Sephardi legal influence on the quintessentially Ashkenazi Jews of Lithuania and Poland, particularly in the manner in which informers were destroyed, following Katz's literal understanding of the texts. Key to understanding the nature of authority in Jewish community life in Eastern Europe is the fact that rabbis often served for very limited periods of time, having little opportunity to become an entrenched force in the community, or alternatively they bought their positions, enjoying the benefits of their office like a bishop would his bishopric but not necessarily for reasons of spiritual or intellectual attainments. Coercion, contrary to so many myths, was in the hands of the secular government, and, paradoxically, these powers were used by the Jews to support any independent authority they might have had. Similarly, most judicial decisions were rendered by lay leaders weighing the merits of the case rather than by a resort to rabbinic legal precedents, although excommunications were issued in cooperation with rabbinic leaders.

MORRELL draws on all previous studies of the Jewish community and the relationship of rabbis to it, reading the primary sources again very carefully. He asserts boldly that, although there were communal institutions in the time of the Talmud, rabbinic literature paid little attention to them. He demonstrates the attempt of later rabbinic authorities to reconcile the development of communal control with talmudic texts. The process that Morrell describes is one in which communal authority gradually shifts from the religious court to the lay leaders who gain the authority to overrule talmudic rulings or to justify practices such as majority rule that had no talmudic basis. He offers examples of texts that indicate that the rabbis have the ability to fine, ban, and flog, but the extent to which they exercised these abilities remains in question. Morrell compares the 13th-century views of the Ashkenazi authority Rabbi Meir of Rothenberg with the Sephardi Solomon ibn Adret as well as with later authorities in Italy, the Ottoman Empire, and Eastern Europe on the question of under what circumstances the majority of a community may impose its will on the minority, an important contribution to the study of the development of the idea of coercion in the Jewish community.

One of the central issues in Judaism today is how to reconcile the autonomy of the individual with the needs of the community. For the U.S. Jewish community in particular, this challenge takes place on two levels. On one level, there is the question of whether individual Jews are entitled to make their own religious choices or whether they must obey external authorities. Must an individual observe *kashrut* (dietary laws), or is that a matter of personal choice? And if it is a matter of personal choice, does that decision have to be made on the basis of certain established criteria, or can the person make a personal decision based on completely subjective factors? On the second level, there are questions of how the Jewish community can and should orient religious belief and practice in the context of an open society such as the United States.

ROOF investigates these issues of autonomy as they reflect the concerns of U.S. Jews born after World War II. As the "Baby Boomer" generation has matured, becoming the parents of Jewish school children and forming the bulk of congregational membership in all U.S. Jewish denominations, members of that generation have brought liberal social perspectives to their respective religious institutions. Roof describes how these individuals grew up "in a post-60s culture that emphasizes choice, knowing and understanding oneself, the importance of personal autonomy, and fulfilling one's potential—all contributing to a highly subjective approach to religion." Roof argues that the Baby Boomers are a generation of seekers and that denominational loyalties that were once taken for granted can no longer be assumed.

Eugene Borowitz is a Reform Jewish theologian who has dealt with autonomy and related issues in great depth. In BOROWITZ (1984) he asks, "must we observe all the Commandments and traditions?" In response, he explains that in the Reform movement, the right of individual self-determination has always held a treasured place, but that in the late 20th century the concept of *mitsvah* in the sense of ceremonies and symbols commended if not commanded has become a more popular position in the movement.

In BOROWITZ (1990), the author addresses the inherent conflict between autonomy and tradition. Borowitz argues that "the Reform of Judaism to meet the situation of an emancipated Jewry became possible only when, even unconsciously, human autonomy could be asserted and given precedence over the authority of Jewish tradition." He explains that Moses

Mendelssohn asserted autonomy in the theological realm but remained orthodox, while Israel Jacobson believed that it was the individual Jew's right, as well as his duty, to follow his conscience and that this autonomy was more important than conforming to the dictates of tradition.

While all of the Jewish denominations in the United States have had to deal with the question of autonomy versus conformity, the Reform movement has taken a particularly clear position on the issue. MEYER describes how that element of the Jewish community has attempted to meet the challenges of modernity and address conflicts between individuality and communal loyalty. Meyer asks, "What, after all this history and contemporary divergence, binds the Reform Movement together?" If each individual is entitled to use his or her personal autonomy to make independent religious decisions and groups of Jews in different communities, cities, or countries are free to move in dramatically different directions, then "where is its diachronic and synchronic continuity?" Meyer admits that "in some respects very little" holds the Reform community together, but he also explains that the early reformers believed that Orthodoxy could not meet the challenges of the modern world, and therefore the Reform movement developed a concept of an evolving Judaism as the best hope for Jewish religious survival. Personal religious autonomy lay at the heart of such a theological system.

SILVERSTEIN considers the theme of autonomy in the course of his study of the Reform movement in the United States from 1840 to 1930. He argues that scholars have taken two distinct approaches when evaluating the movement. Many earlier works focus on Reform as theology. This perspective led to studies focused on rabbinic leadership, ritual debates, and ideological platforms. In contrast to this approach, many of the more recent studies have concentrated on social and cultural changes and their impact on the Jewish community. The religious autonomy enjoyed by all U.S. citizens allowed for the development of a pluralistic religious system.

In the United States today, autonomy is taken for granted by most Jews. Even some participants in the contemporary Reform movement, while reiterating the centrality of religious autonomy for each individual and community, believe that there is a dire need for greater direction and structure in Jewish society. WERTHEIMER describes how the four principal U.S. Jewish denominations have met the challenges of post-World War II society, confronting the "fragmenting world of organized Judaism."

Arnold Eisen is one of the leading intellectuals seeking to provide Jewish theological responses to the challenge of individual and communal religious autonomy. In EISEN (1997), he argues that it is possible to revitalize Judaism in the United States by rebuilding a relationship with Jewish tradition. Eisen uses each of the five books of the Torah to demonstrate how Jews can find meaning in their tradition and hence choose to continue the covenant that their ancestors made with God.

In EISEN (1998), he argues that there has been a massive transformation of Jewish religious belief since the beginning of the 19th century and that these changes "continue to perplex Jewish communities and shape Jewish religious options today." Asserting that it may be more useful for the scholar to concentrate on the study of religious practice rather than that belief, he contends that contrary to many simplistic accounts, Jews did not go through a straightforward three-stage process of adopting Enlightenment ideas, casting off traditional Judaic beliefs, and then modifying or even rejecting the concept of the performance of the mitzvot. Rather, "Jews for the most part navigated their way through modernity's unfamiliar terrain much as we do today: via *eclectic patterns of observance and varied, often individual, sets of meanings discovered in those patterns or associated with them*" (emphasis in the original).

Literally "master of the Name," the designation *ba'al shem* (pl. *ba'alei shem*) first achieved a widespread currency among late 17th-century German-Polish Jews after they became acquainted with practical Kabbalah. Originally, the term applied only to distinctive men who were said to know God's secret name and to use that name for miraculous ends. The first man to bear the title proper was Elijah of Chelm, who flourished around 1500. Two centuries later, the phenomenon developed into a profession, with *ba'alei shem* wandering the countryside writing amulets, prescribing empiric medicines, performing miracles, and engaging in the casting out or summoning of spirits. The early 18th-century figure Rabbi Israel ben Eliezer—the Ba'al Shem Tov ("master of the good Name," an alternative form of the title)—was the founder of modern Hasidism, and he stands as the most prominent and best-known of the group.

NIGAL's treatment of Hasidism and hasidic stories represents the most comprehensive monographic introduction to the topic. In his first chapter, Nigal explains the term *ba'al shem* and introduces his readers to the types of miracles and personalities included under this designation. The following seven chapters address issues with which *ba'alei shem* dealt or that appear in hasidic stories about them. These include *kefitsat haderekh* (the miraculous reduction of long distances), transmigration, spirit possession and exorcism, intermarriage with demons, battles against the forces of evil, journeys to the Garden of Eden and back, and the power of amulets. Nigal includes accounts of early and later *ba'alei shem* as well as the negative responses of detractors as early as the preeminent medieval authorities, Hai Gaon and Maimonides. Some of the sources Nigal uses, such as *Ma'aseh Nissim*, are available only in Hebrew, and therefore the appearance of this work in translation holds an extra measure of importance for its English-speaking audience.

The earliest work to touch upon the subject of *ba'alei shem* and their powers is the *Chronicle of Ahimaaz*, a record of the internal affairs of an Italian Jewish family claiming to trace its lineage to the Judeans exiled to Italy by Titus. The chronicle also reports several accounts of miracles—exorcisms and transmutations—worked by holy men harnessing the power of God's secret name. Written by Ahimaaz ben Paltiel of Capua, the chronicle ends in 1054 in Byzantium, thus establishing a high medieval terminus a quo for *ba'al shem*-like activity in Europe. SALZMAN's English version includes a 60-page introduction in which the editor discusses the influence of Arabic poetry on Ahimaaz's literary style, provides a review of previous literature on the topic, attempts to reconcile the chronicle with history (a task that often proves impossible), and offers a valuable and informative analysis of the text as a genealogical and literary document.

Perhaps the best-known of books about *ba'alei shem* is DOV BAER of Linitz's collection of stories about Israel ben Eliezer, the Ba'al Shem Tov (Besht), who is considered the founder of Hasidism. In 1814, Israel Yofeh of Kopys set the manuscript in type and added 17 pages on the Besht's mother, bringing the number of tales to 251. A few of these stories concern earlier *ba'alei shem*, such as Rabbi Adam and Rabbi Samuel. Ben-Amos and Mintz's modern English translation of this Yiddish-Hebrew work aims to preserve the original character of Dov Baer's manuscript; it shifts person where Dov

Baer shifted and repeats itself where he did. Ben-Amos and Mintz note that two images of the Besht emerge from Dov Baer's collection; one version portrays the Besht as a simple yet pious man whose greatness was kept secret until he reached his 30s. The other depicts a wandering *ba'al shem* whose supernatural gift was always known as he traveled the countryside performing miracles. Aside from such editorial comments, the work is valuable because it makes the tales of the Besht available to English readers.

ROSMAN's groundbreaking study of the Besht has an entirely different purpose. Where Dov Baer intended to publicize his master's miracles, Rosman approaches the Besht as the vehicle through which modern researchers can better understand Hasidim and, by extension, much of modern Jewish religion and experience. In his search for the historical Ba'al Shem Tov, Rosman discounts those sources that are the most susceptible to ideological interpolations and interpretations (such as Dov Baer's manuscript). Instead, Rosman relies on authenticated correspondence of the Besht, contemporary testimonies and texts, and posthumous letters. He also presents an analysis of the environment from which the Besht sprang, the 18th-century Polish town of Miedzyboz. As Rosman states, he is interested in the Besht's place in life, rather than in theology.

ADLER focuses his attention on "Dr." Samuel Falk (1710–1782), the Ba'al Shem of London. A friend of Moses David of Podhayce (the "Ba'al Shem of Podhayce") and a follower of Shabbetai Tsevi, Falk was in the business of contacting kings and other royal personages with offers of talismans, magic rings, and alchemical adventures. Later, he moved to London where he seems to have withdrawn increasingly from his public persona, preferring instead the quiet life of a private citizen, although he earned the title "Ba'al Shem of London" nonetheless. As he recreates Falk's life, Adler uses a number of sources in various languages, including letters from supporters, the writings of detractors (R. Jacob Emden and R. David Azulai), the memoirs of Benjamin Goldsmid (whose family held power of executor for Falk's estate), as well as Falk's diary, will, and epitaph. While later scholars tend to include Falk among the *ba'alei shem* without compunction, Adler retains more ambivalence, evidently regarding the title as one of high honor not to be accorded lightly: "Whilst on the one hand we dare not class him among worthies who have borne the designation of Baal Shem, it would be equally unjust to stigmatise him as a rank imposter." PATAI's chapter on Falk describes the exploits of the same individual from a different perspective. Patai bases his research on the diary of the Catholic Polish Count Rantzow, who recorded his firsthand experiences with the miracle-working Jewish alchemist in the mid-1730s.

ALEXANDER analyzes the tales of the exploits of R. Judah the Pious and his father Samuel, two of the earliest *ba'alei shem*, in terms of Hebrew hagiographic literature. Alexander notes that many of the activities attributed to Rabbi Samuel—riding a lion, creating a golem, his triumph over a priest using sorcery, and his rescue of a doomed Jewish community—conform to the Jewish and universal pattern of the legendary hero. The same point holds true for his son Rabbi Judah, who eclipses his older brother Rabbi Abraham and eventually

becomes an even more potent *ba'al shem* than his father. Alexander aligns the Rabbi Judah stories with the four stages of the Jewish hero evident in Jewish hagiographic tales. Rabbi Judah, however, is not followed by his son, as is typical in Jewish hagiography. Rather, Rabbi Eliezer of Worms, Rabbi Judah's prize student who greatly toned down the behavior of his teacher, inherits the *ba'al shem* role for the next generation. This factor, combined with the problem that all these stories were composed some 300 years after Rabbi Judah lived, causes Alexander to question the authenticity of the tales, the manner in which they were composed, and the elements influencing their composition.

Ba'alei teshuvah, masters (or exponents) of return (or repentance) in the Hebrew idiom, are Jews who recommit to the strict practice of Judaism. The concept of *teshuvah* (return), which is grounded in the Torah and Talmud, refers to the process of repentance and atonement that makes it possible for those who have not been living religiously Jewish lives to affirm their religious commitment and identification with the Jewish community. Since the late 1960s, the term *ba'alei teshuvah* has been applied to Jews who have had little or no exposure to Judaism during childhood and thus are returning to their historic roots rather than a prior state of religiosity. The literature reviewed here consists primarily of social science research studies of the institutions that educate and socialize the returnees and the experiences of the men and women who return.

AVIAD describes the young people who attended *ba'alei teshuvah* yeshivot in Jerusalem in the late 1970s and the educational institutions themselves. Her examination is based on participant observation at the yeshivot, oral interviews, and a written survey of 375 students—66 percent males—some of whom were born in Israel and others in the diaspora. The American *ba'alei teshuvah*, as well as some of their counterparts from other parts of the world, were part of the youth culture that was disenchanting with materialism. The Israelis,

on the other hand, were disillusioned with Zionism, which they associated with a secularism that produced social problems. Aviad notes the extent to which the ultraorthodox faculty of the yeshivot for ba'alei teshuvah disparage Western culture and are in some cases also anti-Zionist. She reports on the importance ba'alei teshuvah attach to being authentically Jewish, and she concludes that, for the most part, they come to feel more integrated and confident than they did before they became religious.

DANZGER covers much of the same ground as Aviad but provides a more comprehensive history and description of the American orthodox context. The author conducted more than 200 interviews in the United States and Israel and was a participant observer in ba'alei teshuvah yeshivot. He found that although secularism had a strong hold on American Jews, the civil rights movement of the 1960s, which emphasized ethnic identity, and the emergence of an antiestablishment counterculture spawned a group of Jewish hippies who were open to learning about orthodoxy. Orthodox groups in Israel and the United States responded by creating ba'alei teshuvah yeshivot and implementing strategies for recruitment: extending invitations to homes, instituting outreach programs for adults, and running special activities for young people. Danzger discusses typical curricular distinctions in the education of male and female ba'alei teshuvah, and cultural differences between "black hat" and "knitted kippah" yeshivot are also described.

Danzger identifies several themes in the "return" narratives of ba'alei teshuvah. Some find that what they considered success in their former lives is no longer meaningful. Others, described as seekers, see divine providence operating in their lives. Some ba'alei teshuvah become religious because of a fiancé, sibling, or other family member. The author also describes some of the difficulties ba'alei teshuvah face in orthodox life and belief, and he notes a tendency among them toward "exaggerated conformity." His informants stress that family relations can become problematic but that maintaining ties with parents and religious relatives as well as integration into orthodox communities is critical.

DAVIDMAN focuses on previously secular American women in the process of returning to Orthodoxy (*ba'alot teshuvah*). The participants in her ethnographic study were predominantly single women, some studying at Bais Chana, a Lubavitch residential seminary in St. Paul, Minnesota, and the others taking part in outreach activities sponsored by Lincoln Square Synagogue, a modern Orthodox congregation on the Upper West Side of Manhattan. The Bais Chana women were for the most part in their 20s, those at Lincoln Center about ten years older. Davidson immersed herself in these communities to learn firsthand about the processes of ideological conversion and socialization and to discover how women who were part of these communities viewed their experiences.

Both groups of women began to return to Orthodoxy in response to discontent and a subjective feeling of meaninglessness. The Lincoln Square women saw themselves as making a rational choice, whereas the Bais Chana women believed that their return was determined by divine providence. Similarly, the Lincoln Square participants were less likely than those from Bais Chana to express their religious turn in spir-

itual terms. The desire to live traditional lives as wives and mothers was a strong motivating factor for both groups of women. The religious leaders at Lincoln Square Synagogue accommodated to modernity whereas those at Bais Chana resisted it.

DAVIDMAN and GREIL investigate the impact of gender on the experience of return by comparing responses to interviews with 26 ba'alei teshuvah and 25 ba'alot teshuvah at Lincoln Square Synagogue. They describe three distinct search paths—accidental, casual, and committed—and identify gender differences in the paths taken. Women were somewhat more likely than men to have had an accidental search, whereas men were more likely to have had a committed search. Women were more likely than men to have discovered Lincoln Square through a personal contact. Both men and women were drawn to this Orthodox synagogue because of its sense of community. Men found particular satisfaction in participating in public worship. Women who were disturbed about gender roles in Orthodoxy were more likely to have left the synagogue or remained nonobservant than men who were uncomfortable with gender roles.

Like Davidman, KAUFMAN examines the lives of middle class ba'alot teshuvah. She had "loosely structured conversations" with 150 predominantly married, newly Orthodox women living in five U.S. cities. She found some differences in the socioeconomic backgrounds and spiritual orientations of the hasidic and nonhasidic participants. Even though many of these women did not identify with feminism, they incorporated many feminist values into their identities as Orthodox Jewish women. They celebrated their roles as wives and mothers and found meaning in living sex-segregated lives. Kaufman notes commonalities (as well as distinctions) between these newly Orthodox women and the trend in American feminism that has emphasized gender difference.

The Southwest Asian empire of Babylonia flourished in the lower valley of the Tigris and Euphrates rivers from roughly 2100 B.C.E. to 689 B.C.E. and then again in the "Neo-Babylonian Period" as Chaldea from 625 B.C.E. to 538 B.C.E. The obvious importance of Babylonia for biblical studies and later Jewish history provided the original impetus for scholarly investigation of the history and culture of this region, but the continuing publication of cuneiform archival materials from Babylonia and its environs has made it the subject of serious study in its own right. In fact, while there remains a great deal we do not know about Babylonia, the very numerous studies that have been written from a wide variety of perspectives make it one of the most exhaustively studied cultural entities of the ancient world.

BRINKMAN investigates the political history of Babylonia from the second dynasty of Isin (c.1158 B.C.E.) to the death of Shalmanezzar V (c.722 B.C.E.). He considers the written and archaeological sources, establishes a chronological framework for the period including the proper dynastic sequence, and supplies a detailed diachronic narrative of political events. In addition, Brinkman provides an in-depth analysis of the role of large foreign populations such as Kassites, Sutians, Chaldeans, and Arameans. Since the last two of these peoples are especially prominent in the Hebrew Bible, this work will benefit students of biblical studies considerably. Moreover, it is an invaluable source of historical and political context for the events leading to the eventual destruction of Samaria. Brinkman also treats the government and army in a separate section of the book and supplies several useful appendixes and a lengthy bibliography.

CONTENAU's focus on the everyday life of the Babylonians makes this work unique among the sourcebooks on Babylonian history and culture. After establishing the geographic limits and the factors that shaped Babylonia, he explores the region's people and nearly every possible aspect of Babylonian life. Topics covered include the societal structure, family life, architecture and the plastic arts, homes and furnishings, clothing, food and drink, agriculture, business, and standards of exchange. In addition, Contenau provides an in-depth discussion of the intellectual achievements and religion of the Babylonians, devoting ample space to the Mesopotamian ontology and their belief in the power of words as well as to music and cultic practices. The subject matter and breadth of this pocket-size work breathes life into the ancient records, effectively presenting a people rather than a mere assemblage of cuneiform texts and ceramic wares.

FRAME details the written and archaeological sources for the period between 689 and 627 B.C.E. and discusses the various players of the period: Akkadians, Chaldeans, Aramaeans, Elamites, and others. The focus of his work is Babylon under the reigns of the Assyrian monarchs Sennacherib, Esarhaddon, and Ashurbanipal. Frame also examines the Babylonian state, the institution of the monarchy, the administration and military complex, as well as Babylonian foreign policy. Also supplied are several useful appendixes on economic texts, Babylonian officials, the difficulty of precise dating, and a few specific campaigns of Ashurbanipal. Frame's bibliography offers an impressive array of sources for advanced research. The period under Frame's microscope is an important one for biblical studies, and this work provides a richer context than can be found in comparative works attempting to cover a multiplicity of ancient Near Eastern societies.

HOOKE's small survey of the fundamental aspects of Babylonian and Assyrian religion is premised upon the author's assertion that "some knowledge of Babylonian religion is indispensable for a proper understanding of the development of Hebrew religion." Hooke's optimistic view concerning our ability to reconstruct the nuances of Babylonian religion and the importance of a full understanding of the religion for elucidating Israelite cultic and religious practice informs the subjects he discusses and the organization of the book. He outlines the textual and archaeological sources, the cultural background of the religion, the pantheon, temple buildings and personnel, rituals, Babylonian and Assyrian mythology, religion and daily life, divination, and astrology. Though it is somewhat naive in its monolithic treatment of the subject and is in need of an update, the book retains value both as a broad introduction to Babylonian religion and for its comparison of Babylonian and Assyrian religious practices. Hooke also supplies an appendix containing select ritual texts.

NEUSNER's chronologically presented series picks up where several of the other works cited here leave off, around 140 B.C.E. His historical study is divided into the following units: the Parthian period; the early Sasanian period; from Shapur I to Shapur II; the age of Shapur II; and later Sasanian times. Throughout, Neusner aims to "synthesize existing knowledge of the subject and, at a number of points, to add to that synthesis." He continues the works of previous scholars in tracking the influence of developing Parthian culture upon the Jews of Babylon. Omitted from his study are certain aspects of the history of Babylonia that are well treated elsewhere, for example, Parthian-Roman relations and Parthian cultural history. His work is filled with talmudic citations, many of which have seldom been interpreted historically.

OATES introduces readers to the chronology, geography, economy, people, and institutional powers of Babylon, as well as to the textual sources for its study. She divides her internal investigation of Babylon into four distinct periods: from Sargon of Agade to the Larsa kings, the Old Babylonian period, the Kassite and Chaldean period, and from the post-Kassite period to Hellenistic Babylon. One of the distinctive aspects of Oates's book is its reliance on both textual and archaeological evidence to tell a more complete story of Babylon. The nearly 140 illustrations distributed throughout the book also make for an interesting visual accompaniment and allow Oates

to achieve her aim of leading “the general reader to further knowledge and the serious student to more analytical sources.”

SAGGS (1995) focuses on the history and culture of ancient Babylon. Following a chapter on the rediscovery of Babylon, from which students of biblical studies will benefit much, Saggs clarifies the prehistory and later historical periods of Babylon. Though the book is organized according to the various periods into which scholars divide Mesopotamia in history, Saggs’s emphasis is on the people and their culture, though Babylonian literature is given less space than the social, historical, and economic overviews of the city and its environs. With photographs, maps, chronological charts, and a select bibliography for advanced reading, this book is the perfect starting point for the study of Babylonia.

SAGGS (1902) is more comprehensive than the above introduction and also boasts a very large selection of high-quality photographs. After a chronological construction of the history of Babylon, Saggs develops several diachronic thematic studies on such topics as law and statecraft, administration and government, trade and commerce, magic and religion, the religious role of the king, literature, mathematics, astronomy, and medicine. Saggs concentrates to a greater degree than other works on this subject on the complex relationship between the powers of Babylonia and its northern neighbor and frequent aggressor, Assyria. In fact, this work is essentially a study of both ancient powers. This perspective allows Saggs to present the political history of the region with remarkable clarity. Two of the work’s distinguishing features are a chapter devoted to the prehistoric period of the region and a chapter on the physical and intellectual legacy of ancient Babylon, both of which make accessible a larger context for understanding the city and its people. For students seeking a deeper knowledge of the subject, Saggs also provides a select bibliography at the end of the book divided by chapter.

Leo Baeck was born in Posen (Posnan) to a rabbinical family. His formal education prepared him to be a rabbi, but he emerged as a community leader, a teacher, and a philosopher as well. His intellectual capacity to rephrase the questions of Judaism and to provide contemporary answers, and his moral strength to share the fate of his community during the Holocaust made him the leader of German Jewry and an exceptional personality of the 20th century.

ALTMANN’s subject is Baeck’s relationship to the mystical tradition. Baeck discovered the significance of the mystical tradition in modern Jewish thought early in his career, but his attitude developed over the years from rejection to incorporation of this dimension into his theology. Altmann traces this development, showing how the Kabbalah was treated in Baeck’s dissertation as a “mental delusion,” and how this view remained the same in his published work *The Essence of Judaism*. During his debate with Protestant scholar Adolf von Harnack, Baeck is seen slowly recognizing the mystical trend of thinking. He explains that Jewish mysticism stems from the harshness of Jewish life and is a form of escapism. In an essay published in 1911, *Die Parteien im gegenwaertigen Judentum*, he differentiates between Jewish mysticism and so-called mere mysticism. He presents three major trends of postbiblical Jewish religious history: talmudic, philosophical, and mystical. He saw mysticism as part of normative Judaism. In *Wege im Judentum* he goes one step further: man for him become a cosmic being. He had discovered the essential nature of the Kabbalah. The second, much enlarged edition of *The Essence of Judaism* (1922) is shown by Altmann to represent a new orientation. His appreciation of mysticism and its relation to the ethical aspects of Jewish philosophy are expressed. “Mystery” is recognized as creating a fruitful polarity with “commandment,” and a final statement of his view on mysticism is given in his last major work, *This People Israel*.

BAKER offers a full account of Leo Baeck, his career, his life, and his historical background. The thorough exploitation of extensive sources, including interviews, archival materials, memorabilia, Baeck’s own writings, and secondary literature, makes this book a well-documented and intimate biography. The index and the detailed notes render the book additionally useful.

BAMBERGER’s lecture introduces Baeck as a man. Beyond his public image, the reader becomes familiar with the personality of Baeck. Bamberger raises questions that contemporaries asked and answers them from the perspective of someone who knew Baeck well. Bamberger’s point is that Baeck was not a popular speaker who offered easy or entertaining sermons; rather, he made heavy intellectual demands upon his congregation. This book presents a deeply personal picture of Baeck.

FRIEDLANDER’s book on Baeck’s theology also describes the Jewish community in which he worked—its institutions, factions, and orientations. He states that Baeck’s greatest achievements were his contributions toward reestablishing

Jewish tradition, uniting the Jewish community, initiating a Jewish-Christian dialogue, and teaching the “real essence” of Judaism. According to Friedlander, Baeck was more of a rabbi and theologian than a philosopher and more of a leader of the Jewish community than a scholar, but this did not mean that he was not accomplished in all of these fields. The author goes into particular detail about Baeck’s debate with the Christian theologian Adolf von Harnack. This book is not only important reading for those interested in Leo Baeck’s life and accomplishments but also for anyone who wants to understand the intellectual history of Germany and the German Jews in the interwar period. A bibliography and index accompany the volume.

GLATZER discusses Baeck’s interpretation of Job, which focuses on two points: the experience of mystery and the acceptance of the divine commandments. According to Baeck, the thinking process alone is not enough to describe man; revelation plays a part as well. At issue again is his interpretation of mystery as it developed through the years, from the first edition of *Essence of Judaism* to its fullest understanding in *This People Israel*.

HOMOLKA deals mainly with Baeck as a philosopher and particularly with the influences Baeck received and the responses he made in the field of religious philosophy during his career. He tracks both Baeck’s philosophical development and his views on Christianity. His contribution to the Jewish-Christian dialogue started with the debate with Adolf von Harnack and continued with his analysis of Luther. Although his view supported the “classical” Jewish over the “romantic” Christian tradition, he was an initiator in the dialogue between synagogue and church. Homolka’s work is short, well researched, and easy to follow. Each chapter promises and delivers a particular subject.

WIENER’s bibliography was an attempt to compile a complete record of Baeck’s literary activity, but since Baeck’s personal library was destroyed during the Holocaust and it was difficult to access European publications at the time of the book’s appearance in 1954, Wiener had limited success. He included lectures published in German-Jewish newspapers, but, with some exceptions demonstrating his organizational activities, the bibliography includes only Baeck’s scholarly and theological writings. The works are arranged in chronological order. A separate list of books and periodicals can be found at the end of the bibliography, to which Baeck himself contributed.

“Baghdadi” was a self-designated label for Jews from the Middle East (Iraq, Syria, Persia, Yemen, etc.) who settled in Bombay and Calcutta during the British colonial period, from the mid-18th century until Indian independence in 1947. A small elite group made fortunes in textile production, jute, opium, and real estate, employing other Jews and establishing synagogues, schools, and charitable institutions for them. Numbering more than 5,000 at their height in the 1940s (slightly more in Bombay than Calcutta), they identified with the British and held themselves aloof from Bene Israel and Cochin Jews who had been in India long before them. After Indian independence almost all migrated to England and other English-speaking countries. The bulk of the research on Indian Baghdadis centers on Calcutta; more is needed on the community in Bombay and on connections to Iraqi Jewish communities in Burma, Hong Kong, and Shanghai.

ROLAND’s solid historical study of Jewish identity under British colonial rule is the only book treating the Baghdadis of Bombay and Calcutta as one community with two branches. Extensive archival research and interviews in India, England, Israel, and the United States uncovered a wealth of detail about Baghdadi and Bene Israel life, and Roland’s analysis is firmly grounded in a wider study of colonialism and Indian responses to British rule. She sees Baghdadi attempts to identify with the British (for political, economic, and social reasons) as fundamental to understanding their alienation from Bene Israel co-religionists and their eagerness to leave India for English-speaking countries after 1947.

ROTH, a noted English scholar, recounts the history of David Sassoon and his descendants. A Jewish merchant from Baghdad who founded a commercial empire in Asia, Sassoon and his sons dominated the international trade in opium, built cotton mills in Bombay, and established charities that aided the Jews of Bombay for generations. Roth’s book and that of JACKSON document life among the wealthy cosmopolitan Baghdadi elite but give no information about middle class or poor Baghdadis and little sense of the Indian environment or wider Jewish life there (Bene Israel are mentioned once by Roth and not at all by Jackson).

E. MUSLEAH wrote the authoritative book on the Calcutta Jews, drawing on a variety of sources including Hebrew and Judeo-Arabic documents from the Sassoon Library and from

collections in Calcutta. In more than 500 carefully documented pages, he recounts Calcutta Jewish history, describing formal institutions, intracommunal conflicts, and religious customs. The book is based on his doctoral dissertation for the Jewish Theological Seminary in New York, where he also received ordination. Born and brought up in a respected Baghdadi family in Calcutta, he returned there to serve as a rabbi from 1952 to 1964.

EZRA's first volume is a combined family memoir and history of the Calcutta Baghdadis, including historical anecdotes and short biographies of community leaders. It contains useful statistical tables on population, literacy, marriage, and occupations, as well as many photographs. The second volume is a compilation of detailed genealogical charts for many Calcutta families. A member of the prominent Ezra family of Calcutta industrialists, the author is a British-educated lawyer who practiced in Calcutta until 1967, when he returned to England.

ELIAS and COOPER, a Baghdadi mother and daughter from Calcutta, spent two years interviewing members of their community in England. From tape-recorded conversations they compiled this book on everyday Jewish life in Calcutta, consisting mainly of quotations about family, religion, customs, social life, education, and work. The final chapter on "identity" reveals varied responses to Baghdadi Jewish life in England as well as Calcutta.

HYMAN, another Baghdadi who grew up in Calcutta, effectively weaves together material from 80 interviews with her own reminiscences to paint a vivid picture of Calcutta Jewish life before, during, and after World War II—not only the synagogues, clubs, and schools, but also such informal institutions as a famous Jewish sweet shop and a village where families vacationed each year. She devotes a chapter to relations with servants and another to class differences and charity within the Jewish community. Material on Zionist organizing and the lives of early emigrants to Israel is particularly valuable. Informants were from England (mostly), Israel, Australia, Canada, and the United States.

SOLOMON also has written about growing up in the Baghdadi community of Calcutta. Hers is a light and charming personal memoir, illustrated with pencil sketches by her daughter. Beginning with early childhood memories and concluding in 1947 when she left Calcutta with her husband and first child, the book is filled with stories of family, neighbors, schools, camps, adolescent adventures, and the impact of World War II on her generation.

R. MUSLEAH has compiled 51 traditional *pizmonim* (songs of praise) of the Calcutta Jews, with words in Hebrew script and transliteration as well as English translation. The songs, transcribed in western-style musical notation, are categorized by occasion, for the sabbath and various holidays, and the user-friendly volume is illustrated with photographs from the Musleah family in Calcutta, where the author was born. The daughter of Rabbi Ezekiel Musleah, she is now a musician and journalist in the United States. A cassette tape of the *pizmonim* accompanies the book.

SLAPAK's Israel Museum exhibition catalogue contains color photographs and descriptions of Baghdadi ritual and material culture in Bombay and Calcutta, including syna-

gogues, homes, ceremonial objects, domestic rituals, daily life, dress, customs, and ceremonies.

Jewish presence in the Balkans dates to antiquity. This essay considers books that trace the long history of Jewish communities in this area, as well as a number of works that focus on specific developments from the 20th century.

According to ELAZAR et al., "no region of Europe has a longer history of organized Jewish life" than the Balkans, and their text is a survey of that lengthy history. The authors assert that the first diaspora community outside of the Fertile Crescent was located in the Balkans, and they trace the lives of Balkan Jews under the successive regimes of pagan Rome, Christian Byzantium, the Muslim Ottoman Empire, and the Christian and Muslim states that replaced the Ottomans. The book also considers Jewish communities' struggles to survive after World War II, including discussion of Jewish life in the repressive Soviet satellite states.

BOWMAN describes Jewish life under the Byzantine Empire from the 13th century through the fall of Constantinople in the mid-15th century. Although integrated into the empire's Greek culture, Jews were its only non-Christian minority. Bowman demonstrates that Eastern Orthodox Christianity considered Judaism to be "accursed," and he explains how Byzantine emperors interfered with Jewish religious practices and promulgated codes restricting Jewish social, political, and economic activity.

SHAW investigates the history of Balkan Jews in the Ottoman Empire and under the Turkish Republic. He begins by considering Jewish life in the Byzantine era, discussing the large numbers of Jews who were forcibly converted to Christianity. He relates the history of the majority of the Jews who retained their identity in this relic of the Roman Empire, rabbanites who followed a “Romaniot” rite (Byzantium was the new Rome) and were influenced by Palestinian Judaism and by Hellenism, as well as by the Karaite minority. Shaw then argues that the Muslim conquest of Byzantium in the 14th and 15th centuries brought “instant liberation” for the Jews, who were naturally favored by Muhammad II over the Christians (Greek and Armenian) from whom he had wrested his new empire. The Ottoman lands became the destination of persecuted Ashkenazim fleeing Northern and Central Europe and Sephardim fleeing Iberia in the late 15th and 16th centuries. Eventually, the religious outlook of the Iberian immigrants and the Judeo-Spanish language became dominant over indigenous Jewish culture. Shaw deems 16th- and 17th-century Ottoman Jewry the largest and most prosperous Jewish society of its time. He designates this period a golden age as Jews settled in urban centers, such as Istanbul, Izmir, Salonika, and Sarajevo; enjoyed communal autonomy; became physicians at Court, bankers, and diplomats; and achieved such religious milestones as the publication of Joseph Caro’s legal digests, *Shulhan Arukh*.

BENBASSA and RODRIGUE dispute Shaw’s view of Ottoman-Jewish relations, which reflects traditional assumptions that Jews were treated well under the empire. They argue that the Iberians exaggerated their welcome and their success in the Balkans, asserting that, in fact, Jews did not generally flourish under Muslim rule. While a small Jewish elite grew politically influential and succeeded in some sectors of the economy (such as trade or cloth manufacture in Salonika), most Jews were involved in small-scale enterprises, and many were poor. According to Benbassa and Rodrigue, the Ottoman attitude toward Jews was dictated only by self-interest, tolerating them because “the Jews seemed reliable and possessed useful skills.” Benbassa and Rodrigue trace the history of Balkan Jews through to the 20th century, discussing en route such topics as the decline of the Ottoman Empire and the inward turn of the Jewish community during the 17th century, which was accompanied by a rise in Jewish mysticism; the effects of the Enlightenment, modernization, and political, educational, and social reforms during the 18th and 19th centuries; the lives of Jews in the newly established Balkan nation-states after World War I; the rise of Zionism between the wars; and the impact of the Holocaust.

Several studies explore the recent past and present state of Jewish communities in the Balkans. Steven Bowman’s essay in CHASIOTES examines the particular history of Greek Jews during the Holocaust, arguing that while the majority of Greek Jewry was lost, Greek officialdom did attempt to extend protection. BAR-ZOHAR investigates the unique situation of Jews in Bulgaria during World War II, showing that they were spared the fates that befell Jews in other Balkan nations because of the courage of King Boris and the church. MEYER et al. paint a grim picture of Jewish life under Balkan Soviet-style regimes after World War II, as all signs of separatism

were repressed. BEKER provides a survey of the current status of Balkan Jewries, arguing that Balkan societies, which have been subjected to warring nationalisms and revisionist histories, are discouraging venues for Jewish revival. Thus, the future of Balkan Jewries is at best uncertain.

Bar Kokhba, Simeon d. 135 C.E.

Judean leader of revolt against Rome

As leader of the remarkably unified Second Jewish Revolt against Rome (132–135 C.E.), Simeon Bar Kokhba (Shim’on bar Kosiva) served as the focus of the historiography of the period in its several genres, including social, intellectual, and military history, as well as in numismatics, rabbinics, polemics, fiction, drama, and poetry. The literature pertaining to Bar Kokhba attends to the history of his revolt on the one hand and to the reception of that history on the other. The first sort of literature may be further categorized as that which preceded the epigraphic and archaeological discoveries of 1951–1961 near the shores of the Dead Sea and that which followed those discoveries and their publication. The second sort of literature—that which deals with the reception of Bar Kokhba’s story—may also be divided by date of publication according to whether it precedes or follows the second half of the 19th century, a period marked by the rise of Jewish interest in antiquity and by the rise of Zionism.

YADIN is a popular account, excitingly told, of his several discoveries, from that of the winter of 1951 through those of 1960–1961, of material related to Bar Kokhba and the revolt. He includes a description of another relevant find from the later expeditions: the archive of Babata, which contains material from the period of the revolt but is chiefly the “life story of Babata’s family as well as that of her two husbands” and their property, from the Cave of Letters. The volume is illustrated with seven maps and dozens of spectacular illustrations, including photographs of objects, documents, and the expedition at work. The book deals only lightly with reception history (in chapter one, “Behind the Legend,” and in the

“Appendix of references to Bar-Kokhba”), and the focus is exclusively on classical references, drawn from Jewish sources and from non-Jewish sources (accounts of the revolt from Dio Cassius, Eusebius, Jerome, and Epiphanius). He provides descriptions of objects and translations of letters—dictated, if not signed, by Bar Kokhba himself—that are essential to any understanding of the revolt and the Jewish parties to it, but he does not attempt to deal with their context or their relevance to the major questions of the history of the revolt. The figure of Bar Kokhba that emerges from the letters that Yadin presents shows him to have been a disciplinarian, restrained in his assumption of power, knowledgeable of the details of the campaign, and attentive to the minutiae of the government of his “Free Israel.” He is also shown to have been interested in questions of husbandry and property and determined to maintain religious practices.

Yadin participates in the linkage of the revolt and the figure of Bar Kokhba with present-day Israel, relating his exposure of the discovery at the home of the president of Israel and in the presence of government officials, associating Bar Kokhba, “the last President of ancient Israel,” with the current incumbent, Yitzhak Ben-Zvi. In a similar vein, others noted that the letters from the last chief of staff of the last national Jewish army, Bar Kokhba, had been revealed to Yadin, the first chief of staff of the new army of Israel. Yadin added to such romantic observations that, “Nothing remains here [at the caves] today of the Romans save a heap of stones on the face of the desert, but here the descendants of the besieged were returning to salvage their ancestors’ precious belongings.”

APPLEBAUM touches on the following historical questions: the cause(s) of the revolt; the number of Jews and Romans involved and the number of casualties; the extent of the fighting; the nature of Bar Kokhba’s role (whether that of a messiah in a messianic war or not); and the effect of the revolt on Jewish populations and institutions in the north (the Galilee) and the south (Judaea, where almost all the action took place). There is no scholarly consensus on any of these questions, and in fact many scholars have changed their own opinions relating to them. Applebaum (amplified in his 1984 article in *Palestine Expeditionary Quarterly*), sees economic hardship, social inequity, and a continuous state of tension as the backgrounds to the revolt and appropriate to a messianic war led by a messiah. He describes the major cause of the revolt: Hadrian’s policy toward the Jewish state—itsself driven by other, nearly contemporary Jewish revolts. Hadrian’s policies included the hellenization and romanization of Jerusalem, deification of himself and of homosexuality, and perhaps a ban on circumcision. According to Applebaum the number of soldiers and population groups involved was very large, with Jewish casualties alone reaching nearly 600,000. Judaea was repopulated by Jews within a few generations, though it never regained its power, while the Galilee was the immediate beneficiary of a refugee population.

Beyond the question of who Bar Kokhba really was—best answered by the letters and other documents—there remains to be considered the matter of his image and that of his revolt in the history of the Jewish people. This is the focus of MARKS, who describes how Bar Kokhba is viewed in the rabbinic literature as a flawed hero or a messianic imposter; by

two medieval writers living under the rule of Islam, with misgivings but with a melancholy appreciation of his messianic qualities; by Isaac Abravanel (and a variety of other Renaissance historians), with a saddened understanding of how the valorous Bar Kokhba (and Rabbi Akiba, his herald) turned out to be wrong, but for the best reasons, meaning, the relief of oppressed Jews and revenge against their oppressors; and by two kabbalists, Rabbi Hayyim Vital in the 16th century and Nathan of Gaza in the 17th century. The former understood Bar Kokhba as the metempsychosis of the messiah-soul who failed because of the weakness of his generation, while the latter believed that Bar Kokhba had been reborn as Shabbetai Tsevi, the messiah who would complete his task. Marks places these views of Bar Kokhba in their immediate contexts in terms of social, political, and intellectual history.

This work is brought into the present and focused on modern Jewish and Israeli devisements of Bar Kokhba by ZERUBAVEL in her post-Zionist consideration of Jewish memory and its reconstruction. Chapter five is devoted to the image of Bar Kokhba. Having begun with his elevation to the model hero of an armed struggle for national liberation, it proceeds to manipulate and diminish the significance of his defeat and ultimately to remove the memorialization of the disastrous end of the revolt from association with the fast of Tishah be-Av and to enshrine Bar Kokhba in memory as the victor celebrated in the festival of Lag ba-Omer.

Bar mitzvah and bat mitzvah have legal, developmental, ceremonial, and celebratory dimensions. Scholarly work in English on each of these dimensions is available mainly in book chapters and journal articles, while the sources available in Hebrew are partial and dated. Medieval rabbinic Judaism used puberty, specifically the ages of 13 for boys and 12 for girls, as legal markers for adulthood. The Mishnah was invoked as the oldest textual source for what is now called bar mitzvah and bat mitzvah, although for some purposes other ages mark significant legal transitions. The idea that a significant psychological/moral transition also occurs at the age of bar mitzvah is developed in a number of midrashim. Since the 19th century, and especially since the mid-20th century, bar mitzvah and bat mitzvah have commonly become occasions when many guests are invited to witness a synagogue ceremony, often with associated elaborate social activities taking place from Friday night through Sunday night.

SHERWIN contains an overview and interpretation of many rabbinic sources and midrashim. Only in the early modern period does he find clear references to a synagogue ceremony and a subsequent celebration.

HYMAN has examined the introduction and spread of bat mitzvah in the Conservative movement, which became com-

mon in the 1950s and 1960s. Bat mitzvah is now common in all the branches of Judaism and in most Jewish communities.

SCHOENFELD (1995) uses what has been written on bar/bat mitzvah to identify common themes about the role of Judaism in the life of U.S. Jews. This article includes an extensive bibliography.

DAVIS (1998) provides the most important analysis of bar and bat mitzvah in current Jewish family life. While intended for a general audience, the book has its roots in DAVIS (1988), a contribution to the scholarly literature in the field of family therapy. Both sources examine how preparing for and celebrating these ubiquitous rituals are occasions for the family—as individuals and as a unit—to confront the meaning of Jewish identity. Families going through bar/bat mitzvah are forced to question the meaning of continuity from generation to generation, the transition into adolescence, extended family ties, gender identity, core values, and, of course, religious commitment. Throughout these analyses, Davis focuses on the possibility that the ritual can be an authentic expression of the family's values and emphasizes the cultivation of the skills needed to achieve that end.

SALKIN's book addresses families preparing for the event. It is distinguished from the numerous other practical guides on the market by its engagement with the challenge of cultivating spirituality in an event that is often focused on the party.

SCHOENFELD (1990), a study of the social celebrations that accompany the synagogue ritual, complements Salkin's approach. The social events, which often extend through the whole weekend, are secular rituals that dramatize the relationships among the child, the immediate family, the extended family, and the child's network of friends. These events express and interpret the child's entry into adolescence and the ambivalence of Jewish identity in the United States.

Studies by social workers and psychologists pay particular attention to relationships and issues that may potentially disrupt a psychologically successful ritual. HARTMAN, WEBER, and VOGEL, which analyzes strategies for working with families in which there has been separation, divorce, and remarriage is a good example of the work in this field.

Bar and bat mitzvah have also been closely tied to the emergence of the structure of Jewish education in North America. LENEMAN contains 50 chapters examining different dimensions of the link between bar/bat mitzvah and Jewish education. SCHOENFELD (1987–1988) documents the importance of bar mitzvah as an aspect of the folk religion of U.S. Jews and the strategy of the religious elite of requiring a minimal number of years of Jewish education before bar/bat mitzvah. It is clear from HOLTZ's study of "best practices" in supplementary education that preparing for the bar/bat mitzvah is a major task for Jewish education. Successful schools recognize the importance of these events as transitions into greater autonomy and responsibility. Religious educators struggle to ensure that the social agenda of bar/bat mitzvah does not overwhelm the religious one. SCHEIN and WYNER report on the experience of a Cleveland, Ohio, task force that worked with local congregations, rabbis, educators, and social workers to produce community guidelines and hold educational sessions for families.

Adult bar mitzvah and bat mitzvah—opportunities for adults to make symbolic statements about their identity by publicly demonstrating the skills of the early adolescent ritual—became common in the 1980s and 1990s. The innovation of adult bat mitzvah has been the object of several studies. KAHN shows how adult b'not mitzvah use the preparation and performance of the ritual to express complex identities. Three related articles, SCHOENFELD (1988), SCHOENFELD (1992a), and SCHOENFELD (1992b), contrast an individual adult bat mitzvah in a small independent synagogue with a group bat mitzvah in a large temple. The individual bat mitzvah used her ritual to affirm a personal spiritual journey before an assembly of family and friends. The author draws from Victor Turner's model of the stages of a rite of passage to analyze group bat mitzvah, which was experienced as an emotionally intense, successful ritual. The metaphor of a spiritual pilgrimage was pronounced in both experiences. While in both settings there was some hesitation about presenting adult bat mitzvah as a feminist ritual, in each case adult bat mitzvah successfully affirmed an active role for women as responsible members of the ritual community.

The Bene Israel, centered in the state of Maharashtra and the city of Bombay (now Mumbai), form the largest of the three Indian Jewish communities. Originally they lived as oil-pressers in villages on the Konkan coast, but during British rule many moved to Bombay and other colonial cities, where they raised their economic and educational position dramatically. Research focuses on theories about their origin, history since the 18th century, relations with Indian "Baghdadi" Jews, impact of British colonial rule, communal organization, religious practices, Zionism, and life in Israel. Today there are fewer than 5,000 Bene Israel remaining in India and approximately 40,000 in Israel.

KEHIMKAR, an early Bene Israel intellectual and activist, completed in 1897 his ambitious study of the community's history and customs. Finally published in Palestine in 1937, it draws on earlier written accounts and on his own deep knowledge of Bene Israel traditions. Kehimkar argues that the community's ancestors, from the ten northern tribes, fled the Land of Israel in 175 B.C.E. and were shipwrecked off the Konkan coast. They preserved practices of the Second Temple period despite isolation from other Jews until their 19th-century religious "revival" under the leadership of Cochin Jews and their education by Christian missionaries. Kehimkar describes in rich detail their daily customs, life cycle rituals, holiday celebrations, service in the British Army, educational institutions, and communal organization; he argues against charges by Baghdadis that the Bene Israel are not pure Jews.

ISRAEL was a prominent 20th-century Bene Israel intellectual who wrote the essays in this collection between 1960 and 1984 after retirement from government service. He reviews and summarizes earlier origin theories, gives a helpful overview of the community's "religious evolution" after 1750, and analyzes demographic data from the 1961 and 1971 Indian census. Particularly important is his essay on the crisis surrounding religious discrimination against Bene Israel immigrants by Israeli rabbinical authorities in the early 1960s.

ISENBERG's substantial study is aptly subtitled "A Comprehensive Inquiry and Sourcebook." Meticulously researched and documented, it brings together material from Kehimkar, Israel, and many others with original archival research, interviews, participant-observation, and analysis, compiled over a period of more than 20 years. She includes valuable appendices, tables, photographs, and suggestions for further research. Isenberg is an American-born anthropologist who lived many years in India before settling permanently in Israel.

ROLAND's historical study analyzes Indian Jewish identity under 19th- and 20th-century British colonial rule, based on extremely thorough archival research (including Bene Israel periodicals in English and Marathi) and interviews in India, Israel, England, and the United States. She discusses both Bene Israel and Baghdadis, commenting on their complex relationships as well as their quite different responses to colonialism. Although many Bene Israel benefited from British rule through education and employment, most seemed secure in their Indian identity, and some became involved in nationalist organizing. In contrast, Baghdadi attempts to identify with the British can be seen as underlying their efforts to distance themselves socially and ritually from the Bene Israel, as well

as underlying the Bene Israel resentment of the Baghdadis. Bene Israel Zionism and migration to Israel are analyzed in depth. Roland is an American scholar whose continuing work on the Indian Jews is highly recommended.

STRIZOWER's ethnographic study is based on fieldwork in India from 1959 to 1961, when about 13,000 Bene Israel remained, mostly in Bombay. Having participated in their religious and communal life, she describes it in detail, including marriage and the family, the synagogue, educational and charitable associations, and cliques and clubs. Her study includes review and analysis of their traditional history and relations with other Indian groups, Jewish and non-Jewish. The author is a European-born anthropologist teaching in Australia.

SHAHAM's volume is the catalog of an exhibit at the Diaspora Museum in Tel Aviv. It features artistic and informative photographs of the Bene Israel in India by Carmela Berkson, an American who has lived for many years in Bombay. The introductory essay by Shalva Weil gives a useful brief summary of Bene Israel history and culture.

MAHADEVAN's novel, the first by a Bene Israel author, tells the story of a traditional middle-class Bene Israel extended family in modern Bombay. The central character is Shulamith, whose husband has emigrated to Israel and left her to cope with three generations of this family as they struggle with changing women's roles, temptations of romance outside the community, class and religious issues within the community, and the decision of whether or not to emigrate. Originally written and published in Hindi, the English translation is a bit stiff, but the author gives a complex and invaluable glimpse of family and community life drawing on her own experience as a Bene Israel woman.

DAVID's recent novel addresses some of the same issues as Mahadevan's, also from the perspective of a Bene Israel woman, but this fictional character is a middle-aged unmarried woman in the small Bene Israel community of Ahmedabad in Gujarat. Separate from the center of Bene Israel life in Bombay and the Konkan, her family has grown gradually less observant of their Jewish traditions. Dramatic reminiscences of childhood and adolescence in her eccentric extended family bring to life the sounds, sights, fragrances, and religious influences of the Indian environment, where she was profoundly affected by intimate relationships with Hindu and Muslim servants, neighbors, and friends. A tone of melancholy and loss pervades the book, as she recalls the ghostly presence of previous generations, departures for Israel, and the death of loved ones.

WEIL is an Israeli anthropologist originally from England, whose doctoral dissertation is an important study of Bene Israel community life and ethnic identity in Israel. Grounded in three years of participant-observer research among 300 Bene Israel families in the city of Lod, she discusses their occupations, social characteristics, status in relation to other Israeli groups, communal organization (including active voluntary organizations), marriage and family, synagogue participation, and religious rituals and practices. The study is thoroughly researched and enjoyable to read.

SLAPAK's book on the three Indian Jewish communities contains many valuable photographs and descriptions of Bene Israel ritual and material culture in India, including syna-

gogues, ceremonial objects, home rituals, daily life, dress, customs, and ceremonies.

David Ben-Gurion was born David Joseph Green in Plonsk, Poland (Russian Pale of Settlement) on 16 October 1886. Claiming to be "a Zionist from birth," Ben-Gurion rose from his humble origins to embark on a quest to create a Jewish state for the Jews of Europe, whom he regarded as woefully mistreated and impossibly disunited. Ben-Gurion became president of the World Zionist Organization in 1946, and two years later he declared the establishment of the State of Israel. He not only became the first Israeli prime minister, but also served as the state's first foreign minister. His political career was frequently controversial. The legitimacy of his overriding objective in creating Israel was questioned, and it is claimed by many that he did not do enough to save Jews from their fate during World War II. Other scholars refute this claim, declaring that he was fully aware of Nazi activities but was unable to stop them. Ben-Gurion retired and then returned to politics several times during his life, permanently leaving the Knesset and public life by 1970. He died 1 December 1973 and was buried in Sde Boker in the Negev after a state funeral.

BAR-ZOHAR's biography is a translation of a work originally written in Hebrew and published after the deaths of Ben-Gurion and his wife Paula. The author worked closely with Ben-Gurion and had access to private archives that Ben-Gurion had never before opened to biographers. Included in these archives were very personal memoirs dealing with political as well as personal aspects of Ben-Gurion's life, and the biography reveals the very human side of the man. Bar-Zohar also uses Ben-Gurion's private diaries and unpublished documents to reveal previously concealed state secrets. The

author presents detailed information about Ben-Gurion's political alliances, enlightening the reader about such issues as Ben-Gurion's heated feud with Chaim Weizmann, the Lavon Affair, and the Sinai Campaign. Photographs recording Ben-Gurion's political career and personal life complement the text.

GAL's book primarily concentrates on the years 1938 to 1942. These were the years during which the rift between Weizmann and Ben-Gurion widened, and the work offers a comparison of the political approaches of these two men. The main focus of this book, however, is Ben-Gurion's role as statesman and as diplomat. Gal reflects upon Ben-Gurion's stay in the United States from 1915 to 1918, when he participated in the organization of the American Jewish Congress, and describes his increasingly frequent visits to the United States in later years, in a period when pro-Zionist sentiment was growing in that nation. Gal's discussion of Ben-Gurion's fervent, ambitious desire to integrate Israel into the international democratic community is well executed. Several appendixes provide the reader with key statistics and with information on Ben-Gurion's policies. A glossary and extensive primary and secondary bibliographies round out the work.

KURZMAN spent 15 years conducting hundreds of interviews and undertaking extensive archival work to prepare for this biography. As the title of the work implies, he regards Ben-Gurion as a titan among Jewish leaders. Accordingly, the book is divided into sections entitled "Moses," "Joshua," and "Isaiah," and each section is divided into chapters based on biblical scriptures. Kurzman presents more intimate details about Ben-Gurion's birthplace, childhood, and teenage life than did Bar-Zohar. The volume contains extensive photographs, detailed notes, and an extensive bibliography that includes citations from newspapers, radio and television programs, unpublished documents, and oral histories.

TEVETH (1987) maintains that Ben-Gurion's story is too involved to cover completely all relevant points. Therefore, this work only recounts Ben-Gurion's life from his birth in Plonsk up to the founding of Israel. Teveth states that Ben-Gurion's life's work was "the founding of a secular authority, without which he could never have brought about the establishment of a state." The author further contends that Ben-Gurion was forced "to confront, helplessly, the destruction of European Jewry without losing faith in humankind and the Jewish people and without abandoning his confidence in the justice of the Zionist cause and its ultimate triumph." Extensive notes, a glossary, an index, and black-and-white photographs are included in the work.

TEVETH (1996) states that the aim of his work is "to examine the charges of collaboration and murderous indifference and to document Ben-Gurion's efforts to rescue the Jewish people." Critics charged that the Zionist leadership of Palestine ignored the fate of non-Zionist European Jews, and Ben-Gurion, as leader of the Zionist Labor Party, Mapai, was accused (along with other "singularly focused Zionist leaders") of being so preoccupied in the creation of a Jewish state that he was willing to sacrifice Eastern European Jewry to accomplish the goal. Teveth seeks to refute these charges and claims that his research, contrary to the claims of Ben-Gurion's critics, shows that as early as 1934, Ben-Gurion saw the ruination

of Europe's Jews and sought to keep them safe from the Nazis. His attempts to bring Jews out of Europe, whether to Palestine or elsewhere, were strenuous—indifference, especially in the United Kingdom and the United States, notwithstanding.

TEVETH (1985) traces Ben-Gurion's part in various stages of Jewish-Arab relations. Initially, Ben-Gurion's fervent dream of a Jewish land and his ties to Marxist utopianism were such that "he gave no thought to the Arabs, their problems, their social conditions, or their cultural life. Nor had he yet acquainted himself with the Jewish community of Palestine." Teveth describes clashes between Palestinian Arabs and immigrant Jews, as well as plans for peace and pan-Arabism. Although Ben-Gurion publicly denied that there was any opposition to Jewish settlement in Palestine, his diaries reveal his awareness of the extent of Arab resentment toward the immigrants. Teveth also suggests that Ben-Gurion did not believe that peace would ever be possible between the two peoples.

ZWEIG's compilation presents scholarly essays about various aspects of Ben-Gurion's life that were compiled to mark the centennial anniversary of Ben-Gurion's birth. The anthology includes essays by historians of international reputation as well as essays by lesser-known Israeli scholars; the articles cover areas of Ben-Gurion's life that previously have been discussed, along with newer areas of investigation, such as Ben-Gurion's role in developing the Israeli public education system. Contributors include Shimon Peres, Teveth, Gal, Uri Bialer, and Yehudit Auerbach. Extensive notes follow each essay.

Skehan, Patrick W. and Alexander A. Di Lella, *The Wisdom of Ben Sira: A New Translation with Notes* (Anchor Bible, vol. 39), New York: Doubleday, 1987

The professional sage Simeon ben Jesus ben Sira, Jesus Sirach in Greek, compiled his book of proverbs around 180 B.C.E. in Jerusalem. His grandson later translated the book into Greek. This translation became part of the Christian Old Testament, where it acquired the name Ecclesiasticus. Today it appears only in Catholic Bibles, whereas Jews (who usually refer to the work as Ben Sira) and Protestants (who usually call it Sirach) relegate it to the Apocrypha. A total of about two-thirds of the original Hebrew document survives in several manuscripts, and all the Greek translation survives in a number of manuscripts. Since these manuscripts differ in some respects, one of the main issues that occupy scholars is establishing the original text. Aside from that, scholars have been primarily interested in understanding the book's principles of organization, its meaning, its relation to earlier Jewish writings and to foreign works, and the author's attitude to foreign cultures.

CRENSHAW discusses ben Sira's work within the context of ancient Israelite and Jewish wisdom books. He finds ben Sira's main innovation in his integration of sacred history and law into wisdom, whereas the older books, such as Proverbs, had been satisfied with nature study. Thus ben Sira emphasizes piety toward the Torah (the books of Moses), and he equates fear of God (i.e., obeying the Torah) with wisdom. Crenshaw sees that ben Sira readily borrows Greek ideas as long as he can "Hebraize" them. His book presents a good brief summary of the contents of the book of ben Sira.

Just under half COLLINS's book deals with ben Sira. He analyzes ben Sira's Hellenistic context (both political and intellectual), the subordinate relation of Torah to wisdom in the book, ben Sira's ethics, the problem of evil, and ben Sira's views on the history and destiny of Israel. The section on ethics emphasizes the individual and familial aspect of ben Sira's ethics and the author's eudaemonism and utilitarianism. Collins agrees with Burton Mack on ben Sira's view of the goal of history.

SKEHAN's and DI LELLA's commentary deals thoroughly with all aspects of ben Sira's work and its problems. A 90-page introduction discusses the title and contents of the book; ben Sira and his times; the canonicity of the book and its place in the canon of Scripture; literary genres; wisdom traditions in the Hebrew Bible; ben Sira's relationship to various books of the Hebrew Bible; ben Sira and non-Jewish literature; the original Hebrew text and ancient versions; the poetry of ben Sira; and the teaching of ben Sira. An English translation of the text that they established appears in brief sections, each section being followed immediately by textual and translational notes, and then by a substantive "comment" on the section. There is also an extensive bibliography. This work

provides an excellent clarification of the broad international and intellectual setting of the book, as well as of the author's meaning on many points. It generally agrees with Crenshaw on the analysis of different wisdom literary genres and with Jack Sanders on ben Sira's relation to earlier Judaic and foreign literature.

SANDERS analyzes the way in which ben Sira drew upon and adapted earlier Judaic tradition, especially that in the books of the Bible, and he then looks at the possibilities for ben Sira's inclusion of foreign material. He finds that quite a few of ben Sira's proverbs, especially having to do with friendship, came from the Greek author Theognis; and he finds some other evidence of Greek influence. Furthermore, he shows that ben Sira had relied on an Egyptian work in Demotic script, called today only *Papyrus Insinger*. Some of the more striking similarities are the presence in both works of images of 100 years as the limit of life and of the little bee that produces much honey. Both works also contain advice at or near the beginning on how to treat one's parents and a long hymn to God's creation at the end.

MACK examines in detail the long section at the end of the book in which ben Sira praises famous Jews of earlier years. He shows that the composition is related both to the preceding section praising God's creation and to the praise of the scholar in chapter 39. Further, the section betrays the influence of both Jewish wisdom texts and Greek literature. The section seeks to show that God's direction of history has led to the religiopolitical situation in ben Sira's time, when both worship and society focused on temple practice and the high priest.

HEATON begins with a brief analysis of ben Sira and with the observation that the author was a school master. He then shows ben Sira's indebtedness both to the international school (wisdom) tradition and to the traditions of Torah, prophets, and wisdom in the Bible, and he argues persuasively for the existence of a school tradition in ancient Israel. The existence of schools prior to ben Sira's time, however, remains a debated point among scholars.

While little of BLENKINSOPP's book deals directly with ben Sira, he presents an excellent analysis of the interaction between wisdom and law in ancient Israel and later Judaism. His section on Ecclesiasticus shows well how ben Sira assimilated Torah to wisdom.

The value of ARGALL's work is in drawing attention to the interaction between apocalyptic literature and wisdom literature and also in showing that both 1 Enoch and ben Sira deal with the themes of revelation, creation, and judgment in highly similar ways. Argall misunderstands ben Sira's attitude toward the Torah, however, and thinks that he draws revelation from the Torah. Skehan and Di Lella explain ben Sira's relation to the Torah more accurately.

The volume edited by BEENTJES contains essays presented by various scholars at a conference. Most essays deal with text, dating, and organization. One essay reviews recent research on the book through 1996; there are also especially noteworthy essays on ben Sira's use of the concept of "fear of the Lord" and on ben Sira's loyalty to the Jerusalem priesthood.

Eliezer Ben-Yehuda—an early Zionist, Hebrew journalist, and leader of the movement for the revival of Hebrew as an everyday spoken language—was a highly controversial figure, and many texts about him are either hagiographic or the opposite, intentionally denigrating. Included in the former category is a full-length biography published in the 1950s that was, unfortunately, for many years the main source of information in English about Ben-Yehuda. Most of the authors of the hagiographic works were members of Ben-Yehuda's family or people associated with them, while many of the denigrators came from the ranks of the so-called Second Aliyah, the early socialist-Zionist pioneers who achieved a position of dominance in the Palestinian *yishuv* and who included the leading figures of the generation that eventually established the State of Israel. It is only since the 1970s that more dispassionate scholarly works about Ben-Yehuda have appeared. These texts' authors have tried to evaluate the facts of his life and work accurately and fairly, and they have been able to make use of a wide range of sources in Hebrew. Rather curiously—and fortunately for those readers who do not know Hebrew—many of these works were written in English; some of them have not been published in Hebrew.

The earliest work of scholastic quality is the study by FELLMAN, whose declared aim is to "examine the role played by Ben Yehuda in the revival of Hebrew and . . . to assess objectively the significance of his contribution in this sphere." Fellman rejects the school of thought that "considers Ben Yehuda in very simplistic terms a modern miracle maker who single-handedly revived the Hebrew language." In his view,

Ben Yehuda must be given the sole credit . . . for being the first to state the idea and the necessity of starting

the revival and for being the first to show the feasibility of implementing it . . . however, Ben Yehuda needed and actively sought the help of many other interested parties who, mainly through their efforts and not those of Ben Yehuda, brought about the true revival of the language on a large scale.

In his book, Fellman discusses systematically the various activities of Ben-Yehuda that were intended to help bring about the revival, and the author concludes that Ben-Yehuda's most important contribution was his advocacy of the use of Hebrew as the language of instruction in Jewish schools in Palestine ("Hebrew through Hebrew"). Although Ben-Yehuda had suggested this method as early as 1880, even before he emigrated to Palestine, Fellman argues that the credit for its successful implementation actually belongs to the teachers in the agricultural colonies and not to Ben-Yehuda himself, who lived in Jerusalem and whose teaching career lasted for only about three months. Fellman's work remains the only serious full-length study of Ben-Yehuda in English. Although Fellman occasionally relies on sources of doubtful accuracy for certain minor conclusions and fails to provide an index, this work is indispensable for the study of its subject.

The ideological path taken by the young Ben-Yehuda on his way to Zionism became a subject of interest at the end of the 1970s, a century after he made his literary debut with an article advocating a Jewish national revival in the land of Israel. AVINERI, who devotes a chapter to Ben-Yehuda in his book on the intellectual origins of the Jewish state, argues that Ben-Yehuda began his inquiries as he became aware of the low artistic achievements of the Hebrew writers of his day, and he attributed this deficiency to the fact that Hebrew was not a spoken language. Influenced by the Russian populists, Ben-Yehuda believed that true literature could emerge only in a society that spoke the same language used for writing. He concluded that Hebrew literature could develop only in a society with a Jewish majority that used Hebrew as its living language of daily intercourse. The only way to create such a society was for Jews to emigrate in large numbers to Palestine and construct a Hebrew-speaking nation there. According to Avineri, Ben-Yehuda posited that the revival of spoken Hebrew was a means to an end (the creation of a superior Hebrew literature), while the settlement of the land of Israel by Jews would make that means possible.

Avineri's view is challenged by MANDEL, who argues that it was based on a misunderstanding of the single source that Avineri cited to support his argument—a brief letter by Ben-Yehuda to the editor of a Hebrew journal. Mandel also charges that Avineri ignored much evidence from other sources. According to Mandel, Ben-Yehuda was not mainly concerned with the quality of Hebrew literature. Instead, he feared for Hebrew's very existence because Jews were increasingly adopting the languages of the gentile majorities among whom they lived and ceasing to use Hebrew except as a language of prayer and religious study. Therefore, Ben-Yehuda decided that the only way to sustain Hebrew was to create a society in which Jews themselves formed the majority, and to this end large numbers of Jews needed to emigrate to the land of Israel. At a later stage of his life, Ben-Yehuda came to believe that even

a Jewish majority in the land of Israel would not keep Hebrew alive unless it also became an everyday spoken language.

BEN-YEHUDA's memoir is an excellent starting point for anyone who wishes to learn about his early life. The text covers the years from his childhood to the birth of his first child in 1882, and it is therefore not a complete autobiography. However, it contains a great deal of important and interesting material, including a description of how Ben-Yehuda suddenly became convinced, while still at school, that the Jews needed a national revival in their ancestral homeland. This realization happened in 1877, four years before the great wave of pogroms in Russia that are usually regarded as the event that gave birth to Zionism, and nearly 20 years before the more famous conversion of Theodor Herzl. Ben-Yehuda became a "Zionist" (to use a word that, although not invented until the 1890s, is an accurate description of the views he held from 1877) at a time when very few, if any, other people held similar beliefs. Like Herzl, Ben-Yehuda arrived at his opinion independently and not because he was persuaded by anyone else's arguments, but Ben-Yehuda's reasons—unlike Herzl's—were not shaped by antisemitism. Because this memoir sheds light on Ben-Yehuda's conversion, it is obviously of interest to historians of Zionism.

The collection edited by SILBERSCHLAG contains a translation of Ben-Yehuda's first published article, "A Weighty Question" (1879), as well as four essays on diverse aspects of Ben-Yehuda's activities. In his collection of writings illustrating the historical development of Zionist ideology, HERTZBERG prints an 1880 letter by Ben-Yehuda to the editor of the Hebrew periodical *Ha-Shahar*. Like "A Weighty Question," the letter is a statement of Ben-Yehuda's reasons for advocating the settlement of Israel by Jews, but the letter was written about 18 months after the article, when his ideas had developed somewhat and become clearer and more straightforward.

Widely regarded as the greatest poet in the Hebrew language, Hayyim Nahman Bialik published his first poem, "To the Bird," in 1891. He lived in several small towns, villages, and cities of the Russian Jewish pale of settlement until he finally settled in the Land of Israel in 1924. A prolific editor, translator, and short story writer, he is best known for his longer epic poems, "Zohar," "The Pool," and "The Scroll of Fire."

ABERBACH's book, a volume in the Jewish Thinkers series, provides a short biography of Bialik. Aberbach consults previous studies of Bialik in Hebrew, as well as some of the few critical pieces in English, and offers his own interpretation of the poet's life. Aberbach's method grounds Bialik in the context of East European Jewry but also compares him with modernist poets such as W.B. Yeats and T.S. Eliot and offers something of a psychoanalytic approach to Bialik's works. He describes how Bialik, although very widely considered the national poet, felt highly ambivalent toward this role, and Aberbach sees this creating a tension in Bialik's work that is, he argues, the mark of his greatness.

The nonspecialist reader in search of an introduction to Bialik may also wish to consult LEITER and SPICEHANDLER. The first and larger part of this article, written by Leiter, offers a thorough biographical and bibliographic survey. Beginning with a description of Bialik's childhood, Leiter describes the events and people in the author's life that most influenced his artistic development: the time the young Bialik spent studying in the yeshivah at Volozhin, the influence of the great Zionist theoretician Ahad Ha'am on the young poet, the period spent in the great literary centers of Odessa and Warsaw, and the mature Bialik's decision to settle permanently in the Land of Israel in 1924. The second part of the essay, titled "Evaluation," is written by Spicehandler. After a few remarks surveying Hebrew poetry previous to the appearance of Bialik, Spicehandler demonstrates how Bialik's innovations of style, form, and subject represented a great change in Hebrew poetry. Basing his poems on European models and demonstrating complete command over the Hebrew language, Bialik, as viewed by Spicehandler, freed Hebrew poetry from its biblical roots and created the first works of truly modern Hebrew poetry.

ALTER looks at the ambivalent attitudes of modern Jewish writers toward the Jewish past and tradition. Alter deals in particular with Jewish authors writing in the United States, such as Saul Bellow and Bernard Malamud, and in Israel, such as S.Y. Agnon and H.N. Bialik. In his essay "The Kidnapping of Bialik and Tchernichovsky," which originally appeared in *Midstream* (June 1964), Alter points to ways in which he feels that these two giants of modern Hebrew poetry have been misinterpreted by many readers. Though he admits that several critics have indeed provided new and "useful" works on these two poets, he ends his essay on a pessimistic note: "the plight of Bialik and Tchernichovsky dramatically illustrates the need for enlightened, disciplined critics: only they can rescue the two great modern Hebrew poets from the hands of their abductors."

BRESLAUER's study is concerned with the relationship of traditional Judaism to the poetry of Bialik. Specifically, Breslauer

looks at the particular brand of Judaism he sees inherent in Bialik's poetry. He makes it clear that he has no intention of denouncing Bialik for "secularizing" Judaism, as some previous critics have done. Rather, he points to Bialik's poems as new and individual attempts at a modern and alternative type of Judaism. Demonstrating a close familiarity both with Bialik's poetry and with the large body of critical literature in Hebrew, Breslauer advances the contention that Bialik's poetry serves "as the agenda for a contemporary Jewish theology."

GENN provides a detailed and comprehensive study of the influence of rabbinic literature on the poetry of Bialik. He argues that although previous works of this nature correctly identified many rabbinic sources in the poetry of Bialik, there are still many sources that have not been considered. It is Genn's purpose to fill this gap and to offer the reader a comparison between the rabbinic sources used by the poet and the poetry itself. The study consists mainly of close readings of the poems followed by an examination of rabbinic sources relating to the different poems and analysis of the relationships between poem and source. The author is appropriately steeped in both rabbinic literature and the large corpus of primary and secondary Bialik material.

Bible translations in English encompass a wide variety of translation philosophies and are targeted at diverse audiences, Jewish and Christian alike. While the most familiar English version

is the King James Version of 1611, the 20th century has seen the production of more major English Bible translations than all previous centuries combined. Most of these were produced by Christian scholars for Christian readers. During the last half of the 20th century, however, Jewish scholars participated in ecumenical efforts to produce Bible translations as well as distinctly Jewish productions of English Bibles.

ORLINSKY and BRATCHER survey the history of Bible translation by dividing it into four great ages. The first great age of Bible translation stretches from 200 B.C.E. through the fourth century C.E. This age was dominated by two early Jewish translations: the Septuagint (Greek) and the Targums (Aramaic). The spread of Christianity gave rise to daughter translations of the Septuagint (i.e., translations of the Greek translation). The second great age of Bible translation begins in 400 and lasts until about 1500. The third great age of Bible translation runs from 1500 through 1960. Orlinsky and Bratcher concentrate on Bible translation in England and the United States during this age. This age saw the first great English translation, that of William Tyndale. In Orlinsky and Bratcher's opinion Tyndale is central to every English translation to this day. Tyndale, in turn, was enormously influenced by Martin Luther, whose translation of the Hebrew Bible was influenced by the commentary of the Jewish exegete Solomon ben Isaac (Rashi). The final age begins in 1960. In their discussion of the last two ages, the authors attempt to cover many of the Bibles produced in North America and provide comparisons and evaluations of them. Orlinsky and Bratcher's work is indispensable to anyone wishing to obtain more than a superficial understanding of the complex history of Bible translation.

FRERICHS assembles eight essays on the Bible in America. The second essay examines major translations produced by committees since 1900. It classifies them either as revisions of the King James Version or as new translations, and it evaluates them according to the degree that they communicate to their intended readers the emotional and cognitive message that was communicated to the original readers. Another essay provides an exhaustive survey of American Bible translations by individuals. A third essay surveys American Jewish Bible scholarship and translations, concentrating on the translations of Isaac Leeser (1806–1868), who produced a literal but wooden translation, and the versions issued by the Jewish Publication Society: *The Holy Scriptures* (1917), and its newer counterpart *Tanakh: The Holy Scriptures* (1985).

KEE contains a number of essays relevant to Bible translation. In particular, the essay titled "New Bible Translations: An Assessment and Prospect" explores the problems of modern Bible translations, asserting that the problem for translations into major European languages (English, French, German, etc.) is that the translators are well equipped with knowledge of the original Biblical languages but ill-informed of developments in linguistics, while for those producing translations in the indigenous languages of developing countries the opposite is true. Another essay examines the possibilities for breakthroughs in Bible translation and urges a more wholistic view of the translation task, including a greater understanding of the oral use of language and its effects upon the written word.

SHEELEY and NASH attempt to provide a guide for evaluating and choosing an English Bible translation. They begin by surveying the history of the Bible and its translation into English. Another chapter presents the challenges of translating the Bible. It divides translations into three categories that correspond to the approach to translation employed by the translators: verbal translations, dynamic translations, and paraphrases. Translations are categorized as verbal translations if they seek primarily to translate the Bible in a way that is faithful to the ancient words and forms of the Hebrew text. Dynamic translations are concerned with translating the meaning of the ancient text as faithfully as possible, even at the expense of the verbal forms. Paraphrase is the classification for Bibles that attempt to update the language of previous translations without consulting the text in the original language. Chapters on verbal translations and on dynamic translations and paraphrases evaluate a number of recent and widely available English Bible translations. A concluding chapter on choosing a Bible translation for personal use attempts to help readers in making this decision. Sheeley and Nash write for a general audience and do not hesitate to criticize various English translations for their shortcomings. They do, however, exhibit a bias toward verbal translations in general and the *New Revised Standard Version Bible* in particular.

THE HOLY BIBLE (*THE NEW REVISED STANDARD VERSION*) (NRSV) is an ecumenical Bible translation produced by approximately 30 scholars. It contains not only the Hebrew Bible but also the Christian New Testament and Apocryphal/Deuterocanonical books. Its Hebrew Bible committee included a Jewish scholar. The NRSV is a conscious continuation of the tradition of the King James Version. Among its controversial features is a commitment to gender-inclusive language even in some cases where it could be validly argued that the original language intended a gender-specific referent. The English rendering of the Hebrew Bible in the NRSV is more elevated and stately than its Christian New Testament counterpart. Undoubtedly, the NRSV is the most widely used modern English version among English-speaking biblical scholars.

TANAKH: THE HOLY SCRIPTURES is the most up-to-date Bible translation produced by a team of Jewish scholars. It consciously breaks away from the English of earlier translations but attempts to remain faithful to the Hebrew text. It is marked by the careful scholarship and thorough research that lies behind it. In any number of passages it offers fresh translations of high literary quality. In general it follows the Masoretic Text of the Hebrew Bible but does depart from it on a few occasions. It also contains quite a number of helpful notes for readers who seek further insight into ancient life and customs.

FOX presents a translation of the Torah along with extensive notes and commentary. It is marked by a translation philosophy that seeks to produce an English translation that preserves the literary features of the Hebrew text even at the expense of idiomatic English.

ROGERSON has edited a slim volume of essays to guide the beginner in the academic study of the Hebrew Bible. These essays give general orientations to the history of biblical studies, the methodology of biblical interpretation, the cultural world of the Bible, and some of the theological problems that readers today encounter when they begin to study the Bible systematically. The essays serve to dispel some popular myths about the Hebrew Bible and replace them with the results of scholarly consensus. This book shows that the Hebrew Bible deserves serious study because of compelling challenges it offers to readers today. This book is designed to make entrance into biblical studies easier for the general reader.

KNIGHT and TUCKER have edited a collection of essays that describe the present state of research into the Hebrew Bible in a clear and comprehensive fashion. Individual topics are discussed by some of the leading biblical scholars of the day. The authors not only review current scholarship but suggest some directions for future research. There is an excellent bibliography accompanying each article, enabling interested readers to probe more deeply into specific topics. In addition to articles that discuss the literature of the Hebrew Bible itself, there are articles on history, archaeology, the ancient Near Eastern environment, methods of biblical interpretation, ancient Israelite religion, the theology of the Hebrew Bible, and the relationship of the Bible to contemporary culture. This is a very useful volume since it provides the reader with

a sense of trends in research, issues currently under study, and any consensus that has been attained. While the essays examine an enormous amount of secondary literature, the purpose is to show how scholarship has advanced. The authors do not burden the reader with a simple review of all the published literature but present to their readers important studies that have made significant contributions to the field.

A concordance, listing the place where a given word occurs in the Bible, is essential for the most basic analysis of the text because it helps the reader determine the usage, distribution, and context of the word in question. The concordance selected should correspond to the reader's chosen translation of the Bible. KOHLENBERGER's concordance to the *New Revised Standard Version* (NRSV) includes the apocryphal/deuterocanonical books along with those in the Hebrew canon. He also provides an index to the NRSV footnotes and a topical index. Concordances in book form, however, are becoming obsolete because computer-based technology allows for speed and a variety of searches using a concordance on a CD-ROM and a lexical analysis program such as those available from Logos Research Systems. There are several "bundles" of basic research tools available in CD-ROM format. These include various versions of the Bible, concordances, dictionaries, atlases, and commentaries.

Dictionaries of the Bible are invaluable as timesaving, informative resources. They give the reader a quick orientation to key words and concepts. There are several good one-volume and multivolume Bible dictionaries available. FREEDMAN's six-volume work is the most comprehensive, however, containing 6,200 entries written by 986 contributors. These statistics reflect the degree of specialization that has developed in biblical studies. Each major article and most others have helpful bibliographies attached. The volumes are amply illustrated. Little attention is given to the contemporary theological relevance of the topics discussed since both the contributors and the intended audience are so religiously diverse. This dictionary is also available on CD-ROM, which makes using it much simpler. The one-volume Bible dictionaries obviously cannot provide the detail of Freedman's *Anchor Bible Dictionary*, which will represent the gold standard for a long time to come.

ZIMMERLI offers a systematic presentation of the religious thought of ancient Israel as found in the Hebrew Bible. It deals with the central focus of that religious faith: the confession of the God of Israel under the name YHWH. Other topics include leadership, morality, liturgy, and eschatology. His presentation of ancient Israel's religious thought shows how this thinking found new expressions in new situations. Each section contains an extensive bibliography of studies in which fuller treatments of the topic can be found. The conclusions represent consensus viewpoints, but the discussion can be dense at times. It is a book for more advanced readers since it presupposes basic knowledge of the contents of the Bible.

The Bible did not emerge in a vacuum. Informed biblical study must consider the wider cultural context of the ancient Near East. Among the anthologies of ancient Near Eastern literature available, that produced by MATTHEWS and BENJAMIN may be most helpful to beginners. Ancient Near

Eastern texts are presented according to the books of the Hebrew Bible that they illuminate. The authors also give a sketch of ancient Near Eastern history and a good basic bibliography. The texts are not true translations but paraphrases. While they give the flavor of the ancient Near Eastern context, they do not provide the precise accuracy necessary for more specialized study. Still, this book provides the beginner with a good entry into the larger ancient Near Eastern world in which ancient Israel played a small part.

An atlas of the Bible is also necessary if biblical study is to recognize the cultural context that gave rise to the Bible. AHARONI provides readers not only with maps of the biblical world but with a historically oriented commentary to each map, along with references to biblical and extrabiblical texts related to each map. This volume, then, offers readers both an introduction to the geography of the biblical lands and a good sketch of their history. Atlases of the Bible are also available as part of computer-assisted biblical study programs.

The results of archaeological excavations supplement the picture of antiquity available through the analysis of its literary remains. Archaeology studies the material remains of the ancient world, and as such it too is essential to understanding the world of those who produced the biblical texts. THOMPSON orients the reader to archaeology as a field of study and then goes on to show how it can help in understanding the world of the Bible. The author also discusses how archaeology contributes to the religious understanding of those who accept the Bible as normative for faith and life.

J.G. Eichhorn published his *Einleitung in das Alten Testament* in 1783 and is considered the founder of the modern introduction to the "Old Testament." He attended to three questions: the growth of the canon, the history of the text, and the origin of the individual books of the Bible. RENDTORFF takes this classical model and modifies it in a creative way. Rather than focusing narrowly on the history of the text, Rendtorff uses the text to reconstruct the history of Israel before turning to extrabiblical material. He then shows how the biblical text is an expression of the life of ancient Israel. After describing how the individual texts became "literature," he discusses the biblical books in their present form. It is here that the author introduces the reader to the results of critical analysis of the individual books. He is careful to underscore the theological perspectives that characterized the canonical form of the individual books. Especially helpful are the cross-references he provides, directing the reader to related discussions elsewhere in the book. While this work was originally written in German, the excellent bibliographies provide the reader with direction to some works in English, even though German titles predominate. The book contains not a single illustration, map, chart, or photograph—an indication that the author sees his work as an introduction in the classical sense.

Though the cross-references in the margins of the text, the bibliographies, and indexes help make this book easier to use, the density of its presentation puts it beyond the reach of beginners. It is, however, a fine reference tool for the advanced student, who will find invaluable the author's accurate and balanced presentation of the state of scholarship regarding issues of history, the institutions of ancient Israelite society and religion, and the theological editing of the individual books in the canon. A particular issue that calls for some comment is the author's perspective on the origins of the Torah. He abandons the view of continuous sources combined by priestly circles. Rendtorff holds that the Deuteronomists gave the Torah its shape by combining fragments of earlier tradition and giving them a distinct theological interpretation.

ANDERSON has produced what has proven to be the most popular of these introductions among readers in the United States, having gone through four editions. The book is amply illustrated and engagingly written. The footnotes and bibliography direct the interested reader to important works of critical scholarship. Although the author sought to interweave the results of historical and archaeological research with literary criticism and biblical theology, the work is governed by the ideas of salvation history characteristic of the biblical theology movement. The problem is that focusing on "salvation history" makes some Hebrew Bible traditions marginal. For example, Anderson did not include a chapter on the psalms or the wisdom tradition in his first edition. This approach also is a distinctively Christian one that sees ancient Israel's destiny

fulfilled in the life and ministry of Jesus, although this is not explicit in the book.

Throughout the four editions of his work, Anderson remained convinced of the historical value of biblical narratives. For example, he presented the patriarchal narratives (Genesis 12–50) as reflecting the cultural milieu of the Middle Bronze Age. He concludes, then, that these narratives are historical sources. Anderson's basic approach has not been affected substantially by the developments in biblical interpretation in the 40 years since his introduction first made its appearance. For example, he makes no use of the sociological and anthropological models that have proven their usefulness in offering new approaches to understanding the Bible. Still, each edition does show that—within his hermeneutical framework—Anderson has changed some positions. Thus, in the fourth edition he makes two significant changes. First, he advances his treatment of the Yahwist epic into the tribal era. He previously considered the Yahwist (author of the "J" source in the Pentateuch) to be the product of the Solomonic era, though a current tendency is to locate this material closer to the exile. Second, his presentation of the restoration places Ezra's mission before that of Nehemiah. In the first three editions, he held the opposite view.

LEVENSON offers an introduction to the Hebrew Bible that is explicitly Jewish in its approach. The first part of the book explores the covenant metaphor, showing that image at home in the culture of the ancient Near East. The section ends with a vigorous defense of the rabbis who have been accused of transforming this covenant ideal into legalism. The second part of the book explores the Zion metaphor and its implications for ancient Israel's liturgical life. The final section of the book argues against the notion that the Sinai tradition was dominant in the North while being displaced by Zion traditions in the South. This is less an introduction in the classical sense and more a theological essay on the significance of the Scriptures from a Jewish perspective.

The value of this work is that it offers a fresh theological interpretation that is not shaped by the categories of salvation history and the biblical theology movement that have dominated "Old Testament" interpretation until recently. It also adds an articulate and creative Jewish voice to a discussion that has been dominated by Christian interpreters. The author makes significant contributions for Jewish and Christian readers alike. For the former, he shows the value of a historical-critical approach to the Bible. For the latter, who tend to view prophets as the apex of ancient Israelite religion, he offers the twin foci of Torah and Temple as stimulating and engaging alternatives.

HUMPHREYS also makes the Moses/Sinai and David/Zion traditions linchpins for his presentation. He makes a conscious effort to augment the literary-critical scholarship of the classical introduction with results from the social-scientific methods in current vogue. This is a good introduction for those with little familiarity with the critical study of the Bible. This is not a theological essay like the one Levenson produced; it is clearly a textbook designed for beginning students. It has charts, maps, and photographs that enhance the content of a clearly written book. There are also select bibliographies of secondary literature in English.

Humphreys's book discusses three "crises" that led to the production of ancient Israelite and early Jewish literature: David's capture of Jebusite Jerusalem, the destruction of Jerusalem and its Temple by the Babylonians, and the First Revolt against Rome. In the course of describing the reaction to these crises, Humphreys introduces his readers to the biblical literature and noncanonical Jewish literature that were the products of theological reflection on these crises.

CRENSHAW provides an excellent resource for those disposed to a literary approach to biblical studies. After beginning with a short treatment of geography and history, the author, following the canonical ordering of the Hebrew Bible, considers each book in succession. He also includes a section that discusses the Apocrypha. The presentation is lucid and informed, although best suited for those who have some basic knowledge of the Bible, even though the book is intended as a college textbook. While Humphreys discussed the religious literature of ancient Israel and early Judaism as theological reflections occasioned by specific events in Jerusalem's history, Crenshaw approaches the Hebrew Bible and early Jewish religious texts primarily as literature. He focuses on the aesthetic rather than on the theological dimensions of the biblical material. Still, this is not purely a "Bible as literature" textbook. Crenshaw helps the reader appreciate the religious dimensions of the biblical text.

One shortcoming of a purely literary approach is that the results of archaeological work do not have much impact on the presentation. Also, the author may well give insufficient attention to certain topics. Apocalyptic, for example, was an important body of literature in early Judaism, but it receives minimal attention here.

CHILDS makes the cleanest break from the classical mold of "Old Testament" introductions. He is not interested in reconstructing the history of the text but in describing the theological meaning that the received text has for believers. The object of his study, then, is the Hebrew Scriptures as received by the synagogue and the church. He examines each book in canonical order by summarizing the literary-critical issues. The heart of his contribution, however, is his analysis of the canonical form of the books and the theological implications of this final form of the text. Appreciation of this book requires a level of sophistication that not all beginners will have. It is less an introduction than a reference work on the importance of the canon of Scripture in the life of believing communities. The value of Childs's work is that it shows how the Scriptures themselves grew out of a process of tradition and reinterpretation. With the formation of the canon, the results of that process became normative for the believing communities, whose reflections gave rise to the biblical text as it now exists.

GOTTWALD's work is also less an introduction than it is a reference tool. At the same time, it is clearly the most comprehensive introduction available. Gottwald goes into great detail, showing how the methods derived from the social sciences can relate to the literary-critical methods that have been characteristic of scholarly biblical interpretation. His understanding of the social process in ancient Israel clearly dominates the book. He sees ancient Israel's history as a by-product of social conflict between the rich and the poor. Though this

struggle had religious overtones, it—not religious beliefs—shaped ancient Israel's life. Gottwald's views on the social process do not lead him to ignore the contributions of the historical-critical approach to the Bible. On the contrary, he provides readers with a most comprehensive treatment of the data that result from the application of this approach to the biblical text.

CERESKO wants to make the results of Gottwald's work available to a wider audience by showing the hermeneutical significance of his approach. Ceresko's introduction, then, explicitly shows the consequences of a liberation perspective on reading the Hebrew Bible. Though he achieves this goal, he neglects to fully inform his readers of the shape of current biblical scholarship in several important areas. Still, those looking for a readable and coherent introduction to the Hebrew Bible from a liberation perspective will appreciate this book. Unfortunately, it lacks the quantity and quality of illustrations that are so important in an introduction.

LAFFEY offers an approach similar to that of Ceresko. Similar to biblical interpretation from a liberation perspective, Laffey's feminist interpretation takes an "advocacy" stance. She helps readers see the ways that the biblical text has been shaped by the patriarchy and offers a reinterpretation of neglected or misinterpreted stories about women. This book is intended to supplement rather than supplant the standard introductions. It suffers from a shortcoming common to advocacy approaches whereby 20th-century motivations are read into some biblical texts at times. Still, the value of Laffey's approach is that it shows how the readers' social stance shapes their understanding of the Bible. This reinforces the notion that the reader is not a passive recipient of data—rather, he or she is an active agent in the process of interpretation.

Biblical theology—variously conceived as the attempt to describe biblical teachings concerning God and God's relation to the world and the community of believers, or as the project of constructing teachings about these issues on the basis of biblical texts—has not generally been a Jewish pursuit. However, while most “Old Testament” theologians speak from a Christian point of view, their work remains instructive for all students of Israelite religion. Moreover, in recent years some scholars have attempted to address the sorts of issues associated with biblical theology from a Jewish point of view. Finally, biases of biblical scholarship appear most clearly in biblical theology, and thus this field can elucidate not only the Bible but also modern scholarship.

Given the many volumes (usually of great length) devoted to biblical theology, students are greatly aided by the fine collection edited by OLLENBURGER, MARTENS, and HASEL. It presents excerpts from books by 20 biblical theologians (19 Christians and one Jew—a breakdown that accurately represents the field). Most authors are represented by two excerpts: a broad programmatic statement followed by a treatment of a specific topic. A short but helpful essay situates the selections in the context of each author's larger project and the field as a whole. Three essays by the editors survey the history of the field prior to the 1930s, its major currents since then, and its future. A 1787 essay by Johann Gabler, often considered the father of Old Testament theology, appears in an appendix.

EICHRODT sets out to provide an exposition of Old Testament thinking as a structural unity. Thus he claims to eschew both traditional Christian dogmatic theology (which prescribes rather than describes) and the history of Israelite religion (which studies variations that manifest themselves over time).

Rather than tracing the development of diverse schools of thought—a project he views as worthwhile but distinct from biblical theology—he finds a thread that holds the Old Testament together, to wit, the theme of covenant. He organizes his book around three categories: God and the People, God and the World, and God and Man. Eichrodt endeavors to show that the New Testament is fully consonant with the Old, and that the Old leads specifically to the New. Thus, while allegedly rejecting dogmatic theology and allowing the texts to speak for themselves, Eichrodt arrives at a classically Christian anti-Jewish conclusion (most evident in his famous description of postbiblical Judaism as “torso-like”). In spite of the chasm between his goal (allowing texts to speak for themselves) and his achievement (imposing Pauline views on them), Eichrodt's attention to the theme of covenant and his detailed considerations of many texts render his book a classic, albeit a deeply problematic and essentially anti-Jewish one.

VON RAD finds the fundamental element of the Hebrew Bible's worldview in the idea of “salvation history” (i.e., Israel's acknowledgement of God's saving actions). For von Rad, at the center of biblical theology stands history—in the sense not of events as they occurred but as remembered and confessed by Israel. True to his descriptive project, he emphasizes that the Hebrew Bible does not present a single theology but contains distinct and often competing sets of teachings, most of which share some element of salvation history. He approaches his exposition historically, attending to differences among prophetic, priestly, Deuteronomic, and wisdom viewpoints. He emphasizes the development of traditions within the Hebrew Bible and the crucial role that reinterpretation plays in it. In light of this tradition of reinterpretation, the New Testament continues the same stream as the Old Testament, and indeed culminates it. This is true even—or especially—when the New revises the Old. That the same claim can be made of rabbinic interpretation does not occur to von Rad. He fails to address why the culmination of this development is found in the Christian revision rather than any other postbiblical tradition.

KNIERIM envisions his work as descriptive, though engaged. In this book (more a collection of essays than a unified monograph), he highlights crucial questions often underplayed by other biblical theologians: the nature of revelation, the relationship between creation and revelation, and themes of justice, hope, sin, and spirituality. One chapter attends in particular to the problem posed for modern thinkers by the Old Testament's zeal for the expulsion or extermination of the Canaanites. Knierim repudiates the tendency of Christian thinkers, including Old Testament theologians, to subjugate the Old Testament to the New. He prefers to evaluate the varied theologies he finds in the Old Testament according to what he views as the most central biblical idea. Unsurprisingly, the idea he finds most central (YHWH's universal dominion in justice and righteousness) reflects his late-20th-century politics more than the texts themselves. Knierim dislikes the notion of the election of Israel, which he somehow wants to argue is alien to the core of Old Testament belief. In the end he differs from his Christian predecessors in imposing on the texts a modern liberal ideology rather than one taken from the New Testament.

BARR (1980) offers an entirely different approach to Old Testament theology and presents a useful polemic. Against much English-language biblical theology of the 1950s and 1960s, Barr argues that the theology of the Bible does not rest on the history underlying the stories but in the stories themselves. Historiography in the modern sense is not really present in the Old Testament; even to the extent that parts of Scripture depict events that actually occurred, the recounting of those events in Scripture is more oriented toward the future than the past. Thus biblical theologians would do better to be concerned with close readings of biblical texts than with defending the historical accuracy of biblical texts. Barr also addresses the question of the Bible's authority from a point of view that is neither fundamentalist nor relativist. Among other topics he addresses are the perils of politicized theologies (e.g., liberation theology) and the nature of "biblical" fundamentalism. These essays reflect his well-founded skepticism toward canonical approaches to Scripture and biblical theology.

BARR (1993) displays the author's constructive side, with a genuine command of both theological discourse and biblical studies (many biblical theologians have little expertise in the former and willfully forget much of the latter). Barr argues that biblical theology need not be opposed to natural theology—the idea that humans have a natural awareness of God or a capacity for such awareness—regardless of any special time-bound revelation that comes from the Bible or the Christian Church. On the contrary, some biblical texts themselves express a type of natural theology. Barr finds evidence of natural theology in various New Testament texts, in intertestamental Jewish texts such as the Wisdom of Solomon, in psalms (especially those concerned with nature or wisdom), in Proverbs and Job, in prophecy, and (less convincingly) in biblical law. Barr's argument is a polemic against the great Protestant theologian Karl Barth, who maintained that biblical revelation is incompatible with natural theology. This book is as much about Barth as it is about the Bible, which is entirely appropriate for an avowedly theological undertaking. This work does not claim to eschew concerns of Christian theology; instead, it does not limit itself to describing ancient ideas but addresses modern philosophical issues; it treats texts from the New Testament along with those from the Old. Yet this book is one of the few biblical theologies that is not in some way offensive to Jewish readers, and its insights into ancient Hebrew texts are just as promising for the construction of modern Jewish thought as they are for Christian theology. The book also includes a lengthy discussion of the Torah's commandment of genocide against Canaanites; Barr's treatment is honest and probing, though inconclusive.

These fairly representative examples suggest the questions: can there be a Jewish or non-Christian biblical theology? Should there be one? Why isn't there one? LEVENSON (1993) addresses these issues with uncommon clarity and élan, especially in the essay "Why Jews Are Not Interested in Biblical Theology." Levenson shows that Jews' aversion to the field does not result solely from the tendency of biblical theologians to denigrate postbiblical Judaism (as in the case of Eichrodt) or to ignore its existence (as does von Rad). For Jews, at least since the rabbinic period, religious discourse involves debate, novel interpretations appended to older ones, and multivocal-

ity. The structural unity or "center" that biblical theologians have tended to seek interests Jews less than it interests certain Christians. Jews traditionally read the Bible as a collection of distinct though interconnected utterances, and thus Jewish interpretations of the Bible contain piecemeal analyses rather than extended syntheses. Finally, for many modern Jews, the Bible is of mainly historical interest, and thus the timeless quality of theological approaches is not appealing.

Clearly, a Jewish biblical theology would look quite different from a Christian one, but this does not mean that it can never exist. KAUFMANN's history of Israelite religion might be thought of as a sort of descriptive theology. By emphasizing a central biblical idea (monotheism and the rejection of mythology), its growth, and its permutations, Kaufmann presents a work in some ways comparable to those of Eichrodt and von Rad (on Kaufmann's relationship to biblical theology, see Greenberg). An explicit attempt appears in LEVENSON (1985), who outlines a theologically sensitive description of biblical beliefs (note the plural) from a Jewish vantage point. He focuses on two covenant ideologies in the Hebrew Bible: Sinai covenant entails law and mitsvot; Zion covenant entails divine promise. These ideas are not mutually exclusive, although they are often in conflict with one another. They work together in the Hebrew Bible, as in later Judaism (which upholds the one in halakhah and the other in messianism). Texts that reflect Sinai covenant often mention and indeed are grounded in the covenant of promise. For Levenson, a Jewish biblical theology should be open to biblical texts as they stand (not only as viewed by rabbinic exegetes), to historical study of ancient Near Eastern backgrounds, and to the legacy of classical Jewish Bible commentary. The last element is rarely evident in Levenson's book, but this readable and erudite volume represents an important first step.

GOSHEN-GOTTSTEIN criticizes the affectations of biblical theology, which is far closer to dogmatic theology than it admits. The rubrics used to describe biblical thought owe more to Christian theology than to the emphases of the ancient Hebrew documents at hand. A theology (or "structural phenomenology") that reflects the Tanakh (Hebrew Bible) itself would afford more attention to God's self-revelation and withdrawal, to peoplehood (as opposed to the individual's relation to God), and to the land. Goshen-Gottstein specifies these themes because, as he points out, they are mentioned repeatedly in the Hebrew Bible. At the same time, the influence of later Jewish thought (Kabbalah, Zionism) is manifest in his list. In this sense his model is a specifically Jewish one. Nonetheless, he insists that Tanakh theology should not merely attempt to interpret in light of Jewish sources. The field of Tanakh theology belongs not only to Jewish Studies but also to biblical studies. A specifically Jewish perspective will help all scholars notice what they had neglected, just as the Christian field of Old Testament theology has made genuine contributions to the study of Hebrew Scripture in spite of its tendentious nature.

While GREENBERG does not describe his collection as a biblical theology, his essays present profoundly learned descriptions of biblical teachings and their relationship to Jewish tradition in a manner sensitive to contemporary concerns. As Greenberg examines narrow issues or elucidates specific

passages (thus showing himself a typically Jewish exegete), he consistently sheds light on much larger questions. Thus his classic study of capital punishment in biblical and Mesopotamian law codes reveals central values of biblical thinking that were developed more fully in rabbinic literature. Other essays cover biblical notions of faith, prayer, and idealism; the tensions between nationalism and universalism in the Bible and postbiblical tradition; and the relationships among rabbinic, medieval, and modern interpretations of the Bible. It is indicative that this rich contribution to Jewish biblical theology emerges from a collection of essays that does not intend to be one.

Hermeneutics denotes the formulation and application of specific principles of interpretation, and hermeneutical approaches to the study of the Hebrew Bible are nearly as numerous as

are interpreters. What is more, the field of hermeneutics continues to grow by leaps and bounds. In fact, although one can locate with relative ease works on the Hebrew Bible that adopt or betray one or another hermeneutic, general surveys on principles of biblical exegesis have appeared with relative frequency only in recent times. Hermeneutics as a subject of inquiry is a colossal topic, and it has undergone especially immense changes in the postmodern age. Postmodern methodologies have entered the world of biblical scholarship only slowly and not without controversy. Nevertheless, postmodern hermeneutical approaches are widely recognized to have brought a great deal of insight into biblical scholarship. The following attempts to represent the gamut of interpretive strategies, from ancient to modern, as well as works that couple a critical and historically contextual self-awareness with an even-handed treatment of their subject.

ALTER and KERMODE bring together more than 20 internationally known scholars for a penetrating and exhaustive look at the literary aspects of the Hebrew Bible and New Testament. The treatment of the New Testament along with the Hebrew Bible is both uncommon and enormously important, providing further impetus for comparative work. The encyclopedic format of the book makes it a handy reference for the general reader, and its keenly perceptive insights and broad scope make it also useful to the specialist. The guide will particularly benefit those who have some knowledge of the paths of biblical scholarship, but the uninitiated reader, religious or not, has much to gain as well. The book turns away from the general atomizing tendencies that have directed biblical scholarship for more than a century, and it is representative of a developing current of scholarship that makes a holistic approach to the text central to initial inquiry.

BARTON's eminently readable work outlines the major interpretive strategies that have shaped the study of the Hebrew Bible in the last century, and it offers discussions of the strategies' wider implications. Beginning with the literary critical approach, Barton moves on to form criticism, redaction criticism, the canonical approach, structuralist criticism, and then to the more recent postmodern critical approaches such as reader-response criticism and deconstruction. Barton supplements his discussions both with select bibliographies and with demonstrations of how each interpretive method can be applied to the Book of Ecclesiastes. Thus, Barton's work serves as an excellent "hands-on" primer.

BRENNER and FONTAINE's collection serves as an introduction to the ten-volume series edited by Brenner. This text does not focus on single books of the Bible. Instead, it examines "the structural and systemic issues of method that are largely glossed over or merely implied in most non-feminist works on the Bible." Thus, this work combines broad theoretical essays on feminist approaches to literature and non-feminist works relevant to feminist methodology. As the editors note, their volume embraces two concurrent trends emerging in biblical scholarship: feminist critical consciousness and literary theory. Brenner and Fontaine seek to engage, to excite, and to provoke student readers. Their goal, which is successfully realized, is to cause readers to evaluate critically the biases and methodologies with which they approach the Bible. While a few of the essays contain some Hebrew, most are

accessible to lay readers. The work achieves the editors' aim of "maximizing and championing *difference*."

BRENNER explores biblical books and narratives from a feminist perspective. The series has ten volumes: Song of Songs; Genesis; Ruth; Judges; Samuel and Kings; Exodus to Deuteronomy; Esther, Judith, and Susanna; the Latter Prophets; Wisdom Literature; and references to the Hebrew Bible in the New Testament. Each work contains several essays by scholars who represent a balanced variety of methodologies. While the works do contain some Hebrew, primarily to elucidate periodic philological issues, the series is readable and enlightening.

EXUM and CLINES collect a number of diverse essays by renowned scholars representing the most recent and adventurous theoretical approaches to the biblical text, which the editors place under the rubric "The New Literary Criticism." The editors seek to distance the methodologies found in the book from the older literary-critical school that foregrounded the reconstruction of biblical history. In this work, it is the textuality of biblical literature that takes center stage; therefore, the perspective might be considered poststructuralist. The essays embrace a wide range of interpretive strategies and include intertextuality, reader-response criticism, deconstruction, psychoanalytic criticism, materialist and political criticism, ideological criticism, and feminist approaches. The entire biblical corpus is covered, from legal injunctions and narratives in the Torah to the Prophets and Writings. The collection demonstrates the impact of postmodern approaches on the biblical text and suggests multicontextual approaches to Scripture.

MULDER's collection of scholarly essays provides the most comprehensive survey of the early history of biblical interpretation. The work offers uniformly as much depth as it does breadth. It opens with a discussion of writing in ancient Israel and early Judaism in which all contextual aspects are examined (e.g., the alphabet and scripts, literacy and the centrality of the book in early Judaism, scrolls and codices, the development of the Hebrew canon, and the transmission of the biblical text from the pre-Masoretic period to recent printed editions). The chapters that follow discuss reading the Bible in the ancient synagogue, the Septuagint, the Samaritan Targum of the Pentateuch, Jewish Aramaic translations, the Peshitta, Latin translations, the interpretation of Scripture at Qumran, the use of scripture in the Apocrypha and Pseudepigrapha, the works of Philo, and the translation technique of Josephus. Other chapters are devoted to authority and exegesis in rabbinic literature, the Samaritan tradition, Gnostic literature, the New Testament, and the church fathers. In addition, this work contains a cumulative bibliography and an index of sources, making it an invaluable (and large) resource. Mulder's collection will benefit especially students who have some acquaintance with the subjects examined.

FISHBANE demonstrates the presence of exegetical practices and trends within the Bible, thus shedding light on the hermeneutics (and their ideologues) that influenced the composition of the Hebrew Bible and its eventual canonization. Fishbane explores the role of biblical law as a factor in the emergence of exegesis, and he provides ample detailed evidence for legal exegesis of various kinds in the Bible, such as

verbatim exegesis, periphrastic exegesis, and pseudo-citations in historical sources. The major part of his work is divided into four sections that discuss different types of exegesis found in the Bible: scribal comments and corrections, legal exegesis, aggadic exegesis, and mantological exegesis. The unit on aggadic exegesis considers the law as found in the prophets, as well as narratives, liturgical and theological formulae, and various typologies. The unit on mantological, or prophetic, exegesis is especially useful to biblical scholars because it successfully places the exegetical traditions of biblical Israel and early Jewish commentators in historical context by comparing the strategies of these early interpreters with modes of interpretation found elsewhere in the ancient Near East, especially in Mesopotamia. This achievement also has the effect of highlighting the unique and important contributions of Israelite genius.

SCHOTTROFF, SCHROER, and WACKER offer an excellent outline of feminist exegesis, with each author taking a section of the book to discuss a different aspect of feminist interpretation. Wacker discusses the historical, hermeneutical, and methodological foundations of feminist exegesis. She first adopts a historical perspective and then distinguishes various approaches and categories of feminist exegesis before discussing the question of canon. Schroer authors a feminist reconstruction of the history of Israel. Her approach is first diachronic and then synchronic, allowing for a full exploration of the following topics: "Who is Eve?"; female sexuality; women and violence; access of women to the cultic sphere; and goddesses in ancient Israel. Schottroff contributes a feminist reconstruction of the history of early Christianity. Together, these authors provide a thorough historical and methodological context for current feminist engagement of the Bible.

Approaches to biblical criticism have changed dramatically over the years, and any study must take into account a number of different techniques and methods. An excellent survey of most of the methods in current use in academic biblical studies may be found in the collection of brief introductory essays edited by MCKENZIE and HAYNES, which deals with some 13 disciplines ranging from tradition history and source criticism to social-scientific criticism, feminist criticism, and poststructuralism. Each essay is the work of a leading scholar known for a special interest in the field under consideration and is illustrated with clear examples from the Hebrew Bible as well as the New Testament.

Pre-critical approaches to the Hebrew Bible are dealt with superbly by JACOBS, whose book is an anthology of selected passages from some of the great Jewish biblical interpreters from the 11th century onward, including ibn Ezra, Rashi, Kimhi, and Nahmanides. His selection excludes both the earlier rabbinic legal interpreters and later historical-critical approaches, so questions of authorial intent, historical accuracy, and the like are not covered at all. Jacobs claims that the authors he has chosen share a common interest in the application of the Bible to everyday life, not interpretation in the abstract. A number of different examples are offered for each selected author, who is introduced with a short biographical note, and these passages are commented on astutely by Jacobs, who regularly points out in particular the dual emphasis in these commentators on *derash*, "the meaning read into the text," and *peshat*, "the plain meaning of the text," as well as alerting his readers to each writer's unique style and characteristics.

FISHBANE's set of essays presents his thinking on Jewish hermeneutics and biblical criticism. He is particularly interested in the uniqueness of scripture, which he sees as "an ontologically unique literature" written principally "for the purpose of envisaging God" and by definition requiring reapplication and reinterpretation for each new generation. This he sees as the essential task of biblical criticism. In the first of three main sections of the book, he investigates the origins and intentions of biblical study, considering innerbiblical and extrabiblical exegesis (i.e., the internal reapplication of biblical truth and instruction to address new circumstances later in Israel's history as well as the interpretation of the whole corpus by later exegetes) and wonders how these pragmatic reapplications have transformed the doctrine and the understanding of Scripture.

Fishbane then proceeds in his second section to take two examples of this transformation in operation, as occasioned by the process of two dramatic changes in Israel—the development of ancient Yahwism in the face of conflict with pagan Canaanite religion and the growth of that ancient faith into rabbinic Judaism. He concludes by looking at a number of different examples of "making the pastness of texts present to us and part of our ongoing lives," considering excerpts from Martin Buber and Franz Rosenzweig and demonstrating how these two authors, among others, help their audiences read Scripture for its "inner power."

The mainstream historical-critical approach is dealt with well by KRENTZ, whose short introduction is intended to provide nonspecialist readers with a brief survey of the method. Krentz argues that the goal of the historical-critical method has never been to undermine the biblical traditions, but rather to gain an understanding of the facts of history: "[Historians are] concerned with more than the corpus of fact . . . [they want] to illuminate the past, to understand the events, and to interpret them." He also stresses what he sees as the neutrality of the method, arguing, "The task of the historian is not judgement, but description and explanation." This fails, however, to take into account the many value judgements the historical-critical method itself makes. Most of Krentz's examples are taken from the Christian New Testament, and the method he contends for is rapidly going out of use in more progressive academic circles. His book, nonetheless, remains probably the most useful short introduction to this discipline, which has shaped biblical studies in the 19th and 20th centuries.

ALTER was among the earliest critics to espouse a purely literary approach to the biblical text, rejecting the traditional methodologies. His work on poetry was written to supplement an earlier volume on biblical narrative, and it rapidly became one of the classic demonstrations of the immense literary skill exemplified in the Bible. The book strikes an excellent balance between theoretical chapters and practical analysis of the biblical text. After chapters on parallelism, the development of narrative elements in biblical poetry, and what Alter calls "structures of intensification,"—the manner in which "the artifice of form . . . becomes a particular way of conceiving relations and defining linkages, sequence and hierarchies in the reality to which the poet addresses himself,"—Alter turns to the biblical text and examines the use of these poetic devices in the books of Job, Psalms, Proverbs, Song of Songs, and also in the prophetic books, where he focuses particularly on Isaiah. A fascinating final chapter considers the "life" of the tradition of biblical poetry, surveying the history of its interpretation over the centuries and its reinterpretation in later poetry and hymnody.

Since so much of the Hebrew Bible consists of narrative, narratological criticism also has been of great importance. A classic introduction to this kind of study is that of BAR-EFRAT, who demonstrates well how interpreters may take account of textual features such as the narrator (overt or covert, omniscient or possessing limited knowledge), characters (how they are shaped and revealed, what factors distinguish major from minor characters, the difference between a "flat" and a fully rounded characterization), developments in the plot, and move-

ments in time and space. Particularly useful are his chapter on narrative style, which considers stylistic and compositional devices, and the final chapter, where he demonstrates the insights narrative criticism has to offer in a lengthy exposition of the story of Amnon and Tamar.

WEISS covers much the same material but enters into a far more detailed analysis of the methods and approaches of this kind of biblical criticism (Weiss states plainly that his intention is “methodological rather than exegetical”). However, he proceeds to introduce the techniques of literary criticism by showing them in use on the biblical text, dealing first with the interpretation of contentious words within the text, then slowly broadening his view to take into account phrases, small-scale images, sentences, literary units, and finally the literary work as a whole. The practical outworking of Weiss’s method is then demonstrated in a supplementary analysis of the story of Naboth’s vineyard (I Kings 21), contributed by Yair Zakovitch. Seven appendixes also pick up on issues concerning some of the varied texts discussed in passing as part of the methodological essay.

GUNN and FEWELL, too, focus on literary perspectives on biblical narrative, but from a slightly more popular orientation and with excellent examples. Each methodological chapter is supplemented by a substantial literary reading of well-selected, important passages from throughout the canon, illustrating the technique featured in the theory section. While their chapter on characterization is particularly clear and detailed and deals at length with the special case of the characterization of God in biblical narrative, their major contribution—and the significant difference between their work and that of Weiss and Bar-Efrat—is their addition of material on two contemporary approaches: reader-response theory, which allows readers a significant role in the determination of the meaning of a text; and ideological criticism, which presumes that “particular readings imply certain values, stated and unstated” and investigates how the reader’s own ideological presuppositions interact with those of the text, asking “what values are at work when we and others read and champion readings?” The book concludes with an excellent and extensive annotated bibliography.

One of the leading exponents of ideological criticism of the Hebrew Bible is CLINES, whose *Interested Parties* is a collection of some of his best work in this field over recent years, specifically dealing with “the impact of various ideologies upon the formation of the Hebrew Bible . . . by its writers and upon its reception by its readers.” In an excellent introductory chapter that illustrates how anyone who comes to read the Bible does so as an “interested party,” having a vested interest in the results of their reading, Clines questions the value and indeed the possibility of truly objective reading. This theme is taken up in the essays “Metacommentating Amos” and “Psalm 2 and the Moabite Liberation Front,” which both examine how quick most commentators are to accept unquestioningly the ideology of the biblical text, even when that ideology is clearly problematic. A number of the other essays concentrate on asserting just how problematic biblical ideologies can be, subjecting Job, the Song of Songs, and Psalm 24 to reader-response and deconstructive critiques, which seek to demonstrate that sometimes the Bible can be a

rather dangerous book, despite its venerated status. Two further essays examine the characterization of God in the Pentateuch, suggesting that his behavior is not always what one might expect, and a “masculinist” critique of the presentation of King David, which illustrates as much about ancient Israelite attitudes to manhood as it tells of the character of Israel’s greatest king.

BRIN’s book deals with some of the problems that surround biblical law and its critical interpretation, first addressing some of the general difficulties posed by legal materials—for example, why do some laws detail at length the punishments described for breaking them, when others seem to have no sanctions attached? How did certain legal forms develop? To what extent is there a bias toward the poor in biblical law? He then investigates the whole issue of the legal status of the firstborn in ancient Israel, considering various angles such as the differing requirements for humans, clean and unclean animals, the inheritance laws, and the issue of royal succession. Of particular interest to many will be Brin’s chapter on the legal traditions of the Dead Sea Scrolls, which shows how the authors of these traditions tried to disguise their authorship “behind a veil of pseudo-biblical composition” and sought to present their own legislation as mainstream, even Mosaic, and not sectarian.

The medieval period of Jewish biblical exegesis began in the tenth century with Saadiah Gaon and the Karaites of Jerusalem and ended around the turn of the 16th century. As Frank Talmage has noted, medieval exegesis operated on many levels, according to the time, the place, and the predilection of the individual writer. In the later Middle Ages, some exegetes developed a four-fold system that was dubbed *pardes*, the acronym alluding to the four different exegetical approaches to the biblical text that were in vogue at the time. *Peshat* refers to the plain or contextual meaning, *remez* to the philosophical, *derash* to the homiletic, and *sod* to the mystical. During the rabbinic period and for much of the geonic period, the midrashic-homiletic approach to the Bible held sway, but in the geonic period, Jews began to study the Bible in new ways, including adopting a rationalist approach to exegesis that was influenced by the rationalist elements in Islamic culture. The story of this transformation is told in BARON.

GREENSTEIN is a lively and engaging introduction to medieval exegesis. He analyzes in detail a passage from Rashi as well as briefer passages from Rashbam and Abraham ibn Ezra. At the end of his article, he constructs an imaginary dialogue among these exegetes as they discuss the meaning of a verse in Genesis. The author provides a useful guide to further reading. Readers interested in a general survey of medieval exegesis will also be interested in JACOBS, which makes available extensive passages from the commentaries of most of the major exegetes and supplies brief introductions and extensive commentary. TALMAGE (1986) is a masterly study of the use of allegory in medieval exegesis that focuses on both philosophical and mystical texts. The analysis elucidates the prin-

ciple of freedom of interpretation of the biblical text that has characterized Judaism throughout the ages.

In addition to general discussions, readers can consult more specialized studies about particular commentators or about specific works of exegesis. SIMON presents an exhaustive detailed analysis of four radically different approaches to the Book of Psalms. It is the only extensive treatment in English of the exegetes of the Arabic period (Saadiah Gaon and the Karaites Yefet ben 'Ali and Salmon ben Yeruham), and the author also analyzes the commentary of Moses Gikatilla, an important but neglected Spanish *peshat* exegete. The bulk of the book is devoted to the exegesis of ibn Ezra, the most outstanding representative of the Spanish school of exegesis, which favored a rationalist approach to the Bible based on sound philological and grammatical foundations.

After Saadiah, few medieval philosophers wrote extensive biblical commentaries. The most notable exception is Rabbi Levi ben Gershom (Gersonides, Raibag, 1280–1344), arguably the most important medieval Jewish philosopher after Maimonides. His commentaries span much of the Bible and are extremely prolix. They also contain a wealth of philosophical material that has never been subjected to scholarly analysis. EISEN's book attempts to begin to fill this gap by analyzing the development of Gersonides' philosophical ideas on providence, covenant, and chosenness in his biblical commentaries. This is an important, groundbreaking work that gives much insight into a major body of philosophical exegesis.

Rashi is undoubtedly the most widely read and studied medieval exegete. For an introduction to his exegesis, the chapter in PEARL is adequate and accessible. GELLES is devoted to elucidating a classic question in Rashi studies—the relationship between *peshat* and *derash* elements in his commentaries. Gelles provides a useful summary of the issues, and his assessment that Rashi had "a vision of Peshat yet unrealized" is probably the volume's most important insight.

The book by BANITT is a most unusual and original study of Rashi, but it is not for the novice. The author is a scholar of the Romance languages, and he argues that Rashi based much of his exegesis on a French vernacular tradition that had developed from the Greek and Latin (Vulgate) translations. According to Banitt, this tradition adhered to a literal interpretation of the Bible, based on the Greek versions, and therefore Rashi's *le'azim* (vernacular glosses) were not merely intended as additional comments for the French-speaking reader; instead, his exegesis was meant to correct or improve the already existing French translation. Banitt also tries to demonstrate with extensive examples and dazzling erudition that many of Rashi's comments were based on his belief in paronomasia (especially similarities in the sound of words in different languages). In some cases, the author may stretch his points, but many of his examples are quite convincing and deserving of further consideration.

Samuel ben Meir (Rashbam) was the most important representative of the Northern French School of *peshat* exegesis, which developed in the generation after Rashi. Rashbam's influence was relatively short-lived, spanning the 12th through the mid-13th centuries, and the best treatment of his commentaries available in English is found in LOCKSHIN. Another significant medieval commentator was David Kimhi, the principal

representative of the Provençal school of exegesis, which combined philosophical sophistication with the Spanish approach of *peshat* interpretation based on grammar and philology. TALMAGE's (1975) chapter on "The Way of Peshat" is a definitive analysis of Kimhi's exegetical methodology.

BEATTIE is a pioneering introduction to the medieval exegesis of the Book of Ruth. The volume provides translations and analyses of several commentaries (including Yefet, Rashi, ibn Ezra, and Isaiah of Trani [erroneously labeled Pseudo-Kimhi]), but it suffers from the author's tendency to judge the value of the commentaries by the extent to which they address the prevalent concerns of modern biblical studies. This approach was common among earlier generations of scholars but has been generally replaced by a more sympathetic approach that endeavors to understand medieval exegetes and their work in their historical and cultural contexts.

WALFISH is the most ambitious study of the exegesis of a single biblical book. His work surveys and analyzes more than 25 Hebrew commentaries on Esther from 1100 to 1500, many of which are found only in manuscript and have never been studied before. This study makes a determined effort to place each exegete in his historical and cultural context. The first section of the book, which discusses the literary sources available to the exegete and reviews various exegetical methodologies, is a useful introduction to the medieval commentators, while the bio-bibliographical survey at the back provides additional information on the exegetes and their work. The second half of the book discusses the exegesis of Esther in its historical context, dealing with concerns such as antisemitism, Jewish-Gentile relations, and attitudes to the monarchy that are reflected in the commentaries.

The study of biblical law is central to the emergence of modern biblical scholarship. A historical approach to the formation of the Pentateuch requires an analysis of how the content, assumptions, and sequence of composition of the three different law collections of the Bible relate to one another. The three law collections in question are the Covenant Code of Exodus 21–23, Deuteronomy 12–26, and the Holiness Code of Leviticus 17–26. This brief essay will focus on the development of the major models and methodologies used by scholars to investigate this material, emphasizing issues that touch upon the study of Judaism and framing the discussion along historical lines.

WELLHAUSEN offers a brilliantly argued example of a classical model of biblical scholarship known as the documentary hypothesis. He compares the legal collections of the Pentateuch both with one another and with the narrative works of the Deuteronomistic History (Joshua, Judges, Samuel, and Kings) and Chronicles. He accepts the hypothesis of prior scholars that Deuteronomy's call for the restriction of all sacrificial worship of God to one exclusive sanctuary (Deuteronomy 12) logically suggests that this legal corpus was closely tied to Josiah's reform of 612 B.C.E. (2 Kings 22–23) and was probably composed around that time. Viewed from that perspective, Wellhausen contends, Deuteronomy's requirements appear to have been a departure from tradition and not simply a reform in which the nation returned to older norms. He draws this conclusion because the requirement for cultic centralization in Deuteronomy contradicts the sanction commanding the worship of God at multiple altar sites evident both in law (e.g., Exodus 20:24) and in such narratives as Genesis 12, 1 Samuel 1, and 1 Kings 18. He therefore places the date of the Covenant Code prior to that of Deuteronomy and maintains that the priestly laws of the Holiness Code assumed centralization and therefore came after Deuteronomy, appearing in the postexilic period (fifth century B.C.E.). The author's model is rooted in the philosophy of German romanticism and consequently assumes that spontaneous religious spirit is more creative and meaningful than a religion that consciously employs literary activity and the intellect. The movement to law and to text is therefore viewed as the ossification of creative originality. This model thus entails an

ill-conceived hierarchy that stigmatizes cultic law and postexilic Judaism as representing a decline from the previous heights of Israelite religion achieved in the age of the prophets. However, extensive literary remains from the ancient Near East, which were already beginning to emerge during the time that Wellhausen wrote, refute the author's conclusions on this subject, for this evidence demonstrates the antiquity of literacy, law, and cultic regulations in the region. Nonetheless, Wellhausen's theory still provides an indispensable, intellectually engaging analysis of the Pentateuch, one that is sensitive to how texts work and attentive to the ways in which the laws relate to and engage one another.

KAUFMANN challenges the classical model of the documentary hypothesis, although he does not reject it altogether, as some have done. He disputes the notion that the priestly literature (and the Holiness Code) represent a postexilic lapse, arguing to the contrary that the priestly literature preceded Deuteronomy and belonged to an early stage of the religion. The author denies any literary contact between the various legal strata of the Bible and also denies the dependence of Israelite law upon earlier Near Eastern sources, explaining all points of apparent similarity in terms of an alleged common tradition, out of which each body of legal literature arose as independent crystallizations. Although that approach has not proven tenable, Kaufmann helps open up a nonreductive approach to cultic and ritual law that saw that law as anchored in the ancient Near East. Equally important, his focus on the Torah as a body of literature expressing a coherent set of values that differ from those of prophetic literature provides a new approach to the classical documentary hypothesis that shows how prophecy often presupposes Pentateuchal norms while also making ethical law the dominant component of the covenant.

Accepting Kaufmann's position regarding the antiquity of the priestly literature (a theory that remains controversial), WEINFELD's important work on Deuteronomy has broad implications for the study of biblical law. He argues that the drafters of Deuteronomy were conversant with Hittite and, especially, contemporaneous neo-Assyrian state treaties. This theory has helped to establish interest in the phenomenon of direct or indirect contact between the creators of biblical and Near Eastern law, thereby encouraging an appreciation of the learned nature of Israelite legal writers. Weinfeld proposes that the writers of Deuteronomy were professional scribes attached to Josiah's court, and he posits that they drew on a wide range of biblical literature, both wisdom and law, to create their texts. Weinfeld's approach countered the then-dominant form-critical approach to Deuteronomy, which traced the text's origins to the oral preaching of the rural Levites. More important, his study provides an implicit challenge to the antitextual bias with which the discipline of form criticism was founded.

In a prolific career spanning many decades, DAUBE approached biblical law as a jurist trained in Roman legal history. He uses this expertise to show how the growth and structure of the biblical text can reflect developments in legal thought, thereby accounting for otherwise problematic constructions. For example, he argues that biblical legislators, like Roman lawmakers, would often add amendments or later

reflections on a particular issue to the end of the original legal text as a coda. Daube also contends that the classical rabbinic techniques of legal reasoning (the hermeneutical "measures") were borrowed from the rhetorical conventions of Greco-Roman jurisprudence. With his capacity for interdisciplinary work, Daube has made important contributions to the study of Near Eastern, biblical, Jewish, and Roman legal history.

Most scholars have directed their attention toward reconstructing the correct sequence and development of the biblical legal collections in relation to one another and to the narrative strands of the Bible. In comparison to that valuable literary-historical enterprise, GREENBERG's essay remains an important attempt to articulate the meaning and significance of biblical law on its own terms. Focusing on the Covenant Code as the earliest legal source in the Bible, he contrasts its set of values with those of such great ancient Near Eastern legal collections as Hammurabi's Code (1752 B.C.E.), which it resembles both in form and in content. Two principles of sanction appear in each legal collection: either *talion* ("an eye for an eye") or financial compensation (a fine) may be imposed as penalties for wrongdoing. However, these principles do not operate identically within the two cultures. In the Babylonian context, *talion* may be imposed either for property crimes (such as theft) or for bodily injury; similarly, homicide is punishable either by financial compensation or by death, depending on the class of the victim. In the biblical context, by contrast, property crime is never punishable by execution of the thief, and bodily injury is never redressed in financial terms. The significance of this distinction is that the biblical legislator views *property* and *person* as separate legal and conceptual categories. Financial compensation marks property loss as finite and replaceable; *talion* marks the person as infinite in value and irreplaceable, which is to say, unique. The categorical distinction between the two categories is absent in cuneiform law.

Greenberg's argument initiated an ongoing debate about how to understand the biblical and cuneiform legal collections. (For the best edition of the latter, see Martha T. Roth, *Collections from Mesopotamia and Asia Minor* [1997].) JACKSON argues that it is invalid to make generalizations about cultural value on the basis of biblical law as codified in the Pentateuch. There is no evidence that those laws had operative force: at a number of points, other literary genres of the Bible, such as narrative and wisdom, presuppose sanctions and norms of redress inconsistent with the formal statements of the laws. Scholars such as Raymond Westbrook (in his essay "Biblical Law" in HECHT), working as jurists, have attempted to reconstruct the system of civil and criminal law that might have operated in ancient Israel. In a brilliant, posthumously published monograph, FINKELSTEIN raises the conceptual and methodological stakes in this debate. He contends that the conception of human value in modern Western culture corresponds to and derives from biblical law. This distinguished Assyriologist argues that ostensibly minute differences of sequence or legal sanction between biblical and Near Eastern law reflect the attempt of the drafter of biblical law to distinguish between person and property. In a richly suggestive analysis, he argues that the drafter's focus upon the

category of *person* is apparent in the organization of the Covenant Code and even helps explain topical shifts in the biblical text that have otherwise been viewed as intrusive or secondary. Biblical law thus represents something similar to a philosophical argument that conceptualizes the autonomy and the sovereignty of the person. Finkelstein then follows the history of related ideas into the legal systems of antiquity, medieval Europe, and contemporary U.S. law.

This debate concerning whether Pentateuchal law reflects broader cultural norms and whether it had judicial force has inspired many avenues of research. Assyriologists have established that Hammurabi's Code was regarded as a literary classic for more than a millenium from the time of its composition, but it is never once cited in any of the thousands of actual court dockets that survive as reflections of actual legal practice in the ancient Near East; nor do actual penalties conform to its stipulations. On the basis of that sharp discontinuity between the literary formulation and the operation of law, many scholars regard the cuneiform legal collections as something closer to moral literature than positive law. That literary model may also be appropriate for biblical law, at least until the reconstruction after the Babylonian Exile when, under Persian rule, the post-exilic community sought to reestablish itself by using the Pentateuch as a type of constitution.

FISHBANE, building on the insights of a number of other scholars, provides a new model for analyzing the composition and growth of biblical literature. He demonstrates the extent to which Israelite scribes and authors were constrained to comment upon, explicate, annotate, revise, refer to, and embellish earlier texts that occupied a privileged place in their culture. In doing so, Fishbane shows that the dynamic of tradition and interpretation is not only a postbiblical phenomenon but also occurs within biblical texts themselves. The continuities of literary form and exegetical technique, which reach from cuneiform literature through biblical texts to the Dead Sea Scrolls, imply that the exegetical techniques of rabbinic literature presuppose an immanent tradition of textual study and do not belatedly derive from the Greco-Roman culture of late antiquity. The book also establishes a continuity of form and scribal technique that spans the various literary genres of the Bible.

The standard view of Deuteronomy as one of the four documentary sources of the Pentateuch, dated to the late seventh century B.C.E., fails to explain either the book's similarities to or divergences from the Covenant Code. LEVINSON seeks to address these issues by arguing that the legal corpus reflects the struggle of its authors to introduce a radically new system of religious law that was viewed as essential for the nation's survival at the time of the neo-Assyrian crisis. Seeking to defend this transformation of prevailing norms, the reformers turned to earlier laws such as those in the Covenant Code, even when they disagreed with those laws, and revised the edicts in such a way as to lend authority to the reformers' new understanding of divine will. Passages in the legal corpus long viewed as redundant or displaced represent the attempt by Deuteronomy's authors to sanction their legal vision before the legacy of the past. This method of attributing an innovation to a tradition that is actually inconsistent with the reform

represents a technique of authorship evident elsewhere in biblical and postbiblical literature, and understanding this process of revision helps open up a broader view of Israelite and Jewish religious history.

Medicine's phenomenal growth in the second half of the 20th century was matched by a burgeoning interest in and development of medical ethics. The articulation of medical ethics in the authentic Jewish tradition has been rooted in teachings and texts that were produced over 3,000 years, as medical ethicists have probed these foundations to identify appropriate models for contemporary medical quandaries.

JAKOBOVITS remains the undisputed "father" of modern Jewish medical ethics. While focusing on the entire panorama of Jewish bioethics, the author develops this subject against the background of the principal teachings of other world religions. In this respect, the book remains unique. Jakobovits traces the evolution of Jewish attitudes from ancient to modern times, and he marshals a comprehensive bibliography documenting these developments. By stressing the moral and general ethical dimensions of Jewish teachings in addition to the minutiae of rabbinic opinion, he presents the topic in a modern light that emphasizes the unmistakable contemporary ramifications.

ROSNER (1972, 1991) is one of the most prolific English-language reviewers and compilers of Jewish bioethics. A

full-time academic physician, his several books present brief chapters covering the entire gamut of the intersection of Judaism and medicine. His collaborative effort with J.D. Bleich, BLEICH and ROSNER, is also quite notable.

PREUSS provides a gold-mine of *materia medica* found in the ancient Jewish sources, including the Talmud and its contemporaneous works. While this text was not designed to discuss the ethical or moral questions of medicine, Preuss should be consulted by the serious student because he provides a historical dimension that illuminates the talmudic underpinnings of Jewish attitudes toward science and medicine.

Among the chief exponents of halakhic medical ethics is BLEICH, a professor of Talmud and Law at Yeshiva University. He is attentive to detail, his sources are comprehensive, and he aptly expresses the nuances of rabbinic thinking in contemporary legal terms. Often forceful in its views, Bleich's book is indispensable to the student of Jewish medical ethics and its application. Bleich takes a traditional view, arguing that halakhic criteria do not allow Jews to consider brain-death the equivalent to death.

As a biologist and rabbi, Tendler brings a desirable measure of expertise to his ethical analysis in his translation of FEINSTEIN, written by his late father-in-law. Rabbi Feinstein was regarded as the foremost halakhic authority of his generation. Tendler's familial associations undoubtedly afforded him a unique opportunity to observe and contribute to the development of halakhic attitudes to current problems. Always confident of his views, Tendler is known, in particular, for embracing the view that there is halakhic basis for equating mortality with brain-stem death, and he uses Rabbi Feinstein's writings to support this view. The Israeli Chief Rabbinate has adopted this position, thereby allowing Israel's leading hospitals to adopt standards similar to those used in U.S. medical facilities.

ABRAHAM belongs to a growing class of highly trained rabbi-physicians. His book, written for the layperson, is an excellent example of the growing number of texts on topics related to practical Jewish living.

The biblical commandment of procreation is deemed technically fulfilled with the siring of two children. Another biblical precept, however, requires propagation of the race. Contraception, therefore, without specific medical or psychiatric indication, is not condoned in Judaism even after one already has two children. Several methods of contraception are discussed in the Bible and Talmud, including coitus interruptus (condemned by all the codes of Jewish law), the safe period, twisting movements following intercourse, an oral contraceptive potion (precursor of the "pill"), and an absorbent tampon during intercourse (precursor of the diaphragm).

The Jewish legal and moral attitude toward abortion based upon biblical, talmudic, and rabbinic sources including the responsa literature is discussed in detail by Feldman, Bleich, Jakobovits, and Rosner. They conclude that most rabbis permit and even mandate abortion when the health or life of the mother is threatened. Some authorities are stringent and require the mother's life to be in danger, however remote that danger, whereas others permit abortion for a less serious threat to the mother's health. Such dangers to maternal health may include deafness, cancer, pain, or psychiatric illness. The psychiatric indication for abortion must be certified by competent medical opinion or by previous experiences of mental illness in the mother, such as a postpartum nervous breakdown. If the mother becomes pregnant while nursing a child and the pregnancy changes her milk, thereby endangering the suckling's life, abortion is permitted.

The enormous rabbinic responsa literature dealing with contraception is presented in detail by FELDMAN in his now classic book. The author examines the rabbinic legal tradition that underlies Jewish values with respect to marriage, sex, and procreation, and he provides comparative reference to Christian tradition. He musters classical and contemporary sources not accessible to most English readers and collates these sources in a sequential pattern. The texts are allowed to speak for themselves, and the interpretations offered by Feldman are consistent with the process of legal and literary development in the codes of Jewish law, commentaries, and responsa. Feldman's presentation of halakhic (Jewish legal) material is totally adequate to address the "modern" societal themes of the sexual revolution, feminism, and population control.

Feldman finds the most lenient or permissive view regarding contraception to be that of 16th-century rabbi Solomon Luria, who allows the wife to apply a tampon before intercourse if conception and pregnancy would prove dangerous. Many subsequent writers support this view. On the other hand, there is a school of nonpermissivists who do not allow any impediment to natural intercourse. When pregnancy would be hazardous, the pessary or diaphragm is allowed by numerous authorities because it does not interfere with the normal coital act. This is not the case with the condom, which

constitutes an improper interference and is strictly prohibited. Chemical spermicides and douches are other contraceptive methods that leave the sex act alone and thus are permitted by many responsa writers, although only in the case of danger to the mother from resulting pregnancy. As to whether spermicides or diaphragms are preferable, Feldman notes that this is a matter of debate. As for intrauterine contraceptive devices, recent medical evidence indicates that these prevent conception by inhibiting proper implantation of the fertilized ovum in the wall of the uterus. If this is so, then their abortifacient action would prohibit their use, as their action is akin to abortion.

In summary, Feldman's survey makes it clear that Jewish authorities prohibit contraception by any method when no medical or psychiatric threat to the mother or child exists. The duty of procreation, which is primarily a commandment to men, coupled with the conjugal rights of the wife in Jewish law, militates against the use of the condom, coitus interruptus, or abstinence under any circumstances. When pregnancy would be hazardous and when the use of birth control is given rabbinic sanction, a hierarchy of acceptability emerges from the talmudic and rabbinic sources. Most acceptable are contraceptive means that interfere least with the natural sexual act and the full mobility of the sperm and its natural course. According to Feldman, "Oral contraception by pill enjoys preferred status as the least objectionable method of birth control."

In his comparative and historical study of the Jewish religious attitude to medicine and its practice, JAKOBOVITS traces the development of Jewish and other religious views on contraception and abortion, among other medico-moral problems, from antiquity to the present day. His book, recognized as a classic and the pioneering work in its field, is profusely annotated with references to the original sources in religious, medical, legal, and historical literature. His special gift is for focusing authentic Jewish teachings on the complexities of modern medical practice.

BLEICH's approach to abortion is to present the variety of opinions and the multiplicity of voices, debates, and controversies so characteristic of the halakhic process. He endeavors to include as many opinions as he can among rabbinic authorities whose credentials are widely recognized and who are fully committed to halakhah. When he offers his own opinion, he does so authoritatively and with intellectual integrity.

ROSNER organizes a mass of halakhic material into concise and systematic presentations of medical-ethical subjects, including abortion and contraception. Like Feldman and Jakobovits, he discusses the attitudes of other religions to these subjects before presenting the Jewish view.

The manner in which U.S. Jews and blacks are thought of and treated by the majority culture reveals a good deal about the gap between democratic ideals and American practice; how Jews and blacks regard each other is an important part of this complicated tale. Until the early 20th century, there was only minimal contact between the two groups. Nevertheless, many elements of the discrimination directed toward blacks could be, and often were, directed toward Jews. As blacks in ever-larger numbers moved north, Jews joined them in a common struggle for civil rights. The contribution of those Jews who helped to found the National Association for the Advancement of Colored People (NAACP) in 1909 is a matter of public record, as is the impact of Jewish philanthropists (particularly Julius Rosenwald) who gave millions of dollars to further black education, and the dedicated Jewish trade unionists who tried to unionize black workers.

But these longtime political allies did not share neighborhoods or come to know each other as individuals. In the late 1960s, a series of confrontations—everything from calls for black power to an insistence that black parents control their children's education—soon escalated into ugly instances of black antisemitism. As a result, some argue that the old "marriage" of blacks and Jews may have outlived its usefulness; others insist that reconciliation is both necessary and possible. Meanwhile, wedge issues such as affirmative action continue to drive the two constituencies apart even as calls for dialogue are repeated by well-meaning members of both groups.

DINER surveys the crucial years (1915-1935) during which the political alliance between blacks and Jews was formed. Chronicling the early years of the NAACP, she makes it clear just how much the fledgling organization depended on the money, dedication, and hard work of Jewish-Americans such as Joel and Arthur Spingarn, Louis Marshall, Jacob Schiff, Herbert Lehman, Herbert Seligman, and Jacob Billikopf. They served as dependable fund-raisers, high-ranking officers, and full participants in the organization's legal, political, and public educational efforts. At the same time, however,

some blacks (W.E.B. DuBois most prominently) were ambivalent about this Jewish involvement. On one hand, these skeptics welcomed Jews' well-meaning support and especially their dollars; on the other hand, they resented what they viewed as the Jews' intrusiveness and overly aggressive personal styles. Diner's scholarly account remains the standard work on a subject that often generates more heat than carefully considered argumentation.

FRIEDMAN looks at black-Jewish relationships in terms of how and why the relationship seems to have turned sour. Black antisemitism—whether it appears in *Nation of Islam* publications and hate-mongering speeches by its officers, rallies on behalf of black control of the teachers (and increasingly the curriculum) in predominantly black urban schools, or the rioting in Crown Heights that set blacks against hasidic Jews—clearly worries Jewish liberals. Rather than editorialize, however, Friedman seeks to explain why the divergent paths that Jews and blacks have taken in the last three decades of the 20th century ended in political alliances of a very different sort than those that might have arisen from what appeared, at least on the surface, to be an abundance of common cause.

KAUFMAN, a reporter for the *Boston Globe*, was among the first to feel the sharply differing perceptions that often divide black reporters from their white counterparts. After Minister Louis Farrakhan gave a talk to the staff of the *Globe*, shouting matches erupted, and it did not take long before Jews were singled out for special abuse. How, black reporters asked, could Jews claim to be political allies but be so opposed to quotas and critical of affirmative action? How, Jewish reporters responded, could blacks be so blind to the impact of the Holocaust and brush off Jews' feelings of anxiety and vulnerability in the face of any antisemitic slur?

Kaufman was well aware of the psychic bonds that once linked Jews to blacks and blacks to Jews. James Baldwin wrote: "The Negro identifies himself almost wholly with the Jew. The more devout Negro considers that he is a Jew, in bondage to a hard taskmaster and waiting for a Moses to lead him out of Egypt"; and Kaufman celebrated a life's worth of Passover seders that made it clear that Jews were once slaves and thus uniquely positioned to empathize with blacks in their cries for social justice.

To better understand how and why the old alliance between blacks and Jews broke down, Kaufman reports "through a set of six serial biographies—the stories of five individuals and one family (three black and three Jewish) whose lives reflect the ebbs and flows, the triumphs and losses of black-Jewish relations over the past 30 years." His case studies on Paul Parks, Jack Greenberg, Rhody McCoy, Bernie and Roz Epstein, Martin Perez, and Donna Brazile serve as reminders that individual human beings, rather than competing ideologies and abstractions, are indispensable to understanding a very complicated social phenomenon.

SALZMAN and WEST have created an anthology meant to collect the most informed opinions of both blacks and Jews. Readers will learn from Thomas Cripps how blacks and Jews became "antagonist allies" in Hollywood, and from Jerome A. Chanes and Theodore M. Shaw why blacks and Jews see affirmative action policies quite differently. The collection of 21

essays ends with personal reflections on black-Jewish relations by Michael Walzer and Cornel West.

BERMAN's anthology is equally distinguished, including among its 19 black and Jewish contributors James Baldwin ("Negroes Are Anti-Semitic Because They're Anti-White" [1967]), Cynthia Ozick ("Literary Blacks and Jews"), and Julius Lester ("The Lives People Live"). Of special note, the collection reprints Norman Podhoretz's controversial 1963 essay, "My Negro Problem—and Ours," perhaps the article most prophetic of the smoldering black-Jewish hostility that would erupt only a few years later.

Critical theories about the Jewish body have emerged out of feminist theories of the female body that seek to account for gender-based stereotypes that make irrational claims about the nature of women's bodies and women's essential natures. Since the 1980s, scholars have applied the insights of these psychoanalytic and/or Marxist theorists to the history of antisemitic stereotyping of Jewish bodies. According to these scholars, the body is not defined simply as the physical body of flesh; it is also an imaginary cultural construction. This image of the body is more significant to the majority of observers than the biological body, and it shapes their perceptions of the physical entity. The power of fantasies, linking human identity to culturally mediated perceptions of the body, accounts for our discomfort when we are forced to see the body outside of its accustomed frames of reference. Thus, mutilation, deformity, dismemberment, autopsy, and the decomposition of corpses are unsettling precisely because they force us to relinquish cherished assumptions about identity and personhood. The theorists considered in this essay further contend that cultural constructions of the body must necessarily be shared by all members of the culture in which the constructions develop. Therefore, members of groups delimited by (generally) imaginary physical differences come, themselves, to identify with such differences, making them key parts of their own self-understanding. For this reason, studies of the stereotypes about the Jewish body incorporate both non-Jewish and Jewish ideas about such putatively

Jewish characteristics as large noses, male effeminacy, strong body odor, deformed feet, and abnormal genitals.

BOYARIN (1993) situates Jewish thinking about the body and sexuality within the context of the late Hellenistic cultures from which both rabbinic Judaism and Christianity emerged. He argues that the physical asceticism of early Christians, on the one hand, and the Jewish valorization of sexuality, on the other, were just two possible solutions to the set of cultural problems faced by the emergent faiths, and he posits that both solutions have had unfortunate consequences. Christians responded to socially divisive discourses of race, sex, and class by espousing a spiritual universalism in which all believers were one in the spirit. But this position left no room for desirable regional and ethnic differences, proposing in their place a universal Christian subject who was, by default, Roman, white, and male. Jews responded to exile and Christian polemic by valorizing genealogy and marital sexuality. But the logic of ethnic particularism and the increased emphasis on regulating women's sexuality eventually led to a loss of female autonomy and restrictions on the lives of Jewish women. Although Boyarin sometimes digresses into theoretical arguments of interest only to historians of the feminist movement, the book as a whole is very readable, and it is replete with fascinating quotations from a wide range of rabbinic discussions on the Jewish body.

BOYARIN (1997) documents how particular characteristics—softness, intellectualism, gentleness, abstraction, and anti-heroism—became associated with male Jews in early-modern Western Europe. The author contends that the Jewish “sissy” was a deliberate response to the anti-intellectual physicality of Christian romanticism. Jewish men, he argues, aspired to an ideal of masculinity that had evolved as a specifically Jewish alternative to Christian notions of manhood. If the ideal Christian man was broad-shouldered, strong, tanned and hard, then the ideal Jewish male body was lean, weak, pale, and soft. This argument is supported by a number of provocative illustrations.

EILBERG-SCHWARTZ collects articles on various aspects of the Jewish body that figure in antisemitic stereotypes and serve as markers of Jewish self-understanding. A helpful overview by the editor is followed by individual studies of sexuality in early Judaism; rabbinic sexuality and obesity; menstruation, pregnancy and childbirth; ascetic practices in 16th-century Kabbalah; God's body; physiognomy in medieval Jewish folk tales; antisemitic stereotypes about Jewish feet and noses; sexual ideology and practices among early Zionists; Jewish American “princesses”; and Jewish lesbians.

GILMAN is a particularly clear exposition of how the body is constructed by cultures in ways that seem arbitrary and strange to cultural outsiders. The author analyzes the work of 19th-century doctors, journalists, and anthropologists who attempted to describe the scientific differences between Jews and non-Jews, finding Jews pathologically inferior to non-Jews in many ways. These “experts” on racial difference claimed, *inter alia*, that Jewish noses and feet were malformed, that Jews were smelly and dirty, that Jewish men were effeminate and prone to hysteria, and that Jewish boys were sometimes born already circumcised. In the cultural logic of turn-of-the-century racial theory, Jewish men occupied an intermediate category between the truly male and the truly female. Gilman suggests

that modern antisemitism may have arisen as a fearful response to this imaginary emasculated Jewish man.

KLEEBLATT is a generously illustrated collection of essays primarily focused on artistic explorations of U.S. Jewish identity. Gilman's essay on Jewish bodies considers how the racist stereotyping of European antisemitism has shaped modern Jewish identities. Anthropologist Riv-Ellen Prell surveys 50 years of images of Jewish womanhood, contextualizing the stereotype of the Jewish American princess that has come to embody Jewish affluence and consumption. Maurice Berger asks why Jewish television writers and producers of the 1950s portrayed Jewish men in unflattering ways reminiscent of earlier antisemitic stereotyping. This anthology is the most accessible of the books listed here and would be a good starting point for anyone unfamiliar with cultural theory.

Sed-Rajna, Gabrielle, *The Hebrew Bible in Medieval Illuminated Manuscripts*, New York: Rizzoli, 1987

As Posner and Ta-Shema write in their introduction, "Not for nothing has the Jewish people been known as the 'people of the book,'" for in addition to the centrality of the Torah, there are "thousands of books that are signposts on the long journey of the Jewish people." Numerous books and articles have appeared on the subject of books and libraries, generally consisting of a discussion of highlights from medieval Hebrew manuscript production and/or a chronological or geographical survey of the history of Hebrew printing. The works discussed here are selected for their fresh approach, their clear presentation, or their importance to the development of the field. All of the cited works contain long bibliographies with abundant references to other works, many of which would have been worthy of selection as well.

BRISMAN's introduction is an interesting combination of detailed bibliographical references and readable sections on the history of the field and its practitioners. He discusses all important general studies and most specialized catalogs of Hebrew and non-Hebrew Jewish books; he provides ample information on the lives and motifs of dozens of Hebrew bibliographers, both Jewish and non-Jewish; and he almost overloads his reader with statistical information on such technical details as the cataloging formats used in the various catalogs or the numbers of entries appearing in different bibliographies. This volume will be appreciated primarily by those who already have some familiarity with the huge body of literature on Jewish books. The interested lay person and bibliographical beginner may be best advised to limit themselves to reading the biographical sections and to use the work as a reliable tool of reference, rather than as a first introduction to Hebrew bibliography, in order to avoid being overwhelmed by the sheer amount of (admittedly impressive and reliable) detail.

POSNER and TA-SHEMA have brought together, edited, corrected, and augmented the many hundreds of articles about books that appear in the groundbreaking *Encyclopaedia Judaica* (Jerusalem, 1972). One of the great achievements of the editors is that they have succeeded in presenting these scattered texts in a clear, systematic manner. After a general introduction on writing and the importance of scrolls within Jewish tradition, the articles explore manuscripts, especially from the medieval era; discuss the science of the Hebrew book; and pay particular attention to printing. Chapters are devoted to major centers of Hebrew printing, Hebrew printers, the artistry of the book, and the "Love of the Book." This last chapter examines Hebrew book titles, approbations, colophons, censorship, the book trade, and other related topics. Two final chapters treat the "basic books" of Judaism (i.e., the Bible, Mishnah, and Talmud, Prayer Books, Mishneh Torah, Zohar, and Kabbalah, and the Haggadah) and Jewish libraries.

RICHLER's guide is the result of his decades of experience discovering, identifying, and describing Hebrew manuscripts in the Institute of Microfilmed Hebrew Manuscripts at the Jewish National and University Library in Jerusalem. Richler's main goal "is to enable the reader—novice and expert alike—to locate the manuscripts referred to in the scholarly literature and to provide him or her with the basic bibliographical

information concerning those manuscripts." The work contains information on libraries and their catalogs; public and private collections that have been dispersed or have changed ownership over the years; booksellers' and auction catalogs (an often forgotten source of information on Hebrew manuscripts); compilers of catalogs; abbreviations; geographical names; and cognomens (by which he means such designations as "the Golden Haggadah" or "the Amsterdam Mahzor.")

ALEXANDER and SAMELY deserve full credit for focusing scholarly attention on the important role that was played by Hebrew manuscripts in the literary transmission of classic Hebrew texts. Their proceedings are greatly augmented by an extensive introduction and may serve as a starting point for any serious student of Jewish literary transmission. Contributions include those of Israel Ta-Shema on "The 'Open Book' in Medieval Hebrew Literature: The Problem of Authorized Editions," Gabrielle Sed-Rajna on "The Image in the Text: Methodological Aspects of the Analysis of Illustrations and Their Relation to the Text," a groundbreaking article by Malachi Beit-Arié on "Transmission of Texts by Scribes and Copyists: Unconscious and Critical Interferences," Emile G.L. Schrijver on "Some Light on the Amsterdam and London Manuscripts of Isaac ben Moses of Vienna's 'Or Zarua,'" and Stefan C. Reif on "Codicological Aspects of Jewish Liturgical History." Appropriate indexes conclude this valuable work.

Among the many works on medieval Hebrew manuscript illumination, those by NARKISS (later published in a revised Hebrew edition, Jerusalem, 1984) and GUTMANN are generally considered to be classics. Both works provide fine typologies of representative selections of illuminated Hebrew manuscripts, with rich and attractive illustrations. Both are accompanied by reliable introductory chapters, and Narkiss's Hebrew edition contains numerous references to primary and secondary sources (many of which were written or edited by Narkiss himself).

Two other works on medieval Hebrew manuscript illumination employ entirely different approaches from that used in Gutmann or Narkiss. METZGER and METZGER start off with the question: "Was Jewish illumination sufficiently rich and diversified to afford a picture of Jewish life in the Middle Ages?" Although the work has been criticized by some scholars, the authors have managed to select hundreds of images from the considerable body of manuscripts available from the Middle Ages that illustrate such fascinating topics as the medieval Jew and the universe, the Jewish Quarter, the house, costume, the professional life of the Jewish community and its place in the medieval city, family life, and religious life.

SED-RAJNA's book, by contrast, finds its strength in its limitation. The author concentrates on diverse images of major biblical figures, such as Adam and Eve, Noah, the Patriarchs, Moses and Aaron, and David and Solomon, providing a surprisingly vivid comparative perspective on these characters.

GOLD is the catalog of a very successful 1988 exhibition at the New York Public Library that brought together a superb selection of medieval illuminated Hebrew manuscripts and early printed books. Apart from descriptions of all the books that were exhibited, the catalog contains articles by leading scholars in the field, including Malachi Beit-Arié, who explains the production process of medieval manuscripts; Evelyn M.

Cohen, who contributes a lucid article on medieval Hebrew manuscript illumination; and Michael W. Grunberger, who sheds new light on the publishing of Hebrew books in 19th-century Eastern Europe. Sharon Liberman Mintz's "Selected Bibliography of the Hebrew Book" is very useful.

KARP's book celebrates the 75th anniversary of the Hebraic Section at the Library of Congress. His approach is very literary, emphasizing the contents of the books or their role in Jewish cultural history more than their printing history or their visual splendor. As such, the work provides a highly inspired introduction to the fascinating world of Jewish literature in its widest possible sense. Worthy of particular mention is Karp's strong emphasis on books, journals, and graphic material pertaining to the history of U.S. Jewry, including biographical sketches and discussions of the works of such famous figures as Mordecai Manuel Noah, Isaac Leeser, and Leonard Bernstein.

The volume edited by OFFENBERG et al. celebrates the bicentennial of the birth of Leeser Rosenthal (1794–1868), the founder of the Bibliotheca Rosenthaliana in Amsterdam, the largest Jewish library on the European continent. The book aims to offer a "cross-section of the wealth of material at the Bibliotheca Rosenthaliana," and 54 of the most interesting items from the holdings of the library are reproduced and accompanied by short essays, usually written by renowned experts. The works are presented in chronological order, beginning with the 13th-century Mahzor from Esslingen, southern Germany, and concluding with a bibliophile's edition of poetry by the 20th-century Dutch-Jewish poet Saul van Messel (d. 1993; pseudonym of Jaap Meijer). Contributions include those of Menahem Schmelzer on the well-known medieval Ashkenazi legend of Rabbi Amnon, which first appeared in a 13th-century manuscript of Isaac ben Moses's *Or Zarua*; Malachi Beit-Arié on a mid-15th-century manuscript of a philosophical work by Averroës; Herbert Zafren on Elijah Levita's 1542 *Shemot Devarim*, printed at Isny, Bavaria; Richard Popkin on Spinoza; Yosef Kaplan, on the Sabbatean movement in Amsterdam; and Yosef Hayim Yerushalmi on Isaac Fernando Cardoso's *Las Excelencias de los Hebreos* (1679). Because of its rich and variegated content, the work can serve as an introduction to the diversity of Jewish booklore.

HILL's special issue of the *British Library Journal* contains nine articles by different authors. All of the contributions bear the mark of Hill's interests, either through their subject matter or through his editorial involvement. Especially useful contributions are Alan D. Crown's "Further Notes on Samaritan Typography"; Hill's "A Catalogue of Hebrew Printers" (the most important article in the volume); Hill and Leonard Prager's "Yiddish Manuscripts in the British Library"; and Hill's augmented version of Fred N. Reiner's account of the Shapira affair, in which the British Museum was offered a supposedly ancient Hebrew scroll by the Jerusalem book dealer Moses Wilhelm Shapira. The greatest merit of Hill's volume lies in its bibliographical wealth. Every article provides numerous footnotes, which often bring to light books and articles located in the most unexpected of publications that would otherwise have gone entirely unnoticed.

Martin Mordechai Buber has had a spectacularly wide influence on liberal Judaism in the 20th century, and his most famous book, *I and Thou*, remains a widely assigned work on modern religious thought. *I and Thou* marks a major turning point in Buber's intellectual development: all that comes after this work is filtered through the lens of the dialogic philosophy that it expounds. Buber made his mark in several areas. He was Western Zionism's most dramatic spokesman and most effective publicist in the years before World War I. His popularization of Hasidism for Western audiences took a generally despised movement and argued that it exemplified the best in Jewish spiritual striving. Buber's Bible translation, begun in 1925 with the aid of Franz Rosenzweig, certainly stands as a lasting monument to how German culture spurred Jewish creativity.

Maurice Friedman, a disciple, defender, and interpreter of Buber, presents the reader with an appropriate starting point. FRIEDMAN (1955) was an early foray in to Buber interpretation that launched many other (often more critical) appraisals. FRIEDMAN (1981–1983) should remain the standard for the foreseeable future, although further research prompted the author to write FRIEDMAN (1991), which incorporates much new data. Friedman presents Buber as a modern hero and a religious existentialist whose Jewishness in no way obscures his importance as a spokesperson for humanity in an inhumane age.

MOORE, written by a student of Friedman's and a Jesuit, embraces Buber as both an advocate and critic of any modern religion. Although the young Buber contrasted the creative impulse of religiosity with the stultifying forces of institutional religion, Moore focuses on the implicit necessity of religion in Buber's world-view. The key to Moore's view is expressed in the book's subtitle: Buber emerges as the modern prophet of religious secularism par excellence. Emphasizing Buber's engagement with society as a German Jew in the 1930s and as an Israeli in the 1940s–1950s, Moore argues that Buber considered grounding in a particular religious tradition as the basis for dialogue along the entire spectrum (politics, economics, etc.) of human existence.

SCHAEDER, the other major biographer of Buber, has the virtue of focusing more than is usual on Buber's mature Zionism, his dialogic vision of Jewish-Arab relations, and the conciliatory politics that inevitably resulted. "Hebrew Humanism," a term that Buber himself coined in opposition to the chauvinism of European nationalism, gives Schaefer her interpretative key. A succinct sketch by Schaefer can also be found in BUBER.

MENDES-FLOHR, like many other scholars, has focused particularly on Buber's early years. Mendes-Flohr considers the political anarchist and pacifist Gustav Landauer a major influence on the early Buber and argues that sociological studies such as Ferdinand Tönnies' *Society and Culture* have been underestimated as influences on Buber's development. For

Mendes-Flohr, Buber's early thought was obsessed with the relationship of the individual and the community and this was not merely a post-*I and Thou* development. World War I emerges in this interpretation as a decisive move away from a romantic nationalism typical of the *fin de siècle*.

SCHMIDT has a good ear for romantic strains in early Buber that place him in the company of Friedrich Nietzsche, Carl Jung, and others. Schmidt states her thesis plainly: "Buber's interests were in German culture, in Jewish renewal and in the renewal of humanity, in that order." Schmidt stresses that Buber's early forays ("apprenticeships," in her words) were all preparatory to a synthesis he wished to bestow on German Jewry and that he was in the process of realizing before the Nazi takeover.

HORWITZ remains a critical reconstruction of the eight years between Buber's first drafting of his masterpiece and its appearance in 1923. Horwitz is particularly interesting when he points to Buber's lecture series "Religion as Presence," delivered at the Frankfurt Lehrhaus in 1922, as a breakthrough to the final form of *I and Thou*. Also interesting, although debatable, is her claim that Franz Rosenzweig's critique of Buber's use of language accelerated significantly Buber's break from key terms of an earlier *Erlebnismystik* and toward a mature articulation of his dialogic philosophy.

VERMES (1980) thoroughly explains the central terms in Buber's dialogic philosophy. VERMES (1988) is a reliable introduction to the man and his thought. Following Walter Kaufman's introduction to Buber's *I and Thou*, Vermes emphasizes the Jewish doctrine of repentance (*teshuvah*) as a central idea in Buber's book. Implicitly in Vermes and explicitly in Kaufman, this makes a case for *I and Thou* as a fundamentally Jewish book, Buber's influence on the Christian world notwithstanding.

ASCHHEIM deals with the *Ostjuden* (East European Jews) in the German Jewish mind and devotes an important chapter to Buber's key role in popularizing Hasidism. Beginning in 1906 with the appearance of the *Tales of Rabbi Nachman*, Buber published dozens of works on Hasidism, including several widely read translations of hasidic tales and several interpretive essays. Buber's representation of Hasidism probably has been his most debated legacy. The issue here, however, is not whether Buber played a huge role in bringing Hasidism to general attention (everyone concedes he did) but whether he did so responsibly.

SCHOLEM (1971 and 1976), Jewish mysticism's most important academic interpreter, accused Buber in a number of articles of presenting Hasidism in such a way as to bring it into close conformity with Buber's own affirmative, situational, existentialist, sacramentalizing view of life. Scholem scorned Buber for failing to admit his role as an interpreter of Hasidism and not just as a translator and presenter.

KATZ extends and sharpens Scholem's critique of Buber, noting that Buber underplayed the kabbalistic elements in the hasidic tales, the Jewishness of the terminology, and the positive content of the hasidic epiphany. This critique emerges from Katz's view of Buber's epistemology. Following Kant's approach to human autonomy as the ultimate deciding factor in religion and Kierkegaard's emphasis on the subjective nature of truth, Buber (in Katz's opinion) denudes the Jewish concept

of revelation of any positive content. Additionally, this view compromises the communally binding force of tradition. What experience, Katz asks, binds the revelation of God to Moses on Sinai and the revelations experienced by the contemporary Jew?

SILBERSTEIN defends Buber's right as a creative interpreter of the biblical and hasidic texts. For Silberstein, as for Friedman, Moore, and Schaefer, Buber possesses one of the most original and important religious voices of the 20th century. Like these three scholars, Silberstein emphasizes Buber's continued attachment to the worldly role of religion, epitomized for Silberstein in Buber's post-1938 championing of Hebrew humanism. Silberstein's is also the first full-length work to discuss Buber's debt to critical theories of language, a debt elucidated by Kepnes.

KEPNES focuses on Buber's debt to the German tradition in the critical theory of language. The tradition of *verstehen*, perhaps rendered most simply as "deep, intuitive understanding," best explains the thrust of Buber's romantic hermeneutic. Wilhelm Dilthey and Hans-Georg Gadamer, and Max Horkheimer and Jürgen Habermas are presented here as Buber's decisive influences and intellectual fellow travelers. Yet Buber did not follow these figures slavishly. Kepnes shows that the dialogic and dynamic reading of the word behind the text (which Buber always emphasized in his Bible readings) may be contrasted to

the static logos of Gadamer. In his final chapter, Kepnes explains that while narrative consistently remained Buber's primary mode of discourse, it was an "impure" narrative using philosophy and academic scholarship.

LEVENSON negotiates the Buber-Scholem controversy, probing the failures of an academic dialogue between those (Silberstein, Friedman) who see Buber as a creative religious thinker engaged in a "strong reading" of a previous text (a time-honored Jewish practice), and those (Scholem, Katz) who feel that Buber misrepresented the hasidic traditions that he did so much to popularize. Levenson concludes that Buber's dialogical approach really admits only an "I-Thou" approach. The "strong reading" approach advocated by the pragmatic philosopher Richard Rorty would necessarily involve Buber in an "I-It" reading, yet Buber always insisted that his was a reading of Hasidism that truly emerged from the sources. Implicitly, Levenson presents Buber as a thinker negotiating between modern and postmodern understandings of his task. Perhaps this helps explain Buber's relevance today.

The Hebrew calendar is of the lunisolar type: months begin with the new moon, and years are kept in tune with the seasons by the intercalation of a leap month every two or three years. The calendar day begins at sunset. In ancient and classical times, the month began with the observation by at least two witnesses of the crescent moon; the Jerusalem authorities added leap months as the need arose. In the Bible, months are usually identified by number, beginning in spring; the Hebrew names for the months were replaced by the present names of Babylonian origin in antiquity.

The fixed calendar, attributed to the fourth-century patriarch Hillel II, is based on a mean month of 29 days, 12 hours, 44 minutes, and 3.33 seconds and on the 19-year Metonic cycle comprising seven leap years, each containing 13 months. The average year length is 365.2468 days, slightly longer than the mean tropical year; because of the accumulated discrepancy, Passover now often occurs more than a month after the vernal equinox. The fixed calendar also incorporates several rules for delaying the onset of the year, as a consequence of which common years have 353 to 355 days; leap years have 383 to 385 days; and Passover never begins on Monday, Wednesday, or Friday. The details of the fixed calendar were only finalized in the tenth century; the evolution of the calendar between the fourth and tenth centuries is still a matter of dispute.

In contrast to the Hebrew lunisolar calendar, the Gregorian calendar—designed at the end of the 16th century and used today throughout the world—is purely solar in nature. There were solar-based sectarian Jewish calendars in classical times, and there remain certain prayers that depend on the Julian (old-style) solar calendar. The Karaite lunisolar calendar is still observation-based.

Chapters six through ten of MAIMONIDES, composed in 1166, remain a classic exposition of the fixed calendar as used to this day, and resemble an earlier work on the calendar by Savasorda. The chapters preceding that section describe the procedures by which the Jerusalem court managed the observational calendar. The remaining chapters are astronomical in nature, based mainly on the work of the Muslim astronomer al-Battani. They provide arithmetical methods for determining the moment of first visibility of the lunar crescent (and its orientation), which would help enable a court to determine the plausibility of reported observations. This volume's introduction and notes by J. Obermann, notes by S. Gandz, and astronomical commentary by O. Neugebauer—as well as the notes by E. Wiesenberg in volume 14 of the same series—are indispensable.

BURNABY, containing more than 300 pages on the Hebrew calendar, offers the most detailed description in English. It includes historical details, methods of computation, an explanation of the formula for Rosh Hashanah propounded in 1802 by Karl Friedrich Gauss, various examples of erroneous dates in the literature, and a long list of festivals and other days of current or past significance.

FELDMAN explores all aspects of mathematics and astronomy in the Talmud and subsequent rabbinic literature and includes several chapters explaining Maimonides' method of calculating visibility. Chapter 17, on the fixed calendar, explains in detail the calculation of the time of mean conjunction, the four delays that may postpone Rosh Hashanah, and the resultant 14 types of years. That chapter also presents arithmetical rules for converting a Hebrew date into the corresponding Gregorian date, and it includes a discussion of various modern attempts to reform the calendar.

DERSHOWITZ and REINGOLD give precise algorithmic treatments of most of the major calendars of the world. Chapter nine describes easily programmed, simplified rules for the Hebrew calendar, for most of the Jewish and Israeli holidays, and for birthdays and *yahrzeits* (the anniversary of a person's death). It includes a brief history of the fixed calendar, as well as a description of the controversy between tenth-century Babylonian and Palestinian geonim regarding the exact parameters of delays.

SPIER is a standard work for converting dates between the Gregorian and Hebrew calendars, with tables for the 20th and 21st centuries. Sabbath Torah readings and holidays are noted. The book provides detailed rules for determining Hebrew birthdays and for *yahrzeit* according to prevailing Ashkenazi practice.

LEVI is most useful for determining times of day critical for ritual purposes, such as dawn and dusk, with tables for each degree of latitude and for 73 cities with large Jewish populations. Unlike most published tables, which use mean values for dawn regardless of season or location, the times in this work are derived from astronomical calculations of the depression angle of the sun. The English section of the book also includes a short chapter on the calendar and tables that allow conversion between Gregorian and Hebrew dates. It should be noted that there remain disputes about where to place the dateline for the purposes of religious observance and what times to use in polar regions. In practice, the international dateline is used and the times of prayer and observance at nearby synagogues below the Arctic Circle are followed.

ROTH prints a convenient calendar for the years 1920 through 2020, arranged by Gregorian year (and based on M. Greenfield's 150-year calendar, 1963) in the index volume. The corresponding Hebrew date is given for each Gregorian day. Dates of all holidays and fasts (and an indication of postponement, if any), as well as the Sabbath readings for the diaspora, are included. These accessible tables are ideal for determining the date for a bar mitzvah or bat mitzvah, as follows: look up the Hebrew date corresponding to the actual day of birth of the child; if the child was born after sunset, take the following day instead. The same Hebrew date 13 years later is the day of the bar mitzvah. For girls in Conservative and Orthodox practice, the bat-mitzvah is 12 years later. The event is usually celebrated on the first Saturday on or after that day, when the child is called to the Torah, but it can be postponed for convenience. Occasionally, the event may be celebrated before Saturday (but not before the actual Hebrew birthday)—on Monday or Thursday, or on a festival day, when there is also a synagogue Torah reading. Complications arise when the child was born in the Hebrew month of Adar, since there is an intercalary Adar every two or three years. If the

child was born in Adar of a common year, or in Adar II of a leap year, then the bar mitzvah is in Adar in a common year, but in Adar II in a leap year. If the child was born in Adar I of a leap year, then the bar mitzvah is in Adar I of a leap year and in Adar in a common year. If the child was born on the 30th day of Heshvan, Kislev, or Adar I, then it may happen that in the year of the bar mitzvah the month has only 29 days, in which case the first day of the following month is used instead.

Biblical scholars have had a notoriously difficult time defining which group or groups compose the Canaanites and the geographic extent of their cultural and political influence. The biblical record is somewhat inconsistent in this regard as are extra-biblical sources, and with the exception of texts discovered at Ugarit (modern Ras Shamra in Syria), the Canaanites (including the later Phoenicians) have left no major archive that might enable us to answer these questions. Further, since

Ugarit is located so far north of Israel, some scholars feel that it should not be considered Canaanite at all. Others see the Ugaritic material as sharing enough correlates with what is known of the Canaanites from the Bible to warrant the label "Canaanite." The difficulty in defining precisely what is meant by Canaan and who the Canaanites were has stirred a great deal of debate, and consequently, despite their biblical fame, the Canaanites have few comprehensive scholarly studies devoted to them, unless one includes, as here, works devoted to Ugarit.

AUBET provides an up-to-date analysis of the historical and archaeological data that relate to the Phoenicians. In particular, she uses new archaeological evidence to reevaluate contemporary understanding of the Phoenician colonies and their relationship to local Iron Age communities. The focus of this work is the overseas expansion and Mediterranean trade network that the Phoenicians established from the eighth to the sixth century B.C.E. Aubet opens her work by examining the historical and cultural origins of the Phoenicians and then moves to an analysis of the bases for Phoenician expansion in the Mediterranean. Topics covered in this work include: Phoenician trade, exchange mechanisms and organization, the palace and the temple, routes of Phoenician expansion into the Mediterranean, the chronology and historiography of the Phoenicians in the west, Phoenician colonies, and the silver trade. A series of reflective essays synthesizes the contents of the book. Aubet includes several useful appendixes that discuss Phoenician Iron Age archaeology, the journey of Wen-Amon to Phoenicia, biblical oracles against Tyre, and the settlements of the central Mediterranean. At the end of the book she provides a bibliography for advanced research.

COOGAN's work offers readers a pocket-size translation of the four most important and complete Canaanite myths from Ugarit: the Tale of Aqhat, the Rephaim text, the Tale of Kret, and the Ba'al Myth. The introductions to each text are brief and footnotes are sparse, allowing for an extremely accessible read. Where Coogan does discuss a text's background, he seeks to juxtapose the Canaanite literature with biblical literature by pointing out linguistic, literary, and mythological parallels. In so doing, Coogan demonstrates for nonspecialist readers the profound impact of Canaanite culture and literature on the Israelites and the Hebrew Bible.

GIVEON's collection of essays is unique in that it takes as its point of departure the evidence for Canaanite contact with Egypt presented by objects of art. Since he transliterates and translates all Egyptian and Semitic words, the book can be used by specialists and interested lay readers. Giveon's essays explore the linguistic evidence for Egyptian contact in Canaan, Egyptian temples in Canaan, methodological issues in dealing with questions of interregional contact, the Samarian ivories, and literary evidence for Egyptian influence in Canaan and vice versa. Giveon also discusses the royal seals of the Egyptian 12th dynasty, Hathor as a goddess of music in the Sinai region, Egyptian mining in the Sinai, and the Phoenician sarcophagus of Ahiiram. Combined, Giveon's essays demonstrate the important role that Egypt played in Canaan, and consequently, the impact of Egypt on ancient Israel.

GRAY outlines a vast array of ancient Near Eastern textual and archaeological sources that contain information about the

society and culture of the Canaanites. Beginning with a discussion of the habitat and history of the Canaanites, Gray proceeds to explore daily life in Canaan as well as Canaanite religion, letters and literature, and art. His comparative approach allows the reader to draw parallels between the literary remains of Ugarit and Egypt and the Hebrew Bible, while preserving the essential and unique contributions of each culture represented by their respective literatures. Gray also provides a select bibliography for each chapter, making his book a useful first introduction to the Canaanites.

GURNEY's pocket-size outline of Hittite history includes sidebars on Achaeans and Trojans in Hittite texts and the Hittites in Canaan and ancient Israel. Gurney synthesizes previous German scholarship on the subject into a concise survey of the Hittite state and society, the Hittite economy, laws and legal institutions, warfare, language, religion, literature, and art. Since the Hittites played such an active role in Canaan and appear with relative frequency in the Hebrew Bible, the student interested in the Canaanites will gain much from this work. Numerous maps, photographs, diagrams, and indexes make the volume extremely useful as an introduction to the subject.

HALPERN brings together a vast array of literary, archaeological, and comparative sources to document the emergence of biblical Israel within Canaan. He is cautious in his treatment of the subject and continually seeks to distinguish the nuances in cult and authority that differentiate the various clans as well as the state from the general populace. Beginning with a discussion of the textual sources, their tendentiousness, and the context of Canaan during the Amarna period, Halpern moves to what he calls the "making of historical Israel." He sheds particular light on the organization of pre-monarchic Israel, the bases of its state and religious authority, the development of a national ethos characterized by religious affiliation, and the development of the Hebrew record that documents these changes. Just as importantly, Halpern offers a historical tour of the sociology of knowledge on the subject. While admitting that "historical Israel is not the Israel of the Hebrew Bible," Halpern nevertheless concludes that within Canaan "the Israel of the pre-monarchic period is not significantly different (except in the ways that one would ordinarily expect) from the picture painted in the biblical sources."

HARDEN offers a cultural survey of Phoenicia. He discusses the origins of the Phoenicians, provides a geographic description of the region under Phoenician influence, and outlines in broad strokes Phoenician history. Harden also provides discussions of Phoenician overseas expansion, the colony at Carthage, Phoenician government, social structure, religion, language, script, warfare, towns, industries, commerce, trade, and exploration. Though largely superseded by Aubet, the work remains a useful supplementary introduction.

SMITH makes accessible a critical edition, translation, and exhaustive commentary on one of the most important cycles of mythological texts from Canaan. While there is much in this work that is of particular benefit to scholars, the general reader will gain much from the comparative insights that Smith provides. He offers also a balanced discussion of the various interpretations of the myth, for example, ritual and seasonal theories, cosmogonic interpretations, historical and political

views, and the limited exaltation of Ba'al. Numerous textual notes make this work an inexhaustible source of information for the interested comparatist. Where appropriate, Smith also adds comments of a literary nature as well as comparisons with biblical, Akkadian, Sumerian, Egyptian, classical, Hittite, and even Indian texts. One of the most important aspects of Smith's work is that it sheds light from the Canaanite perspective on a god whom the biblical authors vilify. Smith also provides comprehensive citation, text, grammar, vocabulary, author, and general indexes.

TUBB provides the most up-to-date analysis of Canaanite culture. Paying special attention to archaeological data, Tubb surveys the various periods of Canaanite existence. Thus, with a few exceptions, the book's chapters cover specific archaeological periods (e.g., Bronze Age, Middle Bronze Age, Iron Age, etc.). Following a chapter on the Persian period, Tubb examines the Canaanite legacy as found in later Phoenician, Roman, and other Mediterranean cultures. By beginning with the Neolithic and Chalcolithic periods and concluding with the Neopunic period, Tubb demonstrates the continuity of Canaanite Levantine culture. Despite the presence of periodic small-scale incursions, especially in the third millennium B.C.E., Tubb argues for "a more or less uniform culture throughout the whole of the Levant in the Early Bronze, and perhaps even more so in the Middle Bronze Age." Despite the large-scale incursions of the Sea Peoples (among whom were the Philistines) and the pressing military influence of Egypt during the Late Bronze Age, Canaanite culture remained essentially consistent. Tubb's observations have implications for those historians who place the patriarchs and the social and tribal institutions they represent in the early Middle Bronze Age (a conclusion not shared by all scholars). If Canaanite culture is demonstrably continuous since the Early Bronze Age, "there is nothing to suggest that these institutions had not existed in Canaan from the inception of that period." Even during the early Iron Age, Tubb asserts, "the Canaanite ancestry of Israelite material culture is evident in nearly all of its aspects." In addition to many high-quality color and black-and-white photos of Canaanite material culture and archaeological sites, the book contains excellent maps, an ancient Near Eastern chronological chart, and a list of suggested readings.

DEL OLMO LETE's monograph opens with a useful history of the study of Canaanite religion. Moving from W.R. Smith and M.J. Lagrange to W.F. Albright, J.M. de Tarragon, and P. Xella, del Olmo Lete examines the sociology of knowledge on the subject and provides a concise context for his own work on Canaanite religion. The work focuses completely on information gleaned from the ritual and liturgical texts found at Ugarit. After providing philological and linguistic analyses, del Olmo Lete synthesizes the materials in an effort to uncover their underlying ideology. While certainly aimed at scholarly readers and thus filled with transliterations, the accompanying English translations and the insightful analyses make the book accessible to nonexperts as well. Among other topics included in this comprehensive study are discussions of sacred times and places, sacrificial rites, Canaanite mythology and epic, the pantheon, the funerary cult, festivals, processions, prayers and oracles, and magic. Del Olmo Lete emphasizes the cultic continuity and plurality shared with other second mil-

lenium sites in Syria and the legacy of Canaanite culture on the later Western world: "Rich and varied in its forms, it allows us to see the Canaanite religious universe beneath the Judaeo-Christian reaction against it, which in terms of culture makes clear the paganism underlying our own Western culture." This study offers the most comprehensive and up-to-date information available on the subject. It will not be surpassed for many years.

The earliest research on the Jews of Canada with lasting value had its origins at the Canadian Jewish Congress (CJC) in the 1930s and 1940s. It was the formation of the CJC in 1919 that consolidated the image of a united Jewry in the Dominion of Canada, and it was the CJC's revival in the 1930s that created both the archives essential for any scholarly study of Canadian Jewry and a cohort of dedicated researchers, who were also community activists. In that era, Canadian Jews, who were for the most part recent immigrants, were looked upon as marginal by the dominant groups within Canadian society—the English and French—and hence Jews were forced to create their own cultural space in Canada. It is no accident, then, that the first serious students of Canadian Jewry came from within the ranks of its own communal activists.

ROSENBERG was the most prominent among these activists. He must be considered the pioneer of social-scientific research into Canadian Jewry. His statistical tour de force, *Canada's Jews*, is still required reading for anyone seeking a clear and discriminating picture of Canadian Jewry in the interwar period, when it was establishing its character and institutions. The lasting importance of this book, originally published in 1939, is underscored by its republication in the 1990s with a stimulating introduction by Morton Weinfeld.

SACK was the first successful attempt at a comprehensive historical monograph devoted to the Canadian Jewish community. When it was written, originally in Yiddish, the subject was virtually uncharted territory. It was a history that had to be painstakingly assembled, reference by reference, by the author. The book has some of the faults as well as the virtues to be expected in a pioneering work. It examines the origins of Canadian Jewry in the 18th and 19th centuries, when the community remained relatively small, and it does not deal with the 20th century. Nonetheless, for the period it does cover, it may still be beneficially consulted.

The last of the great contributors to the study of Canadian Jewry stemming from the CJC is ROME, whose many years of service as head of the Congress's National Archives in Montreal facilitated the production of an enormous output of material, issued in a multivolume series titled *Canadian Jewish Archives*. The 48 volumes in the series explore numerous aspects of Canadian Jewish history and culture, with emphasis on transcriptions of and commentary on documentary sources. The series is particularly rich in dealing with the Yiddish-speaking immigrant milieu. Researchers in any aspect of the Canadian Jewish experience will find much valuable material for their studies in these volumes.

In recent decades, the locus of serious study of the Canadian Jewish experience has shifted to the universities. One of the first and arguably still the most prominent of the products of the academic study of this subject is ABELLA and TROPER. This masterful study of the antisemitism inherent in the Canadian polity and government, which resulted in Canada not offering refuge to Jews fleeing Hitler's Europe, achieved an extraordinarily wide influence in Canadian public discourse. Subsequently, BROWN published his book attempting to situate Jews historically in the evolving debate among Canadians on the nature of Canada: is Canada a pact between two founding peoples, English and French, or a mosaic composed of various groups of multiple origins?

GREENSTEIN constitutes the first major attempt to understand as a whole the literary output of 20th-century Canadian Jews, writing in English and French. The author's aim is clearly to establish Canadian Jewish literature as a subfield within the study of Canadian literature. Similarly, ELAZAR and WALLER seek to put Canada on the map of contemporary Jewish community studies as well as to alert Canadian students of political science to the rich organizational life of the Canadian Jewish community.

The increased scholarly interest of the 1970s and 1980s in the Canadian Jewish experience has brought about the possibility of creating synthetic narrative histories of great scholarly sophistication. ABELLA's book was written to accompany

a major museum exhibition on Canadian Jewry and admirably ties together its varied aspects. Less popular in tone is TULCHINSKY (1992), which traces the history of Canadian Jewry from its origins to the end of World War I. It stands as the most thorough examination of the subject to date, and it is especially strong in its coverage of the economic history of Canada's Jews. TULCHINSKY's (1998) sequel to *Taking Root* takes the narrative up to the contemporary period and is equally strong.

Caro, Joseph 1488–1575

Castilian-born codifier of Jewish law and kabbalist, died in Safed

Joseph Caro (also spelled Karo and Qaro) was born in 1488, probably in Toledo, Castile, left the peninsula with the exiles in 1492, and died in Safed in 1575. He is best remembered as the author of *Shulhan Arukh*, the principal code of Jewish law. This work is an abbreviation of his magnum opus, *Beit Yosef*. He was also a kabbalist who had frequent visitations from a *maggid*, a heavenly mentor construed as the personification of the Mishnah, and these encounters are described in his personal diary.

SCHECHTER has written an eminently readable account of 16th-century Safed, the "city of legists [i.e., legal scholars] and mystics" in which Caro spent the latter part of his life and of which he was perhaps the most eminent resident. The main discussion of Caro begins on page 210, but the entire essay gives an excellent account of the environment in which Caro flourished. The encyclopedic kabbalist Rabbi Moses Cordovero was a disciple of Caro, and his contribution is also discussed here, as is that of Rabbi Isaac Luria, known as Ari, "the

Lion." (The name *Loria*, to which the author frequently refers, is now usually transcribed *Luria*.)

In contrast to the above sympathetic account, GRAETZ in his magisterial history displays a strong animus against both the legalistic and mystical aspects of Caro's legacy, decrying his "sea of casuistical details and mere externals" as well as his "excited imagination," both of which offended Graetz's scientific approach to Jewish history. In some ways Graetz was a prisoner of the fashions of his time, and this is hardly a unique manifestation.

WERBLOWSKY offers here one of the best books in the area of Judaic Studies to be written in the 20th century. Although it modestly declares that "our survey was, perhaps, more of a preliminary reconnaissance than a definitive study," it covers thoroughly the inner life, very strange to the modern reader, of its subject, as well as various other aspects of his achievement and the development of his genius. The writer takes a distinctly scientific approach, but at the same time is respectful and avoids the tendentiousness of the 19th-century practitioners of the *Wissenschaft des Judentums* (a "science," or scientific approach to the study, of Judaism). Neophyte readers may do well to omit the highly technical third and eighth chapters, but careful reading of the remainder will repay them amply and give a clear insight into the subject and his times. These chapters provide a discussion of Caro's *maggid*; spiritual life in Safed; Caro's life and times; the doctrine of the *sefirot* (ten stages of divine emanation that manifest God in his various attributes); the *shekhinah* (originally the notion of divine immanence, developed by the kabbalists to mean the divine power closest to the created world, i.e., the tenth and last *sefirah*); the nature and fate of man in Kabbalah; and finally further discussion of Caro's *maggid* himself or herself.

LEWITTES, a progressive Orthodox Jew, and DORFF and ROSETT, traditional Conservative Jews, form a useful supplement to Werblowsky in assessing Caro's pivotal place in the development of Jewish law. Lewittes deals with Caro mainly in chapter nine, and Dorff and Rosett in topic nine. Both books avoid tub-thumping quite skillfully, although the genesis of Dorff and Rosett's book as the outline of a university lecture course is somewhat evident. No person of any religious persuasion can be totally dispassionate in assessing such complex and delicate matters. Both books, however, make a sincere effort and offer valuable information.

Before seeking out a copy of GORDON's book, readers are advised to see the review in the *Journal of Jewish Studies*, volume seven (1956), pages 119 to 121, which may help them decide not to do so. The author, however, and some of the authorities he cites have the merit of pointing out that it is very difficult to judge psychic manifestations belonging to a pre-scientific age, and he does give some insight into the contents of the diary. His book should not be rejected out of hand.

NASA spacecraft are routinely guided by three linked computers running the same program, which statistically reduces the chance of error to near zero. Caro the jurist uses a similar technique, funneling the true determination of the law through three leading medieval decisors, whose majority decision can, in his belief, hardly be in error. His Ashkenazi commentators do not much care for this approach, preferring the decision of the latest authorities. But the combination of his views and the

reactions he provoked has left a deep impression on Jewish culture, even that of those remote from their ancestral faith.

Meyers, Eric, *Jewish Ossuaries: Reburial and Rebirth: Secondary Burials in Their Ancient Near Eastern Setting* (Biblica et Orientalia, 24), Rome: Biblical Institute Press, 1971

The interment of the dead was of great importance to the Jews in antiquity. Allowing the body to decay above ground was considered extremely dishonorable (e.g., 1 Kings 14:10–14). Because corpses were considered ritually impure, it was essential to bury them. The priority attached to proper burial and the maintenance of burial grounds is shown by the talmudic saying, "The Jewish tombstones are fairer than royal palaces" (Sanhedrin 96b; see also Matthew 23:29). The earliest Israelite graves apparently were family sepulchers, often caves as in the burial grounds of Abraham's family at Machpelah. Among the earliest biblical references to burial grounds set aside for commoners is 2 Kings 23:6.

GONEN provides an accessible survey of the archaeological evidence of cemeteries in Canaan in the late Bronze Age (c.1600–1200 B.C.E.). To date, there are more than 900 such burial sites known in Israel, which form a crucial antecedent to the development of Israelite burial customs. Gonen's analysis is broken down into several sections. One section examines burial caves, which normally have multiple interments; another section addresses pit burials, which normally have individual interments. Gonen also covers intramural burials, where the dead were buried inside a settlement, and foreign burials. Her study of cave cemeteries discusses the placement of corpses in order to determine if the dead were buried according to a particular plan. She gives extended consideration to the regional variety of burial types, and she explains how burial methods changed over time. Her last four chapters offer a thorough location-by-location account of Bronze Age burial sites in Israel.

BLOCH-SMITH presents an informative survey of biblical and archaeological evidence about funerary practices and

beliefs in southern Israel during the Iron Age (1200–586 B.C.E.). She distinguishes eight different types of burial used in the 850 known Iron Age burial sites in the southern Levant. These types include cave tombs, cremation burials, and jar burials (which were used primarily for the interment of infants). Several charts help make more accessible the large amount of archaeological data covered in the book; some of these charts show how burial practices changed over time. Burial sites of both individuals and groups are reviewed. This work uses biblical depictions of death and burial to interpret the vast archaeological evidence about ancient burial sites. It includes as an appendix a long catalog of Iron Age burials, which is arranged so as to facilitate understanding of change over time.

DE VAUX's massive study of the institutions of ancient Israel includes an informative chapter on death and funeral rites. According to this chapter, the "normal type of Israelite tomb is a burial chamber dug out of soft rock, or making use of a natural cave." These tombs were often used by a family or clan for many generations. The poor who could not afford tombs were simply buried in the ground, while the wealthy would construct elaborate mausoleums, some of which can still be seen. According to the Bible, the kings of Judah had a necropolis inside Jerusalem (e.g., 1 Kings 2:10). Other burial sites were simply identified by a pillar. Jacob places such a pillar at Rachel's grave in Genesis 35:20. De Vaux speculates that the *bamot*, the "high places" that were sites of worship before the centralization of religion in Jerusalem, may have been burial sites as well.

MEYERS examines the practice of "secondary burials" in ancient Israel. In such burials, the bones were removed from a burial site and placed in a stone coffin or ossuary that was reburied in another location. While much of the scholarship on this phenomenon focuses on only one archaeological period, this work endeavors to show the "remarkable continuity in Palestine in the history of secondary burials from Chalcolithic times to Roman times." It also strives to reveal the theological implications of this form of burial depicted in the Bible and the Talmud (such as how these practices reflect conceptions of the afterlife). Meyers surveys the various Hebrew, Greek, and Aramaic words used in antiquity to describe secondary burials. By the time of Herod, it is clear that a secondary burial was often undertaken to relocate permanently in Israel the bones of Jews who died in the diaspora. While the work stresses that this aspiration is an ancient Israelite tradition, it does not examine the secondary burial of Jacob, who died in Egypt and whose bones were later brought to the family burial grounds of Machpelah (Genesis 50:13). The one shortcoming of this otherwise fine study is its failure to include or speculate on the date of this important biblical example.

HACHLILI and KILLEBREW present a comprehensive introduction to burial customs in Israel in the late Second Temple period (first century B.C.E. to first century C.E.). Their survey covers archaeological data, particularly a necropolis found in Jericho and the cemetery of the community at Qumran, where the Dead Sea Scrolls were found. Many of the cemeteries of this period were tombs (*kukhim*) carved into hillsides. The study also examines Jewish literature from this time that

describes funerary practices. The most important textual sources are the Mishnah, which was written down around 220 C.E., and the writings of Josephus, a Hellenized Jew active in the second half of the first century C.E. For example, this study recalls the mishnaic rule that cemeteries must be placed outside town limits (Baba Batra 2:9). Also from the Mishnah, the reader learns that secondary burials were quite common: "When the flesh is completely decomposed the bones are gathered and buried in their proper place" (Sanhedrin 6:6). The study's examination of archaeological evidence suggests that secondary burials became more common at the end of the Second Temple period and that funerary methods in this period were heavily influenced by Hellenistic and Roman practices.

Jews have buried or entombed their dead since ancient times. Early Jewish cemeteries consisted either of vaults in caves or of underground catacombs with niches for the dead. These vaults and catacombs can be found in the Middle East, Italy, and North Africa.

In the medieval period, Jewish cemeteries were usually outdoor spaces and were often called "Jews' gardens." Unlike the vaults and catacombs, which were divided into sections for families or groups, medieval cemeteries contained individual graves. Sephardi cemeteries tended to have plain, unadorned gravestones that lay flat on the ground, while Ashkenazi cemeteries usually had gravestones, sometimes elaborately carved, that stood upright. Gravestone inscriptions of the medieval period were mostly in Hebrew. In late antiquity, and again in the 17th century through more modern times, diaspora Jews made widespread use of vernacular languages and scripts for their funerary inscriptions.

KOHLER's article separates carefully the features of medieval Jewish cemeteries from those of modern ones. This article describes the layout of cemeteries, rules of proper conduct for visitors, and prayers to be read at the graveside. The article, although brief, also touches upon the subject of cemetery desecration. The bibliography is surprisingly extensive and names numerous sources that describe specific cemeteries in cities and countries throughout the world. The article also includes illustrations of cemeteries in Germany, Switzerland, Austria, and New York.

TAGGER offers an extensive bibliography and descriptive analysis of books available on specific Jewish cemeteries around the world, including ancient, medieval, and modern cemeteries. Her bibliography is based on the holdings of the national library in Jerusalem. She describes a total of 181 books relating to cemeteries in Europe, the Americas, the Middle East, and North Africa. Some of the titles listed by Tagger are catalogs of inscriptions or are directories of individuals buried in particular cemeteries, whereas others are general histories of cemeteries. Tagger indicates clearly the focus of each book, the languages in which it is available, and what sort of illustrations or other additional features are included. In an appendix, she provides genealogical tables for some of the most noted families whose histories are reflected in the books described. She also supplies two geographical indexes to assist identification of books on cemeteries in particular countries, regions, or villages. More than half the books mentioned by Tagger are in German, but 22 of the titles are in English, and there is material in 16 other languages (including Hebrew, French, Czech, Spanish, Russian, Yiddish, and Hungarian). The most popular cemetery to be examined, according to Tagger, is the old Jewish cemetery in Prague, the subject of 13 studies.

GROTTE surveys customs and art relating to Jewish tombstones from ancient to modern times. For medieval tombstones, he identifies and interprets some of the most commonly used symbols. Grotte believes that funerary art began to decline in the 19th century. Industrialization and mass production of tombstones displaced the artistic function, he claims. The article includes numerous photographs of different styles of tombstones, both medieval and modern, and a modest bibliography.

ABRAHAMS offers a brief survey of the conditions and foundation of Jewish cemeteries in medieval Europe. His survey notes the usual locations of cemeteries and the types of inscriptions and symbols typically found on tombstones. Later in the book, he describes the institution of the burial society as well.

SAFANOV offers a particularly clear and comprehensive survey of cemeteries from ancient and medieval to modern times. His article offers a plethora of examples from different countries to give a picture of Jewish burial customs and the growth and geographical distribution of the cemeteries. Safanov notes that in many European countries from the Middle Ages to the 18th century, Jews were given permission to have only one centralized cemetery. He describes the procedures for cemetery maintenance and includes several paragraphs on modern Jewish cemeteries, often sections of cemeteries that include burial plots for all faiths. The article

also includes numerous photographs of cemeteries, including the old Jewish cemetery in Prague as well as others in Jerusalem, Morocco, Vienna, Berlin, and New York City. A short bibliography accompanies the article.

LAMM's description and explanation of contemporary burial customs encompasses the role of cemeteries. He contrasts recent developments in burial customs in the United States with what has hitherto been accepted as traditional. For example, he deals with the questions of the burial of spouses or children of different faiths and those who have died in war. Lamm also explains the rules pertaining to proper times for visiting the cemetery and for erecting the monument to the deceased. The book includes specific prayers to be read at the cemetery, describes mourning practices in detail, and offers reflections on the interpretation of death and immortality in Jewish philosophy.

Central Europe is usually defined as the area containing the nations of the former Austro-Hungarian Empire, including Austria, the Czech Republic, Slovakia, and Hungary, as well as Galicia, Bukovina, and Sub-Carpathian Ruthenia. Central European Jewry has historically been as varied as the nations themselves. In the eastern part of the region, Jews shared many of the ways of their Eastern European counterparts, adhering to strict Orthodoxy. Further west, but especially in the Czech Republic and Austria, Jews were more often highly assimilated and active in secular society. In Vienna, many converted to Catholicism, while in the Czech lands there was a high rate of intermarriage between Jews and non-Jews. The

Jews of Budapest were active in the political affairs of the city, but a far greater percentage than in Vienna or Prague retained Orthodox ways. Jews in Vienna, Budapest, and Prague were great contributors to science, the arts, theater, and cultural life in general. Franz Kafka, Max Brod, Franz Werfel, Ludwig Winder, Jozsef Kiss, Arthur Schnitzler, Georg Lukacs, and Stefan Zweig are among a host of Jewish writers from Central Europe. The cultural, political, and social prominence of Jews in the cities of the region began in the 19th century and continued on a strong course until the end of World War I, with literature, music, and drama flourishing in large measure due to Jewish patronage and creativity. A major shift set in after the war, including dislocation in the East, the movement of many impoverished Jews to the cities where they found economic distress, a crescendo of antisemitism, and heavy emigration of the Jewish bourgeoisie. Zionism called many to Palestine, while others opted for life further to the west. Fully one quarter of Budapest inhabitants had been Jewish before World War I; more than 40,000 Jews had resided in Vienna, with 11,000 in Prague. These numbers dropped appreciably, and the vast majority of those who remained would later become victims of the Nazis. German and Soviet occupation has left the region a shadow of its former self, with not much more than a token Jewish presence.

BELLER's work investigates the cultural role of the Jews in Vienna. As Beller states, "The aim of this study is to clarify this question about the Jewish influence on Viennese culture and in Viennese culture." He asks whether the culture of fin-de-siècle Vienna was "Jewish," and what in fact was "Jewish" in Viennese culture? Contributions to art, architecture, music, theater, and opera are considered in detail. The work is divided into two sections: part one deals with the "Jewish question," and part two discusses the Jewish background of Vienna's culture. Beller provides tables illustrating the relative economic, social, and cultural participation in society of Jews and non-Jews, and he concludes that the fact that there was a large Jewish presence in Viennese culture is not accidental because the liberal educated classes were predominantly Jewish. His work poses many interesting questions and provides much new information and understanding.

BERKLEY explores the Austrian-Jewish mutual dynamic. Why did so many Jews flock to Vienna? Were the Austrians more antisemitic than the Germans? Berkley delves into the history of this symbiosis, tracing events from the era of Emperor Franz Josef to the presidency of Kurt Waldheim. The first chapter of the work, "Vienna, 1900: Dream and Reality," sets the stage for this work, portraying Vienna Gloriosa as the center of all that was beautiful, especially in art, literature, music, and architecture. Berkley unveils the darker side of Vienna in subsequent chapters titled "Divisions, Dissensions, and Doubts," "A New Kind of Anti-Judaism," and "The Solitary Scapegoat." He illustrates the rights stripped from Jews and details the spread of Jewish hate. It becomes difficult for the reader to grasp the Jewish attraction to such a city. Berkley's inspiration for this book was a remark made to him by a Viennese Jew who stated, "Before the war, I lived in a paradise." However, Berkley's research underscores the truism that all that glitters is not gold, as evidenced in chapters titled "The Spreading Swastika" and "Deportation and

Destruction." In the last section of the work, devoted to post-war Vienna, Berkley writes, "When it comes to corruption, none of Europe's smaller countries seems to have equaled Austria's record . . ." Berkley's epilogue is especially provocative, for he attempts to find explanations for Austrian cruelty toward its Jews—a topic scholars may feel requires further exploration.

DAGAN and HIRSCHLER's three-volume work gives an excellent and in-depth investigation of Czech and Slovak Jews and their role in society, politics, and culture. Volume one begins with historical surveys of Bohemia, Moravia, Silesia, and Sub-Carpathian Ruthenia. Ruth Kestenbergl-Gladstein's article discusses the position of the Jews between the Germans and the Czechs and the difficulties that they encountered, such as anti-German sentiment among the Czechs, who "regarded them [the Jews] as even more pro-German than they actually were." Aharon Moshe Rabinowicz provides a lengthy discussion of the legal position of Jews as they struggled for recognition as a nationality in the Czech and Slovak lands. The appendix to this article consists of legal documents and letters and is followed by a bibliography. Religious life in the Czech lands is covered by Gustav Fleischmann and Hugo Stransky. Joseph Pick comments on the economy and Jewish industrial activity from the time of the national revival until the 1930s. Discussions of literature, the newspaper press, book publishing, and music round out the offerings in this volume. Harry Zohn's "Participation in German Literature" and Egon Hostovsky's "Participation in Modern Czech Literature" provide the reader with fascinating comparisons between those Jews who identified themselves with Czech culture and those who felt kinship with German culture.

Volume two concentrates on the many movements in organized Jewish life: Zionism, the Czech-Jewish movement, the Jewish political arena (including Jewish political parties), and student organizations. Joseph Pick's article "Sports" offers interesting insight into a lesser-known area of Jewish life: Jews as pioneers in athletics, even serving as developers of the new school of gymnastics that later became known as "sokol." Religion, welfare, and education are covered across the entirety of the Czech lands. The section on art provides articles ranging from Jewish art in the Czech and Slovak lands to the architectural history of synagogues in Prague and Mikulov. This volume also contains many black-and-white photographs and line drawings, illustrating monuments of Jewish art and architecture throughout the country. The interwar transition in Jewish life completes this volume and includes a short discussion by Manfred Georg of refugees in Prague from 1933 to 1938.

Volume three reviews the Holocaust period and includes articles both on Terezin and on the anti-Jewish laws imposed in the Czech lands as early as 1938. Erich Kulka has contributed two articles, one on the annihilation of Czechoslovak Jewry and the other on Jews in the Czechoslovak armed forces. The interim period from 1945 to 1948 is treated in Kurt Wehle's article, "The Jews in Bohemia and Moravia: 1945-1948," which explores the reorganization of Jewish life in the Czech lands, the Jewish Religious Congregation, and the determination to rebuild the Jewish community. Hana Volavkova's article on the Jewish Museum of Prague describes

the significance of the Prague Jewish Quarter and outlines the history and main features of the area. All three volumes feature bibliographies after each contribution and a full collective index for all three volumes, as well as an index of illustrations. The vast amount of research effort expended in preparing this work has rendered it an invaluable source.

DON and KARÁDY's compilation of articles by many different authors offers a variety of perspectives on Central European Jewry. The work is based on a conference held in France in 1986 about Jewish claims in Austria, Czechoslovakia, and Hungary. This collection seeks to define the economic role, the ideas, and the social and cultural activities of Central European Jewry. The authors admit that the economic role of the Jews is very complex, for their impact on the economy was positive in many ways, but it also turned the general population against them for perceived "encroachment." This fear brought with it a latent hostility, which blossomed during the interwar period. Yeshayahu Jelinek's article discusses the problem of Slovak Jewish identity and nationalism between the wars. The identity problem stemmed from the Slovak Jews' links to Hungarian Jewry. Social divisions, nationalism, and political life are thoroughly investigated. Nathaniel Katzburg's article portrays the role of Central European Jews as cultural and social intermediaries between Eastern and Western Europe. William McCagg traces the development of the Jewish communities of Prague, Budapest, and Vienna. He suggests that immediately after World War I, European Jewish life changed drastically and was seriously endangered from the outset. This collection offers the reader a well-rounded view of Central European Jewish life and brings to light several lesser-known aspects of the lives of Jews sandwiched between East and West.

IGGERS's lively and colorful compilation of short articles garnered from newspapers and journals is indicative of the great variety of Jewish life in the Czech lands. Her work is divided into five sections, spanning the eras from Maria Theresa through Stalin, as it "portrays the Jews of Bohemia and Moravia in their own words . . ." To this end, she assembles brief personal memoirs, family histories, and letters. Her intention is to reflect Jewish customs and lifestyle, on the one hand, and tensions in society, assimilation, nationality problems, and identity crises, on the other. Iggers also seeks to highlight the difference between German Jews and those in the Czech lands, and her general introduction is particularly helpful in this respect. Many of the articles, such as "The Jewish Flea Market," "A Teacher's Salary," and "A Jewish Junk Dealer," have unusual themes seldom represented in other historical works. Each section of the book begins with a historical discussion of the period at issue. Especially useful are a section of brief biographies of Jewish personalities and a gazetteer of towns and other Jewish geographical locations, such as certain suburbs and even streets, with their Czech and German names.

KIEVAL attempts to chart the multiethnic character of the Czech lands and to explain the implications for the Jews in modern Czech history. He identifies the linguistic problems in the area and does much to clarify conceptions of the place of the Jew in a Slavic milieu. Two topics specifically are discussed in the work: first, assimilation and language loyalty, and, second, the distinctive local character of Zionism here,

as an answer to the problem of identity amid a sea of Germans and Czechs. The differences between the Czech-Jewish movement and the Zionist movement are thoroughly defined in this work. Kieval reminds the reader, "Both the 'Czech Jews' and the Zionists deliberately distanced themselves from the liberal German consensus of the mid-19th century, seeking instead to create a modern Jewish culture more attuned to the multinational realities of East Central Europe." This work emphasizes how the various political agendas and social realities affected cultural development, especially in Prague. The comprehensive investigation of Zionism in the Czech lands includes discussion of the prominent role played by the Bar Kochba movement in such intellectual endeavors as publishing and reviews. Black-and-white portraits of various Jewish cultural figures such as Kafka and Siegfried Kapper are provided, as are photographs of the Josefov section of Prague.

PATAI's work is the result of massive learning on the subject of Hungarian Jewish life. His motive for producing this work is rooted in "the shabby treatment the Jews in Hungary have received at the hands of authors of the standard general histories of the Jewish people." The focus is mainly on Jewish cultural and literary production, for Patai contends that culture is key to the portrayal of a people and that Hungarian Jewish culture has for the most part been ignored. This work recounts Hungarian Jewish contributions to the sciences, the economy, and politics, but, as Patai states, "there can be no doubt that their most significant contributions were in the cultural fields of the arts, and especially literature." He also maintains, in keeping with some of his books on other subjects, that the psychology of the people needs to be investigated "to understand the motivations behind Hungarian Jews' overt reactions to the governmental, political, economic, social, and cultural forces affecting them." The book begins with a survey history dating from 103 B.C.E. through the Enlightenment to the 1848 Revolution and on to the fin de siècle. There is thorough discussion of the early 20th century, the Holocaust, and the era of reconstruction. This is an extremely ambitious, pioneering exploration of a much-neglected area of Jewish scholarship, and inevitably there are certain details in the mass of information presented that require revision. Patai inaugurates the process enthusiastically by including an appendix of animadversions by Professor Miklos Szabolcsi, which reached him when they could no longer be incorporated into the body of the text. A lengthy bibliography for each chapter is provided at the end of the book, although a great deal of the material consists of sources in Hungarian.

The literature available on Russian-French artist Marc Chagall is wide-ranging in its treatment; readers can choose between narrowly focused articles and long biographies, between authors who write only about the Jewish quality of Chagall's art and those who skim over it, between picture books and critical studies. Few titles are both comprehensive and scholarly, but almost all include references to other studies on different aspects of Chagall's art.

The study by MEYER—the former husband of Chagall's daughter Ida—is the most comprehensive to date. His nearly 800-page text is divided into geographic/chronological sections, each of which is divided into many short chapters. It seeks "an understanding of Chagall's work in its entirety" and functions as both biography and art monograph while remaining easy to follow. Meyer sees Chagall's Jewish and Russian heritage as "factors in the artist's production [which] do not determine its nature," arguing Chagall's art was not intended for Jews alone. Included are an extensive index, a bibliography arranged chronologically, a chronological list of Chagall exhibitions, and a list of illustrations in the text.

ALEXANDER's biography of Chagall is a pleasure to read, although unlike Meyer's text it does little to advance serious scholarship about Chagall and his work. He weaves Chagall's autobiography with interviews with those who knew him and with descriptions of his life and work. Alexander questions the veracity of Chagall's self-description, and yet his own text sometimes seems far from factual, with no real notes and with citations woven in so seamlessly that it is easy to miss his sources. The text has a melodramatic quality to it, especially in describing Chagall's marriages to his second and third wives, but it contains a helpful bibliography for each chapter and a comprehensive index. Alexander treats Chagall's ambiguous yet important relationship with Judaism throughout the text, although it is not the focus of his biography.

In an often laudatory, abbreviated trip through Chagall's life, KAGAN highlights major events and influences on his art.

Chagall's Judaism is always present in the art discussed, especially in the images of Christ on the Cross, which are "distinctly Jewish." Kagan argues that "the floating, dreamy visions of Chagall's art have a background in Hasidic spirit, myth and lore." Of particular interest to scholars and general readers will be the appendixes, including "Artist's Statements," "Notes on Technique," "Chronology," a list of exhibitions and holdings in public collections, and a select but strong bibliography and index.

KLOOMOK's text is a heartfelt narrative account of Chagall's art that also weaves together biographical facts, Chagall's own words, and descriptions of his paintings. It moves chronologically through his life, emphasizing Chagall's Judaism and its important role in his work: Kloomok states that the "sources that nourish his genius are his childhood memories of Jewish life and his Jewish inheritance." This text reads as a personal, approving account of Chagall and concludes with a brief recapitulation of modern art and Chagall's important place in it.

DI SAN LAZZARO has edited a curious book, unscholarly yet multifaceted, that treats Chagall's Judaism intermittently. It is a compilation of articles by 13 different writers on aspects ranging from Chagall's imagination to his engravings and from his "love of the cosmos" to his ceramics and sculptures. The articles are interspersed with poetry by Chagall and his contemporaries, photographs, and images. Despite the book's lack of notes, bibliography, and other tools, the varying viewpoints add a vividness to the text, which may serve as a springboard for a range of further studies of Chagall.

AMISHAI-MAISELS's article interprets several of Chagall's paintings from three early stages of his career—his earliest work in Vitebsk, his Paris period after 1911, and his Russian period after 1914—through Yiddish idioms "hidden" in the paintings. She argues that Chagall's ambivalence about his religion and his status as an outsider—especially in France—impelled him to create mysterious works with Jewish meaning hidden in them. Amishai-Maisels sees the biting, elusive iconographic comments in his first Parisian paintings as Chagall's way of criticizing his new host country in a way only decipherable to Jews. She then argues convincingly that as Chagall reidentified with Judaism after moving back to his original home, Russia, he more directly conveyed his hidden meanings to help Jewish viewers identify—and identify with—his work.

KAMENSKII focuses less on Chagall's Judaism than on his identification as a Russian, which for Chagall "meant life which is pure and close to nature." This is a celebration of the joyous quality of Chagall's art and includes a continued discussion of the social, political, and artistic situation in Russia and of the Jews there, interweaving it with citations from Chagall's autobiography and writings, photographs, and artistic images. Particularly interesting are the pages framed with images from Chagall's contemporaries to deepen the reader's understanding of Chagall's art in its proper context. Kamenskii includes a helpful bibliography in English and Russian and an index of works by Chagall and others included in the text.

WOLITZ's article examines David Hofsteyn and Chagall's collaboration on *Troyer* (Grief) in Kiev in 1922, a poetic and graphic work lamenting Jewish victims of the Civil War

pogroms of 1919 and 1920 and following the tragic journey into the “abyss” of Ukrainian Jews. Wolitz highlights Chagall’s focus on rupture and the aftermath of violence and his use of Hebrew letters to heighten expression in focusing on the murder of Jews. Wolitz leads the reader through the poems and accompanying graphics, which represent Chagall’s “farewell to the Soviet art world” and to Jewish modernist expressionism, and which Wolitz feels reveal him to be “quite devoid of nostalgia and full of indictment.”

The comprehensive catalog edited by COMPTON for the major Chagall exhibit at the Royal Academy and Philadelphia Museum of Art in 1985 includes notes and essays by Compton and Norbert Lynton, as well as the plates and descriptions of all pieces included. The introduction highlights the central themes of Chagall’s art—the circus, lovers, peasants, music, Christianity and Judaism, and suffering and death—the universal quality of his art, and the importance to him and his work of his Russian background. Compton includes a helpful Chagall chronology including major exhibits of his work and a short but important bibliography. Most helpfully, the catalog descriptions are separated into thematic categories: St. Petersburg, Paris, Russia and Berlin, France, the United States, France after 1948, theater, stained glass, prints, and books.

The Hebrew term for righteous giving (charity) is *tsedakah*, and in Judaism there is a large literature of popular stories that illustrate the benefits of *tsedakah* for both the donor and the recipient, as well as a body of laws and customs that encourage and regulate charitable giving as an essential means of strengthening individuals and the community.

One of the most important sources on *tsedakah* is found in MAIMONIDES’ 12th-century code. This text presents the famous “Ladder of Charity,” which describes eight levels of philanthropy, listed in descending order. The highest degree of charity is performed by one who strengthens a person so that he or she will no longer beg from others; in short, the recipient becomes self-sufficient. This self-sufficiency can be accomplished by the donor giving a person who lives in poverty a significant gift or a loan, or by entering into a partnership with the person. The degree of charity immediately below the highest level requires an environment of total anonymity; the donor does not know to whom the alms are given, nor does the recipient know who donated the alms. At this level the donor is fulfilling his or her religious duty for its own sake by contributing

directly to the charity fund. The next levels of charity occur in situations in which either the donor or the recipient is not anonymous; persons who offer charity only when pressed reside at the bottom of the ladder. Maimonides’ paradigm has often been used by later commentators to frame their own discussions of charity and to guide charitable giving.

NEUSNER comments on the role of *tsedakah* within the framework of Judaism, and he identifies acts deemed to constitute charity and righteousness in Jewish sources. The book explores teachings of the talmudic sages and Maimonides, and the author raises many questions about charity, among them, what particular acts of charity are people supposed to do? How do these acts help to define and express what kind of human beings the donors are? Neusner argues that Jewish laws of charity reinforce one fundamental point: the poor must be treated with dignity. Giving charity must be done in a sensitive manner, as both the donor and recipient are equally created in the image of God. Neusner emphasizes the validity and centrality of *tsedakah* as an instrument that presents an opportunity to lead a Jewish life by working for organizations and institutions that raise funds and distribute money for worthy causes, such as Jewish education, nursing homes, community programs, hospitals and hospices, and Israel. The book contains an appendix with the source texts in vocalized Hebrew and in translation.

The volume edited by SHEAR and MILLER addresses issues and sources similar to those discussed in Neusner. The contributors demonstrate that from the time of the Temple of Jerusalem, the charity fund was a center around which the Jewish community revolved. Welfare for the poor consistently included providing for clothing, education, dowries, Passover observance, and burials. Once a person resided in a Jewish community he was required to give to charity. Helping the poor was deemed the classic way of showing gratitude to God, and the book contains an extensive anthology of stories illustrating understandings of the concept of charity.

A considerable amount of modern research has been expended on the Jewish past in China, on their earliest settlement there and on the history of their Jewish identity in the face of assimilation. A number of these studies will appeal to the interested layperson for the insight they provide into the history of a bygone symbiosis.

The voluminous work on the Jews of Kaifeng by WHITE is lavishly illustrated. First published in three volumes, it was reedited into one substantial tome of about 600 pages, with an introduction and an essay by Cecil Roth on an illuminated scroll of Esther, allegedly once owned by Jews in old China. White was bishop of Henan before he housed his Chinese collection at the Royal Ontario Museum, of which he became assistant director. The work is in three parts and deals with the history of the Kaifeng Jews, the community's Chinese stone inscriptions from the 15th to the 17th century, and genealogies constructed with reference to Hebrew and Chinese codices. Researchers will need to check White's abridged source materials carefully against the originals, even though some errors have been corrected by Donald Leslie.

LESLIE's comprehensive and scholarly study offers the first real synthesis of all the relevant Chinese, Hebrew, and Western primary sources. This standard work contains hundreds of bibliographical references and remains the prime text for all serious students of the subject. A careful evaluation of sources from "within" sheds light on the earliest traces of Jews in China and Kaifeng, their "discovery" and decline, their religion (synagogue, ritual, ethics), social structure, language, and writing; these are complemented by sources from "outside," such as travelers' reports and the accounts of Jesuits and of later informants, including native Chinese sources. To the scholarly apparatus have been added 37 plates and two maps.

POLLAK's (1980) critical and well illustrated study provides, not only for the student but also for the general reader, a "stepping stone to the more detailed investigations" of the history of the Jews in Kaifeng undertaken by Leslie. An account of their discovery by a Jesuit priest in 1605 is followed by an evaluation of the reactions in Europe, such as the curiosity and controversy this produced among Christian theologians, who, suspicious of the contents of the Hebrew Bible, now hoped to find new evidence of a "more truthful" version. These Jews did not surrender their Torah, however, until the advanced decline of their community led them to do so. Pollak surveys different theories about the beginnings of Jews in China, their relationship to their neighbors, and their Jewish way of life. He includes discussion of many of their customs and ethical values as expressions of their Jewish self-awareness. Finally, he considers their assimilation and ultimate absorption into the culture of their country.

Another most valuable contribution is POLLAK (1993), an updated and indexed companion volume to the 1988 reprint of

the *Sino-Judaic Bibliographies* of R. Loewenthal. Surveying major and minor scholarly and more popular publications on the history of Jewish communities in China, it also includes studies on Jewish immigration since the Opium War, from Russia and from Nazi Europe. This survey of books, essays, and articles has been critically annotated by the author, who offers his "personal views regarding . . . quality and trustworthiness of the titles." The book brings together a large amount of material and facilitates research on a variety of themes within the rapidly expanding field of Chinese Jewish studies.

An unusual collection of studies, this time undertaken by Chinese scholars between 1897 and 1980, has been compiled by SHAPIRO, whose translated extracts and summaries are interspersed with his own comments and interpretations. The 13 individual contributions cover a wide range of subjects, which, given their various dates of publication, differ in reliability and quality of information. They range from a survey of religious sects in the Yuan Dynasty and more general discussions of Jews and Judaism in China to studies of individuals, including also interviews with the descendants of Kaifeng Jews conducted by the author in 1983. Here, basic statistics about occupations, marital and political status, standard of living, and religious beliefs and practices provide valuable information on the heirs of bygone Chinese Jewish life.

MAYNARD's lighthearted autobiography takes the reader to Tientsin where the author spent the first 19 years of her life, from 1929 to 1948. Her parents had fled Russia to escape Communism and antisemitism, and the family had to emigrate yet again under the Japanese occupation of Tientsin. The author's account is a description of a young girl's memories of her early life in a household crowded with Chinese servants about whom she knew next to nothing. Segregated from the Chinese population, but also from other Europeans, she can only convey to the reader occasional glimpses of the Chinese way of life. This honest and personal portrayal, however, does not lack self-criticism for her indifference, and there is plenty of comic relief. But above all, this is a description of emigration and refuge, of homelands lost and found, of alienation and the struggle for Jewish identity. A number of family photographs and official documents illustrate this now vanished world of 20th-century Jewish refugees for whom China provided, at least for a few years, a secure home.

HEPPNER's illustrated autobiography concentrates on Shanghai and provides an important historical record of Jewish life under the Japanese occupation. Bringing together personal memories and historical data, his life story starts in Germany with his childhood and education in the 1920s and 1930s. He describes the rise of antisemitism and the frantic search for refuge under the increasing threat of deportation until he was able to emigrate to China in 1938. Heppner gives a vivid account of Jewish life and Jewish-Chinese business in Shanghai. He considers to what extent the Joint Distribution Committee and, at least initially, the Japanese occupation forces helped the refugees until the Kempetai began to exercise more control and set up the ghetto in 1943. While the testimony of his personal odyssey also contains his first experiences in the United States, the main portion of Heppner's book records the daily struggles of this unique Shanghai community that existed for approximately one decade.

It was not until 1992 that diplomatic relations were established between China and Israel. SUFOTT, Israel's representative in the negotiations and subsequently her first ambassador to China, provides a most interesting description of the early and clandestine contacts between the two countries, revealing much about the mechanisms of both the Chinese decision-making process and the Jewish state's own *modus operandi* with regard to foreign policy. Sufott offers insight into the gradual progress of Israeli diplomacy as well as a fascinating account of both official and personal Chinese viewpoints on Israel, the Palestine Liberation Organization, and the Middle East peace process. The epilogue attempts an evaluation of China's stance toward Israel at the time of writing, without shirking the more sensitive issues that have created irritation in both China and Israel—notwithstanding an overall “consistent” policy during the first five years of diplomatic relationship.

A concept of Judaism with Pentateuchal roots and a controversial history is the doctrine of election, the belief that God chose the people of Israel, out of all the peoples of the earth, for a distinct relationship. This particularist sense of being set apart has been bolstered by historical events, and it is symbolized and reinforced by the singularity of Jewish ritual life and customs.

EISEN's book focuses on Judaism in the United States, highlighting tensions between the idea of Jews as a chosen people and the U.S. beliefs in equality and personal freedom. The book discusses the views of several generations of U.S. Jews from a number of denominations, and Eisen analyzes the influence of social and cultural factors, arguing that in the U.S.-Jewish context, individualism and independent thought have become more highly valued than more separatist communal beliefs valorized by the institutions of Judaism.

FRANK's anthology of essays on chosenness, initially presented at a conference of the Academy for Jewish Philosophy in 1990, offers a philosophical analysis of the idea of election, analyzes Maimonides' views on chosenness, and debates aspects of chosenness that have caused controversies throughout history. Other essays focus on the idea of ritual, which the

authors link to chosenness, given how much ritual has historically been vital in separating Jews from their host societies.

NOVAK explores the significance and merit of the idea that the Jews are chosen by God. His book is a theological and scholarly discussion of the importance of the concept of chosenness for Jewish identity, and it explores the paradox that Jews face as they are at once separate from and connected to the world. Novak argues that the election of Israel implies that the relationship between God and Israel is a historical, not natural or biological, bond, and he contends that its development is two-sided, for Israel is required to accept the chosen status that God confers. Novak analyzes the philosophies of Benedict Spinoza, Hermann Cohen, and Franz Rosenzweig, before concluding with discussions of biblical, rabbinic, and medieval thought.

WYSCHOGROD's brief theological investigation of the idea of chosenness challenges the traditional rationalistic interpretation of the concept identified with the thought of Maimonides and other medieval philosophers. While Wyschogrod maintains a connection with Jewish orthodoxy, he adds an existentialist turn to ideas about chosenness, emphasizing the events of Jewish history as the foundation for understanding Israel's election.

Christian Hebraists

- McKane, William, *Selected Christian Hebraists*, Cambridge and New York: Cambridge University Press, 1989

Christian Hebraists were scholars who explored the Jewish roots of European civilization. Beginning with the early Church fathers, such as Origen (c.185–254) and Jerome (Hieronymus; c.342–c.420), a primary motivation for the study of *Hebraica veritas* (Hebrew truth) was the production of biblical commentaries and translations. Two other goals have also been involved: the desire to convert the Jews by uncovering Christian truth in the Hebrew text; and the later Protestant interest in reforming the church by appealing to Luther's principle of *sola Scriptura* (the sole authority of

Scripture). Landmark texts include: Nicholas de Lyre's biblical commentaries, *Postillae Perpetuae* (1322–1330), which made extensive use of the works of the medieval Jewish exegete Rashi; Conrad Pellican's Hebrew grammar, *De Modo Legendi et Intelligenti Hebraeum* (1504); Johannes Reuchlin's Hebrew grammar and lexicon, *De Rudimentis Hebraicis* (1506); and the grammar, *Institutionum Hebraicarum Abbreuiatio* (1528), and dictionary, *Thesaurus Linguae Sanctae Sive Lexicon Hebraicum* (1529) by Santes Pagnini.

Christian Hebraism also produced the first printing of important source books: Daniel Bomberg's rabbinic Bible (Hebrew text with parallel Jewish commentaries) in 1517 and 1518 and his complete editions of the two Talmuds, printed between 1520 and 1523; as well as the Complutensian Polyglot Bible, which was printed in 1517, containing (for the Hebrew Bible) parallel Hebrew, Latin, Greek, and Aramaic columns. Furthermore, Christian Hebraism ultimately filtered down from select scholars to affect Christendom at large, creating a new way of reading the Hebrew Bible that was incorporated into sermons and literary works.

LOEWE surveys Hebrew scholarship in the Christian world from the high Middle Ages (1100) until the development of widespread secular attitudes (1890). His essay provides a thorough chronological overview of this enterprise, noting significant landmarks such as the rise of the mendicant orders, the Renaissance and Reformation, and the Age of Printing. Loewe enriches this overview with a discussion of the various cultural contexts of Christian Hebraism, distinguishing three primary issues: the factors motivating Christian interest in the Hebrew Bible and in postbiblical Jewish institutions; the facilities for Christian scholarship, including the availability of sources of information, teachers, and libraries; and the occasions that offered opportunity for interaction between Jews and Christians (migrations, political changes, and linguistic developments). The article is embellished with an immense, all but exhaustive list of Christian Hebraist authors, replete with bibliographic references.

HAILPERIN presents a study of two of the most important biblical exegetes of the Middle Ages: Rashi, a French Jew (1040–1105), and Nicholas de Lyre, a French Franciscan (c.1270–c.1349). He regards Nicholas's use of Rashi's biblical commentaries as a central chapter in the long history of Jewish-Christian intellectual encounters. Through careful comparative readings of the two commentaries, Hailperin emphasizes Rashi and Nicholas's mutual emphasis on the literal-historical—rather than the allegorical—meaning of the biblical text. The author also highlights the cultural and religious issues that gave rise to the need for such an emphasis, placing the study of biblical exegesis within a historical context.

McKANE singles out five Christian Hebraists, from the 12th through the 18th centuries, who contributed in different ways to the reception of the Hebrew Bible in the Catholic and Protestant Churches. He is primarily concerned with understanding how these scholars reconciled the historical and linguistic methods of exegesis they used to uncover the literal sense of the Hebrew text, on the one hand, with a Christological exegesis that disengages the Hebrew Bible from its specifically Jewish context, on the other. Closely examining translations of and commentaries on the Hebrew Bible, McKane reviews the

theological and doctrinal shifts in the Christian understanding of the nature and authority of that text.

FRIEDMAN investigates the Christian Hebraica that developed in the first half of the 16th century, a subject that has not received sufficient scholarly attention. He first discusses three seminal scholars who represent different forms of nostalgic desire within Christian Hebraica of that time: Michael Servetus (c.1509–1553), Johannes Reuchlin (1455–1522), and Paul Fagius (1504–1549). Friedman then focuses on two major issues. The first involves the methods of scriptural exegesis and translation used by these Christian Hebraists, which were shaped specifically by their need to create a literal interpretation of the text that would place it in the context of accepted Christian prophecy rather than the Jewish historical context. The second issue involves the issue of Judaization, that is, the suspicions of these commentators' critics that Jewish religious sources inappropriately influenced the views of Christian Hebraists. Thus, Friedman considers how Christian Hebraica contributed to the intellectual climate of crisis and change during the period under study.

DAICHES spotlights one particular episode in Christian Hebraism—the creation of the King James (Authorized) English translation of the Hebrew Bible (1611). He first traces the history of English Bible translation from Tyndale (1523) to the King James Version. He then proceeds to place English Bible translation within the context of the Christian Hebraism of Europe in general and England in particular, demonstrating that this enterprise was the product of both the “back to the Bible” movement of the Reformation and the humanist scholarship of the Renaissance. Daiches then highlights the sources, equipment, and methods of the English translators by presenting a close textual analysis of the Book of Isaiah, collating English, Latin, Greek, Aramaic, and Hebrew divergences and elaborations.

LLOYD JONES extends Daiches's discussion of English Bible translation by exploring the comprehensive study of Hebrew in 16th-century England. Lloyd Jones considers various aspects of this enterprise, discussing the connection between English and continental Hebraic scholars, the common reasons for the flourishing of Hebrew studies (church reformation, Bible translation), and the development of a system of Hebrew studies in England (schools, universities, printing presses). He thus marshals afresh the existing evidence for the status of Christian Hebrew studies and scholars in Tudor England.

Apologetic and polemical writings are those that either advocate a certain belief or practice (apologetics) or attempt to dismantle another's belief or practice through invective (polemics). Very little is known about how Jews perceived Christians, how they spoke about them, or even if they bothered to do so very much. Christianity, on the other hand, produced a substantial corpus of *Adversus Judaeos* material. Apparently, Judaism was a more heated topic for Christians than Christianity was for those Jews who generated religious writings. There is a great deal of development and variation within this Christian genre. There never was a single Christian approach to Jews and Judaism.

WILSON's study is the result of many years of careful and consistent work in the area of Christian-Jewish relations in the period following the New Testament writings. In this volume, Wilson's field includes not only canonical New Testament works (the Gospels and the Epistle to the Hebrews) but also noncanonical works such as the *Acts of Pilate*, the *Gospel of Thomas*, and the *Gospel of Peter*. Wilson also uses patterns of worship as a way of investigating the kinds of issues that may have been in dispute during this time. He sees in these kinds of issues an internal struggle for Christian self-definition in a Jewish context. The strength of this book lies in his lucid prose and the way he views this formative period in Christian-Jewish relations. Without the firm lines of canon (which did not exist during this time), a more varied picture of Christianity appears. There was no prevailing attitude toward Judaism. Various authors from different locations held very different views regarding Jews and Judaism.

The title of LIEU's book is an expression of the theory that runs through this examination of second-century Christian attitudes to Jews and Judaism. Her premise is that while the image of Jews or Judaism may appear artificial and contrived, the reality of the text lies in the context out of which these texts arose. Neither image nor reality are static concepts, but

they can be distinguished from one another through a close reading of each text and other supporting information. These texts are carefully considered from a linguistic and historical point of view. Lieu also uses information, mostly archaeological, about Jews in Asia Minor as a way of putting the Christian sources in a historical context. Lieu's scholarship is very sound, and her attention to text and context is admirable. Anyone interested in early Christianity will benefit from this book, but for those interested in this particular field of study it is essential reading.

SETZER's topic is difficult to investigate because virtually all of the information we have about possible Jewish reactions to Christianity comes from Christian sources. This puts her at a disadvantage, but she nevertheless provides a helpful study of those passages or works from the first and second century C.E. that speak of Jewish reactions or opinions about Christians. The first part of the book is a survey of all those Christian writings, canonical and noncanonical, that mention how Jews reacted to early Christians. She concludes that virtually all the references about Jewish reactions are negative, but by the second century C.E. it appears that there was less direct animosity between Jews and Christians. The exchange becomes more removed and rhetorical in nature. Barriers to discovering information about Jewish reactions to Christians are formidable, but despite this she offers interesting and useful ways to read this highly emotive Christian material.

DE LANGE's book on Origen is an important text for understanding both Christianity and rabbinic Judaism in Palestine during the third century C.E. Both religions were in a state of flux and rapid development, and Origen's comments about Judaism provide a helpful perspective. De Lange sees Origen as a consummate academic who will not discriminate in his search for knowledge. Origen spoke to Christians, Jews, and heretics in his quest for knowledge about the biblical and Christian tradition. He was taught Hebrew for this purpose and was the first Christian scholar to undertake serious textual analysis of Scripture in Hebrew. Origen is an example of an early and extremely influential Christian scholar who was far more interested in scholarship than polemics. De Lange's study of his thought is a well written book that has yet to be equaled.

WILKEN's book seeks to explore Christian-Jewish relations through the eyes of one of the most revered writers of the high patristic period. John Chrysostom is mostly known for the eloquent sermons that he preached to his congregation in Antioch. This book is valuable because it attempts to understand Chrysostom's particular stance toward Judaism and his Christian audience in its late fourth-century C.E. context. Wilken is successful in transporting the reader back into the struggles facing Christianity. Christian history at this point was not a picture of steady success and world domination. Wilken examines Chrysostom in the light of Emperor Julian's anti-Christian agenda, Antiochene Jewry, the attractions of Judaism, and the unrest in his own church. His scholarship shows that Chrysostom is less concerned about Jews per se than he is about Christians who grant authority to the power of Jewish practice and worship. Wilken's style is clear and accessible to the nonspecialist reader.

SIMON's study has had a revolutionary effect on scholarship in this area. It challenged directly the long-held belief that Judaism buckled under the success of the Christian mission and became inverted and passive. Against the apparent silence of the Jewish sources, he posits the view that the only way to understand the intensity of the Christian sources is to assume an active and vigorous competition between Jews and Christians for converts. Christians produced *Adversus Judaeos* material because Jews were meeting Christians "blow for blow." Simon's view of mutual conflict has become quite popular in scholarship. This scenario is problematic because it assumes an active Jewish mission alongside the Christian mission and imposes Christian values (i.e., mission and conversion) on Judaism. This seminal work has recently come under fire because of these underlying assumptions, but it continues to stand as a central text in the field.

MACCOBY's book is a combination of commentary, history, and translation. He has chosen three of the chief Christian-Jewish debates staged in the Middle Ages: the Paris Disputation of 1240, the Barcelona Disputation of 1263, and the Tortosa Disputation of 1413–1414. Maccoby's explanations are clear and help the reader understand the Jewish communities and the individuals behind these disputations. In Paris it was a show trial with the Talmud in the dock. The Tortosa Disputation was characterized by terror and an inquisitional atmosphere. The disputation at Barcelona stands as the only occasion where moments of true debate occurred, and this is the debate that obviously holds Maccoby's imagination. His admiration for Nahmanides (the Jewish protagonist in the dispute) is obvious. The two accounts of this debate—Christian and Jewish—serve as helpful reminders of how accounts can differ based on one's perspective. This is a well written and accessible account of these influential disputations.

LANGMUIR brings together several articles published previously and a few new chapters to form his thesis on the development of antisemitism. The Holocaust plays a large role in this exploration. It is this eradicationist form of antisemitism that Langmuir sets out to trace. The chapters form a kind of journey of discovery that culminates in Langmuir's dating of antisemitism to the 12th century. Before this period there was a strong tradition of anti-Judaic teaching within the medieval church, but he sees two factors occasioning the shift to modern antisemitism: first, the economic explosion of the 12th century, when moneylending was one of the few vocations open to Jews; and second, the 12th-century renaissance, which raised serious doubts about the certainty of Christian doctrine and faith. Rumors that the Jews wanted to kill Christians or desecrate the host helped prove that Christ was indeed in the Eucharist and that Christianity was in fact right. Langmuir sees the level of hate in the late Middle Ages as essentially comparable to that of Nazi Germany and as such the starting point for modern antisemitism.

The last three decades of the 20th century witnessed a remarkable transformation of the relations between Christians and Jews. From the earliest centuries of the Christian era, Christianity fundamentally looked upon Jews as a rejected and despised people who had relinquished their role in the divine covenant by virtue of their rejection of Jesus as the promised Jewish Messiah. As a consequence, they have been subject to severe social and political restrictions and sometimes even to death, both during the Crusades and in a variety of subsequent pogroms.

For some Christians, especially those who had resisted the Nazis during the Holocaust, the evil of the traditional Christian approach to Jews and Judaism became very apparent. As a result, they launched an effort to refocus Christianity's approach to the Jewish people. Joining them were important leaders in the American churches who in the first half of the 20th century had begun working with Jews to combat economic injustices and racism. These forces coalesced in a powerful way at the Second Vatican Council, which issued a historic declaration on the church and the Jewish people in chapter four of its statement on non-Christian religions. This document also inspired similar responses from major Protestant denominations and ecumenical organizations such as the World Council of Churches. These official statements helped to generate a growing body of literature, some in a more popular vein and others decidedly scholarly in tone.

FISHER, who directs Catholic-Jewish relations for the National Conference of Catholic Bishops, has been a major contributor to the dialogue between Christians and Jews through his own writings as well as through the many volumes

he has edited. Fisher's *Visions of the Other* contains four theological essays originally presented at the Ninth National Workshop on Christian-Jewish Relations in Baltimore (May 1986). The contributors are Irving Greenberg and David Hartman on the Jewish side and Paul van Buren and John T. Pawlikowski on the Christian side.

Greenberg, who has been one of the few Jewish scholars to address the theological role of Christianity from a distinctly Jewish perspective, stresses both the similarities and the differences in the roles that Judaism and Christianity play in the divine strategy of human redemption. He calls upon Jews today, despite the tragic history of Christian antisemitism, to recognize the sense of covenantal partnership. For Greenberg, one central implication of the covenant is the need for a plurality of legitimate symbols if God's interest is to elevate humanity to the fullest capacity of life.

Hartman, one of present-day Judaism's most creative thinkers, directs his thoughts toward the development of a spirit of pluralism in Judaism. This pluralism would allow Jews to rejoice in Christians' affirmation of their spiritual identities without feeling threatened about Jewish spiritual identity.

The two Christian contributions by van Buren and Pawlikowski both look to a new Christian theology of the Jewish people. Van Buren discusses a new Christian theology emerging from the dialogue, which recognizes the reality of a single covenant that has been substantially renewed on several occasions. One such renewal led to the emergence of the Christian Church. Pawlikowski focuses on the importance of the Holocaust experience for the meaning of the covenant today both in Judaism and Christianity.

The collection edited by FISHER, RUDIN, and TANENBAUM covers a broader range of topics. These range from an analysis of the first two decades of the Vatican II era (Rudin, Tanenbaum, and George Higgins), to the importance of the dialogue for biblical studies (Michael J. Cook and Lawrence Boadt), to liturgical and theological issues (Fisher, Pawlikowski, and Greenberg), and an analysis of official Catholic statements on Jewish-Christian relations (Fisher).

FLANNERY's volume, in its new updated edition, remains a popular classic in the field of Christian-Jewish relations. While not as scholarly a study as more recent works by Langmuir and others, it has been a challenging volume for many Christians since the original edition was published by Macmillan in 1965. Flannery has restored to Christian history pages thrown out for centuries and has forced the church to confront the dark side of its tradition. The volume chronicles the long history of antisemitism from its pre-Christian roots to the present day. Definitely, it is a book that has made a critical difference in the contemporary Christian-Jewish relationship.

GILBERT was one of the pioneers from the Jewish side in the dialogue with the Christians, and he was present at the Second Vatican Council. His book discusses the emergence of the conciliar text *Nostra Aetate*, whose fourth chapter produced the historic turnabout in Catholic-Jewish relations. He captures some of the delicate negotiations and compromises in formulating a text that had considerable initial opposition but which was strongly supported by the American hierarchy at the council.

KLENICKI, who has served for many years as the Director of Interreligious Relations for the Anti-Defamation League,

has edited (along with Eugene Fisher) several important volumes concerned with aspects of the dialogue. *Toward a Theological Encounter* is one of his most important contributions. Klenicki prodded a number of prominent Jewish scholars to begin to rethink the Jewish religious perspective on Christianity. It was not an easy task, and he had to reject some of the original contributions. But in the end, with essays by Klenicki himself and others such as Elliot Dorff, Walter Jacob, David Novak, Michael Wyschogrod, S. Daniel Breslauer, and David Dalin, he has assembled a comprehensive overview of Jewish viewpoints. This is one of the best and most comprehensive volumes on the subject.

OESTERREICHER's volume is a central contribution to an understanding of the development of Vatican II's declaration on the church and the Jewish people. While Arthur Gilbert was an observer at the council, Oesterreicher was an important architect of *Nostra Aetate*'s fourth chapter. A Jewish convert to Catholicism, Oesterreicher began to present an enhanced Christian understanding of Judaism through his publication *The Bridge*. While there were conversionist tendencies evident in Oesterreicher's early works, *The New Encounter* shows that he had moved beyond that approach. Clearly this is a major work by a person who, despite some valid criticism of his outlook, has contributed significantly to the remarkable transformation of Christianity regarding its Jewish question.

RITTNER and ROTH's book offers a comprehensive overview of major Jewish and Christian scholars' views on the theological significance of the Holocaust. It took some time for the Holocaust to surface in Christian-Jewish dialogue. Both Christians and Jews had a certain hesitation to raise the topic. But in recent years an increasing number of scholars have begun to recognize its central implications for contemporary theological reflection. The authors represent a good cross-section of contributors to the discussion. Susannah Heschel, Alan Berger, David Blumenthal, Richard L. Rubenstein, and Michael Berenbaum are major voices on the Holocaust in contemporary Judaism. The same holds true for the Christian contributors, who include Eva Fleischner, Harry James Cargas, Franklin Littell, Alice and Roy Eckardt, John Roth, and John Pawlikowski. This is an excellent volume for entering the world of religious reflection on the Holocaust.

The collection by SHERMIS and ZANNONI has become one of the more popular introductory volumes on the current dialogue. It includes essays by leading Jewish and Christian scholars. These essays cover a range of topics, most of which are central to the present-day Christian-Jewish conversation. Included are chapters on the Hebrew Scriptures and Jewish-Christian relations (Zannoni), on the New Testament and on Pharisaism (Cook and Pawlikowski), on the Holocaust (McGarry), on antisemitism (Athans), on intermarriage (Seltzer), on God (Culbertson), on feminism and the dialogue (Heschel), on the land tradition (Everett), and a final chapter on educational dimensions of the dialogue (Shermis). This is an excellent text for adult discussion groups as well as basic courses on Christian-Jewish relations.

- Williamson, H.G.M., *1 and 2 Chronicles* (New Century Bible Commentary), Grand Rapids, Michigan: Eerdmans, and London: Marshall, Morgan and Scott, 1982

Commentary on Chronicles has typically focused on several issues: the Chronicler's identity, the scope of the author's work, the purpose of the text, its sources, and the historicity of the events reported.

MYERS (1965a, 1965b) presents a standard commentary on Chronicles, offering an introductory essay and detailed explanation of each chapter of the book as well as his own annotated translation of the Hebrew text, which attends to problems arising from the Hebrew idiom. Although he recognizes that there are discrepancies between the theology of Chronicles and that of Ezra-Nehemiah, Myers accepts the traditional view that these texts were written by a single author, perhaps Ezra himself, and argues that any differences between the books can be attributed to the passage of time. At the time of writing Chronicles, Myers contends, the chronicler was interested in the restoration of the kingdom with a Davidic scion at the head, while Ezra-Nehemiah evinces the same author's growing concern with the law, priesthood, and the temple. Myers also presents the traditional argument about the sources available to the chronicler, asserting that the chronicler knew the entire text that corresponds to the modern biblical books from Genesis to Kings. According to Myers, the chronicler added or subtracted from these biblical sources to support his ideology, using official lists, independent prophetic materials, and temple archives as supplementary sources to create what Myers assumes to be an accurate history.

WILLIAMSON's commentary also follows a traditional format, with an introductory essay and a detailed exegesis of each chapter of Chronicles. He does not provide a translation of the text but encourages the reader to consult the Revised Standard Version (RSV). Williamson's perspective is greatly influenced by an article by Sara Japhet, which argues that different authors wrote Ezra-Nehemiah and Chronicles and contends that the similarities of vocabulary and style between the two texts can be explained by the fact that the two authors shared a postexilic Hebrew idiom. While Myers asserts that Chronicles was written early in the Persian period, around 515

B.C.E. when the Daric (1 Chronicles 29:7) was minted, Williamson theorizes that time must have elapsed for this anachronism to be tolerated, and he concludes that the lack of evidence of Hellenistic influences on the text implies it was written later in the Persian period, perhaps in the fourth century B.C.E. Williamson does concur with Myers, however, when he assumes that Chronicles is based on historical sources and can provide reliable information for the reconstruction of Israelite history.

McKENZIE's study grew out of a Harvard doctoral dissertation he wrote under Frank Cross, and it clearly shows the influence of his mentor's theory of the double redaction of the Deuteronomistic History. McKenzie hypothesizes that the chronicler based his text on the first (not the second) redaction of the Deuteronomistic History, but the results of his analysis, while interesting, are not fully convincing. McKenzie demonstrates that Chronicles closely follows the history in Kings until the account of the death of Josiah, at which point the two accounts diverge. Therefore, McKenzie proposes, the version of Kings that the chronicler used must have been different from the modern text, ending with Josiah's demise (the very moment at which Cross contends that the first redaction of the Deuteronomistic History concludes). McKenzie argues, however, that many passages that Cross identifies as additions to Kings by the second redactor are, in fact, represented in Chronicles. In particular, he cites strong literary and theological evidence to suggest that four passages that Cross assigned to the second redaction actually were present in the first. These reassigned passages include references to exile, the conditional status of the Davidic covenant, the condemnation of Menasseh, and the peaceful fate of Josiah, and McKenzie uses these references to speculate that the first redaction is a postexilic text. If McKenzie is correct about this point, then traditional assumptions about both the Deuteronomistic History and the relationship between that history and Chronicles must be greatly revised.

Written from a conservative perspective, JAPHET's volume is far more comprehensive than other standard commentaries. It includes an introductory essay, detailed analyses of each chapter, the RSV translation, and notes on the Hebrew text and controversial elements of the RSV. Like Williamson, Japhet contends that Chronicles and Ezra-Nehemiah were written by different authors. Japhet further argues that Chronicles was written after Ezra-Nehemiah, proposing that these two books—along with the Pentateuch and Joshua through Kings, in their present form—served as major sources for the chronicler. Japhet also assumes that the chronicler had access to extrabiblical sources, and she suggests that the text provides authentic history. Disputing the theories of previous commentators who identify Chronicles with an earlier era, Japhet posits that the text was written around the end of the fourth century B.C.E., after the Persian domination but before Greek influence. She deduces the theology of the chronicler by tracing amendments that the author makes to his supposed original sources in the Deuteronomistic History. This hypothesis ignores McKenzie's work, which suggests that differences between Chronicles and Kings may result from the fact that the chronicler used a version of Kings that diverges from the modern text.

By contrast, AULD acknowledges the work of McKenzie in his monograph, which compares and contrasts passages from the Book of Kings to the text of Chronicles in order to theorize that both the Deuteronomistic historian and the chronicler inherited and revised a common text. Auld also argues that the theology of each of these authors can be derived from their additions to this shared text; he does not allow that the authors may have omitted parts of the original. This perspective provides a very different way of understanding both the chronicler and the Deuteronomistic History from that found in traditional commentaries, but it has found few adherents among other biblical scholars, most of whom still identify Kings as a source for Chronicles.

GRAHAM, HOGLUND, and MCKENZIE present 11 essays that grew out of a colloquium on the topic of the historicity of Chronicles. All but one of the authors in this anthology conclude that the text adds little to the history gleaned from Kings, showing that scholarly opinion at the end of the 20th century differed radically from that expressed by Myers three decades earlier.

Circumcision, the excision of the foreskin of the male organ, is normally the first ceremonial act in which the male Jew participates, albeit unwittingly. It is known in Jewish tradition as *berit milah* (covenant of circumcision), usually abbreviated to *bris* by Ashkenazi Jews and to *milah* by Sephardim. This rite is ordained in Genesis 17:9–14, but circumcision was not invented at this juncture; rather a new spiritual meaning was breathed into a preexistent and quite widespread custom, as pointed out in the orthodox Pentateuch edited by J.H. Hertz in his commentary on this section. The medical benefits of the procedure are a matter of much controversy.

SCHECHTER limits his discussion to the social aspects of the rite in his classic *Studies in Judaism*. Although dated, these studies, written by a man who had an enduring influence on the development of Conservative Judaism, have continuing value. He sets the rite in its historical context, pointing out that from earliest times it was fulfilled with great joy, with individuals willing to undergo martyrdom in order to ensure its perpetuation. It is clear from his presentation that the *berit milah* is simply one constituent of the highly ritualized Jewish religion, albeit a very important one. It is an integral part of a nexus of custom and tradition that has ensured the continuance of the Jewish religion, without reference to its possible benefits or disadvantages in other respects.

MORGENSTERN's intent is to explain the mysterious passage in Exodus in which God seeks to kill Moses, and Moses is saved only by the intervention of his wife, who circumcises their son. In so doing, Morgenstern offers an explanation of the origins of the rite. He holds that performance of the ceremony at an early age, rather than at puberty, was original in the Semitic tribes and represents part of the taboo culture. Childbirth brought a state of impurity, which was purged by offering to the god or gods a portion of the tabooed object. Detachment of a part of the child's body and the shedding of his blood freed him from the possession of the spirits, and this is "quite manifestly" the origin of the rite of circumcision.

ISAAC offers a clear anthropological explanation with constant reference to Jewish sources. He holds that circumcision early in life is the original custom, but was delayed until after the first week, which was a taboo period.

The SNOWMANS were medical doctors and traditional *mohelim* (ritual circumcisers) who practiced for many years in England and circumcised members of the royal family. They expertly present the technical aspects of the operation.

MOSS writes a deeply felt plea to reevaluate circumcision in the light of modern findings, but her methodology is seriously flawed. She seeks halakhic reasons for the effective abolition of circumcision without any apparent awareness that conflict of laws is a normal situation in any legalistic context, and such conflicts—between federal mandates and states' rights, for example—are normally decided at some point for an enduring future. The fact that the halakhah may prohibit torturing a kitten or endangering the life of another human being simply does not pertain to circumcision which, by ancient consensus, clearly overrules these other principles.

RAUL-FRIEDMAN does not address the conflict issue in her rebuttal of Moss, but engages rather in a midrashic homily that expresses her passionate attachment to the "legacy" of circumcision.

HOFFMAN, an academic liturgiologist closely identified with Reform Judaism, offers one of the most recent extended studies of circumcision. This is a scholarly rather than a polemical work in which he addresses himself to a phenomenon that he finds puzzling. In 1843 a Jewish laymen's proposal to abolish circumcision as an outdated practice met with determined opposition on the part of rabbis who were inclined toward reform of the Jewish religion who had not balked at dispensing with Hebrew in Jewish prayer, cutting traditional ties with the Land of Israel, or rejecting the authority of the Talmud. Circumcision appears, then, as the *sine qua non* of Jewish identity. In his chapter "Reconstructing the Rite," Hoffman gives a detailed discussion of the rite as it exists now, quoting extensively from orthodox formulations, and shows that much of the liturgical material is medieval in origin. Hoffman goes on to discuss how circumcision fits into his perception of the rabbinic attitude toward gender differences: the strength of rabbinic men is that they control their impulses, and this is symbolized by circumcision. Women on the other hand are essentially uncontrolled; the spontaneous menstrual flow is symbolic of this. Hoffman discusses what he perceives as three categories that sum up modern uneasiness with circumcision. The first is the inherently sexist nature of the rite. He acknowledges this, but quotes with some approval the tendency to stress the covenantal aspect for both boys and girls at birth, making the actual operation in the case of boys secondary. The second is the fact that a fair amount of medical opinion considers circumcision unnecessary if proper hygienic practices are instituted. He offers no real response to this and indicates that it is difficult to justify automatic circumcision. The third is the moral argument that unnecessary pain is caused to the infant and thus to his parents. He indicates that the Jewish method is actually less painful than the use of clamps which is accepted medical procedure, a point made by several other writers. Hoffman does not really answer his original question, but this is hardly surprising, since the reasons why circumcision has had such a hold on moderns as well as primitives remain far from clear, despite the voluminous literature on the subject.

LANDER describes a controlled study of pain suffered by babies circumcised shortly after birth with the Gomco clamp and concludes that an anesthetic should be administered. Common Orthodox Jewish practice is to have a general anesthetic for children over the age of one year and a local anesthetic for adults. The use of a topical anesthetic for babies appears to be growing; in this case, the clamp is not used.

WALLERSTEIN and ROMBERG both write personal reactions to the question of whether circumcision should be continued, and they conclude that it should not. Raul-Friedman refers to Wallerstein as a circumcision expert, but in fact his expertise is self-taught. However, he has explored the subject thoroughly, and he gives many references for further reading.

To judge from these texts, it seems that Orthodox Jews will continue to practice circumcision along with all the other injunctions, which for them need no rational basis. Liberal Jews have the blessing and the curse of having to make a choice.

The Cochin Jews have lived for perhaps 2,000 years on India's southwest coast, now the modern state of Kerala. Residing in security under the friendly rule of Hindu maharajahs, they adapted to Indian culture but kept mainstream Jewish religious law and custom through contact with Middle Eastern and European Jews. Literature about them focuses mainly on historical origins, social relations among their internal factions, and recent life in Israel. Most migrated to Israel in the 1950s; there are now about 5,000 Cochinim in Israel and less than 50 in Kerala.

SEGAL, a British professor of Semitic languages, authored a comprehensive book on Cochin Jewish history, drawing on sources in English, Hebrew, and other languages. He begins with local origin legends; ancient trade between Kerala and the Middle East; the tenth-century royal copper plate document granting privileges to a well-established Jewish community in Cranganore (north of Cochin); and the 14th- to 16th-century exodus of Jews from Cranganore to Cochin and elsewhere in Kerala. The book is then divided into three periods of colonial rule in Kerala—Portuguese, Dutch, and British—echoing the centrality of colonial sources, and including new data from Portuguese archives. Other sources include travel writings, Hebrew documents by Cochin Jews, and the work of several generations of Indian and western scholars. Much of Segal's material is about the Paradesi or "white" Jews of Cochin, a separate congregation formed by post-15th-century immigrants from the Middle East and Europe (many of them Sephardi) who did not intermarry with the much larger and older group

of Malabari or Kerala Jews, but who strongly identified with Kerala culture. As they were most active in international trade and favored by the colonial rulers, their story was more accessible to visitors and outside scholars.

LORD, a Church of England missionary who visited Cochin at the beginning of the 20th century, was the first outsider to give voice to the Malabari section of the community, reporting their version of their ancient origins. Through Lord, they rebutted the “white” claim that it was their ancestors who settled in Cranganore and that the Malabar descend from slaves of these Paradesi ancestors.

MANDELBAUM, a noted American anthropologist and expert on Indian culture, wrote an influential article in 1939 on Cochin Jewish social structure, based partly on a brief visit to Cochin as a graduate student. In 1975 he revised and updated the study, setting forth a model of three Jewish castes in Cochin: the “white” (Paradesi), the “black” (Malabari), and the “brown” (“*meshubrarim*” or manumitted slaves and their descendants in both factions). Grounded in his study of the larger Indian caste system, this model emphasizes ways in which Cochin Jews kept socially and ritually separate from each other, rather than the ways in which they were united. Though his article has affected almost all subsequent research on the Cochin Jews, Cochin Jews do not see themselves as constituting separate castes, nor do they use the term “brown” to refer to the so-called *meshubrarim*.

DANIEL and JOHNSON coauthored this life story of Ruby Daniel, a Cochin Jewish woman who was born in 1912 in the Paradesi community. Daniel resoundingly challenges the labeling of her own family and others as *meshubrarim*, and gives an alternative reading of Cochin Jewish history based on stories from her grandparents. She also tells about her own life; the first Cochin Jewish female to attend secondary school and college, she worked as a clerk and served in the Indian Navy during World War II before migrating to Israel in 1951 and settling on a kibbutz. The book includes translations of Malayalam-language Jewish songs sung by Cochin women, descriptions of holiday and life cycle celebrations from Daniel’s childhood, and an introductory section by American anthropologist Johnson, who has studied the Cochin Jews for almost 30 years.

KUSHNER, an American applied anthropologist, carried out his study of planned change in an Israeli *moshav* (cooperative settlement) of Cochin immigrants from 1960 to 1961. Sympathetically describing the lives of the new immigrants (all Malabar), he notes their transformation from small city or village merchants in Kerala to agricultural workers in the new Israel. This *moshav* was an “administered community” where few Cochin immigrants were yet taking initiative or responsibility for political or economic decision-making—in contrast to the later economic success of Cochin *moshavim*.

WALERSTEIN’s folklore dissertation (based on extensive participant-observation) centers on more recent *moshav*-based Cochin life in Israel, focusing on public ceremonies (weddings, Simhat Torah, ceremonial vows in memory of a 17th-century holy man, Purim parties, synagogue dedications, a 30th anniversary celebration of Cochin *aliyah*) as expressions of ethnic identity. Her study is filled with ethnographic detail on Malabari life in Kerala and Israel, new information about

their immigration, and useful analysis of ritual change. Walenstein is an American scholar who lived for many years in Israel and developed close ties in the Cochin community.

JOHNSON’s dissertation is an ethnographic study of the Paradesi community’s transition from India to Israel, drawing on participant-observation in both countries. The Paradesi emigrated later than the Malabar and now live scattered throughout Israel. Johnson describes past and contemporary life in Cochin, then analyzes how the Paradesi maintain a separate community identity in Israel despite their loss of geographical unity, by developing more flexible external boundaries, mutual aid and visiting patterns, and a new emphasis on community parties. Detailed comparison of Passover preparations in Cochin and Israel shows continuity and change. This study emphasizes women’s central role in community preservation and social change.

KATZ and GOLDBERG (a professor of religion and a journalist from the United States, respectively) spent a year in the Paradesi community of Cochin not long after Johnson. Their book combines a thorough review of Cochin Jewish history with descriptions of daily life among the few Jews remaining there. Analysis of the ritual cycle of the Jewish year emphasizes parallels with Hindu beliefs and ritual practices, especially during the High Holy Days and Passover.

FUKS, a Belgian-born photographer, lived from 1993 to 1996 in Kerala. This book combines her exquisite photographs of the few Cochin Jews remaining in India with a handwritten diary of her experiences there. She combines artistry with personal and cultural sensitivity in intimate portraits of everyday life and special celebrations among Jews in Cochin, Ernakulam, and nearby villages. The historical introduction is by Samuel H. Hallegua, warden of the Paradesi synagogue.

SLAPAK’s thorough study of Jewish material culture in India includes invaluable documentation and illustrations of Cochin Jewish synagogues, ceremonial objects, home rituals, daily life, dress, customs, and ceremonies.

Hermann Cohen was born in Coswig in 1842. He was the son of a cantor, and for a time Cohen studied to become a rabbi at the liberal Jewish Theological Seminary of Breslau before leaving to study philosophy, first at the University of Breslau and then at the University of Berlin. In 1865, he received his doctorate in philosophy from the University of Halle, and in 1873 he was appointed lecturer in philosophy at the University of Marburg. He became full professor in 1876 and taught at Marburg until 1912. From 1912 until his death in 1918, he taught at the Hochschule fuer die Wissenschaft des Judentums in Berlin.

At Marburg, Cohen was the founder of the very influential philosophical school known as Marburg neo-Kantianism. Claiming to have recovered the classical idealism of Plato, Leibniz, and Kant, Cohen attempted in particular to apply rigorously what he took to be Kant's transcendental method. Cohen's early works centered on a reinterpretation of Kant's three-part system. He published *Kant's Theory of Experience* in 1871, *Kant's Grounding of Ethics* in 1877, and *Kant's Grounding of Aesthetics* in 1889. With the publication of *Logic of Pure Cognition* in 1902, Cohen began to construct his own philosophical system. *Ethics of Pure Will* followed in 1904 and *Aesthetics of Pure Feeling* in 1912. Interpretations of Cohen's Jewish thought emphasize his final two major works: *The Concept of Religion in the System of Philosophy*, published in 1915, and *The Religion of Reason out of the Sources of Judaism*, published posthumously in 1919. In his introduction to Cohen's Jewish writings, Franz Rosenzweig argues that Cohen's late philosophy constitutes an existential break with his earlier idealist system, and the Jewish philosophical debate about Cohen continues to center on this issue of the philosophical relation of these later works on religion to Cohen's system as a whole. This debate also addresses broader questions concerning Cohen's respective relations with German and Jewish culture. Interpreters who argue that Cohen's writings on religion demonstrate a break with his idealist system tend to maintain also that this break marked his return to Judaism from a previous stage of alienation, while those who dispute the former contention also tend to dispute the latter, often arguing that Cohen never left the Jewish faith and that he never stopped identifying with the Jewish people.

BERGMAN argues that Cohen underwent a philosophical, social, religious, and existential change as a result of two experiences. First, when Heinrich von Treitschke published an antisemitic pamphlet in 1879, Cohen felt the need to defend Judaism publicly, publishing his own response, titled "The Jewish Question: A Confession," in 1880. Second, in 1914, Cohen traveled to Poland to lecture to Polish Jewry, and, according to Bergman, "these years brought a radical change in Cohen's philosophic orientation." Bergman acknowledges

that Cohen himself was unaware of this change, but the author maintains that Cohen's writings on religion reflect an attempt to deal with the existential self, an issue that, Bergman contends, Cohen's earlier philosophical system could not approach.

ROTENSTREICH (1968 and 1984) offers a more technical analysis of Cohen's philosophy than Bergman, but he shares with Bergman the assumption that Cohen's writings on religion reflect an existential turn in the philosopher's system. Dividing Cohen's thought into two distinct periods, Rotenstreich examines the methodological change that (he claims) accompanies Cohen's conception of religion, asserting,

In short, with the emphasis on the relation between religion and logic in his second period, Cohen had to make use of significant, real concepts; from the standpoint of method, he had to rely on experience as the source of important religious concepts, such as "I," sin, fellow man, love, suffering etc. . . .

More broadly, Rotenstreich maintains that Cohen's thought develops from and is the culmination of a broader German-Jewish philosophical effort to argue that Judaism is consonant with ethics. Accordingly, Rotenstreich discusses Cohen's conceptual relation to some basic tenets of the Reform Movement both in Germany and the United States. In particular, Rotenstreich explores Cohen's conception of Judaism's mission to the nations and the ways in which Cohen's view of Israel's historic fate has some fundamental affinity with the thought of David Einhorn (a central 19th-century exponent of reform in the United States).

SAMUELSON challenges the contention that there is a break in Cohen's system when the philosopher turns to the subject of religion, arguing that this mistaken position reflects the inability of interpreters to recognize the relation between the real and the ideal in Cohen's thought, particularly in his view of mathematics. To support this argument, Samuelson offers a detailed analysis of the interrelations among Cohen's mathematical, philosophical, and Jewish thought.

POMA's work offers the most comprehensive account of Cohen's thought available in the English language. This book bridges the issues that concern German, Israeli, and U.S. scholarship on Cohen. Against Rosenzweig in particular, Poma maintains that in the philosopher's religious writings, "Cohen further investigated problems that were already present in his system, and . . . his results were not a turning point, but a coherent further investigation of critical philosophy." Particular contributions of Poma's book are the author's lucid explanation of Cohen's logical conception of "conservation" and its relation to Cohen's arguments about messianic history, as well as Poma's convincing argument that for Cohen, the idea of God bridges logic and ethics. These points support Poma's argument for the continuity of Cohen's philosophical concerns and methods. Poma points out that Cohen's philosophy of religion, and his discussion of Jewish monotheism in particular, deals with "the problem of the limit," a problem that logic and ethics could only glimpse.

SCHWARZSCHILD rejects the notion that Cohen's *Religion of Reason out of the Sources of Judaism* constitutes an existential break with the philosopher's earlier system for both philosophical and biographical reasons. Schwarzschild

uses Cohen's thought as the basis for his own philosophical arguments about the modern meanings of Judaism, art, ethics, and national identity. Summarizing Cohen's influence on his thought, Schwarzschild states that Cohen

carried out the program in Jewish terms of philosophically restoring the "infinite" gap between ideality and reality and explicating in technical detail what the actionable consequences of that gap are for science, ethics, aesthetics, religion, and social policy.

Schwarzschild also endorses Cohen's controversial anti-Zionist claims.

BOROWITZ assesses the contemporary relevance for Cohen's thought within the context of the United States. The author explores Cohen's ethical monotheism and his defense of the particularity of Jewish identity, arguing that Cohen directly and indirectly influenced 20th-century U.S. Jewish thinking. A critic of Cohen's views of God and practice, as well as of his notion of Jewish peoplehood, Borowitz concludes that "Cohen's thought . . . remains a challenge to anyone who would assert that Judaism is essentially particularistic." Despite the contemporary relevance of Cohen's views about universalism, however, Borowitz maintains that it would be difficult to revive Cohen's philosophy today.

The Hebrew word *mitsvah* (plural: *mitsvot*), commonly translated into English as *commandment*, is used to imply something that has its origin in the divine that expresses the divine will for Israel. Chief among all the commandments are the Ten Commandments (Exodus 20:1–17 and Deuteronomy 5:6–21 and internalized in the ethical homily of Leviticus 19). The Ten Commandments stand apart from other laws both in terms of their rhetorical form and function. Popular tradition since tal-

ludic times has liked to regard the Pentateuch as legislating a total of 613 distinct commandments, although the specifics of this enumeration were a matter of keen medieval debate. Modern scholarship has stressed the similarity in form and content of biblical legislation to the legal systems of other ancient societies as well as the unique liturgical and spiritual function that commandments have performed in Jewish life.

MAIMONIDES discusses the basic principles used by the rabbis to determine which biblical precepts were to be included among the 613 mitsvot. The arbitrary-seeming number 613, alleged to comprise 365 negative mitsvot (corresponding to days in the solar year) and 248 positive mitsvot (corresponding to the putative number of parts of the human body), is manifestly less than the actual number of legal stipulations in Scripture. Maimonides seeks to explain and defend the number, however, and he offers classifications into which various mitsvot are to be divided. This exercise in the rationalization of an aggadic whim, in which Maimonides had been anticipated by such distinguished precursors as Saadia, constitutes one of the most influential schematizations in the history of Judaism.

RABINOWITZ begins his study with the time-honored assertion that the 613 mitsvot serve as a pedagogically perfect basis for learning about and understanding the heart of Judaism, in its written (biblical) and oral (rabbinic) dimensions. The Hebrew mnemonic *TaRYaG* (the numerical value of whose letters equals 613) thus becomes a symbol for the whole of the halakhic system. As Rabinowitz shows, the mitsvot have often been the subject of distinguishing categorization: mitsvot that derive directly from Scripture and mitsvot that derive from rabbinic discussion; less important mitsvot and more important mitsvot; rational mitsvot and revealed mitsvot; or mitsvot regulating conduct toward God and mitsvot regulating interpersonal relationships. Rabinowitz's viewpoint denies the value of such differentiations in favor of the mysticism of Mishnah Avot, where the view is expressed that no one can know the reward to be gained by the fulfillment of even the simplest precept.

NEUSNER considers the dual nature of Jewish revelation, written (biblical) and oral (rabbinic), highlighting a matter of fundamental importance in the study of Jewish law. Although the *TaRYaG* must be discerned in the written Torah itself, the meaning and significance of these "biblical" mitsvot cannot be understood unless one recognizes the process of continuing interpretation and disputation in which the rabbis were so assiduously engaged. Examining how Judaism ascribed the title of Torah to postbiblical literature such as the Mishnah, in effect elevating such literature to the status of revelation, Neusner posits that the rationale for this ascription is explained in the opening verse of Avot, an expression of the belief that the teachings of the rabbis of the Mishnah had been

received in the chain of tradition from Sinai. And what they teach is Torah. Now the Mishnah . . . enjoys its standing and authority because it comes from sages, and, it follows, sages' standing and authority come from God.

Neusner contends that the work of these rabbis took a classical expression of the will of the divine and infused its principles into the realm of the mundane. The mitsvot taught in

rabbinic literature are a compilation of the finest human expression of which the scholars and sages of their era were capable. But these teachings were not presented as mere options by the rabbis; they were weighted with authority virtually equal to that of biblical legislation. This presentation was possible because the rabbis met “the enormous challenge of finding warrant in the written Torah for the truth revealed in the oral Torah.” Neusner concludes that the work of the rabbis shows how the principles of biblical mitsvot can be adapted to fit the needs of an era and a society radically different from that which was envisioned in biblical times.

CHILL addresses a central question facing modern Jews: “What value or purpose is there in the practical observance or the intellectual analysis of those mitsvot that seem to be outdated?” In his vigorously Orthodox defense of the mitsvot, Chill recognizes that the reasons for observing the commandments may at times seem “unappealing,” but he insists that in such cases, “the reader should not arrogantly assume to himself the monopoly of wisdom and reject that rationale.”

BAZAK, a Jerusalem judge and professor of criminology at Bar Ilan University, recognizes that a majority of Jews since the 19th century have viewed the mitsvot as unrelated to their lives and values. Searching through the legal opinions of the great rabbinic authorities of the 11th through the 15th centuries, Bazak focuses upon cases dealing with torts, while excluding opinions regarding ritual and family law. According to Passamanek, the translator of this text, Bazak makes this selection because

traditionally, a student of Talmud began his studies with chapters from the civil and commercial law . . . [because] the law, if it is to have meaning in society, must function in the heat and press of the marketplace, the shop, the hiring hall, and wherever men strive and strain to earn a livelihood.

Bazak successfully demonstrates that post-talmudic masters of Jewish law updated rabbinic interpretations of specific commandments yet held to the practical ideal of the mishnaic teachers underscored by Neusner. While Bazak, unlike Chill, does not attempt to offer reasons why modern Jews should adopt traditional ritual practices, he does present excellent examples of ancient commandments’ relevance to contemporary circumstances that show the extraordinary richness of Judaism’s legal corpus.

Founded under the influence of the positive-historical school of Jewish studies that emerged in 19th-century Germany and then in the United States, the Conservative movement is now the largest Jewish denomination in the United States (constituting roughly 43 percent of all synagogue-affiliated Jewish households); the movement is also increasingly active (under the name “Masorti,” or “Traditional”) in South America, Europe, and Israel. Beginning formally in New York in 1887 with the establishment of the Jewish Theological Seminary to train rabbis and educators, the movement now encompasses five schools ordaining rabbis (in New York, Los Angeles, Jerusalem, Budapest, and Buenos Aires), as well as the Rabbinical Assembly, the United Synagogue of America, youth groups, day schools, summer camps, and other institutions. For many, the title of Mordecai Waxman’s collection, *Tradition and Change*, has come to stand as the most succinct statement of the movement’s ideology. Holding Jewish law to be central to Jewish religion and life (although practices among the laity vary widely), Conservative Judaism also brings to tradition a historical consciousness and awareness of the ways in which Judaism has changed in response to circumstances in the past, thus considering further change permissible and even desirable in the present.

DORFF is written for young adults in the movement’s youth groups, and the book’s tone reflects its audience. Adult readers overlooking this detail will find a fine overview of Conservative Judaism’s history, institutions, and beliefs on such issues as law, theology, Jewish unity, and Zionism. Dorff carefully

delineates the variety of outlooks contained within the movement, even providing a chart summarizing approaches of Orthodox, Reform, and differing strands of Conservative Judaism to revelation and law. Dorff's outline of the organizational structure of the movement is somewhat, but not overly, out of date, and focuses primarily on the U.S. arm of the movement.

DAVIS's book details the origins of the Conservative movement in the 19th century. The United States, with its commitments to religious equality and the separation of church and state, presented Jews with a historically unprecedented social situation, to which the "Historical School" offered one response. The Historical School was distinguished by its embrace of Emancipation and Enlightenment; its name marked both its adherents' commitment to Judaism as passed down through history and their awareness that Jewish practice had adapted over the course of that history to changing conditions. Davis traces the rise of Conservative Judaism as an organized denomination out of the Historical School, particularly emphasizing the founding and development of the Jewish Theological Seminary. Also included are short biographies of major figures in the Historical School and several significant documents of the period.

Writings by a number of the movement's forebears, as well as its more recent leaders (nearly all rabbis), are collected in WAXMAN's anthology. The historical section of the book focuses primarily on the late 19th and early 20th centuries; the mid-19th-century German and U.S. backgrounds of the movement are represented by a single selection each. The rest of the book consists of mid-20th-century Conservative Jewish thinkers' various approaches to issues such as the ideology of the movement, its liturgy, Jewish law, education and unity, and Zionism. Also included are legal responsa on two of the most controversial changes to Jewish law made by the Conservative movement, the relaxation of Sabbath prohibitions to allow unrestricted use of electricity and driving to the synagogue.

CARDIN and SILVERMAN have collected a number of informative articles that were written more recently than those in Waxman's anthology. A comparison of the authors and topics in the two collections is telling because it reveals changes that the movement underwent in the 30 years that passed between their publications. For example, Cardin and Silverman include eight female contributors (compared to Waxman's single woman author). The more recent anthology also contains a section on "Responding to Feminism"; as well as articles from laypersons, including a section on "The Making of Lay Leadership; and an article on "The Renewal of the Cantor." The institutional growth of the movement is reflected in Cardin and Silverman's articles on Ramah summer camps, the Jewish Museum in New York, and the Masorti Movement in Israel; the movement's continuing dedication to academic scholarship is demonstrated by this book in a section called "Symposium on Scholarship and Belief." Other articles grapple with the ideology of the movement, explore its commitment to pluralism, assess its successes and failures, and look toward its future.

SKLARE attempts to describe Conservative Judaism as lived and practiced by its members, rabbinic and lay. Sklare's unique and enduring insight is that Conservative Judaism has been shaped as much by sociological as ideological factors, reflecting particularly the interaction of U.S. Jews with their national

milieu. Based largely on mid-20th-century research in suburban Conservative congregations around Chicago, this book has publicized the "insider's" view of the movement (notably documenting the low levels of ritual observance among the laity), and this perspective initially faced an ambivalent and occasionally hostile reception. A final chapter, added in 1972, helps to update the book. Many of the sociological factors that Sklare identified as affecting (Conservative) Judaism remain in force today, and his picture of the Conservative movement remains thoroughly relevant.

The movement's ideology is formally addressed by the COMMISSION ON THE PHILOSOPHY OF CONSERVATIVE JUDAISM. In this publication, a committee of scholars and lay members attempt for the first time to delineate the movement's stand(s) on a variety of issues, which are organized under three rubrics: "God in the World," "The Jewish People," and "Living a Life of Torah." While it is clear that this document was produced by committee, its form amply captures the diversity and pluralism of Conservative Judaism. *Emet Ve-Emunah* has been critiqued for a lack of specifics regarding Jewish practice and for a certain degree of (perhaps inevitable) self-contradiction; nonetheless, as Gillman states, "*Emet Ve-Emunah* . . . provides the first consistent and coherent theological groundings for much of what the Movement has said and done for generations."

KLEIN is the most complete source on Jewish law as understood by the Conservative movement. While obviously not up-to-date on the most recent writings and decisions on matters of law in Conservative Judaism, the volume is designed to be used as a handy reference on matters of religious observance as they arise. The particular tension of Conservative Judaism, "tradition and change," is highly evident in this work, as Klein is as likely to cite the writings and rulings of Conservative scholars and the movement's Committee on Jewish Law and Standards as he is to refer to classical codifications of Jewish law or responsa literature.

GILLMAN, a professor at the Jewish Theological Seminary, developed his book, in part, from his courses on Conservative Judaism for rabbinical students. Another overview of the movement's history, institutions and ideology, this volume's tone is very different from Dorff's study. Gillman subtitles his introduction "A Lover's Quarrel," stating that he writes as an insider and an advocate but also as a critic of Conservative Judaism. His most trenchant critique concerns the movement's reluctance for most of its history to articulate a coherent ideology. Gillman attempts to tease out the ideology of the movement's founders as displayed in their writings, and he devotes a chapter to the writing of *Emet V-Emunah*. The author does not shy away from other divisive issues that have recently challenged the movement, such as the roles and ordination of women, the place of homosexuals, the question of patrilineal descent, and the lack of observance of Jewish law among many of the movement's laypeople. A notable feature of this book is its generous use of visual materials. Finally, since Gillman's text is the most recent of the books surveyed here, it stands in a unique position to critique its precursors, an opportunity that the author seizes.

Ever since Abraham, "the first Jew," confronted his mortality in the first book of the Bible, Jews have been greatly concerned about continuity, that is, the capacity to perpetuate the Jewish people as a clearly defined community. Most recently, scholars, religious leaders, and others have pondered how to maintain continuity in the distinctive social, economic, and political contexts of the modern world. In the United States, for example, the publication of the 1990 National Jewish Population Survey, which indicated a decline in the number of U.S. Jews, immediately became the focus of nearly every ensuing discussion on continuity. Issues for debate include the definition of Jewish identity, threats to continuity, and the viability of cultural and pedagogical programs intended to strengthen or enlarge the existing Jewish community.

WOOCHER defines the parameters of the debate over continuity in the contemporary U.S. Jewish community. The author asks and attempts to answer the central questions that faced the Jewish diaspora in the United States at the end of the 20th century: What defines Jewish identity in the U.S. context? Given the trends noted in population studies, is there any guarantee that there will be a viable Jewish community in the United States in the year 2020? Woocher argues that in the U.S. context, Jews may tend to eschew overtly religious aspects of Judaism, but some evidence suggests that a civil religion does help bind U.S. Jews into a community. For example, nonreligious Jews may express their Jewish identity by contributing to fund-raising efforts for Jewish causes. Woocher argues that the vibrant survival of the Jewish community is important to humanity as a whole, and he identifies specific practices that may enhance the possibilities of Jewish continuity.

BAYME's anthology, a volume published in honor of Yehuda Rosenman, contains essays by influential scholars on Jewish sociology, Jewish education, and the Jewish family, particularly in the North American context. The essays in this collection focus largely on evidence that the Jewish community in North America is in decline, and these articles, like the 1990 Population study and the ensuing commentary, suggest that the future viability of the Jewish community is highly doubtful.

STEVEN COHEN identifies the central issues that arose from the 1989 National Survey of American Jews. The author discusses "the concerns, attitudes and practices of American Jews, and identifies a gap between many Jews' professed belief in the importance and value of Jewishness and the minimal levels of Jewish content in their lives."

SHRAGE's article is one of the most important essays framing the debate and panic that followed the publication of the 1990 survey of the U.S. Jewish population. The author argues that Jewish federations across the United States should help provide synagogues with funding and support programs that target the moderately affiliated family. Shrage also urges Jewish organizations to create additional points of access to the Jewish community in order to strengthen the Jewish identity of U.S. Jews.

SARNA offers little in the way of recommendations for strengthening Jewish identity in the United States, but he does use the 1990 survey as a starting point for a thorough review of the trends of the Jewish community in the early 1990s.

SACKS concentrates on concerns over continuity among the Jews of England. Focusing on the miraculous aspect of Jewish survival, the author stresses the challenges of integration and survival for a Jewish community that has survived in previous ages in contexts of isolation. Sacks argues powerfully against the idea that segregation is the only key to Jewish continuity.

SHAYE COHEN traces the discussion of Jewish identity back to its roots in ancient Palestine and the early diaspora experience. The author attempts to answer the questions of who was a Jew in antiquity and how Jewishness was defined. By delineating the boundaries that initially demarcated the Jewish community in antiquity, Cohen highlights the belief that the very definition of an ethnic unity depends upon a community's maintenance of boundaries and provokes questions of contemporary significance about the essential nature of Jewish identity. Cohen also contextualizes the variety of attitudes and practices that various modern Jewish communities use when potential converts seek to enter into the community and when Jews intermarry or elect to live in a non-Jewish community.

As Judaism has seldom regarded itself as a missionizing religion, books on conversion to Judaism in the past have been few and mostly have dealt with the history of conversion over the centuries. More recent studies, although they do not neglect the historical perspective, focus on the variety of reasons and personal motives for conversion and proceed to discuss the practical and theoretical requirements of the various streams within Judaism. Consideration is also given to the different answers in the current "Who is a Jew?" debate, which also affects the Law of Return and other matters of personal status in Israel.

BAMBERGER's scholarly and comprehensive study begins by tracing the origins of proselytism from the biblical period through the records of Jewish missionary activity in Hellenistic sources, before undertaking a thorough and exhaustive evaluation of the material presented in the talmudic literature. Here, numerous mistakes and misrepresentations of the Talmud in past studies are corrected. Special attention is given to the halakhic material given that it "represents the official Jewish attitude," determining the requirements for conversion as well as the reception and status of converts according to Jewish law. Favorable and adverse statements about converts follow, drawn from the purely rhetorical aggadah. A further chapter examines the actual circumstances of individual conversions mentioned in rabbinic literature, while the concluding survey demonstrates the rabbis' altogether favorable attitude to conversion throughout the talmudic period.

The general emphasis of ROSENBLOOM's study is historical-sociological, rather than theological, providing a synopsis of the course of conversion throughout Jewish history. He examines the process of conversion in the biblical and rabbinic periods and the reasons why conversion became restricted during the Middle Ages. The survey also covers the post-Enlightenment period and the contemporary situation. Accounts of group and individual cases of conversion throughout history successfully break up and illustrate the historical framework, while they also shed light on the sociological implications. References to statistics in Europe and the United States concerning intermarriage and conversion indicate new trends and more liberal attitudes to conversion in comparison with a past when attitudes were shaped by very different political and social circumstances.

The volume edited by EICHHORN also begins by tracing the subject of conversion to Judaism in Jewish classical sources from biblical to modern times, and it includes sections on individual and group conversions over the centuries. This is followed by analyses not only of the theological and sociological factors in conversion but also of the psychological state of the potential convert, while in a third part individuals give personal accounts with regard to their initial motivation for conversion and their experience of integration into their respective Jewish communities.

The volume edited by HOMOLKA, JACOB, and SEIDEL is a collection of studies only recently published in German and now available in an English-language version. Addressing interested laypersons, potential converts, and theologians active in interfaith work, the international team of contributors explores a variety of issues. The historical section surveys conversion from the Bible through the talmudic period and the Middle Ages to the present, while numerous testimonies by converts past and present make for lively reading. The section on current attitudes offers updates on the Jewish identity question in both Israel and the diaspora and describes the manifold theological, legal, sociological, and psychological aspects of conversion, undermining any residual impression that Jewish identity is conferred by birth alone.

EPSTEIN's recent guidebook is aimed at "those who are studying to become Jewish and . . . at those who have completed their conversion," but it also addresses those who wish to know about the manifold reasons that compel others to convert. This helpful volume encourages would-be converts to clarify their own motives for conversion and to consider carefully both their choice of denomination within Judaism and the effects of their conversion on family and wider society. The theoretical and practical requirements for the process of conversion are addressed, together with the possible psychological aspects of post-conversion integration experiences. The second part of the book provides a very basic introduction to Judaism's core beliefs and practices. It offers a summary of the leading classical Jewish texts together with a brief outline of Jewish history. Jewish practice is represented by a number of key prayers and an outline of Jewish holidays. Together with suggestions on further study through books and films, this manual concludes by providing the addresses of relevant Jewish organizations and guidelines for conversion published by the various Jewish movements in the United States.

The collection of essays edited by JACOB and ZEMER explores present-day conversion to Judaism by evaluating its past and present halakhic construction. The latter is constantly being revisited in accordance with the principles and theology of progressive Judaism, but, before the view of liberal halakhists is expounded, the volume surveys talmudic law and the subsequent rulings of orthodox halakhists. Among other issues, this volume assembles halakhic sources and rulings on the retroactive annulment of a conversion, examines the ambivalence to and the impact of sincere and ulterior motives for conversion, and discusses the ritual requirements for conversion laid down by Reform Judaism. A selection of contemporary Reform responsa to a variety of individual concerns with regard to conversion, brought about by unusual circum-

stances and borderline cases, concludes this topical volume, which reflects the current stage of the discussion within the progressive rabbinate.

SCALAMONTI's autobiography is representative of a more personal genre. It describes the conversion of a young Catholic priest to Judaism. Initially, the book provides an instructive insight into the regulated life of young seminarians: their hope and pride and their frustration at the restrictions imposed upon their daily lives, the rigidity of their study regimen, and the discouragement of questions and criticism. A period of profound disenchantment with the dogmatism of the Church and of severe inner doubt caused Scalamonti to rethink his vocation. While working as a waiter, he met an orthodox Jewish young woman who became the catalyst that helped transform his life. Comparing Catholicism with Judaism, he describes his own spiritual growth and "longing for a religion that would enable [him] to unite heart and mind," and how this search led him to embrace Judaism. This lively memoir will be of interest to anyone engaged in interfaith work, as it examines in a perceptive, albeit engaged, manner the differences between two major religions.

In biblical times, the daily costume of the Hebrews apparently did not differ much from that of neighboring peoples. The Bible refers to three basic garments, known in Hebrew as

simlah, a long roll of cloth serving as an outer garment; *ezor*, a loincloth; and *ketonet*, a shirt-like garment corresponding to the Roman tunic. However, the Torah does prescribe a specifically ritual element of costume in the form of the *tekhelet* thread of Numbers 15.

From the postbiblical period through the modern era, the uniqueness of Jewish dress has frequently attracted the attention of Jewish and non-Jewish moralists, and RUBENS surveys the history of Jewish attire from antiquity through medieval and modern societies, Eastern and Western. One aspect of Jewish costume that stands out noticeably in Rubens's collection is the ubiquity of headgear, as nearly all the figures wear a head covering. This phenomenon conforms with the habits of surrounding societies, because in medieval times covering the head was the norm in both European and Eastern lands. Nevertheless, as several illustrations show, the Jews had a distinctive headgear, at least in parts of Latin Christendom, where their pointed hats were easily recognizable. The association of Jews with the wearing of a pointed hat partially explains why some scholars identify a pottery tomb figure from seventh- to ninth-century China with a Jewish peddler.

ZIMMER traces the practice of males covering their heads for religious purposes from the talmudic era through contemporary times. In the talmudic period, the common Jew was not particular about covering his head. Scholars were more meticulous, although they too were not entirely zealous followers of this custom. The Middle Ages also exhibits a dichotomy between the behavior expected of scholars and laymen, especially in Spain where there is evidence that this practice was not strictly followed. Similarly, in northern Europe, the 13th-century author of *Or Zarua*, Rabbi Moses ben Isaac of Vienna, criticized the Jews of France who recited benedictions with a bare head. However, evidence suggests that the German rabbis contended that covering one's head at all times was a recommended act of piety (*middat hasidut*). In the modern era, the nature of the debate has shifted. Reformers decided in the 19th century that head covering was no longer necessary under any circumstances, while conversely this practice became far more ubiquitous among Orthodox Jews. Indeed, perhaps as a backlash against the Reform movement, some Orthodox scholars demanded not one but two headcoverings. Contemporary Orthodox rabbis seem focused less on the question of whether or not a male should cover his head (a given) but rather on what should be the exact nature of this headcovering.

LEVINE studies comparatively the customs relating to the covering of women's hair in the ancient Greco-Roman world, ancient Jewish society, and contemporary Orthodox Jewish circles. In ancient Mediterranean societies, the hair of women often had both a metonymic and a metaphorical meaning. Hair symbolized the nature and restraints of a society, as well as a language of death and regeneration of the body. Levine notes the similarities between Greco-Roman practices and Jewish customs. For example, the Jewish wedding custom of *badeken*, where the groom lowers the veil over the bride's face, corresponds to the Greek *anakalupteria*, and Levine suggests that the original intention of both customs was the same: to permit the groom to see the bride in public for the first time in the presence of a supporting group of witnesses.

Thanks to the rich documents of the Cairo Genizah, more is known about the daily life of the Egyptian Jewish community of the Middle Ages than about any other medieval Jewish community. GOITEIN's classic study of this archive describes the clothing of the "Genizah people" in a highly detailed manner that far exceeds current knowledge of Jewish costume in any other medieval society.

The eighth-century Pact of Umar required that the clothing of tolerated non-Muslims (*dhimmis*) be distinguishable from that of their Muslim hosts. At first this requirement was hardly burdensome, as Jews dressed differently in any case. As time progressed, however, Jews began to dress in a manner apparently more similar to their hosts. The adoption of Arab dress eventually provoked decrees forcing Jews to wear a yellow badge (introduced in the year 850 by Caliph al-Mutawakkil) or to dye their outer garments.

Enforcement, however, was another matter. Although these dress requirements have been, in Goitein's words, "an obsession pestering Muslims" throughout their history, the Genizah shows no evidence of practical restrictions on the dress of non-Muslim people. Jews of all classes could be mistaken for their Muslim neighbors. One Muslim writer cited by Goitein lamented that,

dhimmi women, when they leave their houses and walk in the streets are hardly to be recognized. . . . They go into the bazaars and sit in the shops of the merchants, who pay them respect on account of their fine clothes, unaware that they belong to the *dhimmis*.

Goitein does, however, find evidence pertaining to some distinctively Jewish garments among Genizah people. Thus, the Jewish prayer mantle had no fixed form in this period, and at least four different kinds of square outer garment could serve the purpose. Shawls with their accompanying ritual fringes were worn only during prayer, study, and banquets of a religious nature. They were worn in the street only when walking to and from the synagogue. Goitein speculates that Jewish women did have some particular tastes and styles in clothing. Thus, the *jukaniyya* (a house robe) and *mukhlaf* (a patchwork cloth) were garments perhaps favored only by Jewish women. Additionally, many women chose to decorate their clothes with a Jewish symbol such as a seven-branched candelabrum.

All the same, Goitein's research makes it clear that the daily garments of the Jewish community were generally very similar to the garments of their neighbors. An outer garment was the norm, as much a sign of respectability as for protection from the elements. Male and female fashions were not easily distinguishable, and at times husband and wife even shared clothes. In the Near Eastern quest for modesty, both men and women wore many layers of garments to conceal the body. These garments usually had wide and puffy sleeves, which also served a function similar to modern-day pockets. Head covering was worn at all times and by everyone, and often this was the most expensive element of a person's wardrobe. In general, the larger the head covering, the more prestigious the individual was considered to be.

Lastly, the prevalence of amulets should be noted among the jewelry worn by the Genizah people. Children as well as adults

seem frequently to have been bedecked with ornaments that aspired to convey magical powers on the wearer.

Under Pope Innocent III, the Latin Church legislated at the Fourth Lateran Council (1215) that in order to prevent inadvertent sexual relations between Jews and Christians, Jews were to "be distinguishable from the rest of the population by the nature of their clothes." Aside from the stated reason for this decree, COHEN conjectures that the Church intended also simply to humiliate the Jewish people. Enforcement of this ordinance initially obligated Jews to wear a distinguishing yellow badge and later a Jewish hat, *Judenhut*. Cohen surveys the spread of this requirement through Latin Christendom, as well as implementation of the parallel decree under the Pact of Umar in Muslim lands. The Church's requirement continued through the early modern era. In Europe, only in England (after the readmission) and in the Netherlands were Jews spared the humiliation of this requirement. Cohen cites an English woman visiting Rome as late as 1826 who recounts that Jews were "obliged to wear a yellow ribbon as a mark of distinction when they mix among Christians."

Despite the fact that Jews were often embarrassed by the requirement to wear an identifying mark, the fact remains that many Jewish communities possessed, and still possess, a unique garb. Cohen suggests that the source of this practice lies in the nostalgia of displaced Jews who were reluctant to abandon the dress of their native land as they wandered from one country to another. This nostalgia, combined with Jewish isolation in ghettos and their fear of the attractions of apostasy, suffices to explain hesitation about embracing the latest fashions of their host country. Cohen describes the dress of a number of these communities: Polish Jews who wear the Russian fur cap and Polish black robe; Jews of Istanbul who don "a dingy-colored white cap, surrounded by a cotton shawl of a small brown pattern"; and Jews of Portugal whose "dress generally consists of a red cap, with a blue silken tassel at the top of it, a blue tunic girded at the waist with a red sash, and wide linen pantaloons or trousers."

RAVID's essay represents a case study of the enforcement of the requirement of a distinguishing Jewish garment in a single city, Venice, in the early modern period. The first charter permitting Jews to reside in Venice was granted in 1382, and soon after, in 1394, the city legislated that Jews must wear a visible yellow circle, the size of a loaf of bread, above the chest on their outer clothing. The color yellow in addition to being the traditional color assigned to Jews was also identified with other undesirable segments of society, such as prostitutes. Jewish neglect of this requirement caused the Venetian government to enact stricter legislation in 1496, requiring Jews to wear a yellow head covering at all times and in all places, and subjecting those who disobeyed this statute to a fine or imprisonment. However, Ravid shows that Jews continued to seek exemptions for themselves, and exemptions were granted to allow some to wear a black head covering when traveling or staying temporarily outside of the ghetto. Eventually, Venetian Jews, other than members of the Levantine community, changed from wearing yellow head coverings to wearing red ones, but exactly when and why this shift happened remains to be clarified. Ravid speculates that Jews might have preferred

the color red because it lacked the negative connotations associated with the color yellow.

A covenant is a contract, a formal and binding agreement, usually written, between two parties obliging them to perform or refrain from certain specified actions. Covenant (*berit*) is also the chief biblical model for describing the relationship between God and the people of Israel. The modern study of the concept of covenant between God and the people of Israel has undertaken two tasks, one historical and the other theological. The historical thrust has focused on questions of the origins of the concept of covenant and the date of the adoption of the idea of covenant as the prevalent model of the relationship with God. Modern Jewish theologians have sought to understand the significance of the concept of covenant for Jews in the aftermath of historical scholarship, insofar as it has shattered faith in the antiquity and uniqueness of the Israelite covenant and severed divine revelation from the Bible.

MENDENHALL focuses on the evidence of ancient Near Eastern suzerainty treaties and argues that the biblical descriptions of the covenant in the Decalogue (Exodus 20 and Deuteronomy 5) and elsewhere in the Book of Deuteronomy are modeled on the form and specific terminology of a Late Bronze Age (15th–13th century B.C.E.) Hittite treaty between an overlord and a vassal. The concept of covenant must, therefore, have been adopted by the Israelites about that time. The central features of a Hittite suzerainty treaty are the identification of the covenant giver; the historical prologue in which the overlord recounts his past deeds of benefit to the vassal; stipulations that the vassal is to obey; provision for deposit and periodic public reading; a list of witnesses to the treaty; blessings and curses; the ratification ceremony; and the reiteration of curses. Although the Decalogue itself contains only the first three elements, Mendenhall argues that the rest of the elements were part of the complex of traditions surrounding the founding of the ancient Israelite community even if they were

put into written form later. Indeed, the provision for deposit and periodic public reading, list of witnesses, and the curses and blessings are absent from later treaty forms. Mendenhall identifies covenant-making as an activity undertaken when relations are forged between formerly separate groups, creating a new legal community. A covenant was the formal means by which the tribes, newly escaped from slavery in Egypt, were bound together in a religious and political community. The text of that covenant is the Decalogue.

McCARTHY argues on the contrary that the resemblance between Exodus 19–24 and Hittite suzerainty treaties is superficial because the biblical passage does not contain some essential features of a Hittite suzerainty treaty, such as a historical prologue and blessings and curses. In fact, Exodus 19–24 reflects a tradition of covenant-making by means of ritual, not the treaty-making tradition. Only in later texts, such as Deuteronomy, 1 Samuel 12, and Joshua 24, is the influence of ancient Near Eastern treaties—in this case Neo-Assyrian, not Hittite, treaties—manifest.

NICHOLSON assigns the concept of covenant to a later date, specifically to the time of the prophet Hosea (late 8th century B.C.E.). He maintains that the absence of the term *berit* (covenant) from any text that critical scholarship dates earlier than Hosea refutes any claim that the concept of covenant predates the late 8th century B.C.E. He argues further that the concept of covenant is the result of a decisive change innovated by the prophets, who challenged the existing social order by maintaining that the relationship between God and the people of Israel originated in free choice that had to be continually reaffirmed by adherence to the terms of the covenant. The concept of covenant received its fullest expression in Deuteronomy and the historical books—Joshua, Judges, 1 and 2 Samuel, and 1 and 2 Kings. For Nicholson, unlike Mendenhall and McCarthy, the significance of covenant lies in how it envisions Israel's relationship with and commitment to God. The covenant explicates what it means to be the people of God. Nicholson moves away from understanding the covenant as a means of uniting the tribes because none of the descriptions of covenant explain its purpose in such a way. Rather, the texts presuppose that the tribes belong together.

LEVENSON sketches the relationship of covenant theology to the other dominant theology in the Bible, Zion theology. In contrast to other scholars who believe that Zion theology superseded covenant theology or that Zion theology was prevalent in the southern kingdom while the concept of covenant persisted in the northern kingdom, Levenson argues that covenant theology and Zion theology coexisted and indeed transformed each other. Zion theology, with its emphasis on the cosmic importance of Zion, imbued the concept of covenant with universalistic import. Covenant theology, with its insistence on the fulfillment of covenantal obligations, qualifies the promise to the Davidic family of an everlasting monarchy by subordinating the fulfillment of the promise to obedience to divine commandments.

ROSENZWEIG believes that the concept of covenant does not appropriately describe the biblical description of the revelation and declaration of laws at Sinai. He argues that divine revelation was limited to the expression of God's commanding presence in relation to Israel. The spontaneous response

reflected a feeling of obligation. When the original spontaneity dissipated, human beings transformed the feeling of obligation into impersonal laws encapsulated in books, devoid of any sense of personal relationship with God. Each individual Jew, therefore, must recapture the feeling of God's self-revelation and the natural response of obligation.

HESCHEL understands the Jewish people's participation in the covenantal process to be that of writing a midrash on revelation. In contrast to Rosenzweig, Heschel argues that divine self-revelation included specific content. Human beings, however, have no direct access to the pure form of God's will. Therefore, the Jewish community is forced to offer its best interpretation of God's will in every generation.

The Book of Genesis contains two accounts of the creation of the world: an orderly and structured story of creation is presented in 1:1–2:3, and a slightly different story appears in 2:4–3:24. Most modern Jewish treatments on this topic compare these two stories to each other, to modern scientific theories of creation, or to other accounts of creation from the ancient world. Comparisons to scientific theories are usually designed to synthesize the biblical account of creation with modern ideas about evolution, and comparisons to other creation stories from the ancient world are usually designed to highlight the unique aspects of the biblical story.

LEVENSON presents a Jewish “biblical theology” of creation. He bases his study on comparisons between the biblical story of creation and other ancient Near Eastern accounts, examining the similarities and differences in the creation tales in order to discern how the ancient Israelites viewed creation and God's mastery of the universe. The author addresses the

presence of evil in the creation story and investigates how biblical Israelites and later Jews dealt with this aspect of the biblical account. Levenson successfully melds literary and theological analysis in an insightful and compelling book.

Like Levenson, SARNA deals with both literary and theological issues in the biblical text. His treatment is briefer than Levenson's study (creation occupies only the first chapter of Sarna's book), and he deals with a broader range of questions. Sarna's chapter is appropriate for those seeking a readable introduction to the points of comparison between the biblical stories and other ancient Near Eastern creation accounts.

SOLOVEITCHIK's seminal essay is one of the more original treatments of the creation story. The article is a philosophical and theological discussion of the nature of religious existence, drawing on the story of creation. The author uses the differences between the two accounts of creation in Genesis as a springboard to contrast two different aspects of the human personality. He investigates dilemmas facing the person of faith in the modern world and debates whether the notion of religious surrender to God can be reconciled with modernity's orientation toward personal success. The essay is complex and demands a careful reading.

AVIEZER compares the biblical account of creation in Genesis to current scientific knowledge. He writes from the perspective of a physicist and deals with each of the days of creation recounted in the first chapter of Genesis in turn, discussing how modern scientists explain the origins of the various elements and entities identified in the biblical story. For example, his discussion of the second day in Genesis, when the firmament was created, is titled “The Formation of the Solar System.” Aviezer consistently argues that the biblical account is not supplanted by modern science, choosing the views of eminent scientists who think that the “actual point of creation” is inexplicable by the ordinary rules of science. Aviezer's work is very useful for anyone seeking a way to synthesize the biblical story of creation with some perspectives of modern science.

SCHROEDER also seeks to harmonize the story of creation in Genesis with the conclusions of modern science. Writing both as a scientist and as a religious believer, he argues that the events that scientists theorize followed the big bang and the events described in the six days of Genesis are the same, although described in vastly different terms. His work is accessible to lay readers with a basic knowledge of modern science.

CLIFFORD writes from the perspective of a Roman Catholic, but his work is of great use to all readers interested in a clear and readable presentation of different accounts of creation found in various ancient Near Eastern texts (Mesopotamian, Egyptian, Ugaritic) as well as the different creation stories presented in the Bible. Clifford discusses not only the versions presented in Genesis 1 and 2, but also the other creation stories found in many of the Psalms, in Isaiah 40–55, and in Proverbs 8.

HESS and TSUMURA's anthology of academic essays presents 18 perspectives on the relationships between Genesis 1–11 and the ancient Near Eastern creation stories, including the Enuma Elish epic from ancient Mesopotamia. Two of the essays are introductory, surveying the field of comparative studies; the rest of the chapters deal with particular ancient

Near Eastern texts or specific elements of the Genesis story. The essays emphasize the sources of the biblical story and debate the ways in which ancient Near Eastern texts may have influenced the biblical account. Theological issues are not treated in these essays.

Crescas, Hasdai died c.1412

Catalan critic of Aristotelian philosophy

Lasker, Daniel J. (editor), *The Refutation of the Christian Principles by Hasdai Crescas*, Albany: State University of New York Press, 1992

Lasker, Daniel J., "Chasdai Crescas," in *History of Jewish Philosophy* (Routledge History of World Philosophies, vol. 2), edited by Daniel H. Frank and Oliver Leaman, London and New York: Routledge, 1997

Wolfson, Harry Austryn, *Crescas' Critique of Aristotle: Problems of Aristotle's Physics in Jewish and Arabic Philosophy* (Harvard Semitic Series, vol. 6), Cambridge, Massachusetts: Harvard University Press, 1929; London: Oxford University Press, 1971

Wolfson, Harry Austryn, *Studies in the History of Philosophy and Religion*, 2 vols., Cambridge, Massachusetts: Harvard University Press, 1977

LASKER (1992) translates and annotates Crescas's polemical anti-Christian work *The Refutation of the Christian Principles*. In a short foreword, Lasker describes the historical background that led to the writing of the book. He also outlines Crescas's biography and the main elements of his philosophy, and he provides data on the rest of Crescas's writings. He then discusses the original language of *The Refutation*, its title, date of composition, and Crescas's methodology. He considers relations between Crescas and Profiat Duran and discusses the disputed question of for whom the book was written.

LASKER (1997) gives a general evaluation of Crescas as "a fertile mind struggling to replace the accepted scientific verities of the day (Aristotelian philosophy) with traditionally religious (Jewish, rabbinic) nonphilosophical beliefs." He concludes that the result of Crescas's criticism of the rationalist thought of Maimonides and Gersonides was a philosophical system that could compete with Aristotelianism on its own terms. Given the paucity of Crescas's writings, however, and the contradictions between the opinions he articulates in his different works—even changing his mind within the same work—the nature, let alone the stature, of Crescas's thought is unclear.

Lasker describes the essence of each of Crescas's works separately. First comes *The Refutation of the Christian Principles*, in which Crescas sought to demonstrate that the principal beliefs of Christianity are contrary to reasonable thought. Crescas discussed ten such principal beliefs, analyzed their premises, and considered which of them were acceptable to both Jews and Christians and which were held by Christians alone. Lasker points out an important contradiction

between *Refutation of the Christian Principles* and Crescas's *Light of the Lord* concerning the question of creation ex nihilo: in the polemical work Crescas employed Gersonides' arguments against creation, while in the philosophical work he accepted the concept of creation and refuted Gersonides' arguments. Next Lasker discusses Crescas's *Sermon on the Passover*, which also includes statements that contradict his own opinions in *Light of the Lord*, for example on the issue of free will versus determinism. Finally, Lasker describes *Light of the Lord*, Crescas's major philosophical work. Crescas's intention was to overturn Maimonides' Aristotelian philosophy. His perception that rationalism weakened Jewish religion (or rather Jewish resistance to conversions and missionary activities) possibly played some role in this anti-Maimonidean critique. Crescas went as far as to reject Maimonides' 13 principles of Judaism. To replace them he formulated four categories of Jewish doctrine: roots, cornerstones, true doctrines or beliefs, and doctrines and theories. Maimonides believed that the existence of God is a revealed commandment, while Crescas argued that any revelation presupposes the existence of God, his unity, and his incorporeality. According to Crescas, this should be accepted as an axiom. He believed that God's unity is not given to rational proof; only reliance on revelation can guarantee the truth of the belief in one God. Maimonides believed that to define God is possible only by saying that which God is not, while Crescas argued that positive qualities can be attributed to God. Among his "cornerstones," Crescas listed six beliefs pertaining to divine revelation. He rejected the Aristotelian intellectualist approach to God's relation to the world and accepted biblical miracles literally, not figuratively as did the Aristotelians. Crescas believed in God's absolute knowledge of particulars and rejected free will. He ascribed a place of unrivalled pre-eminence to the Torah, which brings the believer to eternal life through love of God as expressed in observance of the commandments.

Crescas's "true beliefs" were creation ex nihilo, immortality, reward and punishment, resurrection, eternity of the Torah, the superiority of Mosaic prophecy, the efficacy of the *urim* and *tummim* (oracles) to learn the future, and the messiah. Any denier of even one of these principles is a denier of the whole Torah. The last portion of Crescas's *Light of the Lord* contains a number of short discussions of various topics that were commonplace in medieval philosophy, such as the eternity of the world, the possible existence of other worlds, and whether the heavenly spheres are intelligent living beings. In discussion of these topics, Crescas argued against the rationalist viewpoint. In the final analysis Lasker contends that although Crescas's philosophical contribution is undeniable, his works for many reasons did not exercise much influence on Jewish philosophy.

WOLFSON (1929) is one of the most fundamental treatments of Crescas's philosophy. Since the very core of Crescas's arguments was based on criticism of the philosophical background of the rationalist Jewish thought of Maimonides and Gersonides, refuting Aristotelian principles meant rejecting the main Jewish (and also Muslim and Christian) philosophies of the time. Crescas's "main object was to show that the Aristotelian explanation of the universe as

outlined by Maimonides in his propositions was false and that the proofs of the existence of God which they were supposed to establish were groundless."

The same method that Crescas applied to the study of texts of others, Wolfson applies to the first 25 chapters of part one of book one of Crescas's *Light of the Lord*. These chapters were written in the form of "proofs" of the 25 propositions in which Maimonides summed up the main principles of Aristotle's philosophy. The first 20 chapters of part two of book one were written in the form of criticism of 20 of the 25 propositions. Wolfson deals with these two sets of chapters. Besides his analysis, he also offers a critical edition of the Hebrew text and a translation of the parts he discusses with extensive notes.

In his introduction, Wolfson scrutinizes Crescas's criticism of Aristotle in six chapters covering the following topics: sources, method, influence, and opposition; infinity, space, and vacuum; motion; time; matter and form; and foreshadowing a new conception of the universe. Wolfson states that no one before Crescas undertook the task of finding proofs for Aristotle's principles. All the commentaries on Maimonidean philosophy were explanations of Maimonides' own thought, ignoring its philosophical background. Crescas presented the Aristotelian explanation of the universe as outlined by Maimonides as false and groundless.

After scrutinizing the philosophical matter in Crescas, Wolfson describes Crescas's positive doctrines ("foreshadowing a new conception of the universe"). Crescas himself did not summarize these positive doctrines. He scattered separate statements that Wolfson gathers into a systematic unity. From this gathering emerges a new doctrine of the infinite universe that allows "incorporeal extensions" and the possibility of many worlds. A similar system was imagined by Giordano Bruno two centuries after Crescas. Moreover, Crescas corrected the very fallacies of the Aristotelian perception of celestial mechanics and made other advances in understanding the laws of nature that were proved by experiments three or four centuries later. This book can be recommended only to advanced readers familiar with the history of philosophy and science, and with some knowledge of Semitic languages.

WOLFSON (1977) includes the article "*Crescas on the Problem of Divine Attributes*," which was written originally in 1916 and concerns the problem of universals. To Wolfson, the problem of attributes discussed in Jewish philosophy is a problem of universals in disguise. In chapter one of the article, Wolfson describes how Jewish and Muslim philosophers solved the problem before Crescas. In chapter two, he treats Crescas's solution of the problem in his criticism of Maimonides. Crescas, following logical reasoning, came to the inadmissibility of either positive or relative attributes. God's existence is necessary because it is not preceded by any prior cause but is causative because it is creative. Necessary existence means nothing but the absence of efficient causation. Crescas discussed the relation between essence and existence. Avicenna concluded that in God there is no distinction between essence and existence, while Averroës maintained that existence is identical to essence. The same difference of opinion exists between Avicenna and Averroës with regard to the

attribute of unity: Avicenna maintained that, like existence, unity is only accidental to essence, while Averroës, on the contrary, maintained that unity is identical to essence. In Jewish philosophy, Maimonides and his immediate disciples followed Avicenna, while all later Jewish philosophers accepted the view of Averroës. Crescas refuted both approaches by reducing their views to absurdity. Then Crescas worked out his own theory of attributes. He endeavored to prove that attributes are positive both in the sense that the divine substance is composed of essence and attribute, and in the sense that the predicate affirmed of God is a related term. Crescas especially mentioned the attributes of priority, knowledge, and power. The main advance in the thought of Crescas lay in his attempt to show the compatibility of essential attributes and absolute simplicity.

The medieval military and religious movement known as the Crusades affected Jews living in Europe and the Holy Land, and several studies of its impact have centered around these two foci. More attention has been paid to attacks on Jews in Europe, especially those directed against Rhineland Jews and sparked by the call to the First Crusade in 1096. These studies have placed greatest weight on medieval Jewish reactions to and interpretations of the attacks, as described in a series of medieval Hebrew chronicles. The changing fate of Jews liv-

ing in the Holy Land during this turbulent period has prompted a smaller but important group of studies.

EIDELBERG has translated into English four Hebrew chronicles of the First and Second Crusades. *The Chronicle of Solomon bar Simson*, *The Chronicle of Rabbi bar Nathan*, and *The Narrative of the Old Persecutions* (also known as *The Mainz Anonymous*) all recount attacks on Jews during the First Crusade; the *Sefer Zekhirah (The Book of Remembrance)* by Ephraim of Bonn describes events surrounding the Second Crusade in 1146 and 1147. Eidelberg gives brief introductions to each chronicle and highlights the liturgical quality of some sections. The general orientation that he provides suggests that attacks on Jews were primarily motivated by the antagonism and jealousy of Christian burghers toward wealthy Jews. He also contends that a better organized and prepared Christian elite was able to protect Jews more effectively from attacks in the wake of the call for the Second Crusade than it had been during the First Crusade. His translations have been criticized for using (without emendation) the faulty 1892 edition of the chronicles by Neubauer and Stern.

The three chronicles of the First Crusade share text and information, but untangling the exact nature of their relationship to one another has proved challenging because they exist only in late manuscripts (200 years and more after the events they describe) and because two of the chronicles exist only in a single copy. ABULAFIA describes the problems entailed in such investigations and outlines the solutions that have been proposed, providing a useful synoptic table. She hypothesizes that the three are directly related; that the so-called *Chronicle of Solomon bar Simson* is a compilation of the other two, with letters sent between affected Jewish communities; that this chronicle was written between 1140 and 1146; that Solomon bar Simson himself was not its author but only the name of one of the author's sources; that the *Chronicle of Rabbi bar Nathan* was written by Eliezer ben Nathan before 1146; and that the *Mainz Anonymous* was contemporary with the persecutions and possibly written by a Jew of Mainz.

MARCUS approaches these texts "as literary works, as fictions of a particular Jewish imagination," arguing that they are less useful and interesting as repositories of facts than as documents that reveal what cultural symbols Jews used to make sense of the horrific events of 1096. He highlights the liturgical and martyrological nature of sections of the chronicles and argues that when political intervention, which he calls the Esther paradigm, failed to protect the Jews, they turned to a new paradigm of sacrifice by relating the martyrdoms to the Temple cult in order to valorize what had happened.

RILEY-SMITH seeks to discern the relationship of the persecution of Jews in the First Crusade to the project of Crusade as a whole by comparing Christian and Jewish accounts of the attacks. He highlights the fact that the attackers were not gangs of peasants but crusaders under organized leadership, many of whom went on to successful careers in the Holy Land. He downplays as motives for attacking Jews both conversion of Jews by force and a wish to exact supplies by extortion and looting; he suggests instead that the primary motivating factor was a desire for vengeance against the perceived enemies of Christ.

CHAZAN (1987) argues that 1096 was not a catastrophic turning point in the history of Christian-Jewish relations and that Ashkenazi Jewry emerged intact from the terrible attacks. His important revisionist reading of the chronicles also suggests that, judging from their patterns of response to the violence, Ashkenazi Jews were better integrated into broader Christian society than has been assumed. The Jews' first response was to seek protection from Christian elites and from their neighbors. In some cases this was successful, but when it failed they either passively allowed themselves to be killed or killed their families and themselves. The chronicles were written both to memorialize the victims and to reconcile the behavior of the voluntary martyrs with halakhic and aggadic norms. Chazan's translations of the *Mainz Anonymous* and the *Chronicle of Solomon bar Simson* supersede those in Eidelberg. CHAZAN (1996) presents the conclusions of his earlier book to a broader audience, deepening his discussion of the relationship of the events of 1096 to the problem of antisemitism.

GOITEIN translates and discusses two documents from the Cairo Genizah that reveal different aspects of the Jewish response to the Christian capture of Jerusalem in 1099. One describes relief work done for Jews displaced by the conquest. The second places the Frankish taking of the city within a broader context of struggles between Fatimids and Seljuks and shows its Jewish author to have had confidence that the Fatimids would soon retake the city.

PRAWER's work is a comprehensive history of the Jewish communities in the Holy Land from the Christian conquest in 1099 to the fall of the Latin Kingdom in 1291. He describes the initial destruction and dislocation of the Jewish communities after the conquest as well as their comparatively quick recovery. Although Jews were prohibited from living in Crusader Jerusalem, they were encouraged to settle in other cities and towns of the Latin East. They formed an especially strong and vibrant community in Acre in the 13th century. Prawer highlights the diverse origins of the communities in the Holy Land, noting that Jews from North Africa, Egypt, Yemen, and Iraq as well as from France, Spain, Italy, and Germany were attracted to come and join the nucleus already there.

The term "crypto-Jew" applies to persons who publicly profess another religion while privately practicing Jewish rituals, such as Friday-night candle lighting (perhaps unaware that family traditions are of Jewish origin), and to individuals who possess secret, transmitted Jewish identities (which may be unaccompanied by specifically Jewish practice). The word "marrano" is often used in the same sense, but it can carry a pejorative connotation. The Hebrew appellation "anusim" is more general, denoting Jews who adopted another religion under duress and their descendants who continue to belong to another faith, whether or not they maintain any Jewish traditions. In addition to short-lived instances of secrecy in Europe during the Nazi era, crypto-Judaism persisted into the 20th century among New Muslims, whose ancestors were forcibly converted in Persia in 1839, and among communities and individuals maintaining descent from New Christians, the Iberian Jewish majority who succumbed to the religious persecutions in Spain and Portugal between 1391 and 1497.

While countless descendants of the Iberian trauma the world over still maintain a Jewish heritage or identity, popular awareness of contemporary crypto-Judaism is limited primarily to groups in New Mexico and Belmonte, Portugal, and its significance is underrated, although there have been sporadic press reports on the topic since the early 1800s. The literature available in English remains scant, and much of it is anecdotal or amateur. Additional scholarly work is required to understand properly this subculture, particularly its prevalence among New Christians both during and after the Inquisition (which was abolished in the early 19th century). Important areas for research include the nature of crypto-Jewish religiosity and identity, attitudes of anusim toward the dominant religion, the history of particular Jewish customs that have been preserved, the process of identity transmission, and the art and literature of anusim (as well as any Jewish subtext therein). Also of interest are the crypto-Jews' reasons for remaining secretive after religious freedom has been granted; how the anusim have perceived normative Judaism; and the ways in which many modern-day crypto-Jews blend their Jewish heritage into a new, multifaceted identity. Research is hampered because crypto-Jews find it difficult to identify Jewish elements among customs remembered from home and because some have been too quick to attach Jewish meanings to certain customs or foods without adequate investigation. Furthermore, few scholars investigating this phenomenon have sufficient background in Jewish law and Sephardi customs to identify practices not mentioned in Inquisitorial documents. Appropriate methodology still needs to be developed, and the mixture of fact and fantasy in reports remains a serious problem.

While working as an engineer in Portugal in 1917, SCHWARZ was introduced to New Christians in the moun-

tains of northern Portugal. In this sensitive, intelligent, and well-informed two-part essay (based on his unsurpassed book, *Cristãos-Novos em Portugal no Século XX*, Lisbon, 1925), he tells his story of getting acquainted with crypto-Jewish families in and around Belmonte. He describes their self-perception as well as how others saw them, demonstrates that numerous similar communities existed at the time, and notes that women were the torchbearers of tradition. Schwarz collected many of the secret prayers of crypto-Jews throughout the region, some of which appear in translation in the second part of the study. His work was instrumental in generating support for the emerging Jewish community of Oporto, headed by Captain Arturo Carlos de Barros Basto.

A more recent description of the crypto-Jews of Belmonte by CANELO, a school teacher in that town, is available in English. It begins with a compilation of historical information regarding the Jewish presence in Portugal as well as Christian attitudes toward the Jews, and it continues with a listing of customs and prayers based almost entirely on Schwarz's findings. He does, however, add a number of recently learned or composed prayers (e.g., a translation of the standard Friday night *kiddush*, presented as a crypto-Jewish Saturday night prayer) collected from a few community members since nearly half the formerly crypto-Jewish community adopted mainstream Judaism. The book suffers from inaccuracies of detail and translation, but the author's descriptions and personal observations afford the reader insight not only into the ritual life of this Portuguese community but also into how they are perceived by their Catholic neighbors.

Almost nothing has been written in English about contemporary crypto-Judaism in Brazil, where it appears to be widespread and in flux. BLOOMFIELD RAMAGEN is a professor of geography who, in her former capacity as an employee of the Israeli embassy in Brasília, carried out extensive correspondence with anusim and wrote a masters thesis on the subject. In the published text, she considers one group from northern Brazil, their claim of transmitted Jewish identity, evidence they offer of their Sephardi roots, and reactions of scholars and representatives of Jewry and Israel. Her dispassionate examination gives the reader a glimpse into the problems inherent in the disparity between the folk-etymologies and historical theories that groups use to convince outsiders of the validity of their crypto-Judaism and the tools used by those outsiders who seek to verify the groups' status.

A folklorist of great eminence, PATAI collects in this volume various articles he wrote between 1936 and 1983. Section three ("The Marranos of Meshhed") is comprised of five chapters and offers a straightforward history of the "jedid al-Islam" crypto-Jews of Iran, which is based on oral histories and descriptions of that community's lifestyle. The final section ("On the Peripheries") investigates the newly formed organized communities of "Indian Jews" in Mexico who claim descent from anusim, as well as the New Christians ("Chuetas") of Majorca. Patai does not consider the latter to be crypto-Jews, both because they preserve no traces of Jewish heritage that he could identify and because even if they believe their Jewish ancestry was a secret, their Christian neighbors readily identified them as Jews based on their names and areas of residence.

Patai's two chapters on the Jewish Indians of Mexico are based on field trips taken in 1948 and 1964, during which he gathered oral testimony, mainly from community leaders, about their ethnohistory and observed their practices. He distinguishes between Adventist Protestants and crypto-Jewish Indians, but he suspects that the anusim have had a propensity to join Bible-reading and, later, Bible-observing Christian sects, once those options become available. Ultimately, Patai leaves the question of the origin of these communities (whether it was a "reawakening of the old faith which for many centuries had remained dormant" or merely "a pious fairy tale") unresolved; his main argument against their authenticity concerns the willingness of some community members to accept his advice and officially convert to Judaism in order to be recognized by the State of Israel. A remarkable polymath, Patai's judgment might have been rather different given greater familiarity with the history of the New Christian presence in Mexico and the beliefs and traditions reflected in Inquisition *processos*.

SANTOS, in one of the earliest attempts to grapple with the possibility of crypto-Judaism in the Southwestern United States, combines personal memories of foods and customs with some historical background, as the author seeks to demonstrate a likelihood of Jewish heritage among Texan Latinos. He concludes his essay with an emotional lament over the loss of crypto-Jewish tradition.

HERNÁNDEZ, a professor of English at the University of Texas, has compiled an extensive and eclectic list of all the elements believed in New Mexico to be of crypto-Jewish significance, based upon articles in the popular press and on interviews with Father C. Carmona, the historian L. Carrasco, New Mexico state archivist S. Hordes, and the latter's informants. Spanning the gamut from significant evidence of Jewish origins through tantalizing suggestions to fanciful signs, she discusses the history of the settlement of New Mexico; recounts the transmission of culture and the Penitente movement; lists "Jewish" names and surnames, artifacts, Sabbath and holiday customs, life-cycle rituals, and "Sephardi" foods; and identifies Jewish-seeming symbols on headstones and in Christian prayers, Ladino-sounding language, and Sephardi-sounding music. This work is the most comprehensive and vivid representation of crypto-Jewish self-perception as it has developed among a generation that has been influenced by external and often poorly informed Jewish sources.

The issue of *JFER* edited by HASKELL explores the controversy over the existence of contemporary crypto-Judaism in the Southwestern United States. The inclusion of two articles by Patai on the Mexican community of Venta Prieta attests to the editor's indecision as to whether the phenomenon of crypto-Judaism should be analyzed in geographically broad or specific terms. In her virulent contribution to this number, J. Neulander spends most of her time detailing the history of various "biblical churches," which she fails to connect convincingly with the claims of crypto-Judaism in New Mexico. The remainder of the issue contains several rejoinders to the conclusions of Neulander's article in an earlier issue of *JFER* (vol. 16, no. 1), in which she demonstrates that the popular *trompito* top—which resembles a *dreydl*—is unlikely to be a Jewish marker and then asserts that crypto-Judaism is a modern myth. T. Atencio, the son of a Hispanic Presbyterian minister who considers his family to be of Jewish descent, examines crypto-Jewish heritage in New Mexico—which he takes for granted—in the context of its role in the Manito culture and, eventually, in New-Mexican Chicano identity. S.C. Halevy, citing decades of earlier reports of a crypto-Jewish presence in the Southwest from retired rabbis and priests, reviews the nature of the surviving heritage. She presents evidence of rabbinic practices unrelated to Christian sectarian groups, including sweeping to the middle of the house, burning hair and nail trimmings, fasting on Mondays and Thursdays, soaking and scalding meat, avoiding meat-dairy combinations, and some mourning customs. In a contribution that shifts from personal reminiscence to the description of the general observances of a community, I. Medina-Sandoval gives a passionate account of her own heritage, placing her story in the context of what is known or believed regarding crypto-Judaism in the Southwest. The last article, by D.M. Gradwohl, raises succinctly the question of exceptionality: given the numerous past and present groups of Hispanic anusim throughout the world, why should their presence in the Southwest be so vehemently disputed?

The Book of Daniel, found among the Writings in the Hebrew Bible, is a bilingual document written partly in Aramaic and partly in Hebrew. The first half of the book (chapters one through six) presents stories about Daniel and his companions, who rose to prominence at the Babylonian court after they were exiled following the destruction of Jerusalem, while the second half (chapters seven through 12) contains revelations given to Daniel about the future and the end of time. The form and content of these revelations have led scholars to regard the Book of Daniel as an apocalypse written sometime during the Maccabean period.

Among the most thorough studies of Daniel, COLLINS's commentary represents nearly 20 years of work on the subject. In the extensive introduction, Collins discusses the state of scholarly debate on the book's text, language, composition, genre, and setting, and he recounts the history of interpretation. The commentary also provides a substantial essay by Adela Yarbro Collins titled "The Influence of Daniel on the New Testament." The main part of the study moves systematically through the chapters of the book in both its Hebrew/Aramaic and Greek versions, the latter supplying the significant additions of the Prayer of Azariah and the stories of Susanna and of Bel and the Dragon. Important issues, such as the identity of the "Son of Man" mentioned in Daniel 7 and the idea of the resurrection of the dead present in Daniel 12, are discussed in greater detail in the excursuses that accom-

pany the commentary on each of these chapters. Collins also draws heavily on the Dead Sea Scrolls, at least some of which were composed around the same time as the Book of Daniel and which reflect many of the same views.

GOLDINGAY has written a commentary intended for the scholar and nonspecialist alike. He provides a translation of the text followed by philological and textual notes, and he also addresses literary and historical questions. Goldingay accepts the popular thesis that the tales in Daniel 1–6 are pre-Maccabean and developed gradually, originating in the eastern diaspora. He regards the Book of Daniel as a creative amalgam of many traditions, asserting that the tales and visions can be read "as wisdom or as prophecy, as pedagogics or as eschatology, as halakah or as haggadah." Identifying Daniel as an early example of an apocalypse, Goldingay attributes the book to the Hasidim, exponents of a Jewish pietism active during the Maccabean period. Goldingay notes the differences between the Hebrew/Aramaic text and the Old Greek version, but he does not analyze them; similarly, he only refers in passing to the Maccabean setting of the visions in Daniel 7–12. Goldingay's use of the term "midrash" to describe some of the material contained in Daniel 1–6 and 10–12 is problematic. An extensive bibliography is provided at the end of the commentary.

LACOCQUE has produced an excellent introduction to Jewish apocalyptic literature by means of his thorough study of Daniel. LaCocque argues that the social milieu responsible for the apocalypses of the second century B.C.E. was that of the pacifist and anti-Hellenistic Hasidim. The Book of Daniel is addressed to the "faithful ones," the Hasidim, who risked their lives to uphold the Torah. LaCocque notes the close relationship between the Book of Daniel and the Dead Sea Scrolls and concludes that the community at Qumran constituted the true successors of the Hasidim. He argues that the stories about Daniel in chapters one through six are aggadic narratives, based on a core of legendary tradition, which served to exhort, inspire, and give hope to the persecuted faithful of the author's generation. LaCocque's interpretation of the Son of Man referred to in Daniel 7 is somewhat speculative. He opts for a conception of the Son of Man as High Priest, basing much of his interpretation on the scribal figure in Ezekiel 9–10, who he believes influenced the author of Daniel chapter seven. LaCocque concludes with an important discussion of the relationship of wisdom, prophecy, and apocalyptic in the Book of Daniel.

WILLS identifies the subject of his study as the “wisdom court legend,” which he defines as “a legend of a revered figure set in the royal court which has the wisdom of the protagonist as a principal motif.” He discusses many examples of this genre both within and outside of the Hebrew Bible, focusing on the Joseph, Esther, and Daniel stories, as well as a number of stories in Greek sources that are set in Near Eastern courts. Approximately one-third of the book is devoted to an analysis of the Daniel stories, especially chapters four, five, and six. Wills investigates the sources behind these stories and the history of their transmission; his arguments draw heavily from the Old Greek version, which Wills considers to be the best witness to the original form of the material. His use of the variant Greek texts of Daniel (and Esther) is especially commendable, for even when his conclusions about particular issues may be challenged, he has effectively demonstrated that the evidence of these versions can not be overlooked.

MONTGOMERY’s scholarly commentary on Daniel is devoted primarily to philology. Preeminent in its comprehensiveness and balanced judgment, this study remains invaluable for its discussion of textual problems. Montgomery examines not only the Hebrew/Aramaic and Old Greek recensions of Daniel, but also the other Greek versions as well as the Latin, Coptic, and Syriac versions. Montgomery theorizes that the combination of languages in the Book of Daniel results from the incorporation of older Aramaic material into a work that was ultimately composed in Hebrew. Montgomery does not provide an English translation of the Book of Daniel, but his highly detailed textual and historical notes on each chapter or story are invaluable.

The Dead Sea Scrolls were certainly the best-publicized archaeological discovery of the 20th century, but much of the publicity has been tinged with sensationalism. A number of popular books on the scrolls have made claims that distort or disregard the findings of the majority of the careful scholars who have made scrolls research their life’s work. In general, the media have tended to focus on the relevance of the scrolls to the history of Christianity, while overlooking their significance for understanding the history of Judaism. Although some of the books described here are addressed primarily to a Christian audience, all of them are informed by responsible scholarship and seek to place the scrolls in a Jewish context.

VANDERKAM offers a concise and balanced summary of the scholarly consensus on the main issues surrounding the scrolls. After a brief account of the discovery of the caves near Qumran that contained the scrolls and the excavation of the site, he briefly surveys the contents of the major scrolls. In the next two chapters, he defends the widely accepted hypothesis that the inhabitants of Qumran were Essenes, and he presents a detailed but cautious reconstruction of the history of that sect based on both textual and archaeological evidence. He then focuses on the impact of the discovery of the scrolls on the study of both the Hebrew Scriptures and the New Testament. His limited treatment of the recent controversies surrounding the scrolls is evenhanded, if somewhat protective of the original team of scholars to whom the publication of the scrolls was entrusted.

STEGEMANN takes a more outspoken approach than VanderKam to the task of introducing the scrolls. Stegemann devotes many pages to defending the original scrolls team and sharply critiquing several recent books alleging various conspiracies to keep the scrolls hidden from the public. The author’s description of the excavations is colored by his unverifiable hypothesis that the Qumran settlement functioned primarily as a center of scroll production that served Essene communities throughout the land of Israel. He also puts forth the idiosyncratic theory that the Teacher of Righteousness (a key figure in the history of the community) served as high priest during the hiatus between Alcimus and Jonathan Maccabee (159–152 B.C.E.), before breaking away from the

temple to found the Essenes. In spite of its polemical and speculative tendencies, Stegemann's book provides the most thorough and engaging descriptions of the contents of the scrolls of any introduction to date.

Another highly readable and informative introduction is that of SCHIFFMAN (1994). His stated purpose is to "correct a fundamental misreading of the Dead Sea Scrolls" by locating them in their Jewish context. His approach brings the scrolls into dialogue with other texts of Second Temple Judaism, on the one hand, and with the rabbinic literature, on the other. Chiefly on the basis of a comparison of the so-called Halakic Letter (4QMMT) to rabbinic accounts of debates between the Pharisees and the Sadducees, he maintains that the Dead Sea community originated as an offshoot of the Sadducees. He contends that the scholarly consensus that the Qumran sect was Essene needs to be (at least) modified to take into account the sect's Sadducean roots. In addition to exploring the Qumran community's distinctive halakhah, Schiffman treats a number of other issues that receive scant attention in other introductions to the scrolls, including prayer and ritual and the sect's attitudes toward gentiles and women.

In a collection of articles from the *Biblical Archaeology Review*, SHANKS presents a variety of approaches to the basic issues surrounding the scrolls, all geared to a general audience. Shanks was personally involved in the controversy over the delay in publication of the Cave 4 texts, so his introduction and choice of contributors betray a certain hostility toward the original team of scrolls researchers. (He includes the infamous interview that led to the removal of John Strugnell as chief editor of the scrolls.) Nevertheless, the articles are by experts, and most cover their subjects thoroughly. Some essays are on topics not treated in other introductions, such as the techniques used for reassembling fragmentary scrolls.

The most recent edition of VERMES's classic translation of the scrolls (first published in 1962) contains "all the texts sufficiently well-preserved to be understandable in English." It is certainly the most intelligible of the available translations, but its comprehensibility is partly the result of Vermes's maximalist approach to the reconstruction of fragmentary texts. In other words, wherever there are gaps in the recovered text, he has filled them with suppositions (indicating with square brackets where the reconstruction begins and ends) derived by analogy with similar texts, or at times by (admittedly highly educated) guesswork. This technique means that sometimes more than half of the words in a given translation represent Vermes's supplementation of the little that remains of the written scroll. He helpfully divides the documents into eight categories, although one might question why some of the "Biblically Based Apocryphal Works" were not included under "Apocalyptic Works" (as it stands, the latter is by far the smallest group represented). His introduction is lengthy (90 pages) and tends, like his translation, to be overconfident in reconstructing the history of the Qumran sect.

In recent years, many students of the scrolls have come to prefer the translation of GARCÍA MARTÍNEZ for a number of reasons. First, it is substantially complete, including all of the nonbiblical texts except those García Martínez considers too fragmentary to translate. For texts that are found in more than one of the scrolls, he translates each of the fragments sep-

arately rather than combining them into one composite version, as other translators do. He is much more conservative in his reconstructions than Vermes, supplying missing words only where there is a clear textual or contextual basis for doing so, and frequently using ellipses instead of offering conjectures. The resulting lack of fluency is compounded now and then by an infelicitous choice of words; the English version is a translation of the author's original translation into Spanish. Nevertheless, what it lacks in elegance, the translation makes up for in accuracy and consistency. García Martínez's organization of the texts into nine categories, however, often seems rather arbitrary, and his introductions to each category are too brief to be of much help to novices.

WISE, ABEGG, and COOK have opted to forego the thematic classification of the scrolls altogether, simply arranging them in numerical order. Moreover, they have given new names to many of the well-known documents (the Community Rule is titled "Charter of a Sectarian Jewish Association"); as a result, someone who has read an introduction to the scrolls might search their table of contents in vain for a familiar point of entry into the translation. Their introductions to the individual texts are sometimes informative, but they tend to emphasize points of contact with Christianity. The translations themselves are accurate and unbiased, and even more conservative than those of García Martínez, for the translators only represent words that are clearly legible on the Scroll fragments (indicating doubtful readings with square brackets and keeping reconstruction to a minimum).

For readers with some knowledge of the original languages of the scrolls, the series of editions and translations under the general editorship of CHARLESWORTH may prove to be very useful. (At this writing only three of the projected ten volumes are available.) Text and translation are attractively arranged on facing pages for ease of comparison, with textual variants noted on the text page and all other types of annotation (alternative translations, cross-references, exegetical comments, etc.) placed below the translation. The editors have been criticized for not making use of all the available scholarship, but this omission seems to be a conscious decision, in keeping with the editorial policy of minimizing reconstruction of the text. The translations aim to be as literal as possible, even following the word order of the original to the extent that English syntax will allow. The brief introductions to each text are densely packed with all sorts of information but offer very little interpretation. A reader with a serious interest in a particular scroll and a desire to form an independent opinion of it would do well to consult this series, although it could be years before the publication is complete.

Most scholars would define the Qumran community as a Jewish apocalyptic sect, even though they apparently did not compose any original apocalypses. COLLINS gives a succinct and lucid explanation of apocalypticism and its relationship to the scrolls. He illustrates the main features of apocalypticism with examples from two prototypical Jewish apocalypses, the Book of Daniel and I Enoch. He then traces several dominant apocalyptic themes through the Dead Sea Scrolls, including traditions about the origin of evil, the deterministic view of history, expectations about the messianic age and reward and punishment after death, and angelology. He concludes

that while the beliefs of the Qumran community are illuminated by comparison to the apocalypses, the scrolls are innovative in many respects and contribute to a broader understanding of the social context of apocalypticism.

SCHIFFMAN's (1983) study of sectarian law was written before the discovery of 4QMMT (the Halakhic Letter) and therefore does not include his later claim that the halakhah of the Qumran sect is basically Sadducean. Yet in this volume, he already expresses doubts about the identification of the sect with the Essenes, because there are significant discrepancies between the laws of the sect and what is reported about Essene practice in external sources (particularly regarding celibacy and communal property). The focus of this volume is what would now be called "civil law" (roughly corresponding to the scope of the Mishnah's order *Nezikin*), although Schiffman convincingly demonstrates that the Qumran sect did not recognize a distinction between civil and ritual laws. Schiffman's thorough methodology, elucidating the halakhic reasoning of the Qumran sect by contrasting that reasoning with both biblical and rabbinic law, entails some quite technical discussions. Each chapter ends with a clear summary, however, making this book enjoyable reading for anyone with an interest in the development of halakhah.

The easiest way to get a sense of the different approaches taken by many of the major figures in scrolls research (at least in the early 1990s) is to read ULRICH and VANDERKAM's collection of essays. With only one or two exceptions, each of these articles is an excellent introduction to a prominent scholar's area of expertise. Some important issues are not covered, such as the sect's method of scriptural exegesis, whereas there are three overlapping discussions of messianism (out of a total of 13 essays). On the other hand, various methodologies are represented, and some of the authors openly disagree with one another (e.g., Baumgarten and Schiffman on Qumran law), making the collection as a whole more interesting than any of its parts.

The most far-reaching and up-to-date collection of scrolls studies available is found in the two volumes edited by FLINT and VANDERKAM. In the selection of contributors and topics, these volumes reflect an interest in both "past perspectives and future prospects" in scrolls research (to borrow from the subtitle of Jodi Magness's essay in volume one). Approximately half of the articles are by up-and-coming scholars who bring newer methodologies to bear on scrolls research. The first volume ranges from general surveys of the history of scholarship and archaeology of Qumran, through somewhat more concentrated studies of the main genres of Qumran texts, to highly specialized reports on techniques and technologies that have been or are beginning to be applied to scrolls research. The majority of the studies in the second volume are topical (e.g., "Holiness in the Dead Sea Scrolls," "The Demonology of the Dead Sea Scrolls," "Prophets and Prophecy at Qumran"). There are also two groups of three essays each under the headings "The Scrolls and Judaism" and "The Scrolls and Early Christianity." A comparison of these essays confirms that, in spite of all the changes over the course of the history of Qumran research, there is still a fundamental division between scholars who study the scrolls in

the context of the history of Judaism and those who treat them as background to the history of Christianity.

The traditions preserved in the Hebrew Bible are reticent regarding the subject of death. Academic inquiry into the topic therefore relies on mining the scattered references throughout the canon, comparison with other ancient Near Eastern cultures, and occasionally on archaeological data. It is a matter of current debate whether the Israelites, in spite of biblical prohibitions, engaged in ancestor worship or cults of the dead. Postbiblical Jewish approaches to death are less frequently discussed in the secondary literature, which focuses largely on contemporary mourning customs.

TROMP provides a detailed study, based on comparisons with Ugaritic terms, of the Hebrew words and phrases in the biblical corpus that refer to death and the realm of the dead. His method results in a largely philological project, one that focuses on text and language, particularly on the Bible's poetic compositions. Tromp concludes that the Israelite conception of the netherworld is closely related to the idea of the grave, and that it is often described as the negation of positive life experiences. His arguments here are persuasive, but his additional statement that death was regarded by the Israelites as a personal enemy is open to debate. While the subject of death probably does not, in the end, have the prominence in the

Hebrew Bible that he suggests, Tromp's study is an important contribution regarding the language of death in the biblical traditions.

BAILEY's book is part of the series "Overtures in Biblical Theology," and reflects the series' aim of discussing biblical themes in relation to the modern world. He begins with a brief reflection on modern thoughts about death, and then, in the bulk of the book, he studies several topics in a range of texts: attitudes toward death in the Hebrew Bible; the shift to new views of death with the rise of apocalypticism; death in post-biblical works including the Dead Sea Scrolls; and, finally, death in the New Testament. Bailey concludes by exploring the implications of these traditions for bioethics, for the modern fear of mortality, and for contemporary theology. His book does not provide a thorough scholarly analysis of the ancient texts but rather is aimed at a more general audience with an interest in modern theological questions.

SPRONK begins with an extensive survey of the history regarding scholarship on the question of whether a belief in the afterlife may be found in the Hebrew Bible. This is followed by a discussion of death in the cultures of the ancient Near East, including Egypt, Mesopotamia, Asia Minor, Greece, Syria, and Palestine. Spronk then moves on to ancient Israel and considers matters such as the culture's funerary customs, beliefs in the powerful dead, traditions about heaven, and the afterlife of the king. At the end of the book, he addresses a number of texts regarding notions of God's ability to rescue one from death. The evidence leads him to suggest that while Israelite Yahwism generally avoided the subject in order to resist Canaanite beliefs, there were still circles in Israelite folk religion in which the Canaanite views of death survived.

LEWIS readdresses the question of whether ancient Israel had a cult of the dead, which he defines in terms of acts intended to placate the dead or attain favors from them. He says that although many earlier scholars felt otherwise, in his opinion there is strong circumstantial evidence for death cult practices within the popular religion, practices that were rejected by the religious strand that eventually became normative Yahwism. He draws his evidence from a detailed analysis of recently published Ugaritic texts, and then he argues that similar traditions appear, or are forbidden, in a range of biblical materials including the Deuteronomistic, prophetic, and priestly literature. Lewis's study is most accessible to those with a background in Semitic languages, but his identification of a large number of biblical passages relevant to the death cult debate is useful for general readers.

BLOCH-SMITH examines Iron Age Judahite mortuary practices and beliefs, using both archaeological and literary evidence. She discusses the tomb types of the period, human remains, and the contents of the burials, and then she turns to the biblical texts for a short analysis. Her conclusion is that cults of the dead were a standard part of Judahite religious practice and were limited, but not utterly forbidden, by the Jerusalem priests and prophets beginning in the late eighth century B.C.E. The aim of these priests and prophets was to strengthen their own positions of power by reserving all forms of contact with the supernatural for themselves. An appendix of almost 100 pages catalogs Iron Age burials by time period

and type and is followed by several illustrations and maps. Although Bloch-Smith considers literary materials, her book's focus and strength is the archaeology.

SCHMIDT questions what he describes as a recent academic consensus that some or most of Israelite society before the exile was involved in ancestor cults and necromancy. He provides a survey of Syro-Palestinian literary sources on the matter (from Ebla, Mari, Ugarit, Nuzi, and Emar) and then investigates biblical sources. He decides that while the texts show evidence for ongoing mortuary rites after burial, these rites affirm only a desire to take care of the dead or memorialize them and are not proof of actual ancestor cults. Neither pre-exilic Israel nor Judah appears to have believed in the dead's power to help the living, and when this belief did finally emerge in the tradition it was a late phenomenon, the source of which was Mesopotamian necromancy. Schmidt's work, read in conjunction with the opposing views above, shows the complexity involved in interpreting the data.

ZLOTNICK translates the "classic rabbinic text on death and mourning" from the Hebrew into English. While his book therefore consists largely of making available a primary source to an English audience, he provides a 30-page introduction that discusses the date of the tractate, its content, and its parallels with death customs in Greek and Roman texts. The translation itself follows, occupying 57 pages. Zlotnick's notes on the translation appear afterward and run to more than 70 pages, providing the reader with copious commentary on the primary source. A glossary and indexes follow, and the book concludes with a vocalized Hebrew text.

FELDMAN investigates biblical and rabbinic understandings of death and, more specifically, the content and ramifications of Jewish *tum'ah* (defilement) legislation. The first part of his study argues that in biblical and rabbinic thought, death is the highest state of desacralization, and that the defilement associated with death signifies alienation from God. The second half of the book studies talmudic mourning law, which functions, in his view, to represent the mourner's temporary separation from God, community, and self. He concludes with an analysis of all the rabbinic laments in the Talmud, presented with the Hebrew and Aramaic texts as well as English translations. Feldman's book is accessible to the general reader, and with its focus on rabbinic material, it is a rare investigation of postbiblical Jewish thinking about death.

The laws of mourning apply when one of seven close relatives (father, mother, son, daughter, brother, sister, or spouse) passes away. Jewish tradition encourages simple funerals, and respect for the dead is considered the ultimate kindness.

MAIMONIDES, who wrote in the 12th century, and CARO, who wrote in the 16th, are the two chief codifiers of Jewish law. For the Sephardim, Maimonides and Caro are co-equal authorities. For the Ashkenazim, Caro's code, as supplemented by the 16th-century glosses of Moses Isserles (which incorporate the decisions, rulings, and customs of German and Polish scholars), is the ultimate authority. Should there be a conflict between Caro and Isserles, the rulings of the glossator govern for the Ashkenazim. In the 19th century, GANZFRIED wrote an abridgment of Caro's code and its commentaries. Because of their authoritative nature, these three codes are entitled to pride of place in any discussion of death, burial, and mourning in the Jewish tradition. However, law codes, by their very nature, tend to be dry and tedious reading, and therefore it may be preferable for the uninitiated to study the work of Lamm or Klein, which integrate Jewish law with Jewish values, before tackling these codes.

LAMM's pioneering study of Jewish laws and traditions pertaining to death and mourning is intended for the layman. Written from an Orthodox perspective, the laws are not simply ordered as a list but are interpreted as expressions of historic Jewish ideas and ideals. Lamm interprets traditional Jewish practice in a manner relevant to the average contemporary Jew. He aims to show that Judaism teaches the aching heart how to express its pain with love and respect and without vindictiveness or self pity. He makes interesting observations on the cathartic quality of the ritual tearing of garments prior to a funeral, the significance of the "filling-in" ceremony at the gravesite, the custom of washing one's hands upon returning from the cemetery, and other rituals associated with death and mourning.

RABINOWICZ presents a very useful compendium of the laws of mourning for the nonspecialist. The work is also valuable for scholars, for the author supports his statements with references to the Bible, talmudic and rabbinic texts, the standard codes, and the responsa literature. He points out that while the Jewish laws of mourning are many and detailed, they are inspired by a warm humanity. The guiding principle of the rabbis was always to adopt the "lenient view" when questions arose in connection with the laws of mourning. Particularly valuable is chapter 12, which is devoted to words of comfort from the Bible, the Talmud, and several modern writers.

KLEIN's code serves as a detailed and comprehensive guide for Conservative congregations and individuals sympathetic to the Conservative viewpoint. Like the rest of the work, the two chapters devoted to the laws of mourning consider traditional Jewish sources (Bible, Talmud, codes, responsa, etc.) and are fully referenced for further study. This text can also be used by Orthodox Jews because the author clearly indicates where the guidelines deviate from Orthodox practice, considering, for example, the Conservative practice that permits mourners to pin a symbolic black ribbon on their lapel for the *keriah*, which traditionally requires the rending of one's garment. Klein belonged to the right wing of the Conservative movement, and his views are more representative of the ritual practice endorsed by the Union of Traditional Judaism than that of the United Synagogue of Conservative Judaism.

DIAMANT aims to help non-Orthodox Jews, who view the halakhah as a reference point rather than a mandate, make Judaism's time-honored rituals into personal, meaningful sources of comfort. Every Jewish ritual and custom that surrounds death is guided by two principles: the requirement to show respect for the dead and the commandment to provide comfort for the bereaved. Diamant organizes her work on these dual cornerstones. Chapters discuss the Jewish funeral, the *shiva* period (the first week following a death, when community, friends, and family comfort and care for mourners), the needs of grieving children, mourning the death of a child, neonatal loss, suicide, and the death of non-Jewish loved ones.

RIEMER has edited an anthology of 23 selections by Jewish thinkers on the subject of death and dying. The contributors represent different religious perspectives, but all the authors have been shaped, at least in part, by the Jewish tradition. The texts are relevant because they wrestle with the Jewish tradition concerning death, the responsibility the living bear for the dead and the dying, and the particular issues these topics raise for contemporary Jews. Some of the essays probe the special problems posed by new medical technology and by other aspects of modern society. Riemer presents opposing views of euthanasia, the affirmative position being defended by Jeremy Silver and the negative by Hayim Greenberg. On a more personal level, Jacob Neusner writes movingly of his father-in-law's funeral in Jerusalem, and Deborah Lipstadt explains how mourning rituals helped her and her family cope at the time of her father's death. The book appropriately ends with a modern ethical will.

COHEN and SOLOMON view the Jewish eulogy as an opportunity for a spiritual leader to reach the mourners and community with a message that is both therapeutic and religious. Although solidly grounded in traditional Jewish sources,

this collection of brief eulogies also incorporates contemporary views of grief psychology. Death affects everyone, regardless of religion or lifestyle, and the authors urge that every death be treated with respect and compassion. Even a person who subscribes to a different set of beliefs or engages in behavior considered deviant, deserves an honest eulogy that acknowledges his or her life and views without necessarily endorsing them.

WIESELTIER has edited the journal that he kept during the traditional year of mourning following the death of his father in March 1996. During this time, the author faithfully recited the Kaddish three times a day. The book has an existential as well as an intellectual dimension. The author, although not especially devout, poignantly recounts the continuity he sought with his father by reciting the prayer that has been aptly described as the handclasp of the generations. In addition, Wieseltier is an accomplished student of Hebrew literature, and his work is invaluable for its excerpts from, and analyses of, many medieval religious texts unavailable in English translation.

STAMM reviews the serious scholarship focused on the Decalogue during the first part of the 20th century. The introduction, which occupies half the book, discusses studies of the transmission, form, and origin of the Decalogue. Albrecht Alt's distinction between casuistic and apodictic laws and the covenant formulary receive the most attention here. In the next section, each commandment is discussed individually as exegetical studies on the commandments are summarized. The concluding chapter is a short discussion on the distinctive character of the Decalogue against the backdrop of ancient Near Eastern law codes. Stamm's book provides a convenient summary of the work done on the Decalogue primarily by German Protestant biblical scholars. Their work has been very influential in the development of scholarship on biblical law in general and the Ten Commandments in particular.

NIELSEN offers a hypothesis regarding the development of the Decalogue from its origins to its present literary setting in Exodus 20 and Deuteronomy 5. He suggests that the Decalogue was the basic law that defined the limits of royal behavior in the kingdom of Israel. Priests and elders produced these laws, which served as the basis for judicial decisions. After the fall of Israel to the Assyrians in 722 B.C.E., the Decalogue became a covenant document that served the cause of reform in Judah. In time, people came to regard it as a sacred tradition delivered by God. Nielsen denies that the Hittite treaties served as an analog in the development of the Ten Commandments.

PHILLIPS sees the origins in the Decalogue in ancient Israel's system of criminal law. Although the Ten Commandments do not contain sanctions, other laws mandate various penalties, including death, for individuals who violate laws similar to those found in the Decalogue. The original purpose of the Decalogue was to regulate conduct that was harmful to the community as a whole. Since any violation of the community's covenant with God was detrimental to the community's welfare, the Ten Commandments served to safeguard Israel's relationship with God.

CARMICHAEL makes an important connection between biblical laws and narratives. He argues that the origin of the laws found in the Bible was not a response to the social situation in ancient Israel; rather, biblical law developed out of scribal reflection on the narrative traditions of ancient Israel. The sources of biblical laws may be folk or scribal wisdom, custom, or ancient Near Eastern law codes, but the impetus for developing a distinctively Israelite code came from reflection on distinctive Israelite religious traditions. Carmichael illustrates this hypothesis regarding the Ten Commandments and other biblical laws by relating these laws to key moments in the stories about Jacob, Joseph, and Moses. This is a creative and engaging approach that not only provides a way to integrate biblical law and narrative but also helps contemporary believers see their experience as reflected in ancient narrative and legal texts.

NEUSNER, known for his translations of early rabbinic texts, offers a translation of the section of the Mekhilta of Rabbi Ishmael that deals with the Decalogue. In his prologue to the translation, Neusner provides a general introduction to the Oral Law of rabbinic Judaism and a more specific introduction to the Mekhilta, which has guided Jewish understanding of the Book of Exodus, including the Ten

Commandments. Shorter introductions to each section of the Mekhilta guide the reader through the ancient rabbinic work. Neusner's comments make it possible to appreciate early rabbinic discourse that, despite its importance and influence, may be unfamiliar and occasionally difficult for the modern reader.

At the time of his death, GOLDMAN was working on a multivolume commentary on the Hebrew Bible. His posthumously published study of the Ten Commandments was to be part of that work. In his commentary on Exodus 19–20, Goldman describes the giving of the Decalogue as a crucial step in transforming a band of freed Hebrew slaves into a civilized people. The commentary has two parts. The first offers a more general discussion of the religious and cultural significance of the Decalogue, while the second section deals with more technical, exegetical issues. Goldman was ahead of his time when he criticized the tendency of the scholars of his day to divide the biblical text into increasingly smaller fragments. He also found fault with the evolutionary framework within which some scholars placed the religion of ancient Israel. This is an excellent example of sound biblical scholarship at the service of a believing community.

HARRELSON writes on the Decalogue for a general and mostly Christian audience, although he does raise issues that relate to the Jewish community specifically. He sees the commandments as a charter of freedom rather than as restrictions on the human spirit. While Harrelson begins with issues that are of more interest to the scholar, such as the exegetical problems that call for a new study of the Decalogue as a whole, his most significant contributions are his lucid and insightful comments on each of the commandments and their importance in the contemporary world. He argues persuasively for the importance of moral imperatives, and he describes clearly the types of behavior that are harmful to humans.

WILLIAMS conceived his work as a response to what he saw as the post-Christian culture of the United States after the 1960s. He offers this line-by-line commentary on Exodus 20 as a way for believers to develop their identity in a secular culture. The commentary examines the meaning of the Decalogue in itself, in relation to other biblical motifs, and in relation to the contemporary scene. The basic assumption behind Williams's work is the enduring value of the Decalogue and the impossibility of exhausting its value for believers. While Williams writes for the general reader, he is not simply engaging in a homiletical exercise. The book is informed by critical scholarship but not limited by it. Williams wants to show how the Ten Commandments, critically understood, can shape the lives of believers in a time of cultural and moral relativity.

In SEGAL's collection, 17 Israeli students of the Bible, history, philosophy, liturgy, theology, music, poetry, and art have each approached the Decalogue from their individual perspectives. While the discussions follow the conventions of scholarly discourse, the book addresses itself to a broader audience. The first essay, Moshe Weinfeld's "The Uniqueness of the Decalogue and Its Place in Jewish Tradition," sets the tone for the volume. It weaves together biblical analysis with examples of how Jewish tradition has appropriated the "ten words." The final essay, Bezalel Narkiss's "Illustrations of the 10 Commandments in the Thirteenth Century Minute Mahzor," describes how medieval Jewish illuminated manu-

scripts depict the two tablets of the Law. All the essays in this collection are marked by careful scholarship, reverence for the tradition, and engaging discussion.

VON RAD's work represents the beginning of the modern study of Deuteronomy. The questions he asks deal with the sociological background of the text. He focuses on the book's social context by studying its style and forms of expression. He is struck by the variety of literary forms in the book and concludes that its complex literary structure must have been rooted in a ritual during which the clergy recited the laws of God. He identifies these reciters with the Levites and considers them to be the spokesmen of the Deuteronomistic movement. Especially influential is his thesis that the six books from Genesis through Joshua were simply the elaboration of what he calls "the short historical creed" found in Deuteronomy 26:5b–9. While scholars today have taken issue with some of von Rad's conclusions, his work remains seminal to the study of the Deuteronomistic tradition. Von Rad's studies set the agenda of research into Deuteronomy for an entire generation of biblical scholarship.

Of the many full-scale commentaries on Deuteronomy, that of MAYES is clearly the most sober, engaging, and helpful to the general reader. The author is thoroughly familiar with current scholarship on Deuteronomy. He espouses no idiosyncratic positions but prefers to offer the reader the scholarly consensus, although he is fair in presenting the alternatives. The principal motif that is present throughout the commentary is Mayes's view that Deuteronomy conceives Israel as a community of brothers living in the land promised to their ancestors. This community expresses its unity through observing the laws given to it by its God. Because of Mayes's historical-critical concerns, he does pay some attention to the development of the book into its present form. Still, the history of the text is not the primary focus of this commentary; Mayes pays much more attention to the religious affirmations of the text. His commentary helps readers to appreciate Deuteronomy itself and also to see why many scholars consider the composition of Deuteronomy to be a turning point in Israelite religion, emphasizing as it does the central significance of a written authoritative law, the obedience of which will determine Israel's future.

Mayes examines carefully one of von Rad's most influential hypotheses about the development of Deuteronomy—that Deuteronomy is a product of ancient Israel's covenant tradition. While Mayes recognizes the connection between Deuteronomy and ancient Near Eastern covenant formularies, he asserts that the book is not a treaty document nor does it present itself as one. Mayes holds that the literary criticism of Deuteronomy must proceed independently of the covenant formulary.

OLSON provides a thorough presentation of Deuteronomy's theology by examining the full structure and movement of the book. Although this is a close literary reading of the text, Olson does not underplay the insights from historical criticism. The book's title comes from the author's assertion that the death of Moses is a significant motif throughout the Book of Deuteronomy, with important theological consequences. He sees Moses' death as a metaphor for the limits and inevitable losses of human life and power before God; the death has a positive function by offering a paradigm for the vocation of sacrificial giving. Olson studies Deuteronomy's religious ideas by focusing on the book as a whole rather than on the development of the book's theology through successive reinterpretations of traditional material.

Olson's work makes it clear that only thorough familiarity with Deuteronomy as a whole can allow appreciation of its components. His approach stands in contrast to attempts to reconstruct the history of Deuteronomy's formation as the result of a series of redactions, each with its editorial enrichments. This "archaeology" of Deuteronomy led to an elaborate conjectural reconstruction of ancient Israel's religious ideas and institutions.

POLZIN offers a synchronic study of Deuteronomy. He begins with a lengthy and dense discussion of his own literary approach. Polzin sees Deuteronomy as the result of a debate between proponents of the fixed Mosaic tradition and critics of that tradition. The latter offered a serious theological challenge to the Mosaic tradition by suggesting that the covenant should not be understood in a rigid, unconditional

manner. Israel's experience led the critics to suggest that Israel must depend upon divine mercy and not simply on its own achievements. Unlike some structuralists, Polzin is able to show how a close reading of the biblical text helps the student grapple with a crucial theological issue. He sees the existence of Deuteronomy as evidence of the freedom and multivalence of the ancient Israelite theological enterprise.

Polzin's work is a fine introduction to a contemporary literary critical approach to Deuteronomy. He appreciates the issues and concerns of historical criticism and does not engage in unnecessary diatribes against a historical approach to the book. His style is clear and persuasive and without the jargon that sometimes accompanies literary-critical studies. Polzin tests his hypothesis by examining the books of Joshua and Judges and sees the pattern found in Deuteronomy replicated in these first two components of the Deuteronomistic History.

WEINFELD (1972) tackles a most controverted issue in the study of Deuteronomy: the book's origins. He holds that Deuteronomy was the creation of scribal circles that began their literary project some time prior to the reign of Josiah (640–609 B.C.E.) and were still at work after the fall of Judah (587 B.C.E.). Although this hypothesis has not won wide acceptance, two aspects of Weinfeld's work that have been very helpful in the study of Deuteronomy are his analysis of the book's homiletic framework and of the book's legal code. He shows quite convincingly that the laws of Deuteronomy reflect a secular and humanistic perspective when compared to the laws of the Holiness (Leviticus 17–26) and Covenant (Exodus 20:22–23:33) Codes. He shows that the religious ideology and the didactic aims of Deuteronomy reflect the concerns of lay people rather than priests.

Some interpreters hold that the final forms of several books of the Hebrew Bible were the work of editors imbued with Deuteronomistic theological perspectives. In an appendix to his book, Weinfeld assembles a list of what he considers "Deuteronomistic phraseology" and the texts in the Hebrew Bible where these characteristic phrases occur. This provides the type of data necessary to evaluate any hypothesis regarding a supposed Deuteronomistic redaction of other books.

WEINFELD (1991) has also completed one volume of a projected two-volume commentary on Deuteronomy for the Anchor Bible series. This format allows the reader to appreciate the author's skill as a translator, his insights as a historical critic, and his sensitivity as a biblical theologian. A principal achievement of this commentary is the consistency with which the author compares the words, literary forms, and theological ideas of Deuteronomy with other biblical texts, ancient Near Eastern works, classical Greek texts, the New Testament, and rabbinic literature. This helps clarify not only Deuteronomy's role in the development of ancient Israelite religion but also its significance as a religious text from the ancient Near East that helped shape both early Judaism and Christianity.

Weinfeld holds that the Book of Deuteronomy, while containing older traditions, took its shape during the time of Josiah. He sees the production of Deuteronomy as beginning the process of the canonization of Scripture. During the same period and for some time later, there were scribes who collected and edited traditions dealing with the settlement of the

Israelite tribes in Canaan and with the story of Israel's monarchy. In assembling these traditions, Weinfeld maintains, the scribes used the ideology of Deuteronomy as their unifying principle. The Book of Deuteronomy, then, was the text that changed the religion of ancient Israel into a religion of the book.

The essays collected by CHRISTENSEN include articles by several of the major scholars involved in the study of Deuteronomy. He has divided the book into five sections. The first deals with basic issues and the book as a whole; especially important here is Weinfeld's essay on the present state of research. The second part of the collection deals with the outer frame of Deuteronomy (i.e., chapters one through three and 31 through 34). The inner frame (chapters four through 11 and 27 through 30) is the subject of the third part. The fourth section is on the central core of the book (chapters 12 through 26). The essay by Braulik on the sequence of the laws is a significant contribution, and Polzin's essay on the compositional analysis of the Deuteronomistic History provides a good example of recent literary approaches to the book. The concluding section deals with new directions in the study of Deuteronomy.

As important as Christensen's book is, there are many other significant articles on Deuteronomy that could not be included in his collection. The Book of Deuteronomy has become a magnet, attracting the attention of many scholars who have made impressive gains in understanding and appreciating this book and its significance for the religion of ancient Israel and early Judaism. One may quibble about the inclusion of one or another of the essays in Christensen's volume, but as a whole it is an excellent entrance into the current state of research.

McCONVILLE takes the position that the laws of Deuteronomy are not simply one codification of ancient Israelite legal practice; he maintains that the Deuteronomic Code (Deuteronomy 12–26) is an expression of the book's theology. McConville focuses on cultic laws to prove this hypothesis. For example, he reads the laws of sacrifice less as technical directions on how sacrificial rituals are to be performed than as an illustration of Deuteronomy's view that the land is a gift that God has given to the people of Israel for their enjoyment. Earlier treatments of Deuteronomic laws study them as part of the history of Israelite religious practice. According to McConville, however, it is clear that in Deuteronomy the laws are theological statements.

Among the related issues that McConville discusses is the date of the composition of Deuteronomy. He rejects the common view that associates the book with Josiah's reform (seventh century B.C.E.); he sees the book taking final shape during the exile (sixth century B.C.E.). While others have believed the book to have undergone a long and complex literary development, McConville believes that a single author was responsible for the laws that deal with sacrifice and ritual. He considers his study to give credence to the possibility of a greater unity for the book than is usually allowed by historical critics.

CARMICHAEL also deals with the laws of Deuteronomy as he tries to fathom the principle of their arrangement, which many interpreters have regarded as haphazard. Carmichael suggests that Deuteronomy is not a legal code in the strict sense. Rather, it is a literary work that reinterprets the laws

and stories of Genesis, Exodus, Leviticus, and Numbers with the goal of religious reform. The laws of Deuteronomy make allusions to earlier traditions. While these allusions seem subtle, they were undoubtedly understood by the reformist circles for whom Deuteronomy was written. Carmichael rejects any suggestion that Deuteronomy is a composite work. Like McConville, Polzin, and Olson, Carmichael focuses on the unity of Deuteronomy rather than on attempting to reconstruct the literary history of the text. The tendency to view Deuteronomy as a literary whole is characteristic of contemporary approaches to the book. While it is difficult to deny that the book is, in some sense, a composite work, too little attention has been paid to the form that the text has in the canon.

Deriving from the Greek words meaning "to sow" and "over," diaspora refers to the state of Jewish people who live outside of the land of Israel. Since the destruction of the First Temple in 586 B.C.E., this has been the predominant mode of Jewish life and culture. Despite its centrality to Jewish history, there are few sustained studies of its specific impact on Jewish life and culture. What does diaspora mean to the people who live in Israel? Is it merely a waiting room for the prophetic "ingathering of the exiles?" Does it depend on a myth or movement of return to a homeland, or is it relatively autonomous? Or is it the circumstance of Jewish life and history, operating quite independently of a homeland? Finally, what can the diaspora tell us about Jewish history, culture, and life?

The first scholar to feature diaspora as a theoretical or methodological tool was DUBNOW, whose premise is that Jewish history is rooted primarily in diaspora, and yet it is not

limited to persecution, exile, oppression, or waiting for redemption. Reading against the mainstream of Jewish historiography, Dubnow asserts that diaspora (rather than Israel) is a (if not the) crucial element in the perpetuation of Jewish cultural, scholarly, and communal life. According to his framework, Jewish life has organized itself historically around a progression of creative centers from Babylon to Spain to Poland (with other places in between). Dubnow argues that Jewish culture is a process of diaspora and that there is no preference given to a specific "home" over shifting or mobile ones. Although Dubnow was not a Zionist, he acknowledges the possibility of a Jewish state that could vie for (but would not be guaranteed) a central position in global Jewish life.

Following Dubnow, DINUR offers a historiographical study of the relationship between the diaspora and Israel. He suggests the term "Israel in the Diaspora" to convey that the diaspora is not a question of dispersion but a question of "Jewish continuity in the face of dispersion." Relying heavily on the "essential character," "emotional awareness," and "spirit" of the Jewish people, Dinur asserts that diaspora is a historical circumstance that is not necessarily one of persecution, migration, or oppression. Rather, diaspora is a historical condition that falls into the broader narrative of the "history of the Jews in their own land." As such, diaspora must necessarily contribute to its own demise either in the form of assimilation or through migration to the land of Israel. For Dinur, diaspora has been the historical circumstance for living out Jewish national destiny and maintaining Jewish political and administrative autonomy in the absence of a unified national framework.

PATAI believes that diaspora is the cultural trait that makes Jews unique among the people of the world, and he explores the impact of dispersion on Jewish culture. Dubnow and Dinur take historical approaches, while Patai's is anthropological. Following a broad historical survey of Jewish diasporas from Abraham onward, he turns briefly to the development of basic differences (e.g., language, folklore). The bulk of the book is dedicated to the study of a number of Jewish communities, including a historical overview of each and a short treatment of cultural practices that are shared among dispersed communities. He concludes that each Jewish community maintains a unique "cultural physiognomy" that is a distinct blend of "traditionally" Jewish and assimilated local cultures. This kernel of similarity that persists between dispersed communities is the essence of Jewish cultural survival. For Patai, the diaspora is a uniquely Jewish condition that demands of Jewish culture a balance between assimilation and retention, between creative innovation and Jewish tradition.

COHEN would disagree. In response to the proliferation of academic writing about diaspora, Cohen attempts a systematic analysis of diaspora, understood as a dynamic term that can be useful for describing or explaining numerous ethnic communities who live in diaspora in addition to Jews. Cohen establishes nine conditions for diaspora, which include dispersal (by trauma or in pursuit of work, colonies, or otherwise), a sense of ethnic solidarity, and the possibility of an enriching life in tolerant host countries. For Cohen, the Jewish diaspora is one among many and is unique, ironically, only insofar as its national return movement has succeeded. Cohen's

nine features are a helpful guide for considering the extent to which diaspora has emerged to explain human migration and ethnic relationships in the contemporary world.

EISEN prefers "exile" to the "honorific" term diaspora, and his intellectual history of exile (which he considers to be nearly the same thing) is a brilliant and far-reaching survey of attitudes toward dispersion, tradition, and Jewish history. Eisen refuses the clichés that dominate so much of the literature in favor of an examination of the concept as it has been rendered from Genesis until the mid-1980s. The book, however, is much more than a survey of other writings, for Eisen establishes a pattern of evidence that exile is always both political and metaphysical. In this way, he resists the convenient tropes of exile and homecoming in favor of a complex and unstable notion of the relationship between diaspora and home that reflects both the historical conditions of Jews and the psychic, scholarly, cultural, religious, and political strategies for living Jewish lives. Organizing his study around delicate readings of classical Jewish texts (Genesis, Deuteronomy, the talmudic tractate Avodah Zarah, the Kuzari) and commentaries (Rashi, Isaac Luria, Ahad Ha'am, Herzl, Rosenzweig, and others), Eisen lays out the historical context that enabled each of these influential books to be written while suggesting how these contribute to our understanding of the contemporary world.

Finally, the most radical and, in some ways, most interesting discussion of diaspora comes from BOYARIN and BOYARIN, whose article offers a post-structural reading of diaspora both as a critique of nationalism and as the source of Jewish identity. Diaspora provides a theoretical model for Jewish creativity and survival based on exchange and interaction with neighboring communities rather than a national politics of self-determination based, as they see it, on separatism. Modeling Zionism after European nationalism spoils the redemptive power of its politics and ultimately condemns it as "a subversion of Jewish culture and not its culmination." They champion a Jewish collectivity that is flexible enough to share space and culture with other people as opposed to one based on territorial exclusivism. This radical critique of Israel and Zionism is a creative and rigorous evaluation of diaspora read through rabbinic literature and cultural studies and begins consideration of the political repercussions of diaspora and nation.

GRUNFELD'S survey of the entire body of Jewish dietary laws draws upon traditional sources and is intended, in part, as a primer for those interested in the basic requirements of a kosher kitchen. Thus, in volume one, he reviews the general rules concerning the consumption of meat and fowl: animals that are forbidden to be eaten, the forbidden parts of permitted animals, conditions under which otherwise permitted animals are forbidden, and the final preparation of permitted meat. Additionally, Grunfeld summarizes the vast and highly complex laws concerning mixtures of meat and milk and the status of permitted foods that have contacted forbidden food (*ta'aruvot*). However, he correctly notes on two occasions that his elementary survey hardly does full justice to the intricate laws that govern this topic, which is traditionally one of the most complicated and detailed regions of rabbinic Judaism. Other topics covered in this first volume are the laws of leavened bread (*hamets*), which is forbidden on Passover; the permissibility of wine, cheese, milk, and bread that a gentile manufactures; and the requirement to inspect fruits and vegetables for insects and worms before consumption.

In addition to his introduction to the strict requirements of the dietary laws, Grunfeld also discusses the underlying reasons for these laws. Basing his analysis entirely on traditional Jewish sources, and especially on the writings of Samson Raphael Hirsch, Grunfeld offers religious, moral, and philosophical explanations for the seemingly idiosyncratic dietary requirements of the Jewish people. He favors the approach that contends that these dietary laws aim to exclude the spiritually harmful and morally dangerous influences of forbidden animals and forbidden parts of permitted animals from the body and soul of a Jew. Nonetheless, Grunfeld maintains that these dietary laws require observance simply because they were commanded to Jews by God.

Volume two discusses the dietary laws that relate to agriculture, especially the produce of the land of Israel. Here too, Grunfeld posits an ethical base for these restrictions: they are intended to inculcate the Jew with a high level of moral values—"such as kindness, charitableness, humility, helpfulness, fairmindedness, likability, sincerity, and confidence in the ultimate good of man." The survey of agricultural laws covers the laws of *terumot* and *ma'aserot*: that is, laws governing the tithes and donations that must be presented to the priests (*kohanim*) and Levites. Additionally, he surveys the laws gov-

erning *orlah*—the forbidden fruit of young trees; *neta revai*—the produce of a tree in its fourth year of existence; *hadash*—the prohibition against eating new grain; *kilayim*—the injunction forbidding the mixture of different seeds, different kinds of animals, and wool with linen; and *hallah*—the requirement to remove a portion of kneaded dough. In all cases, Grunfeld considers the applicability of these laws in modern times and in places outside of the land of Israel.

The most extensive section of the second volume is Grunfeld's discussion of *shemittah*, that is, the prohibition on working the land of Israel once every seven years. There was heated discussion among rabbis of the 19th and 20th centuries concerning the nature of *shemittah* today, and whether one may use legal fictions such as the sale of the land of Israel (*heter mekhirah*) to escape some restrictions. Here too, Grunfeld's presentation is highly influenced by Hirsch, a vocal opponent of the *heter mekhirah*.

KARO is a translated version of the section known as "Laws of Terefah" of the *Shulhan Arukh*, the great code of Rabbi Joseph Karo. The rabbis understand the biblical injunction (Exodus 22: 31) against eating "any flesh that is torn of beasts in the field" to include any occasion in which the vital parts of an animal are punctured, missing, or broken. Thus, Mishnah Hullin lists 18 defects (*terefot*) that render an animal unfit for consumption. This number is not definitive, and one talmudic sage assumes that there are eight categories of *terefot*, while Maimonides rules that there are seventy. In addition to the negative injunction against eating a defective animal, the rabbis also define *shehitah*, a positive injunction requiring the proper slaughter of animals: a proper slaughter occurs when the majority of either the gullet or the trachea in a fowl, or the majority of both of these body parts in a quadruped, are severed in accordance with the law. The rabbinic discussion of laws relating to *terefah* and *shehitah* from talmudic times through the 15th century are codified in the first two sections of *Yoreh Deah*, the second of the four volumes of *Shulhan Arukh*. Levin and Boyden's literal translation also includes the 16th-century glosses of Rabbi Moses Isserles, which allows the code to accommodate northern European practice. Accompanying the translation are competent notes that reflect a portion of the vast and trenchant literature of commentary on *Shulhan Arukh*. These notes include the glosses of two 17th-century scholars: Rabbi Shabbetai Meir ha-Kohen and Rabbi David ben Samuel ha-Levi.

DOUGLAS (1966) argues against a long tradition that explains the biblical dietary laws of the Israelites as primitive, irrational, and inexplicable. She also rejects the use of allegory, as seen in the works of Philo, as a viable explanation of such laws. Instead, Douglas posits that the desire for holiness that the Bible declares is the ultimate aim of these putative restrictions, in reality demands that individuals seek out unity and perfection in their lives. Holiness is a matter of separating what should be separated, and the forbidden animals are those that do not conform to the expected norms of biblical society. Cloven-hoofed, cud-chewing ungulates are the model of the proper kind of food for a pastoralist. Assuming that the story of creation in Genesis lists the way animals are supposed to exist (fowl fly with wings; scaly fish swim with fins; and beasts hop, jump, and walk), Douglas argues that all other ani-

imals are unclean; “Any class of creatures which is not equipped for the right kind of locomotion in its element is contrary to holiness.” The ultimate purpose of these dietary laws, then, is to inspire “meditation on the oneness, purity and completeness of God.”

DOUGLAS (1975) responds to criticisms of her earlier position and reformulates her theory. She argues that the dietary rules of the Hebrews are consistent with the emphasis that Israelite religion places on purity and rejection of impurity; purity exists in the Hebrews’ dietary laws, lineage rules, territorial boundaries, and animal sacrifices on their altars. She thus sees food restrictions as analogous to other prohibitions of mixtures. Douglas illustrates her revised theory with a novel but not entirely convincing reason for the injunction against eating pork. A pig, she claims, represents impurity and therefore is prohibited for three reasons: it is not an ungulate; it eats carrion; and non-Israelites raise it as food.

KATZ describes the function of dietary laws in the lives of medieval Jews. The Talmud forbids Jews from partaking in the bread, wine, oil, milk, and cheese of their gentile neighbors. However, the purpose of the talmudic prohibitions was largely to ensure the social cohesion of the Jewish community, while in the Middle Ages these same dietary requirements “became a method of personal conduct enabling the individual to preserve his inward sense of aloofness from those with whom he came into every day social contact.” Consequently, Katz suggests that if there was an economic or social need to bend these restrictions, such powerful figures as Rabbenu Tam in the 12th century used casuistic arguments in order to protect the essential needs of the community. For example, the consumption of gentile bread was permitted by rabbinic figures after the 11th century because Jews could not practicably rely upon Jewish bakers. Some figures, but not all, were lenient with respect to cooking done by a gentile (*bishul nokhri*), and eventually a middle position was found that allowed a gentile to do the actual work but required the Jew to maintain a fictional (Katz’s term) involvement. The adjustment of dietary restrictions among the medieval rabbis thus supports Katz’s overall view of the function of halakhah in that period: to achieve a balance between two opposing forces—the necessary realities of life and the maintenance of Jewish identity.

SOLOVEITCHIK discusses legal developments within the Franco-German culture of the high Middle Ages concerning the prohibition against drinking and trading wine that a non-Jew touched (*yein nesekh*). The subject of his study is the determination by medieval scholars of the exact moment in which the grape juice became wine and, consequently, became covered under the injunction of *yein nesekh*. The regnant practice in 11th- and 12th-century Germany was to prohibit gentiles from treading or touching the product even in the earliest step of wine production (i.e., while the grape pulp and juice remained in their original vat). However, the French view—beginning with Rashi (who hesitantly and ambiguously advanced this doctrine) and continued with far more certainty in his grandson, Rabbenu Tam—argued that so long as the wine remained in the *cuvée* in which it was originally trodden, it was immune from the qualifications of *yein nesekh*. The 12th-century Germans, led by the scholar Rabbi Shemaryah,

objected fiercely to this position. Indeed, the French never pursued their concession to its logical conclusion, which should have permitted gentile tub treading. Such a denial takes on even greater significance in light of the overwhelming economic need for additional gentile labor. Soloveitchik argues that the prohibition against *yein nesekh* so strongly dominated the Ashkenazi mindset that any attempt to relax the restrictions on *yein nesekh* would have struck them with revulsion. Nevertheless, by the end of the 13th century, the stricter German position had given way to the more lenient French rulings.

The Babylonian Talmud (Gittin 90b) quotes the biblical prophet Malachi (2:13–14) in support of the assertion that “If a man divorces his first wife, even the altar sheds tears.” There is little doubt that biblical and rabbinic traditions both view divorce as a tragic outcome antithetical to the joy that should accompany a marriage. Yet, Judaism permits divorce, uncertainly admitting that the alternative of an unhappy marriage may be even worse than the dissolution of the relationship. However, the ability to initiate divorce has always been a prerogative restricted to men: a divorced wife receives her *get* (divorce document) from her husband; she cannot be divorced from him if he is unwilling to end the marriage. In the contemporary era, this restriction continues to be a significant disability for women. While the frequency of divorce has fluctuated in various eras of the Jewish past, statistics indicate that recently married Jewish couples in contemporary North America have less than a 50 percent chance of sustaining their unions. Such findings are a cause for alarm in a Jewish community already gravely concerned about prospects for Jewish continuity.

The essays collected in FREID provide overviews of the ramifications of divorce in historical and contemporary settings from a range of denominational and disciplinary stances.

This useful volume includes discussions of divorce and divorce law in Jewish tradition, Judaism and human sexuality, and divorce and alienation in modern society, as well as several essays written from the field by Jewish social service professionals.

Feminist analyses of the development of Jewish divorce law from biblical legislation to rabbinic halakhah appear in both Biale and Hauptman. Quoting Deuteronomy 24, which forbids a divorced woman who has remarried and divorced again from remarrying her first husband, BIALE observes that the Hebrew Bible accepted divorce as a normal part of human life, effected when a man wrote a bill of divorcement, handed it to his wife, and sent her away to remarry as she pleased. Rabbinic discussion of divorce centered on defining the acceptable grounds for dissolving a marriage; the biblical given concluded that while a husband may divorce his wife for vaguely defined "unseemliness" a marriage was necessarily terminated by her sexual transgression. The halakhah does address the economic vulnerability of divorced women, obligating the husband to promise his wife a considerable minimum sum in case of divorce, a safety net extended by the rabbinic institution of the *ketubbah* (marriage contract). Biale also elaborates on the rabbinic provision that in the case of a woman's sexual or religious infractions, including refusing conjugal relations with her husband, she may be divorced without payment of her *ketubbah*.

Although divorce is a unilateral act reserved for men, the Talmud allows certain conditions when a woman may ask the court to compel her husband to divorce her. HAUPTMAN notes that by the Middle Ages, these conditions included a husband's repulsive physical condition, his violation of marital obligations, and, for some authorities, sexual incompatibility and physical abuse. The author stresses the ways in which the development of halakhic divorce legislation recognized women's suffering from male recalcitrance or capricious behavior and looked for ways to alleviate that distress. Thus, if a man cancelled a *get* without informing his wife, his marriage could be annulled by the court, while a man who falsely claimed that he issued a *get* under duress could be subject to corporal punishment. Similarly, Hauptman interprets rabbinic demands that a *get* be written with permanent ink on an enduring surface in a standard form as precautions intended to protect a woman against later claims that her divorce was not valid. Hauptman notes, however, that despite these rabbinic efforts to improve the wife's situation, she was still dependent on men to resolve her marital difficulties.

The halakhah rules that a man who lives with a woman for ten years in a childless marriage must either divorce her or take a second wife, for he is obligated to fulfil the commandment to procreate; the divorced wife may also try her luck with another spouse. BASKIN shows, however, that the aggadah undercuts this halakhic position by deprecating the dissolution of a stable marriage, insisting that barrenness is never more than a presumption, and relating tales of loving couples whose infertility was ultimately rewarded with children. Baskin argues that these aggadic stories offer an ethical and humane rebuttal to the halakhic insistence on divorce, constituting an extra-legal expression of concern for women and for the preservation of meaningful human relationships.

FRIEDMAN offers evidence from the Cairo Genizah that in the Islamic Middle Ages some Jews did not follow the unilateral rabbinic *ketubbah* issued in the husband's name but used an alternative *ketubbah* based on a statement of mutual obligations. These contracts, originating in the land of Israel, define marriage as a partnership and promise a wife the right to initiate divorce proceedings if she finds herself unable to live with her husband; this *ketubbah* was unknown among Jews in Christian countries and did not survive in mainstream Jewish practice.

FALK discusses two important reforms in divorce law enacted by the medieval Jewish communities of France and Germany. The first, attributed to Rabbi Gershom of Mainz in the 11th century ruled that a man could not divorce his wife against her will, an indication of the high status of women in this milieu. The second, probably dating from the 13th century, required that divorce become a public matter, approved by representatives of the community as well as by the couple involved; this development protected women by making divorce more difficult.

Seltzer, a Reform rabbi, and Bulka, an Orthodox rabbi and psychologist, have both produced books for divorcing couples and for those counseling such couples at this difficult juncture in their lives. SELTZER explores such topics as *shelom bayit* (domestic harmony), domestic abuse within Jewish families, the connection between the traditional *ketubbah* and alimony, difficulties for children, and the necessity of a *get*. BULKA provides comparable Orthodox perspectives.

Dogmas may be defined as a corpus of fixed beliefs authoritatively laid down for and subscribed to by members of a community. Since Judaism is known as a way of life rather than a mere creed, dogmas play a smaller role for Jews than they have, for example, in most traditional Christian denominations. As S.R. Hirsch aptly stated: "The catechism of the Jew is his calendar." It is significant that no creed has ever been practically employed as a test of membership in the Jewish community.

SCHECHTER's aim in his classic essay is twofold: to refute the contention of Moses Mendelssohn and his followers that Judaism has no dogmas; and to present in outline the historical development of dogmas in Judaism. Mendelssohn (in his *Jerusalem*, 1783, and elsewhere) refuses to base Judaism on doctrinal beliefs, asserting that Judaism is primarily a revealed legislation, a system of laws to be obeyed, not a system of articles of faith to be believed. Schechter makes it clear that Mendelssohn is not entirely consistent in his argument. At times, he asserts that Judaism does have dogmas, but those dogmas are more in harmony with reason than those of other religions. Furthermore, in a textbook for children, he includes the traditional Maimonidean creed found in the prayer book, but he changes the opening formula of each article from "I believe with perfect faith" to "I am firmly convinced." Schechter's rejection of "the great dogma of dogmalessness" is well reasoned, for subscription to revealed legislation is itself a dogma.

At the same time, however, Schechter's insistence that Judaism must have definite beliefs is not his last word on the subject. He argues that in the Bible humans are not commanded to believe in God, but rather the sacred writers operate with ideas that presuppose God's existence. Contrary to this assertion, some medieval Jewish authorities—including Maimonides, Nahmanides, and Halevi—interpreted the first of the Ten Commandments, "I am the Lord your God," as a command to believe in his existence. Additionally, Maimonides, in his Arabic Commentary on the Mishnah, when he reached the passage in tractate Sanhedrin that excludes unbelievers from a "share in the world to come," listed 13 principles of faith as criteria. These found their way into the prayer book and

thus obtained quasi-official sanction, becoming the first systematic presentation of a set of beliefs constituting the Jewish creed. But despite Maimonides' declaration in the epilogue to his 13 articles that membership in the Jewish community rests upon assent to the principles in their entirety—while the rejection of even one principle carries with it excommunication and classification as a heretic worthy of death—his formulation of the creed was not accepted by his medieval successors any more than it is today subscribed to by Reform, Conservative, or even most Orthodox Jews. Schechter presents a succinct yet densely informative survey of medieval reactions to Maimonides' formulation, down to the time of Abravanel.

The view of ABRAVANEL, elegantly rendered by Kellner, proves very interesting. The work is ostensibly devoted to defending Maimonides' 13 articles against his critics, but in his conclusion Abravanel states that Maimonides compiled these principles merely in accordance with the fashion of other nations, which set up fundamental axioms and theorems in their sciences, from which the investigators deduce propositions that are less evident. But Abravanel sees the Torah as a revealed code that does not rely on deductive reasoning; all of the Torah's commands are equally divine, and none of the edicts ought to be presumed more fundamental than any other.

BAECK clarifies Mendelssohn's view on dogmas and defends this position against Jewish reform critics such as David Einhorn, Samuel Holdheim, and Leopold Loew. Baeck contends that Judaism has no dogmas analogous to Christian authoritative formulations of faith such as the Apostles' Creed or Nicene Creed.

GUTTMANN, a historian of Jewish philosophy, wrote his study a generation after Schechter's famous essay, and they cover much of the same ground. Guttmann's discussion is more sophisticated than Schechter's, but it is much less readable.

BLEICH's useful anthology consists of selections from medieval philosopher-theologians arranged thematically under the rubrics of Maimonides' 13 principles. While a number of the selections have been translated especially for this work, Bleich frankly acknowledges that in other cases he had to use older and inferior translations because newer and superior versions were restricted by copyright considerations. There is a general introduction dealing with dogma in Judaism and briefer introductions to each of the 13 principles.

In his study of medieval Jewish dogmatic theology, KELLNER offers reliable translations, together with clear explanations and notes, of key passages from the works of both major and minor thinkers, beginning with Maimonides. Kellner's thesis is that creed-formulation arose in response to external influence and declined with the expulsion of the Jews from Spain.

MARGOLIS presents a scholarly critique, with immensely erudite footnotes, of the Maimonidean creed from the classic Reform Judaism perspective. The last part of the study is devoted to a proposed modern substitute for this creed. Margolis attaches an article on divine forgiveness as a correlate of divine justice to Maimonides' 11th principle. Discussing the fifth principle, he observes that a prayer recited on the Day of Atonement reads: "O Divine Mercy plead for us!"

JACOBS's interest in dogma is more theological than historical. He not only considers what Maimonides intended by

his formulation in the Middle Ages; he also evaluates the relevance of that formulation for a modern-thinking Jew. In Jacobs's view, the first five principles present no offense at all to the modern mind, but the next four principles, especially the eighth (which asserts that the Torah has divine origins and was dictated by God to Moses), are not so clearly acceptable to modern Jews. Jacobs rejects the fundamentalist conception of revelation on the grounds that it is undermined and contradicted by the evidence of archaeology, anthropology, biblical criticism, and comparative religion. He contends that while "the Bible *contains* the Word of God, its own words are human." Throughout this learned and well-written book, Jacobs ably defends the position of Conservative Judaism.

SHAPIRO concludes that if rejection of one or more of Maimonides' principles equals heresy, then many of the greatest Jewish sages must be classed as heretics. The fourth principle affirms creation *ex nihilo*, but Abraham ibn Ezra and Gersonides taught creation from pre-existent matter. The eighth principle teaches that God revealed the entire Torah to Moses and that the Torah found today is identical to the Torah that Moses presented to the Children of Israel. But the Talmud notes that there were differences in Pentateuchal texts in Temple times, and there is also the view in the Talmud that Joshua wrote the last eight verses of the Torah. Ibn Ezra and other medieval exegetes suggested that certain verses in the Pentateuch are post-Mosaic. The tenth principle, that God knows the actions of individual men, was disputed by Gersonides and probably also by ibn Ezra.

REINES views Reform Judaism as a religious attitude without dogmas and without any clearly discernible outlines of belief or practice. Reform Judaism recognizes a sole regulative principle: every individual has an absolute right of religious self-authority and autonomy, provided he or she in turn respects the ultimate religious self-authority of every other individual. The quest for religious truth—the truth about the great themes of life and existence, God and the world, and good and evil—requires the radical personal freedom that is the hallmark of Reform Judaism. It is not clear what defines Reform Judaism, beyond freedom: Reines expressly affirms that Reform Judaism embraces different, contrary, incompatible, and mutually exclusive elements of belief. "Since no person or group of persons possesses absolute authority and the consequent right of dogmatization, Reform Jews, on principle, will subscribe to different views as their conscience, belief, and reason dictate." What distinguishes a Reform Jew from a Scientific Humanist or Ethical Culturist, for instance, is membership in a temple that, in the United States, is associated with one of Reform's three formal institutions: the Central Conference of American Rabbis (CCAR, the Reform rabbinical association); the Union of American Hebrew Congregations (UAHC, the Reform congregational association); or the Hebrew Union College-Jewish Institute of Religion (HUC-JIR, the Reform rabbinical seminary). Regardless of what an individual believes and practices or disbelieves and fails to practice, any member of a congregation affiliated with the UAHC, any member of the CCAR, or any member of the core HUC faculty is *ipso facto* a Reform Jew. Reines himself is a professor of philosophy at HUC-JIR in Cincinnati, Ohio, and an

authority on the philosophy of Maimonides, on whom he has written extensively.

Dualism as a religious theory of two opposing entities or two conflicting elements has drawn considerable attention from scholars studying early Christianity, rabbinic Judaism, and gnosticism. Indeed, identification of the many manifestations of dualism in the writings of these sects may provide insight into the literature of a crucial turning point in world history. The following studies deal essentially with two types of dualism: theological dualism, the belief in two deities, one good and the other evil; and psychological dualism, the bad impulse versus the good impulse in the heart of a human being. Although it may seem paradoxical, admission of multiple forms of dualism enables the monotheistic believer to accommodate dualistic trends within the religion.

Psychological dualism, or the struggle between good and evil inclinations, is explored in COHEN STUART's detailed study, which deals with various sources dating from the Second Temple period, including the Dead Sea Scrolls. The book consists of two parts: part one discusses "the role of the evil inclination in the struggle in a human being between good and evil," and part two traces the development of the use of *yetzer* (inclination). Cohen Stuart asserts that the term *yetzer hara*, understood as the evil inclination, became popular only in the early Tannaitic period. In texts by Sirach and Philo, the evil inclination is identified as an impulse within a person and not as an outside force. However, in such writings, there is no mention of final judgment or what happens in the age to come. In Paul, IV Ezra, and rabbinic sources, evil inclination is similarly defined as an inner element, but these authors contend that a person has no control over it, and redemption is left in God's hands. In the Dead Sea Scrolls, Hermas, and the Testaments of the Twelve Patriarchs, the battle between good and evil is seen as a contest between two opposing spirits, while a person's decision to obey God appears to determine his or her fate in the age to come. Cohen Stuart concludes that the concept of the evil inclination grew out of the rabbis'

struggles with dualism of body and soul (anthropological dualism) and dualism of God and Satan (cosmic dualism).

LEAMAN explores Jewish philosophical conceptions of good and evil, addressing these ideas systematically from the viewpoints of Philo, Saadya, Maimonides, Gersonides, Spinoza, Mendelssohn, Cohen, and Buber. His study begins and ends with discussions of the Hebrew Bible, particularly the Book of Job, and Leaman analyzes such issues as “how God relates to events in this world”; “what is Jewish philosophy”; and how that philosophy addresses evil and suffering. Leaman asserts that Jewish philosophers tend to consider diversified sources—biblical, legal, artistic, historical, ritual, and philosophical—when they discuss evil and suffering, and this practice enforces their arguments with religious and theological elements inherent in Jewish theodicy. For Leaman, one can solve the problem of the existence of evil in this world only by redefining and strengthening one’s relationship with God, who is the source of any explanation for the way things are in the world. In his noteworthy chapter on the Holocaust, Leaman concludes that the phenomenon of evil and suffering during that period must be approached “on different lines from those acceptable in the past.”

LEVENSON’S book investigates the combination of theological dualism and psychological dualism and focuses primarily on the Hebrew Bible. The first few chapters, which deal with cosmogony and the persistence of evil and analyze their role in the Creation story of Genesis 1, are the most useful parts of the book. Parallels between the biblical account and the *Enuma elish* (the Babylonian Creation story) support Levenson’s thesis that this particular creation theology is not “*creatio ex nihilo*,” but the establishment of a “benevolent and life-sustaining order” by a God who can overcome all his opponents. Jewish apocalyptic literature and some rabbinic sources depict eschatological struggle on different levels between God and the evil power represented by Leviathan,

Gog, Amalek, or the *yetzer hara*. Adherence to the divine commandments appears to enhance God’s absolute victory over these evil forces. Levenson claims that this theology uses these assumptions to create a “semiotiose deity” who is still responsive to its cult and is able to rescue its believers. The author concludes that this type of theology has its roots in the 6th century B.C.E. and remains an important spiritual element in contemporary Judaism.

ROSENBERG explores the problem of good and evil in classical Jewish thought, although his notion of the classical ranges from the rabbinic period to the Holocaust. He presents a “history of ideas as a struggle” and distinguishes between “cosmic evil” and human (“anthropological”) evil. Maimonides’s views dominate Rosenberg’s discussion, even in chapters that address other texts. Moreover, because the author interlaces both ancient and modern philosophical notions into his arguments, the reader can become somewhat bewildered.

SEGAL’S book analyzes theological dualism, the belief in two opposing divine forces or deities. This belief was fiercely attacked by the rabbis, and out of that heresy Christianity and gnosticism eventually developed. According to Segal, both of these sects were affected by strong Hellenistic and Jewish apocalyptic influences that made it necessary for a mediating figure to come between believers and God. The rabbinic texts surveyed by Segal demonstrate that only among the rabbinic academies in Palestine of the Second Commonwealth was there a certain evolution in the identification and cataloguing of unwanted heresies. Segal proposes that gnosticism is a by-product of the “battle between the rabbis, the Christians and various other ‘two powers’ sectarians who inhabited the outskirts of Judaism.” Initially, Segal surmised that the rabbinic reports about the “two powers in heaven” were “obscure.” His conclusions confirm this supposition.

The biblical book of Ecclesiastes (in Hebrew, Kohelet) is a puzzle full of contradictions, unevennesses, and unorthodox ideas, whose pessimism and skepticism seem contrary to the theology of other biblical books. As such, it has engendered much disagreement among scholars and a variety of approaches to dealing with these problems. Some commentators have sought to reconcile Kohelet with other biblical viewpoints, while others have highlighted—or exaggerated—his heterodoxy and regarded him as a deliberate polemicist. The latter approach is dominant in contemporary scholarship.

Commentaries are the starting point for a study of Kohelet. DELITZSCH's highly conservative commentary is still valuable, drawing on a profound (though outdated) knowledge of Hebrew and the classical commentaries. He is almost the only commentator to pay attention to the Masoretic accents. In spite of his conservatism, Delitzsch was able to lay down the arguments, which are still valid, for the book's late dating. Delitzsch reads Kohelet as "proof of the power of revealed religion which has grounded faith in God" but also of the inadequacy of Israelite religion. Several subsequent Christian commentators take this approach, explaining Kohelet's divergences from expected pieties and his apparent skepticism as proof that the faith of Israel was inadequate and awaiting completion in the gospel of the New Testament.

BARTON's commentary is valuable particularly as a representative of a once-influential approach that made Kohelet's thought internally consistent (but theologically more radical) by assigning numerous verses with apparently "orthodox" opinions to later writers. Kohelet's philosophy (after the excisions), though pessimistic and "hopeless" with its harsh and distant deity, is not immoral. He recommends healthy work and enjoyment of life. The teaching that remains is "to a Christian chilling and disappointing" but serves the purpose of clearing the ground for the new dispensation. The problem with removing some verses as doctrinal glosses is that there are so many apparent inconsistencies in Kohelet that it is arbitrary to identify some statements as incompatible with the "real" Kohelet.

REICHERT and COHEN's commentary is the one commonly available in synagogues in the English-speaking world. It comments on the old Jewish Publication Society translation. It is succinct and simple, if rather pietistic, with a traditional Jewish orientation.

GORDIS's book was long the most popular commentary on Kohelet. It is clearly written and helpful to those with a modest command of Biblical Hebrew. But Gordis's analysis of Kohelet's thought is rather pedestrian and harmonistic.

CRENSHAW's (1988) commentary is valuable for its philosophical probing of Kohelet's thought, though his image of Kohelet seems too grim. Crenshaw describes the author as a radical, unrelenting polemicist struggling with the traditional beliefs of the wise.

MURPHY sees a more subtle interplay between Kohelet and the wisdom tradition, as Kohelet modifies and restricts some of its claims while affirming its basic validity. The commentary begins with valuable surveys of the state of research. According to Murphy, a variety of attitudes are heard in Kohelet. These are sometimes contradictory and sometimes in dialogue. Kohelet affirms the values of life, wealth, toil, and wisdom, but they prove inadequate when seen under the shadow of death. Kohelet is often in conflict with traditional wisdom teaching, especially with its claim to provide security, yet he affirms wisdom and remains within its traditions, employing its methods and literary genres. It is because Kohelet loves life and wisdom that he is grieved by death and by life's vanity.

FOX (1989; 1999a) takes as his starting point the contradictions that have long troubled commentators and argues that they are deliberate and should be interpreted rather than harmonized or eliminated. They show that Kohelet's central concern is the meaning of life—showing life's absurdity and pointing to ways meaning can be reconstructed. Even if the world as a whole lacks meaning, humans have the potential to experience passing moments of goodness and clarity. These are brief, limited, and uncertain, but they are enough to make life worth living. Fox's books include essays on Kohelet's vocabulary and thought as well as a commentary with a philological focus.

FREDERICKS's brief conservative commentary, aimed at a popular audience, paints the most optimistic picture of Kohelet. Kohelet confines his observations to the transient human realm and offers ways of coping with transience. Man's duty is to resign himself to God's will and accept cir-

cumstances beyond human control. Fredericks downplays Kohelet's pessimism and his bitterness about life's systemic injustices.

TOWNER's short and nontechnical commentary is aimed at a lay audience. Kohelet offers advice on living in a difficult, limited, and incomprehensible world. He teaches respect for an unknowable God, responsible use of limited human freedom, and the seizing of opportunities for happiness. Towner includes reflections on the present-day meaning of the book.

LONGMAN's approach is religiously conservative but innovative. He distinguishes Kohelet's message, which is skeptical and pessimistic, from the message of the author, which is that life is meaningless without God. The author gets the last word in the epilogues, 12:9–12 and 13–14. Kohelet's experience demonstrates the dangers of speculative skeptical wisdom. Longman's approach is based on a distinction drawn by Fox (1987) between Kohelet, a fictional persona, and the book's author. (Fox, however, thinks that the epilogue "buffers" rather than neutralizes the negativism of Kohelet's words.) Longman has studied Mesopotamian fictional autobiographies and locates Kohelet's words in that genre. It must be asked, however, whether the epilogues can cancel out a sense of skepticism and pessimism that dominates the book until the very end.

CHRISTIANSON applies a narrative-critical analysis to the book of Kohelet as a story and describes Kohelet as a persona, a literary character in his own right, rather than as the author. The formation and growth of the character of Kohelet is as important to the book as the ideas he expresses—which are not necessarily shared by the author himself, who speaks in the epilogue (12:9–14). Christianson's clearly written book examines a dimension of the book of Kohelet—its narrative character—that has been neglected until recently.

PERRY regards the epilogue as giving voice to the authoritative viewpoint. He distributes the entire book, down to parts of sentences, between two voices, a pious sage-narrator and a skeptical persona, Kohelet, the former transmitting and debating the wisdom of the latter. However, the way Perry assigns words to one voice or the other seems rather arbitrary.

SEOW's is the most valuable all-purpose commentary, offering a thorough examination of historical, textual, literary, and philological issues and extensive comparisons to other ancient Near Eastern literatures. Seow is almost alone in assigning Kohelet to the Persian, rather than the Hellenistic, period. Kohelet, according to Seow, is above all troubled by lack of human control of destiny. He teaches a spontaneous response to life, with an affirmative acceptance of both the possibilities and the limitations of being human.

Useful collections of essays on Kohelet, including some English translations of notable essays in German, are CRENSHAW (1976), ZUCK, and SCHOORS. For the history of Kohelet exegesis, see FOX (1999b). For a detailed summary of exegesis from ancient times to 1860, GINSBURG's survey is still unsurpassed.

Midrash Rabbah, available in the Soncino translation by COHEN, is a major compilation of early midrashic (homiletic) commentary that omits little of importance. The Targum (Aramaic translation) of Kohelet is more of a midrashic commentary than a translation; it is available in an English translation by KNOBEL. Little of medieval Jewish exegesis is available in

translation, except for the innovative commentary of Rabbi SAMUEL BEN MEIR (Rashbam), which excels in attention to literary context and poetic features. Patristic exegesis is represented in JARICK's translation and discussion of Gregory Thaumaturgus's "Metaphrasis," while Murphy's commentary draws on ancient and medieval Christian interpretation.

Ecology encompasses both natural history (description of plants and animals) and scientific study of biological interactions with geologic, hydrologic, and atmospheric systems. Ecological issues such as changes in global environmental health and the imbalance of population growth and resource utilization have become the stuff of academic and popular debate and of international negotiations in the course of the late 20th century. Ecology is thus a subset of broader environmental thought, which encompasses perceptions of and approaches to issues such as management of natural and human systems. In this context the relationship of religion and environment has attracted considerable discussion. Some writers view western religion as the root cause of planetary despoliation, while others look to religion for a renewed environmental ethic. This essay addresses the environment and Judaism in the wider context.

Many books identifying plants or animals of the Bible are little more than catalogs and lack a particularly Jewish context. Three of the listed books illustrate ecology as natural history, in that they show how an awareness of flora and fauna helps elucidate the meaning of scriptural passages. HAREUVENI created Neot Kedumim, an environmental park

near Tel Aviv, "to show the entire ecological framework of biblical and talmudic flora and fauna." This small book provides examples of nature-based similes, analogies, and metaphors, mostly from Prophets and Psalms. Hareuveni contends that an understanding of ecology helps decipher the symbolic meaning of these literary devices, and he argues further that Jewish practices, such as Shabbat and Sukkot observances, have preserved the symbolism of the ecological relationship of the people to the land.

RABINOWITZ's collection of weekly newspaper columns is arranged according to the cycle of torah or haftarah readings. Each short article (two to three pages) plays on some nature reference or imagery contained in the weekly reading. These little essays, representing "the fruit of personal observation," bespeak a love of the land of Israel and of the Scriptures. This book is not meant to be a systematic treatment of ecological matters.

FELIKS provides the most exhaustive treatment of the three. The more than 80 chapters (typically two to six pages long) proceed in an orderly fashion through Scripture. Feliks has two purposes: first, he applies philological and historical scholarship to the nature of the country at the time of Scripture's composition, in order to identify the species of flora and fauna mentioned in the texts. Second, he intends to recover both the symbol and the symbolism of the textual references, which are too often lost in translation. The result is ecology in the service of scriptural interpretation.

The other books on this list treat implications for environmental ethics, illustrating how Jewish texts teach respect for the environment and contribute to wise stewardship. Citation of proof texts from Scripture is a common device. Yosef Orr and Yossi Spanier (in Rose) summarize much of this genre: "sayings of the Jewish sages may serve as a constant source of encouragement and support" for conservation efforts. Bradley Shavit Artson (in Troster and Wyman) notes that most works "strain Jewish writings through the standards of the Green perspective to argue the relevance of Jewish tradition." BERNSTEIN and FINK's "guidebook for teaching Jewish perspectives on the human relationship with nature" is a good example of Artson's characterization. It comes from a grassroots organization in the United States aimed at developing programs to train Jewish leaders and lay people about environmental ideas. As such, it is full of proof texts, questions for discussion, and suggested activities on a variety of topics including the human place in creation, blessings and praise, waste reduction (based on the *bal tashhit* tradition), and social justice (based on the *tikkun olam* tradition). ISAACS provides an eclectic selection on ecology, nature, agricultural mitsvot, sabbath and holidays, folk remedies, songs, names for children, and so on. It is a sourcebook, not a reasoned consideration of environmental issues.

Contributions to the three edited volumes range from explorations of personal Jewish and environmental experiences to more scholarly considerations of closely defined themes. The volume by ROSE is one of several in a series on world religions and ecology. The 16 chapters are arranged in three sections: resources in Jewish teaching and tradition, Israel, and action. Noteworthy is Norman Solomon's exposition of Jewish attitudes to creation, a paradigm for the land and the people,

specific examples of application to environmental laws, sample ethical problems relating to conservation, and a model Jewish statement on nature.

TROSTER and WYMAN assemble eight contributions from "Jews who see Judaism through their involvement in environmentalism and from Jews who see environmentalism through their involvement in Judaism." Noteworthy contributions include Troster's attempt to harmonize Jewish interpretation of "in the image of God" with Lovelock's Gaia hypothesis, and Artson's start at building a Jewish ecology from "an internal Jewish assessment of how our tradition and our God would have us relate to the world." Both of the books just mentioned include brief suggestions for individual and institutional environmental action.

The 37 contributions in BERNSTEIN are arranged into sections on sacred place, sacred time, and sacred community. Although uneven in scholarly depth and underpinnings, this is the foremost collection in English of the variety of thinking on environmental issues and Judaism. Many of the chapters, such as those by Neal Joseph Loevinger, Bradley Shavit Artson, Eliezer Diamond, and Lawrence Troster, illustrate well the interpretation of the environmental ethic from within Jewish tradition.

Standing apart on this list, as it is an extended academic exercise with a single focus, is COHEN's response to the frequent charge that the western environmental crisis has its origins in the grant of dominion to humans in Genesis 1:28. His close examination of the history of both Jewish and Christian interpretation and understanding of this verse indicates that it was rarely, if ever, read as a warrant for unrestrained exploitation of the world. That interpretation seems to be a product of the mid- to late 20th-century search for a source of current dysfunctional environmental behavior.

There are two basic issues in determining the ideology of an economic system. First, to what extent does the government allow private property? In a capitalist system, a large percentage of the resources of the country will be private property, while in a communist system there is no private property. Second, to what extent does the government intervene in the economic decisions of the people? In a market economy, there is relatively little intervention by the government, while in a planned or command economy the government is extensively involved with the economy. When discussing the question of economic ideologies in reference to religion, identical questions can be asked but with the religion and/or the religious authorities replacing the role of the government. In the classic texts of Judaism, there is no systematic discussion of these questions. However, there are discussions about issues and laws relevant to economics, and this allows inferences to be drawn about the underlying economic ideology of Judaism. The texts that are the basis for these inferences start with the Bible and continue through the modern era.

GINZBERG examines three sets of property laws recorded in the Bible: the laws of slavery, the sabbatical year, and the jubilee year. He argues that as "the notion of the Bible is that all beings owe their existence to God, there are laws for the manumission of slaves." Similarly, the laws of the sabbatical and jubilee years are based on the premise that God is the sole possessor of the land. Ginzberg also speculates about the historical reality of these laws, but many of his arguments rely on the assumptions of biblical criticism. The article ends with a critique of the view that the Bible supports communism.

NEUSNER compares the economic implications of laws recorded in the Mishnah (c.220 C.E.) with the economic theories of antiquity, especially those of Aristotle. Neusner gives a detailed explanation of several chapters in the Mishnah (principally chapters four and five in Tractate Baba Metsia) and concludes that the economic system envisioned by the Mishnah was a combination of a market economy and a planned economy (or what he terms a distributive economy). He claims that the assumption of the Mishnah is that while land is privately owned, it must be shared with God by donating the fruits of the land to God.

OHRENSTEIN and GORDON briefly review economic lessons to be learned from the Pentateuch and the book of Proverbs and then concentrate on economic ideas to be found in passages in the Talmud (c.500 C.E.). One of the fundamental ideas of a market economy is Adam Smith's doctrine of the "invisible hand," the idea that when people act in their own self-interest, they benefit society. Ohrenstein and Gordon contend that the Talmud anticipates this idea, which shows the Talmud's support for a market economy. In addition, they argue that many present-day economic ideas, such as game theory, opportunity cost, and human capital, can be found in the Talmud. They end with a brief look at the impact of

Judaism on the development of the European economy and capitalism.

BARON presents a lengthy essay on economic thinking that can be inferred from the writings of Maimonides. Maimonides was arguably the preeminent rabbinic jurist since the time of the Talmud and codified the laws of the Talmud. He addressed many issues that had economic ramifications. Baron notes that Maimonides, as opposed to Christian writers of his time, took for granted the institution of private property. "Maimonides, of course believed that God is the ultimate master of all things. But once acquired by an individual, such property is entirely his own and, subject to stated limitations, may be freely disposed of by him," writes Baron. These limitations are discussed in reference to the goods market, the money market, and the labor market. Baron argues that Maimonides sought a "proper balance between regimentation and freedom." Baron maintains that an important aspect of Maimonides' economic thought is that contrary to mystical approaches to religion, he stressed the importance of working and not living off charity.

LEVINE (1980, 1987, 1993), in a series of books that collects his articles, compares the approaches of a market economy and Jewish law to various economic issues, such as monopoly, competition, externalities, pricing, and taxation. The focus in each situation is whether and how Jewish law intervenes in the market. On each economic issue, Levine briefly presents the relevant economic theory, quotes the pertinent discussion in the Talmud, and then examines how these passages have been interpreted from the Middle Ages to the present. Levine infers that Jewish law rejects the idea of a completely free market economy, and he argues that Judaism attempts to promote social justice even if this is sometimes at the expense of economic efficiency and economic freedom.

TAMARI (1987, 1995) argues in both his books that there exists a separate and distinct "Jewish economic man," as Judaism places a religious and moral framework around the workings of the market economy. Notwithstanding this framework, Tamari notes that while all wealth originates from God, "there is nothing intrinsically evil or sinful about pursuing the accumulation of material assets and wealth." Tamari briefly quotes the argument that the biblical laws of the jubilee and sabbatical years support socialism. However, he dismisses this claim since "despite Judaism's insistence on economic justice, charity and mutual assistance, it also recognizes the legitimacy of private property, the profit motive, and the market mechanism." Tamari's books are similar in content, but the 1987 work concentrates more on economic issues, while the 1995 work places greater stress on ethical issues. Tamari covers many of the issues discussed by Levine, and both use similar sources for their inferences. The authors do differ in style, however; Levine generally provides a more detailed review of all the viewpoints, while Tamari includes more historical information.

Although Jews are extolled as People of the Book and are lauded for a strong commitment to religious education, the history of Jewish learning reveals that such characterizations remain more unfulfilled platitudes than regular aspects of reality, albeit with notable exceptions. Simhah Assaf and Nathan Morris amply illustrate these trends in their major multi-volume Hebrew histories of Jewish education. Despite the vast amount of institutionally produced studies, curriculum guides, and model lessons, mixed with various attempts at theorizing and philosophizing about Jewish education and learning, the studies discussed in this essay have been chosen because they provide valuable insight into the eternal problems of Jewish education from historical, sociological, or programmatic points of view.

ADAR offers insight into the system of Jewish education in the United States and its shortcomings. Although reflecting the scene of the late 1960s and the mid-1970s, this book, like the impressions of North America presented by Alexis de Tocqueville or even earlier by J. Hector St. John de Crèvecoeur, stands as a classic statement about circumstances both before and after the time it was written—both because of its penetrating analysis of deep structures and because so little changes in Jewish education. Although Adar studies each denomination separately, many of his most important comments apply equally to all aspects of Jewish education. Particularly apt are his observations that most of the stated goals of Jewish education, both in Hebrew and English subjects, are unobtainable: the Hebrew because of a lack of time, interest, and teachers; and the English because advanced subjects are directed at children who are too young to appreciate them. Adar notes that students are not taught texts but are merely taught about texts, usually with apologetic meanings imposed on them. The lack of accumulation of skills, interest, and correlation with parental values places the school in an unreal realm that is not part of either U.S. or Jewish culture. A stinging critic of Hebrew supplementary schools for their failure to offer even a hint of historico-critical study, let alone to confront prob-

lematic aspects of Judaism, Adar was prophetic in predicting the success of the day school in U.S. Jewish life. This book, a product of the Samuel Mendel Melton Center for Jewish Education in the Diaspora at the Hebrew University of Jerusalem, represents many of the studies produced by this institution.

ADELMAN (1983, 1984) attempts to synthesize his experiences in the field of Jewish education as a teacher and principal with his graduate training in Jewish studies. In these pamphlets he offers a bluffer's guide intended to enable the novice to approach the Jewish classroom armed with ideas for understanding the dynamics of this particular setting as well as the subject matter being presented. He also provides an overview of the ingredients necessary for a professional Jewish educator to plan and implement a curriculum. These guides help teachers find a focus for presenting material and guiding students. In particular, they urge teachers to select aspects of the material that truly interest them and not to try to cover it all equally. Academics and professional teachers work this way with much success. Teachers are urged therefore to find key questions about Jewish history, life, and society in the various materials available rather than trying to work in sequence from a textbook. The pamphlets talk frankly about the limitations of the Jewish educational environment and the ways that an individual teacher can take control of the class using successful strategies of discipline, organization, and motivation. The pamphlet about teaching Hebrew is particularly specific about the necessity of offering honest motivations for the study of Hebrew, limited goals, and clear guidance for reaching them. One of the themes that emerge in Adelman's pamphlets is the need for both teachers and students to feel good about themselves and what they are doing. Whether they are studying Jewish history or Hebrew, therefore, they must feel that there is a manageable and interesting task before them in which they can succeed. In particular, teachers are urged not to badger students with corrections nor to demand perfection. In short, this approach comes from the realization that much of what does happen in Jewish education is affective rather than cognitive, and unfortunately it often can be negative rather than positive. By highlighting the ways in which teachers can create small communities with their classes, these pamphlets aim at building positive relations within Jewish education.

GARTNER provides a good foundation for a clear historical understanding of Jewish education in the United States. Although the book is a study of the development of Jewish education in the United States and may seem provincial for readers from other diaspora communities, it may, nevertheless, be highly instructive of the dynamics involved everywhere. These primary sources acquaint those interested in Jewish education with a real sense of the difficulties inherent in the enterprise, illuminating in particular the rocky beginnings, the difficulties in supporting and staffing institutions, and the financial, social, and cultural influences that have always played a part in the development of Jewish education. Some of the most salient features of the history of Jewish education include the fact that few Jews actually received a Jewish education; Jewish communities were unwilling to finance schooling; and few students made serious strides in their studies. Gartner regularly notes the role of the physical learning envi-

ronment of the schools, the tensions between generations and between immigrant groups, the difficulties of learning Hebrew, the difficulty of finding teachers and paying them, the varying degrees of integration and exclusion of girls from Jewish education, and problems with discipline. One of the most interesting insights provided into the intellectual and religious underpinnings of U.S. Jewish education is the description of Rebecca Gratz, the founder of the first Jewish Sunday school. Gratz used a Christian catechism in her classes, but before class she had members of her family paste pieces of paper over answers unsuitable for Jewish children, an allurements to student interest and a token of the lack of specific Jewish cultural and religious content in the institution. One fascinating aspect of the various school reports concerns the amount of time spent studying maps of Palestine even prior to the rise of the Zionist movement.

SARNA, a scholar of American Jewish history, not only provides a clear reconsideration of Jewish history but also offers a paradigm shift in the study of Jewish education. Sarna demonstrates that toward the end of the 19th century (prior to the mass migration of Eastern European Jews), American Jews initiated a series of religious, cultural, and organizational changes. This kind of research is important for today's Jewish educators because of the picture it presents of the ability of Jews to reconstruct regularly the basic structures of educational and communal life itself. Sarna warns about the call for panaceas in Jewish schools.

SCHOEM, in a fascinating ethnographic study of one afternoon religious school, presents astute observations and interviews with all the major actors: the parents, teachers, children, rabbi, and principal. Although Schoem's work is well researched and contains an extensive bibliography, it appears that he was unaware of Adar's study, and thus he confirms many of Adar's findings independently, making his observations even more valuable. Schoem characterizes Jewish education as an inflexible and unreflective involvement in building an identity based on pride or guilt but not content. He sees this endeavor as geared to the formation of "anti-anti-semites" or "non-non-Jews." In other words, definitions of Jewish identity are based upon what one is not, often with the admixture of feelings of contempt and superiority. The values he identifies in the school—often a blurring of Jewish and secular values—include material prosperity, getting into college, and the family. Some of the key features of the culture of religious school include simple propinquity, the ritual of affiliation in an institution where everyone is Jewish, hating Hebrew school as a Jewish tradition, and the school as a place for participants to posture. The rhetoric of "a Jewish way of life" includes teachers who do not have any other connection with the Torah, Bible, or prayer book, who teach prayer without feeling comfortable at prayer themselves, and who continue the myth of learning Hebrew, practicing ethics, and joining a community. In short, Schoem documents with precision the diminution of standards of behavior and study at one religious school while at the same time acknowledging that the institution offers rich potential for building a community.

WOLFSON, in this pamphlet on family education, describes the current trend of the synagogue as the place parents go when they want to step out and do something Jewish. In other

words, the synagogue and not the home constitutes the focal point for Jewish activities. Wolfson sharpens this thesis by noting that there are tensions between the home and the synagogue. Many parents, for example, do not want their children bringing religious values home from religious school. He contrasts the public Jewishness of the synagogue, the school, Jewish organizations, and Israel with the private Jewishness of home, identity, self-esteem, and cultural involvement. Wolfson concludes that religious schools provide only for public Jewishness, while the home provides for private Jewishness, thus bringing issues back to the parents. Wolfson offers quotations from three influential U.S. Jewish thinkers to support his point—A.J. Heschel, Robert Gordis, and Samuel Schaffler, each of whom articulates in his own way the current tendency of modern Judaism to be localized in the synagogue and the danger that this presents not only to Judaism in the home but to Judaism itself. As a solution, Wolfson suggests moving synagogue and school activities to the home, involving parents more, and developing vehicles for parental edification and leadership.

One of the most ancient of Jewish communities, the Jews of Egypt were a very heterogeneous group and included a sizable Karaite community. The famed Cairo Genizah is a major source for research on regional medieval society. Being a venerable and major community, much scholarly attention has been paid to it, with publications mainly in Hebrew, English, and French.

Based primarily on Cairo Genizah documents, COHEN examines the origins of the office of Head of the Jews (*Ra'is al-Yahud; Nagid*), concentrating on the evolution of political power and authority rather than on the history of the title *Nagid*. Following an examination of Jewish autonomy under pre-Islamic regimes, Cohen focuses on the administration of several officeholders and provides much data and analysis on social and political issues relating to Jewish life in medieval Egypt and the life of minorities under Islam.

KASHER's study of the struggle for equal rights of Jews in Hellenistic and Roman Egypt does not regard it as a "war of emancipation," aspiring to citizenship in the polis. He believes that the equality that the Alexandrian Jews strove to obtain is to be conceived as an equality between two separate political bodies: the Jewish community and the Greek polis. The Jews fought for the right of self-organization within the polis on an equal footing with the Greeks, with this right being dependent on the central government rather than the polis. The study covers the period up to the Jewish rebellion of 115–117 C.E.

The Karaite community of Egypt, which was one of the world's major Karaite communities and an important component of Egyptian Jewry, is the subject of EL-KODSI's book, focusing on the years 1882 to 1986. As an active member of the community he had firsthand knowledge of its internal developments and access to Karaite archival sources and periodicals. Against the background of the origin of the Karaites and their history, El-Kodsi examines the community in Egypt: its structure and organization; relations with other Karaite communities and mainstream Judaism; its educational system, social services, liturgy, customs, traditions, and cultural and social activities; the impact of Zionism; and the exodus from Egypt after 1948.

KRÄMER provides a socioeconomic, political, and cultural history of the Jews of Egypt during the monarchy period, from 1914 until the Free Officers revolution of 1952. Based on Hebrew, Arabic, and foreign sources, the study is structured around a few major topics: communal structure and composition, socioeconomic and political change, Jewish reactions to political change, and the beginning of the end—the mass emigration that began in the late 1940s. Developments within the community are examined in relation to those in Egypt and the Middle East, and data is closely integrated into the analysis.

LANDAU includes a survey and a selection of documents on the Jews of Egypt from the fall of the Mamluk regime under Muhammad Ali in the first half of the 19th century until the end of World War I in 1918. Based on archival sources and publications in Hebrew, Arabic, and European languages, Landau's book examines the demography of the Jews and their occupations, their relations with gentiles, the spread of Jewish communities in Egypt, communal organization and institutions, education, intellectual and religious life, and early Zionism. Many sources are published in their original language.

LASKIER examines the Jewish community of Egypt during the period from 1920 to 1970 against the background of political developments in Egypt and in the Middle East. Based on extensive study of Egyptian publications and Israeli and international Jewish organizations' archival sources and publications as well as on interviews, Laskier provides a detailed description of the community. The implications of the Middle East conflict on the community are major themes, with discussion of Zionist underground activity, especially after 1948, in cooperation with Israeli institutions. Laskier also describes the secret efforts of international organizations to ameliorate the condition of the Jews of Egypt after 1948.

The modern history of the Jews of Sudan is the subject of MALKA's book. An indigenous businessman and the son of Sudan's chief rabbi, Malka left Sudan in 1964 and was one of the last members of the modern community formed following the 1898 defeat of the Mahdi. Using his own and his family's recollections as well as archival sources, Malka provides a vivid portrait of that community, its organization, and social, economic, and cultural life. Relations with the communities of Ethiopia, Aden, and Egypt as well as those of Europe and the United States are examined as are the conditions following Sudan's independence, which resulted in the departure of the Jews.

Based on Genizah documents and published sources, MANN examines Jewish life under Fatimid rule in Egypt and in Palestine from 969 to 1204. The first part of the study provides a chronological examination of the Jews in the regions under Fatimid rule, their communal organization, economic activity, social life, and major figures, including Maimonides, while numerous annotated documents are published in the second part. Considered a classic study of the period, Mann offers a carefully annotated and comprehensive examination.

MODRZEJEWSKI's study covers Jewish life in Egypt from biblical times to the annihilation of Egyptian Jewry following the 115–117 C.E. rebellion, focusing on the Hellenistic and Roman periods and emphasizing social change and institutional history. This meticulous study is based on literary sources and Greek papyri found in Egypt that provide much data on religion, administration, and everyday life of the Jews and the majority population. He examines a "Jewish Golden Age" in which Jewish life was enriched through the challenge posed by the advanced culture of the surrounding gentile environment.

The collection edited by SHAMIR covers the period from the Ottoman conquest in the early 16th century to the 1950s but focuses on the 20th century, discussing politics, economics, culture, and internal diversity. Several authors bring to light unknown state and private archival sources and provide some documents that are cited in their original languages. The role of the community and of individuals in the economic and cultural life of Egypt is discussed, highlighting Jews who were prominent in Egyptian Arabic theater, journalism, and literature. Other authors examine the evolution of the Egyptian nationality laws and their application to the Jews, the political participation of Jews between World War I and 1952, Rabbanite-Karaite relations, and images of Egyptian Jewry.

The island of Elephantine is located in the Upper Nile at the First Cataract, across from the modern Egyptian city of Aswan (ancient Syene). Because of its strategic location near the Egyptian border with Nubia, the island was garrisoned in ancient times. During the period when Persian dominion stretched into Egypt, from the late sixth to the late fifth century B.C.E., Jewish mercenary troops and their families were stationed on the island. Aramaic papyri and ostraca, found in archaeological remains of the soldiers' homes, are among the few documents of Jewish origin to survive from this period, and they offer important insights into this chapter of Jewish history.

PORTEN presents the most comprehensive and in-depth treatment of Elephantine and its Jewish residents. The book is divided into three parts, each of which focuses on specific aspects of Elephantine life: politics and economics, religious worship, and communal relations. First, Porten surveys what is known about the immigration of Jews and Arameans to Egypt, exploring different theories as to when and why these population movements occurred. The second chapter treats the organization and administration of the Elephantine garrison. Detailed analyses of weights, measures, prices, food, and clothing give the reader a concrete idea of daily life in the community. Porten presents different hypotheses on the origin and nature of worship at Elephantine, theorizing that the Elephantine temple was created by certain alienated Jerusalemite priests who moved to Egypt in the seventh century B.C.E. He also carefully scrutinizes available evidence to argue that a limited number of Jewish residents participated in the cults of their Aramaic and Egyptian neighbors, a finding that might be expected in a remote area where Jews and non-Jews lived side by side. The following chapters of the book explore specific families and their interrelations as revealed in letters and legal documents. Thus, this accessible book not only illustrates the nuances of the legal system, it also portrays the individuals behind the texts. A final chapter considers the destruction and restoration of the temple of Elephantine. Porten elaborates on the tensions between the Jewish and pagan communities on the island as well as the relations of

the Elephantine and Jerusalem Jews. The book is replete with footnotes, while a series of appendixes investigate specific topics that are primarily of interest to specialists.

KRAELING offers an introduction to the Elephantine documents that is shorter than Porten's treatment but is important nonetheless. Kraeling, like Porten, outlines different possible explanations for the origin of the Jewish colony and temple. His analysis, however, is more cautious than Porten's, and he is hesitant to isolate one explanation as more plausible than the others. Kraeling's introduction may be of particular interest to the general reader because it contains a history of the discovery and publication of Aramaic documents from Egypt that puts in perspective the textual finds from Elephantine. The introduction also contains a summary of the archaeological excavations on the island, something that is absent from Porten's work. The synopsis of excavations explains what is known of the architecture and layout of the city, while also demonstrating the random and reckless manner of the archaeologists, whose primary objective was the discovery of texts rather than the thorough preservation of the sites.

YARON directs his book to the reader, lay or professional, who wishes to learn more about specific legal practices at Elephantine but is unfamiliar with Aramaic. Yaron analyzes Elephantine law as a discrete entity, avoiding arguments about influences and origins. The benefit of this approach is that his focus stays on the Elephantine texts and does not get bogged down in the analysis of other legal systems. He attempts to reconstruct some of the laws that are only implicit in the texts themselves, suggesting, for instance, that eight witnesses were required for complicated legal procedures, while simpler procedures required only four witnesses. The study is broken down into chapters that discuss the form of the legal documents, court procedure, slavery, adoption, marriage, succession, and property. A final chapter briefly treats similarities between Elephantine, Egyptian, Babylonian, and later Jewish legal practices.

A much more detailed and specific treatment of law at Elephantine is provided in MUFFS, which analyzes the Aramaic texts in light of the legal tradition of ancient Mesopotamia. (The connection between the two traditions is a methodological premise of the study.) Muffs narrows his focus to a particular phrase found in ten individual Elephantine papyri that concern property rights. He methodically interprets each passage in which this expression appears and then compares this phrase to its Demotic and Akkadian counterparts. The goal of this study is, first, to demonstrate that this particular locution, dismissed by Yaron as superfluous, actually serves to indicate compensation. The wider objective is to establish the significance of the corresponding expressions in Demotic and Akkadian, thereby elucidating the relation between these legal traditions and Elephantine law.

SILVERMAN supplies a detailed analysis of Elephantine personal names in a book that surveys the chronological distribution and the languages of all the names found in the Elephantine texts. In addition, the author analyzes the morphology and meaning of all the West-Semitic names, asserting that the number of Akkadian names decreased over time, while the number of Egyptian and Hebrew-Aramaic names

increased. He suggests that pagan theophoric elements supplanted traditional Yahwistic elements in Jewish personal names as reverence felt for the appellations of God grew more intense. He posits that this trend prefigures transcendental conceptions of divinity peculiar to Egyptian Hellenistic Judaism.

Rabbi Elijah ben Solomon Zalman of Vilna, popularly known as the Vilna Gaon (literally, "the genius of Vilna") or by the acronym Gra (Gaon Rabbi Elijah), was the outstanding rabbinic figure of the 18th century and the heroic model of non-hasidic Eastern European Orthodoxy in the following century. He was born in or near Vilna in 1720 and died there in 1797. His extreme precociousness (he is said to have delivered a learned talmudic discourse in the Great Synagogue of Vilna at age 6) led him to dispense with teachers at a very early age. This, in turn, allowed him to develop his own scholarly methods, which valued wide erudition and philological precision over the ingenious casuistry (*pilpul*) common among Ashkenazi talmudists at the time.

The Gaon led a reclusive and saintly life, supported by a modest stipend from the Jewish community of Vilna. He held

no official position, but was nonetheless regarded as the leading rabbinic authority in Vilna, and indeed throughout much of the Ashkenazi world during the second half of the 18th century. His only real entry into the public sphere was in his unyielding opposition to the nascent hasidic movement, which he took to be dangerously anti-intellectual and antinomian. In providing the spiritual leadership for this opposition, the Gaon helped to found the Mitnagged (literally, “opposition”) Orthodoxy of the 19th and 20th centuries. The nature and reasons for his opposition to Hasidism are discussed in each of the above listed entries. The most accessible and complete account of this phase of the Gaon’s career is SCHOCHET, which includes many of the controversy’s documents in elegant English translation.

There have been several biographies of the Gaon, beginning with the Hebrew hagiographies of the 19th century. SCHECHTER, GINZBERG, and the succinct essay by Menahem KADDARI in the *Encyclopaedia Judaica* are all distinguished attempts to provide critical biographical portraits. Ginzberg, himself a great philological master of the rabbinic tradition, makes some suggestions about the nature of the Gaon’s scholarship, as does Schechter. COHEN, although dated, is useful for placing the Gaon’s life within the communal setting of late 18th century Vilna. Each of these works necessarily draws on the hagiographical traditions. For a compendium of such folk traditions rendered in English and presented in the same pious spirit in which they originally arose, see ROSENBLUM. His portrait of the Gaon is more traditional and credulous than those of Schechter and Ginzberg.

Of course, the importance of the Gaon, even his saintly status, rests largely on his scholarly achievements, a fact that is crucial for understanding the Mitnagged subculture, for which he became a kind of intellectual icon. All of his works were published posthumously from marginal notations in the books of his personal library and from the notes of his sons and students. Among the most important of these are *Hagahot haGra*, textual glosses to the Babylonian Talmud; *Biur haGra*, a commentary on the *Shulhan Arukh*; *Aderet Eliyahu*, a commentary on selected passages throughout the Hebrew Bible; a homiletical commentary on the biblical Book of Proverbs; and a commentary on the early kabbalistic work *Sefer Yetsirah*. These works, which consist largely of terse commentary and philological emendations based upon the Gaon’s encyclopedic erudition, do not lend themselves easily to translation or summary. For a brief but useful discussion of his work as a biblical exegete and his understanding of the nature of rabbinic interpretation, see HARRIS, which also traces the influence of the Gaon’s approach.

Finally, there is the influence of the Gaon’s thought and his image on Jewish ideologies of the 19th century. NADLER and LAMM both discuss the ideological roots of his opposition to Hasidism through careful interpretation of his students’ work. Lamm focuses on the thought of the Gaon’s greatest student, R. Hayyim of Volozhin, who founded the first modern yeshivah and gave theoretical articulation to Lithuanian Mitnaggedism in his religious writings. Similarly, Nadler is a thorough monograph on the religious thought of the Gaon’s circle of followers, particularly that of the preacher Pinhas of

Plotsk, and the polemics of this line of thought with early Hasidism. Such studies are especially important since the Gaon’s own work, while voluminous, was, as noted, restricted almost entirely to terse exegesis of classic texts. Hence, the more developed theoretical statements, sermons, and theological works of his students gain historical importance. Care should be taken, however, to distinguish the Gaon’s thought from that of even his closest followers. BRILL is a useful short guide to the distinctive features of the Gaon’s kabbalistic thought, coexistent with his antipathy to Hasidism.

Other 19th-century movements were also influenced by the Gaon, or at least they attempted to claim his influence. ETKES, the dean of Israeli scholars of the Gaon and Lithuanian Mitnaggedism, discusses the Gaon as a precursor to R. Israel Salanter, the founder of the Musar movement, a 19th-century movement of pietist asceticism. His portrait might be usefully compared with Nadler’s. Less plausibly, early figures of the 19th-century Eastern European Jewish Enlightenment movement (Haskalah) also claimed the Gaon as an intellectual predecessor. They did so based upon his endorsement of a reformed Hebrew curriculum, the utility of certain forms of secular knowledge, and philological precision in talmudic studies. Historians of the 19th and early 20th century who were themselves champions of Haskalah, or their intellectual heirs, have taken such claims rather too seriously. Nadler convincingly rebuts this portrait. FISHMAN is the first study to focus on the most important source of this tradition, R. Barukh of Shklov and his circle. In the introduction to his translation of Euclid’s *Elements* into Hebrew, Barukh recounted a conversation in which the Gaon purportedly commissioned the translation and discussed the importance of certain forms of secular knowledge.

Much of the scholarly literature on the Gaon, not to speak of the primary sources, is available only in Hebrew. The bibliographies of the *Encyclopaedia Judaica*, Etkes, Fishman, Lamm, Nadler, and Schochet will be of particular value in guiding the interested reader through this literature.

Emancipation refers to the abolition of the distinctive, usually demeaning, legal and social status ascribed to Jews and the creation of laws that viewed Jews as citizens with rights equal to those accorded to other citizens. The social structure and political order in each country fixed the timing, character, and extent of Jewish Emancipation in the various nations. The change began in Great Britain and its colonies in the mid-18th century and slowly moved eastward across Europe and the Turkish empire, continuing after World War I and right up to the Polish constitution of 1931. By the 1870s, however, there was a full-scale antisemitic reaction in many nations against Jewish Emancipation. Over the past three centuries, scholars of Jewish history have repeatedly examined the strug-

gle for Emancipation and its long-term results. Nineteenth-century Jews and most historians of that era regarded the age of Emancipation as a period of freedom and equality. Since about 1880, both the defects of Emancipation and the antagonism it evoked (culminating in the Holocaust) have brought about a much more critical view. The newer scholarship reacted against the utopian view of Emancipation by emphasizing that legal emancipation was not social emancipation and by arguing that extensive Jewish assimilation did not lead their host societies to regard Jews as true equals. The literature on Jewish Emancipation appears in many languages and is the subject of a host of scholarly articles.

One recent book of value is BIRNBAUM and KATZ-NELSON, which stress the plurality of emancipations. In addition to articles on the well-known cases of Germany (W.E. Mosse), France (P. Birnbaum), Britain (G. Alderman), and Italy (D. Segre), essays about cases less familiar to the English-language reader appear—The Netherlands (H. Daalder), Russia (M. Stanislawski), and Turkey (A. Rodrigue). Katz-nelson's article emphasizes the limits of Emancipation for Jews in the United States.

Selected articles from the journal *Jewish Social Studies* are gathered in DUKER and BEN-HORIN, which includes a large bibliography by Duker and an important essay titled "Impact of the Revolution of 1848 on Jewish Emancipation" by the renowned historian Salo W. Baron.

BARON (1937) and BARON (1971) both situate the history of the Emancipation of Jews in the United States in a comparative perspective. Baron posits that Jewish Emancipation did not occur as the result of Jewish efforts nor was it the product of ideologies concerning the Jews' place in society. Rather, he contends that Emancipation was the necessary corollary of revolutionary changes in France and elsewhere that replaced restrictive social classes and their legally defined privileges with equality. He recognizes the defects of Emancipation, but he stresses that Jews were not deluded when they sought equal rights. He also emphasizes that Emancipation pushed Jews to enter the modern world and adjust their religious and communal life to the demands of modernity. Another analysis of the Emancipation of Jews in the United States appears in MARCUS, which presents the U.S. case in full detail in a generally optimistic work that reflects the relatively positive U.S. experience.

Two works by a distinguished Israeli historian, KATZ (1973) and KATZ (1980), present a by-now-traditional view of Jewish Emancipation centered on events in Germany and the significance of ideological thought. Katz emphasizes that Emancipation was only partial, given half-heartedly, and always under attack. This view that Jewish Emancipation was fickle and ultimately false helped to inform Zionist ideology.

The best recent studies of Jewish Emancipation in Germany are the articles by RÜRUP (1969, 1975a, 1975b, 1986). In these essays and other studies not translated from his native German, Rürup connects the history of Jewish Emancipation to the evolution and decline of bourgeois liberalism in Germany.

The ramifications of German Jewish Emancipation are fully examined in the anthology edited by MOSSE, PAUCKER, and RÜRUP. After a broad survey of the German revolution by

Rürup, the collection includes studies of Emancipation as it affected population change (L. Schofer), rural Jews (M. Richarz), and the modern rabbinate (I. Schorsch). The anthology also contains a discussion by Mosse of the limits of Emancipation.

Emancipation in Britain necessitated mainly political emancipation. The fine work by ENDELMAN deals in an original fashion with the British social background, while SALBSTEIN treats in detail the parliamentary maneuvers and party politics that surrounded the Emancipation of British Jews. FINESTEIN raises a question that has yet to be properly studied: what did Jews think about Emancipation? Finestein's evidence suggests that the opinions of Anglo-Jewry were by no means unanimously favorable.

HERTZBERG maintains the controversial hypothesis that the leaders of the French Enlightenment pioneered secular antisemitism, but his account of the French Revolution and the Jews is brief and straightforward. SCHWARZFUCHS investigates the history of European Jews in the age of Napoleon. The author argues that the emperor was hostile to the Jews of France, although his relations with Jews elsewhere in Europe were less contentious. HYMAN's study of 19th-century French Jews in Alsace (the region with the highest Jewish population) shows that traditional ways persisted in private life and religion long after the Revolution.

EISENBACH's thorough study of the Emancipation of Polish Jews concerns the policies of the three powers, Austria, Prussia, and especially Russia, that governed over this population. The latter autocracy granted substantial rights to Jews, but only in its Polish lands.

Emden-Eybeschütz Controversy

Schacter, Jacob Joseph, "Rabbi Jacob Emden: Life and Major Works," Ph.D. diss., Harvard University, 1988

The bitter 18th-century theological dispute between the German rabbi Jacob Emden and Jonathan Eybeschütz is, despite its profound impact on German Jewry, a sparsely researched topic that merits further attention from English-speaking scholars. Especially to be regretted is the fact that Emden's Hebrew-language autobiography, *Megillat Sefer*, has never been translated into English.

Emden was a prominent rabbinic scholar who was known for his traditionalist and elitist views and who viewed himself as a defender of the Jewish faith. Eybeschütz, a talmudist of comparable standing and an aficionado of the Kabbalah, was widely suspected of being a secret follower of the 17th-century messianic pretender Shabbetai Tsevi. A highly charismatic figure, Shabbetai set into motion a movement that would survive

his conversion to Islam and even his death, continuing to create a stir in surprising quarters well into the 18th century.

The outlines of the dispute are clearly recorded in GRAETZ. Graetz takes the position that Eybeschütz was indeed a Sabbatian. He acknowledges that Eybeschütz was a brilliant scholar but criticizes him for being seduced by "the crooked path of sophistry" and being "deeply committed to the Sabbatian heresy." In 1728 Eybeschütz was appointed preacher in Prague. His contacts with the Jesuits displeased many Jews. He was elected to the rabbinate of Metz, but the widow of the incumbent spoke out against it, because she believed him to be a heretic. Eybeschütz later exerted himself to become rabbi of the "three communities" (Altona, Hamburg, and Wandsbeck, the first of which was at that time under the sovereignty of Denmark). Emden was also a candidate for the rabbinate of the three communities and was aggrieved when Eybeschütz was chosen.

When Eybeschütz assumed the rabbinate, many Jewish women had been dying in childbirth. Eybeschütz provided expectant mothers with incantations for exorcising evil spirits. This left Eybeschütz open to the charge of heresy. Eybeschütz was accused of devising amulets with encrypted messages calling for Shabbetai Tsevi to intercede; Graetz believes that these accusations were well-founded.

Emden was very zealous in calling for the excommunication of Eybeschütz, and Emden tried to antagonize Eybeschütz's friends and supporters. Eybeschütz presented himself to his disciples as unjustly accused and railed against Emden's audacity. Eybeschütz had broad support within the Jewish community while Emden, the accuser, stood alone.

At first, public opinion was in Eybeschütz's favor. Eybeschütz denied charges of Sabbatianism and excommunicated his enemies. Emden was banished from Altona, but he refused to leave and became still more zealous in pressing his public accusations against Eybeschütz. A royal procurator declared that amulets devised by Eybeschütz contained Sabbatian writings. Riots broke out and Emden fled to Amsterdam.

Eybeschütz feared that Emden's presence in Amsterdam might prove dangerous for him, and he issued an encyclical that consisted of an exhortation to bear witness to his orthodoxy. He maintained that his amulets conformed to a deeply orthodox mysticism. A triumvirate of leading rabbis, including the revered Joshua Falk, published a decision declaring that the amulets were Sabbatian and that their author should be "cut off from communion with Israel." The case ended up in the Christian courts under the jurisdiction of King Frederick of Denmark, which decided in favor of Emden and against Eybeschütz. Eybeschütz was dismissed from his rabbinate and Emden was allowed to return to Altona. Eybeschütz continued to press his case with his followers and a heated controversy continued for a number of years. Finally, Eybeschütz's rabbinate was restored in a special election in 1753.

While Graetz believes that Eybeschütz was in fact a Sabbatian, COHEN argues that Eybeschütz was innocent of Sabbatianism. He points out that rabbis were expected to distribute amulets in the superstitious environment of 18th-century Germany. Those amulets that were demonstrably Sabbatian, argues Cohen, did not originate with Eybeschütz

but were deliberately crafted to incriminate him. The mystical amulets that were of Eybeschütz's devising were subjected to a strained interpretation and falsely labeled as Sabbatian. Eybeschütz sought to prove the validity of his amulets and demonstrate that his enemies deliberately misconstrued them in order to force Shabbetai Tsevi's name into them. Furthermore, many of Eybeschütz's amulets may have been altered after he had written them.

Emden's written denunciations of Eybeschütz are, according to Cohen, full of invective and unsubstantiated charges; they represent scandal-mongering at its worst. Emden printed several pamphlets against Eybeschütz on his own printing press and distributed them throughout Germany. His vituperative attacks against Eybeschütz continued until Eybeschütz's death in 1764. After Eybeschütz's death, Emden attacked Frankism, and even the Zohar, with the same vigor with which he had attacked Sabbatianism. According to Cohen: "His contentious spirit made him prominent in his generation."

SCHACTER's massively researched study argues that even if the charges of Sabbatianism were true (and they may have been), Eybeschütz was not deserving of Emden's 13-year attack. He also concludes that Emden acted against his own interests in pursuing the matter to the extent to which he did. He finds it testimony to Eybeschütz's strength that he was able to have his rabbinic restored. Emden's contentiousness, on the other hand, is shown to have increased his marginalization within the Jewish community. Furthermore, the Emden-Eybeschütz controversy set a precedent for the persecution of other supposed heretics. In 1782, Naphthali Hartwig Herz Wessely, a student of Eybeschütz who had become a leading proponent of Haskalah, was excommunicated for his book *Words of Peace and Truth*, although nothing in the book could have reasonably been considered heretical. Schacter argues that the great legacy of the Emden-Eybeschütz controversy was the installation of a profound fear of new ideas within the Jewish community.

The term *eschatology* usually is understood by biblical scholars to designate a literary genre or way of thinking about the world that refers not to a posited "end of time," but to any time in the future in which the course of history will be changed radically by the intervention of the deity. There is a scarcity of good literature dealing specifically with this topic.

FREEDMAN's dictionary is by far the best and the most up-to-date initial resource. D.L. Petersen's article, "Eschatology (OT)," provides a good, concise introduction to the sources out of which eschatological thinking arose. An outline of the historical development of eschatology through the preexilic and postexilic periods and some idea of its social setting is also provided. A more detailed article by G.W.E. Nickelsburg, "Eschatology (Early Jewish)," considers the eschatologies of the eighth-century prophets as well as the books of Jeremiah, Ezekiel, Isaiah 40–55, Isaiah 56–66, Isaiah 24–27, Haggai, and Zechariah. Perhaps more significant, however, is the section devoted to apocalyptic eschatology, which examines the early apocalyptic writings, including those from Qumran. Nickelsburg also explores the major themes associated with these texts (messianism, resurrection, eternal life, and the Kingdom of God) and the proposed historical/social setting for apocalypticism. A final section deals with the eschatologies of writings associated with the destruction of Jerusalem in 70 C.E. Together, these two articles provide a well-written, cogent, and accessible starting point for further study of the subject.

MOWINCKEL looks at the theme of kingship/messiahship in the Hebrew Bible and early Jewish writings with particular reference to how this was reflected in hope for the future (i.e., positive eschatology). Separate chapters survey the relevant material in the Hebrew Bible and explore the ideal of kingship in ancient Israel and how this ideal was expressed in expectations for the future. This then provides a basis for an assessment of the significance of the messianic idea in later Judaism. The development of the concept of the Son of Man and the application of Second Isaiah's Servant Songs in this context by Jewish and Christian groups are also discussed. While Mowinckel's work takes account only of one strand of eschatology in the Hebrew Bible and interprets the term in a more restricted sense than modern commentators would (by applying it to the end of days rather than to a radical future event), there is much that remains useful in this book. However, Mowinckel takes little account of the Qumran materials. Hence, some caution must be exercised in the use of this book, particularly as a resource for reconstructing messianic beliefs of the turn of the era.

As a starting point for discussion of the eschatology of the Hebrew Bible, GOWAN's slim volume focuses on traditions associated with Zion. Three main themes are discussed in detail: the transformation of human society, the transformation of the

human person, and the transformation of nature. Each of these headings includes disparate ideas: for example, the chapter "Peace in Zion—The Transformation of Human Society" is divided into subsections on restoration to the promised land, the righteous king, and the transformation in the relationship between Israel and the nations (either by Israel's defeat of the nations on Mount Zion or by means of the pilgrimage of the nations to Zion). More controversial concepts also are introduced. Gowan asserts, for example, the idea of an "eschatological forgiveness" in the work of some prophets (e.g., Second Isaiah): a divine act of grace causing a fundamental change in the human recipient prior to God's transformation of society or nature. The third and final section of the book, on the transformation of nature, is considerably shorter. Generally, this is a useful book, rendered accessible to the general reader by its thematic approach. Unfortunately, the lack of chronological structure of the eschatology discussed results in little feeling of a historical development of these themes. Nor are the more negative eschatologies of preexilic texts given much consideration.

BRIGHT to some extent fills this gap by looking at the election of Mount Zion and David and the importance of these themes for the future expectations in Israel. He then goes on to examine the future hope as it appears in the work of the eighth-century prophets, and he traces this tendency toward positive eschatology, particularly in terms of the theme of covenant and promise, down to the exile. Like other authors, Bright tends to interpret the term eschatology in a positive sense, although not exclusively so: in this context he mentions the eighth-century prophets who spoke of Israel standing under God's judgment but who were able also to look forward to a time in the distant future when the projected punishment would be reversed (e.g., Amos, Isaiah). Probably most scholars would disagree with such dualistic readings of the preexilic prophets and argue that the positive eschatology in these books is representative of later (exilic) additions. Nevertheless, this remains a valuable work in that it approaches the subject with some degree of balance.

HANSON is more concerned with later developments and focuses on the literature of the earliest postexilic period. Essentially, he argues that the return of the exiles from Babylon at the end of the sixth century saw a seizure of religious power by a hierocratic "priestly" party (whose ideals are reflected in biblical texts such as Haggai, Zechariah 1–8, and Ezekiel 40–48). Over time, those who were disenfranchised by this seizure of power (particularly levitical and "visionary" prophetic groups) developed an increasingly eschatological outlook, calling on God to "rend the heavens and come down." Out of this conflict arose works such as Isaiah 56–66, Zechariah 9–14, Joel, and Malachi, and the apocalyptic worldview was formed. While it is true that Hanson's thesis as to the origins of apocalypticism has been strongly criticized, his book remains a useful discussion of the complex eschatologies of this period.

The Book (or Scroll) of Esther, which is chanted in Jewish communities during the holiday of Purim, tells the story of a Jewish diaspora community under threat of persecution and of two heroes, Esther and Mordecai, who save their people from the evil vizier Haman. To some extent, this book has been a source of discomfort for Jews and Christians both because it never mentions God and because it seems to glorify violent revenge against gentiles. Nevertheless, this short biblical book has been the subject of numerous studies in recent years that point to new directions of interpretation.

BICKERMAN's book has become a classic among learned readers. He argues that there is a problem with the Book of Esther, namely, that there are two heroes: Esther and Mordecai. Bickerman posits that there were originally two independent stories, the tale of a queen who saves her people and the story of a new courtier who overthrows the wicked vizier. He writes:

Having heard two parallel tales about a Jewish courtier and a Jewish queen who struggled with and overthrew the evil minister of their sovereign, the author of the Book of Esther thought that the stories represented two complementary versions of the same events and accordingly combined them.

Bickerman further asserts that the book was composed in order to explain the holiday of Purim, which already had a life of its own. Many readers disagree with his conclusions, but Bickerman's argument is filled with insights and interesting questions that are worthy of careful consideration.

FOX's book is intended both for the specialist and non-specialist. Fox provides a fresh translation, literary commentary, and character analysis, in addition to chapters on dating, historicity, and genres. His methodology is based on "modernist" literary-critical approaches and character study. Fox's

primary aim consists “in imparting the author’s ideas about realities outside the book.” For Fox, this means an exploration of the ideologies—national, religious, and ethical—of the book. Among his questions are: “How can Jews best survive and thrive in the diaspora?”; “What is the nature of the gentile world?”; and “Where do we see God?” Fox’s analysis of Esther is based on the Hebrew (Masoretic) text; however, readers interested in the Greek versions should consult the final chapter, in which Fox summarizes his findings on this topic from his book, *The Redaction of the Books of Esther* (1991).

WALFISH addresses the role of the Book of Esther in the Jewish Middle Ages. The parallels between aspects of the Persian setting of Esther and the medieval conditions of Jewish life, such as persecutions in exile and the centrality of court life, made the Book of Esther particularly attractive to Jewish medieval exegetes. Walfish divides his study into two parts. In “The Work of the Exegete” he explores technical issues regarding sources, philology, and literary and theological issues. The second part, “The World of the Exegete,” addresses issues more accessible to the nonspecialist, namely, what the Esther commentaries reveal about Jewish medieval life with respect to Jewish-gentile relations, antisemitism, the royal court, and the institution of the monarchy. This book is of greatest value for readers interested in the history of interpretation and/or Jewish medieval life.

BRENNER’s volume is part of a series intended to amass both previously published and new critical articles on the books of the Bible from feminist-critical perspectives. Although this volume also contains studies on Judith and Susanna, it devotes the greater part of its pages to articles on the Book of Esther. The essays employ a range of methodologies and approaches, including folklore studies, literary criticism and intertextuality, visual arts, and midrash. The collection is to be commended for its diversity of approaches and its sophisticated level of discourse.

LARKIN impressively synthesizes a broad range of critical issues regarding the Book of Esther into a concise and readable introduction. She introduces the new student of Esther to the Greek versions of the book and highlights their most significant features. She provides brief introductions to early rabbinic debates regarding the authoritative status of Esther; discussions regarding the historical background of the story; the text’s relationship to the Jewish holiday of Purim; and various hypotheses regarding the literary genre of Esther. Additionally, Larkin includes an initial bibliography for the reader who wishes to explore any of these issues in more depth.

DAY’s work is less a study of the Book of Esther than it is a reevaluation of the characterization of Esther the queen. Opinions regarding Esther are quite varied: she has been characterized as flat, weak, and overly obedient; wise; tricky; a positive role model for women; and an oppressive example for women. Day reassesses these evaluations by considering not only the Hebrew (Masoretic) text but additionally the two extant Greek versions. Her analysis is based on the theory proposed in Seymour Chatman’s *Story and Discourse: Narrative Structure in Fiction and Film* (Ithaca, New York: Cornell University Press, 1978), which conceives of character as a “paradigm of traits,” that is, as a combination of traits that remain relatively stable throughout the unfolding of events. Day con-

cludes that all three versions of Esther reflect “part of a general trend during the Hellenistic period to highlight female characters in literature.” This book is also recommended for its extensive bibliography.

LEVENSON’s commentary marks an important contribution to Esther studies. A commentary on the Book of Esther must include, essentially, two commentaries, because the Greek version (used in Catholic and Orthodox Bibles) and the Hebrew version (used in Jewish and Protestant Bibles) are radically different from one another. Levenson begins his commentary with a useful bibliography and an introduction outlining the basic features and problems of Esther. The translation integrates the Hebrew and Greek versions so as to yield a maximum of text, albeit with distinct sources clearly indicated. The commentary itself focuses on literary issues, with more attention given to rabbinic interpretation than is commonly found in critical Esther commentaries. Levenson’s commentary also has the advantage of elegant prose that is clear enough for the nonspecialist.

Ethical and Devotional Literature

- Dishon, Judith, “Women in Medieval Hebrew Literature,” in *Women of the Word: Jewish Women and Jewish Writing*, edited by Judith R. Baskin, Detroit, Michigan: Wayne State University Press, 1994

The word *devotional* does not turn up in a search of the CD-ROM edition of the *Encyclopaedia Judaica*. This can be taken as an index of the rarity, or nonexistence, of the category in Judaism. A modest presence of what is recognized in other religions as devotional literature occurs in Judaism in prayerbooks as optional readings, often in the vernacular rather than Hebrew and supplied as aids to contemplation. The process of anthologizing material for contemplation within the larger anthology that is the prayerbook remains largely unstudied.

Jewish ethical literature develops from the Wisdom Literature of the Hebrew Bible, organized around Wisdom personified, who becomes identified with Torah in both Hellenistic and rabbinic thought. This early form of ethical literature is expressed in collections of rabbinic sayings or in works probing the mysteries of God and of human responses. Similar works are part of the transition to a recognized literature that provides specifications for the human road to perfection. These ethical works, also dependent on Greek models and their adaptations in Islamic philosophy, entered Judaism in the medieval period.

DAN (1993) is a solid account of various kinds of Jewish mysticism in the talmudic and early medieval periods, before the flowering of Kabbalah. The history examines a number of Jewish spiritualities as recorded in literature, including Jewish Gnosticism, the Work of the Chariot/Hekhalot, Messianism, and the constructive mysticism of a book known as *Sefer Yetsirah*. Where possible, Dan develops what is known of the accompanying devotional practices, although what was involved is not always known. Instead, accounts of the conventional ways of reporting the results of those practices are available. Dan provides a readable and authoritative background in each of the methods and the literatures that developed out of them. Dan is a distinguished scholar of Jewish mysticism, but this book is a simple semipopular narrative account with minimal annotation.

DAN (1986) is a marvelous intellectual treat of a discussion that integrates Jewish mysticism with Jewish ethical literature. It manages to be profoundly interesting without demanding that the reader be an expert in the field. The author proceeds inductively by exploring the numerous ethical works that began in the medieval period and gradually took on a concern with the divine presence. Ethics, in the literature Dan surveys, becomes a way toward God so that ethical literature becomes the devotional literature of Judaism.

There is an interesting difference in the development of a secular literature in the 12th and 13th centuries. According to DISHON, "an entirely new literary genre, the debate about female virtues and vices, emerges at this time and continues well into the 17th century." While these works may be secular, they portray women in a world shaped by religious concerns about matters of life and death. To the extent that the depiction of positive and negative characteristics is a feature, this literature could be classified together with ethical literature. The various purposes of the ethical literature discussed by Dan, however, differ from the secular literature of vices and virtues discussed by Dishon.

Women's spiritual lives in the medieval period are the subject of BASKIN. She distinguishes between the lives of Jewish women in the Islamic world and those of Jewish women in Christian Europe, as represented by the Jewish communities known as the *Hasidei Ashkenaz*, German-Jewish pietists of the 12th and 13th centuries. In the case of the Islamic world, her source is the Cairo Genizah, whereas for the European world, she exploits accounts of women and their religious practices that can be gleaned from careful reading of *Sefer Hasidim*, the chief guide to religious practice of the pietists. To a considerable extent, however, what is known of the lives of medieval Jewish women indicates that they uniformly took as exemplary the (wise) woman of valor of Proverbs 31.

Ethical Culture is a nontheistic religious movement inaugurated by Felix Adler in 1876. The movement is often viewed as a logical and natural development of classical Reform Judaism, and the leaders of Ethical Culture societies are often confused with radical reform rabbis.

KRAUT's study examines the relationship between Reform Judaism and the Ethical Culture movement of Felix Adler, whose dramatic public renunciation of Judaism shocked the Jewish community in the 1870s. From this full-scale biography there emerges the picture of a complex man. Adler was the descendant of rabbis on both paternal and maternal sides, closely related to the mystic Rabbi Nathan Adler of Frankfurt and Nathan Marcus Adler, chief rabbi of the British Empire. His father, Rabbi Samuel Adler, occupied the pulpit of the prestigious Reform congregation, Temple Emanu-El in New York City. After graduating from Columbia University, Felix was sent to Germany to study for the rabbinate with the intention of succeeding his father. At the Hochschule für die Wissenschaft des Judentums in Berlin he studied under Abraham Geiger and Herman Steinthal; while at the universities of Berlin and Heidelberg (which awarded him his doctorate) he studied Semitics, natural science, and philosophy. These studies undermined his faith in Judaism and supernatural religion. Kraut reports that Adler told one of his classmates at the Hochschule that on his return to New York he would stir things up.

When he returned in 1873, Adler was invited to preach in his father's temple, with a view to joining its ministry. In his trial sermon, he did not mention God but called for a "religion such as Judaism ever claimed to be—not by the Creed but by the Deed." When Adler was not offered the post of rabbi, he left the synagogue with a few sympathizers, and in May 1876 he founded the Society for Ethical Culture, dedicated to "the supreme importance of the ethical factor in all relations of life, personal, social, national and international, apart from any theological or metaphysical considerations."

Kraut shows that from its beginning, the movement, especially along the East Coast, drew its membership from among alienated Jews, and that throughout his life Adler was regarded as a radical, free-thinking rabbi by non-Jews. The Reform ministers are shown not to have repudiated Adler for two reasons. First, many of their congregants attended Adler's lectures and they did not want to offend those who underwrote their salaries. Second, they lacked Adler's training in religious scholarship, particularly in Bible criticism. Kraut finds only Kaufmann Kohler, the most intellectually able Reform theologian of the day, denouncing Adler as "a man who has deserted

the Jewish flag and . . . blasphemes God and Judaism.” With the passage of time, the Jewish establishment almost began to warm to Adler, and he was actively admired by many younger Reform rabbis concerned with social justice. Rabbi Stephen S. Wise, who officiated at Adler’s funeral, hailed him as “Sinaitic in the clarity and radiance of his moral insight . . . treasurer and magnifier of the Hebrew prophets.” Nevertheless, Adler remained a thorn in the side of the Reformers by exposing the patent contradiction in their position: on the one hand, they asserted Judaism’s claim of religious universalism, while on the other hand, they affirmed the particularist mission theory, namely, the notion that Israel was God’s chosen people, destined to remain separate for the sake of its priestly mission to spread its form of monotheism among the peoples of the world. Adler contended that since the Reformers regarded themselves as only a religious community, and since religious communities are held together by common religious beliefs, the Reformers should labor to bring about a fusion between themselves and liberal theists. According to Kraut, Ethical Culture pushed the Reform ideas of religious universalism and progressive human evolution to their logical conclusion.

RADEST examines from an Ethical Culture insider’s perspective the rise of the movement that Kraut approaches from a Jewish point of view. These two works, therefore, complement each other. The later chapters of his book discuss the educational, philanthropic, and social reform activities of the society.

FRIESS, Adler’s son-in-law, confidant, and disciple, provides an informative and useful portrait of Adler and his thought. He also describes the philosophy of the Ethical Culture movement, rooted in Adler’s three fundamental tenets (postulates) of Ethical Culture: “the supremacy of the moral end of life above all other ends, the sufficiency of man for the pursuit of that end, and the increase of moral truth to be expected from loyalty in this pursuit.”

BURTT devotes a chapter of his work to Adler’s “religion of duty.” Burtt highlights the main assumptions of Ethical Culture that have been subject to dispute and rejected by other religious philosophies. These disputed assumptions, dealing with man’s moral situation, his social duty, and the possibility of metaphysical knowledge, are that man needs certainty by which to live; that he is capable of attaining this certainty in the form of a supreme principle of moral action; and that this principle is that inviolable worth attaches to every human personality, who must be treated accordingly.

HIMMELFARB observes that there has been a curious lack of objective inquiry into the social history of Ethical Culture. A question that particularly interests him is why so many Jews are attracted to Ethical Culture. Himmelfarb suggests that Ethical Culture serves as a decompression chamber, permitting apostasy to Christianity without feelings of guilt or anguish. The extended “baptism” may take place over several generations. Since membership in Ethical Culture societies has remained fairly constant at about 5,000 members, and since there is no natural increase due to the low birthrate of its members, there must be an influx of new members to make up for the loss in membership due to withdrawals and attrition. Membership in an Ethical Culture society is open to all with no

formal conversion procedure, obviating the dramatic and possibly traumatic act of baptism and a Christian confession of faith. Nonpracticing Jewish parents bring up their children in Ethical Culture. Lacking any inhibitions not to do so, these children marry Episcopalians. Their children and grandchildren are likewise Christian. Here the cycle ends and a new group of ex-Jews enter the decompression chamber. This, in part, may explain the attraction of deracinated Jewish intellectuals to Ethical Culture, even though the ethical “postulates” of Felix Adler are as dogmatic and as little demonstrable as, say, the Mission theory of Reform Judaism advocated by his father.

Ethical Wills

Goldin, Judah, “Foreword,” prefaced to reprint of *Hebrew Ethical Wills*, edited by Israel Abrahams, Philadelphia: Jewish Publication Society, 1976

Riemer, Jack, “Preface,” in *Ethical Wills: A Modern Jewish Treasury*, New York: Schocken, 1983

Stampfer, Nathaniel, “Introduction,” in *Ethical Wills: A Modern Jewish Treasury*, New York: Schocken, 1983

An ethical will is a literary device for leaving a moral legacy to one’s descendants. Some scholars claim that such wills have an ancient pedigree, stemming from the oral testaments given by parents to their children as portrayed in the Bible. Ethical wills became a distinct literary genre, however, only in the European Jewish communities of the Middle Ages, taking their place alongside other ethical literary genres such as treatises, homilies, and monographs on various subjects. Unlike other types of ethical or moral literature, ethical wills are distinctive both in that they are written as lasting legacies for one’s heirs rather than as works intended for a broader public, and in that generally they deal only with the traits necessary to lead a good life and not the philosophical or theological arguments behind these norms.

GOLDIN was the first contemporary scholar to analyze medieval Jewish ethical wills seriously as a distinct genre worthy of study. His major work on the subject appears as a foreword to the 1976 reprint of the first anthology of these texts, assembled by Israel Abrahams and originally published in 1926. It is in fact this book that brought the genre to public awareness for the first time. Accordingly, Goldin’s foreword marks the beginning of serious scholarly treatment of this branch of moral literature. He notes that the writing of such wills in Judaism faces special problems. One problem is that what these texts have to say has been attempted many times before and so can rarely be new or unexpected. The other problem is that, aside from ethical wills, Jewish religious literature is replete with discussions of norms of behavior (i.e., halakhah). The ethical will thus developed, in his view, in order to stress in a new way the need to cultivate moral traits. From his perspective, it is not the content of these wills that is significant, then, but rather the

rhetoric, the way they drive home their lesson as last testaments, exploiting the moral force of the deathbed.

DAN was the next significant scholar to take up the study of the genre. In his lengthy entry in the *Encyclopaedia Judaica*, he attempts to trace the major streams of the tradition of writing ethical wills. He adds considerably to knowledge of the historical development of the genre by mentioning the major writers and works that comprise this literature. Dan also alludes to some of the literary history of the genre, including the controversy surrounding the 13th-century ethical will of Joseph ibn Kaspi and its justification of philosophical speculation, and the family tradition of writing such wills as seen in several generations of the Horowitz family in Prague in the 17th century.

RIEMER and STAMPFER produced the only other significant book on ethical wills published in the 20th century. Published in 1983, theirs, like Israel Abrahams's, is a collection of significant ethical wills that is presumed to speak largely for itself. In his preface, Riemer notes that the editors have divided their material in such a way as to reflect the different experiences of Jews in this century: faith and piety, agony and anguish, return to power and statehood, and freedom. Despite their different provenances, however, all these wills, he claims, have a similar point to make, namely to call the readers to remembrance of what the people of Israel have stood for and suffered for. Stampfer's introduction raises some of the seminal questions that he sees arising from the collection and that in turn point the way for further research.

Prior to the introduction of Christianity to Ethiopia in the third century C.E., Judaism had a considerable impact on the ancient Aksumite kingdom in that land. Biblical and Hebraic influences on early Ethiopian culture are well documented, and

to this day, the Ethiopian Orthodox Church has adhered to Old Testament practices inspired by the Hebrew Bible. Against this backdrop, it is not surprising that a group of Ethiopian Jews, known as *Beta Israel* ("The House of Israel") or *Falashas* ("Strangers"), survived in Ethiopia from antiquity until the end of the 20th century, when the great majority of them migrated to Israel.

LESLAU, one of the greatest semitic linguists, displays a particular interest in the history of the Falashas of Ethiopia. His anthology provides rare translations from such sources of Falasha sacred literature as *The Death of Moses* and the *Apocalypse of Gorgorios*. In addition, Leslau's introductory chapter details in schematic fashion the life and customs of the Falashas as he found them in Ethiopia in 1947.

SHELEMAY's approach to the Falashas contrasts with that of many of her scholarly predecessors, who emphasize the Judaic aspects of Falasha tradition. Shelemay demonstrates their Ethiopian Christian heritage through an ethno-musicological analysis of Falasha liturgy, comparing the Falashas' liturgical cycle and literature with that of the Ethiopian Orthodox Church. She concludes that the extant Falasha tradition descends from a Judaized monastic tradition that emerged in the 14th and 15th centuries and was derived from Ethiopian Christian monks.

KAPLAN traces the history of the Beta Israel in Ethiopia. He mentions the existence of Jews in the early Aksumite kingdom, but he cannot identify any links between this early group of Jews and the *aybud* (Jews, Judaizers) who emerged in Ethiopia sometime in the 14th century and became known as the Falashas. The author places this study of the Falashas in an Ethiopian context. He demonstrates that they cannot be a "lost tribe of Israel"; rather, he considers them to be an ethnic group that adopted its liturgy and specialized economy between the 14th and 16th centuries. He chronicles the development of this low-status group through the beginning of the 20th century, examining, in particular, the effect of the European missionaries and the impact of the Great Famine of 1888 through 1892 on the history of Beta Israel Judaism in Ethiopia.

QUIRIN's book is similar in scope to that of Kaplan's, but Quirin relies extensively on evidence from oral traditions to recount the development of the Beta Israel in Ethiopia from ancient times. Through careful historical reconstruction, the author demonstrates how the Jews of Ethiopia struggled to create and maintain their religious and ethnic identity in the face of external pressures, such as the loss of political independence in the 17th century and the arrival of Protestant missionaries in the 19th and 20th centuries. Quirin claims that the Beta Israel's strong sense of religious identity and their self-perception as a separatist group (together with their semi-independent material base as artisans) contributed to their emerging caste relationship with the dominant community, which prevented their assimilation in Ethiopian society.

PARFITT and TREVISAN SEMI's collection of articles, which arose out of the Society for the Study of Ethiopian Jewry (SOSTEJE) conference in Jerusalem in 1995, concentrates on the processes by which late 20th-century Ethiopian Jewish identity evolved. A group of original essays are devoted to documenting the lives of some of the Ethiopian Jews, such as Solomon Isaac and Hizkiah Finkas, whom Jacques Faitlovitch,

a 20th-century Polish Jewish “missionary,” brought out of Ethiopia to be educated in Europe. Other essays are devoted to describing the changing identity of Ethiopian Jews in Israel, in the Israel Defense Force, in ritual situations, and in medical contexts.

WEIL's volume presents original contributions by eight leading scholars about the situation of the Ethiopian Jews both in Ethiopia and in Israel. Richard Pankhurst's essay, “The Beta Esra'el (Falashas) in their Ethiopian Setting,” considers the similarities between Ethiopian Christianity and the Judaism practiced by the Beta Israel and argues that Westerners have distorted perceptions of Beta Israel religion. By contrast, an essay by Rosen refers to Ethiopian Jews in their Israeli setting, citing his own work as an Israeli government anthropologist to demonstrate how a better understanding of Ethiopian culture can help resolve practical questions the immigrants face in Israel. In her “Introduction: Ethiopian Jews in the Lighthouse,” Weil contends that

While [this volume is] tracing the emergence of a new identity for the Beta Israel as Ethiopian Jews in Israel, the newly-formed ethnic group could develop as a twilight group, straddling the boundaries of dark and light, black and white.

Survey results presented by Esther Benita and Gilah Noam show that an immigrant's length of time in Israel has been one of the factors that positively influences his/her employment and social integration opportunities.

Jewish teaching in regard to mercy killing is based on the principle of the infinite value of human life. Hence, there is an obligation to provide all necessary care to patients even if they have only a few moments left to live. One is prohibited from doing anything that hastens death. Based on many sources, JAKOBOVITS, the father of modern Jewish medical ethics, concludes that any form of active euthanasia is strictly

prohibited and condemned as plain murder; anyone who kills a dying person is liable to the death penalty as a common murderer. At the same time, he argues, Jewish law sanctions the withdrawal of any factor—whether extraneous to the patient himself or not—that may artificially delay the patient's demise in the final phase. Jakobovits is quick to point out, however, that all the rabbinic sources refer to a *goses*—an individual in whom death is believed to be imminent—as one whose life expectancy is three days or less. Thus, passive euthanasia for a patient who may yet live for weeks or months may not necessarily be condoned. Furthermore, in the case of an incurably ill person in severe pain, agony, or distress, the removal of an impediment to death, although permitted in Jewish law, may not be analogous to withholding the medical therapy that is perhaps sustaining the patient's life, albeit unnaturally. The impediments to death spoken of in codified Jewish law, whether far removed from the patient (as exemplified by the noise of wood chopping) or in physical contact with him (such as the case of salt on the patient's tongue), do not constitute any part of the therapeutic methods or equipment employed in the medical management of the case. For this reason, these impediments may be removed. Furthermore, in Jakobovits's view, it may be permissible to discontinue the use of instruments and machinery specifically designed and used in the treatment of incurably ill patients when it is certain that doing so will shorten the act of dying rather than interrupt life.

ABRAHAM takes the position that nothing may be done to a dying person that might hasten death. Since there are rare cases in which critically ill patients, for whom all hope has been abandoned, do nevertheless recover, it is the duty of the physician to continue treating a dying patient until the very end. This is equally valid if treatment may prolong life for only a short time, but not if the treatment would add suffering to a patient who has reached the natural end of the disease. Abraham further states that one may not hasten death, even that of a patient who is suffering greatly and for whom there is no hope of a cure, even if the patient asks that this be done. To shorten the life of a person, even a life of agony and suffering, is forbidden. To do so, albeit for reasons of compassion and even at the request of the patient, is equivalent to murder and is punishable accordingly. Under no circumstances does Jewish law permit escape from suffering at the price of human life. The value of life is infinite, and therefore the value of every part of it, however brief, is also infinite. Abraham concludes that denying the value of human life because of the nearness of death destroys the absolute value of all life and gives it instead a relative value only. Willingness to shorten, by however little, the life of a dying patient on the grounds that it is of no further value destroys the infinite value of all human life.

HERRING's approach to the subject is novel in its format in that he presents a brief introduction, a case illustration, sources, and a discussion of those sources in relation to the case. He has researched the contemporary halakhic literature and culled the most relevant and authoritative material bearing on euthanasia and related issues. He ably digests, summarizes, and popularizes his material so that it is accessible to the interested non-specialist. The unusual format allows the reader to feel a sense of participation in the process of halakhic reasoning.

ROSNER draws heavily on the responsa of the late Rabbi Moshe Feinstein as well as classic sources in his exposition of the Jewish attitude toward euthanasia. He maintains that Jewish law requires the physician to do everything in his power to prolong life but prohibits the use of measures that prolong the act of dying. The value attached to human life in Judaism, he adds, is far greater than that in the Christian or Anglo-American common law traditions. To save a life, all Jewish law is automatically suspended, short of idolatry, forbidden sexual relations, and murder. Euthanasia, says Rosner, is opposed without qualification in Judaism, which condemns as sheer murder any active or deliberate hastening of death, done with or without the patient's consent. He notes that some rabbinic views do not allow any relaxation of efforts, however artificial and ultimately hopeless they are, to prolong life. Others, however, do not require the physician to resort to "heroic" methods, but sanction the omission of machines and artificial life-support systems that only serve to draw out the dying patient's agony, provided that basic care (such as food and good nursing) is provided.

Rosner stresses that the physician is given divine license to heal but not to hasten death. When a physician has nothing further to offer a patient medically or surgically, the physician's license to heal ends and he becomes no different from a lay person. Every human being is morally expected to help another human in distress; a dying patient is no exception to this entitlement to help. The physician, family, friends, nurses, social workers, and other individuals close to the dying patient are all obligated to provide supportive—including psychosocial and emotional—care until the very end. Fluids and nutrition are part and parcel of that supportive care, no different from washing, turning, talking to, singing with, reading to, or just listening to the dying patient. There are times when specific medical and/or surgical therapy is no longer indicated, appropriate, or desirable for an irreversibly ill, dying patient. However, under no circumstances can general supportive measures be abandoned to hasten the patient's demise.

The Babylonian exilarchate, an office of Jewish authority held throughout late antiquity and the Middle Ages by a dynasty that traced itself to King David, was, along with the Yeshivot of Sura and Pumbedita, one of the major institutions of Jewish leadership in the geonic period. However, unlike the Babylonian academies, which were perceived as primarily religious institutions, the exilarchate was generally considered an institution of temporal authority. This perception left its mark in the sources available to historians and has had repercussions in secondary literature as well. While relatively abundant primary sources pertaining to at least certain aspects of the gaonate have survived—largely as a function of their continuing relevance to the development of halakhah—very little remains from the exilarchate itself. In fact, a large portion of the available information comes from geonic sources, which, far from being objective, are mainly interested in the occasions on which the exilarchate came into direct conflict with the academies. Two additional sources have helped to correct the skewed picture that emerges from the geonic sources: references to the exilarchate in Arabic literature and documents from the Cairo Genizah. For the most part, however, the history of the exilarchate has been told under the general rubric of geonic history, the dynamic relationship between it and the academies determining its place in scholarship.

MANN's work is based primarily on documents from the Cairo Genizah, a resource that has made significant contributions to practically every aspect of medieval Jewish history. Above all, Mann demonstrates that, despite its relatively weakened stature, the exilarchate continued to be a profoundly important force in the political life of medieval Jewry long after its supposed demise in the middle of the 11th century. Thus he devotes particular attention to the exilarchs who functioned in subsequent generations, as well as to the status and power attained by members of the exilarchal dynasty outside Babylonia. Illustrating a similar point, volume two of *Texts and Studies* contains considerable information on a particular branch of the exilarchal dynasty, the descendants of Anan b. David, who functioned for centuries as leaders within the Karaite community.

GOODE's article, while somewhat outdated, provides a useful chronological history of the exilarchate during the Islamic period. His account, essentially a synthesis of information gathered from medieval chronicles and to a lesser extent from Genizah documents, focuses on the disputes between exilarchs and geonim. An important aspect of this article is its periodization: by continuing his narrative down to the 14th century, Goode argues compellingly for the importance of tracing the institution's history even in its decline. The chronological chart at the end of Goode's article should be corrected on the basis of that given by Gil.

NEUSNER deals with the origins of the exilarchate as part of his general study of Babylonian Jewry in late antiquity. Through careful analysis of numerous references to the exilarchate in rabbinic literature, he attempts to reconstruct the social, political, and demographic factors that combined to

bring about its establishment sometime around the end of the first century C.E. Following a familiar typology, Neusner sees the emergence of the exilarchate as the product of larger political forces acting outside the Jewish community. Thus, in his view, the exilarchate was the result of “a successful reorganization of Jewish affairs” by the Parthians, who were concerned to secure the loyalty of the potentially volatile Jewish community within Parthia’s borders. Neusner’s sensitivity to external influences is also evident in his analysis of the fate of the exilarchate under the radically different Sasanian dynasty. His analysis of the “uneasy alliance” between rabbis and exilarchs in the Talmud provides an important contextual backdrop to the conflicts that erupted between geonim and exilarchs during the medieval period.

GIL focuses on the exilarchate between the seventh and 11th centuries. He uses a variety of materials—medieval Hebrew chronicles, Arabic literature, and Genizah documents—to explore the sources of the exilarchate’s authority, its functions, and its status in the Jewish and Muslim communities. Gil also sets out to clarify the thorny chronology of exilarchs in this period, a tedious but crucial first stage for serious historical research. A comparison of the articles by Gil and Goode reveals how much stands to be gained when Arabic sources and Genizah materials are incorporated into the study of the Jewish past. The article ends with a useful table of exilarchs that serves as a corrective to that given by Goode.

WASSERSTROM’s book, unlike the other works discussed in this article, does not deal with the history of the exilarchate per se but instead with its function as a symbol within medieval cultural discourse. *Between Muslim and Jew* explores the complex synergistic relationship between Islam and Judaism in the Middle Ages. In particular, Wasserstrom is concerned with a process whereby each of the two sought to define and legitimate itself through its constructed image of the other. In a chapter devoted to the symbiosis between Judaism and Shi’ism, Wasserstrom considers a number of stories about the exilarchate that appear in Shi’ite texts. He shows that the figure of the exilarch actually plays a part in the polemical struggle between Sunnis and Shi’ites. Indirectly, Wasserstrom’s chapter illustrates the unique popularity of and respect shown to the exilarchate in Muslim society.

BRODY’s work, although devoted primarily to the Babylonian geonim, contains an important chapter in which the author dwells on the sources of the exilarchate’s authority, its rights and responsibilities, and, in particular, its tense relationship with the gaonate during the Islamic period. Brody’s concern is to flesh out the historical setting in which the geonim functioned, and as a consequence his treatment naturally focuses on the interaction between exilarchs and geonim. The reader will note that the delicate balance of power between exilarchs and rabbis depicted by Neusner for the pre-Islamic period continued, *mutatis mutandis*, in the competition for authority between exilarchs and geonim here described by Brody.

Inasmuch as the Book of Genesis recounts the origins and development of a family and its covenant relationship with God, the Book of Exodus describes the birth of a new people and their destiny *vis-à-vis* God. Exodus introduces the concept of a God who operates through history and the notion of a covenant expressed through law and sacred spaces and times. The Book of Exodus begins with the enslavement of the Israelites by the Egyptians and God’s saving acts through his mediator, Moses, and concludes at Mount Sinai with the revelation of God and stipulation of the terms of the covenant.

CASSUTO’s commentary, originally published in Hebrew in 1951 around the time of his death, reflects his encyclopedic knowledge and extreme sensitivity to the nuances of the Hebrew text. Rejecting the historical-critical approaches of his contemporaries for whom “the study of sources takes precedence over that of the book as we have it,” Cassuto presents an exegesis of the received Hebrew (Masoretic) text whose primary aim lies in “elucidating and evaluating the work itself.” Cassuto asserts that the Book of Exodus is based on an “ancient heroic poem,” rather than the result of a weaving of separate sources. He does, however, concede in subtle ways to the source critics on a number of passages. Cassuto uses the format of a running commentary with the text of Exodus worked into his readings, which helps to make his commentary accessible to the nonspecialist. The greatest strengths of Cassuto’s book are his insights into literary structure and ancient Hebrew literary techniques, such as the use of repetitions, the sequencing of sections, and the symbolism of numbers, particularly the use of the number seven as an organizing principle.

GREENBERG’s book is the first volume of a planned multi-part Exodus commentary for the Heritage of Biblical Israel series, the subsequent volumes of which were never published;

consequently, Greenberg's analysis of Exodus exists only through the narratives of the plagues. Greenberg applies a literary analysis to Exodus based upon the principle that a book is essentially "an organization of literary units meant to convey a complex ideational message." By ideational message he refers to the meaning of a book as it is reflected through the component parts into a coherent whole. His commentary operates on three levels: he analyzes the Book of Exodus as "an element in the Torah book"; he studies smaller literary units looking for themes and common structures; and he discusses the redactor's contributions in organizing the individual units into a coherent book. Greenberg shows how the Book of Exodus is not about conveying "the past historical but present affective," so that each generation of readers relives the saving acts of God. This short work is highly sophisticated yet readable and informative for the novice.

CHILDS's book may well be the definitive commentary on Exodus at present. Childs organizes his commentary into thematic units. Each unit contains a bibliography, translation, textual and philological notes, literary analysis, thematic interpretation, Hebrew Bible and New Testament contextual readings, and a history of exegesis. Childs's method is canonical; that is, he approaches the text as theological and canonical literature. Although he acknowledges that Exodus has a compositional history, he is interested in the final product that has shaped religious communities for generations. Unlike other interpreters who focus on the final product, Childs submits the text to a rigorous textual, philological, and source-critical analysis. Despite Childs's self-conscious reading as a Christian, Jewish readers can find a wealth of helpful information and insights into the text, particularly in his sections on thematic interpretation and the history of exegesis.

Sarna has published two books on Exodus that may be read concurrently. SARNA (1986) is intended for the nonspecialist curious about the historical and cultural background of Exodus. The book is highly readable, contains a helpful bibliography, and is filled with interesting information about the world of the ancient Israelites. Sarna has been criticized for overstating his case for the historicity of the exodus event when, for example, he discusses the atmospheric conditions at Mount Sinai and the geological background of the plagues. Readers should also be aware of Sarna's polemical attitude toward the uniqueness of ancient Israel in the ancient Near Eastern world. SARNA (1991), a contribution to the Jewish Publication Society's Torah Commentary series of which he is the general editor, is aimed at a popular Jewish audience and is particularly valuable for the novice. It is user-friendly, scholarly but not technical, and includes many gleanings from rabbinic and medieval Jewish commentators. His book also introduces background information from ancient Israel's surrounding cultures in a clear and effective manner. Finally, the excurses at the end of the book provide excellent brief summaries of various themes and topics that emerge from the Book of Exodus.

JACOB's English commentary is based on his unpublished German manuscript, which was compiled during World War II. His son Ernest spent several years revising the book, and it was finally translated and edited by his grandson Walter. In some ways, Jacob paved the way for scholars such as Umberto

Cassuto and Yehezkel Kaufmann in his repudiation of the historical-critical approaches of his contemporaries. Unfortunately, he gained many opponents as a result of the scathingly adversarial attitude reflected in his writing. Nonetheless, Jacob's work is intelligent and creative. The commentary is filled with traditional Jewish learning presented in a manner accessible to the nonspecialist. It also provides a window into early 20th-century pre-critical Jewish scholarship.

ZAKOVITCH's short book contains a number of studies on the Exodus motif throughout the Hebrew Bible. He is interested in various biblical viewpoints regarding the Exodus story. He addresses, for example, the following questions: Why were the Israelites enslaved in Egypt? How do the biblical books make reference to the Exodus account? What roles did the Exodus story play for ancient Israelites? Although not all scholars agree with his conclusions, this book should be of considerable interest to those who are looking for echoes of the Exodus motif throughout the Bible.

The Book of Ezekiel is among the most provocative books in the Hebrew Bible. From grandiose divine visions to rational discourse and argumentation, from dramatic and unusual actions to a detailed utopian blueprint—all these seeming contradictions have evoked heated debates regarding authorship, dating, and provenance. The personality of the prophet also has intrigued readers for centuries and has led to a range of speculation concerning his prophetic experiences and state of mind.

TORREY wrote in the heyday of scholarly debate regarding the dating of the Book of Ezekiel. Based on a study of the language and references in the Book of Ezekiel, he maintains that Ezekiel was a pseudepigraph from the period of King Manasseh, reedited around the period of Alexander the Great. According to Torrey's thesis, the biblical book was given its Babylonian setting in order to promote what Torrey believed was the Chronicler's myth of an exile and restoration. Included in the 1970 reprint are refutations of Torrey's claims by Shalom Spiegel and a significant introduction by Moshe Greenberg. A late date for Ezekiel has been thoroughly debunked since Torrey's time, yet this work still marks an important chapter in Ezekiel scholarship.

ZIMMERLI's commentaries (1979 and 1983) provide the basis from which most other recent Ezekiel commentaries derive, and they are indispensable for the serious student of Ezekiel. The English editions are based on his German commentary, published in fascicles from 1955 to 1968. The layout of the English commentaries, determined by the editors of the Hermeneia series, begin with an extensive bibliography and introduction. The commentary on each unit is preceded by a translation side by side with extensive textual and philological notes. Following the translation and notes come sections on form, setting, interpretation, and aim. Zimmerli's work marks a change from earlier examinations of Ezekiel in that he redirects the focus of Ezekiel studies from dating and provenance to a form-critical approach. He devotes the greater part of his introduction to forms of prophetic speech, which lead him to conclude that "Undoubtedly the present Book of Ezekiel stems from the hand of the 'school of Ezekiel.'" Zimmerli's focus on textual notes and on untangling the various editorial levels of the text, while valuable and of the essence to specialists, leads to an atomistic reading in which the text in its final form receives minimal attention.

GREENBERG's recent commentaries (1983 and 1997) are having an enormous impact on the direction of Ezekiel studies. Apart from the bold new approaches to which he subjects the text, Greenberg sets a standard for close readings of biblical literature. His commentaries are original, insightful, and well documented. He presents a "holistic" explication of the Book of Ezekiel, arguing that almost the entire book can be attributed to a prophet named Ezekiel who prophesied in Babylonia in the periods immediately preceding and following the capture and destruction of Jerusalem. In his introduction,

he offers an incisive critique of critical-historical methodologies that slice texts into various layers based primarily upon modern assumptions of what constitutes good literature. Rejecting the position of an Ezekiel school, Greenberg proposes that the Book of Ezekiel "is the product of art and intelligent design" and that it reflects the work of "an individual mind of powerful and passionate proclivities." Whether or not one agrees that the entirety of the book is the direct product of Ezekiel himself, Greenberg's cautions regarding the evaluation of ancient literature through the eyes of a modern reader deserve serious consideration.

KLEIN's book, part of a series on biblical personalities, is nonetheless "not a biography but a literary and theological analysis of a biblical document" that "attempts to take seriously the present shape of the book, to decipher its imagery, to comment on its technical vocabulary, and to relate its several parts to one another." Klein stands between Zimmerli (with whom he studied) and Greenberg in that he supports theories of multiple redactions in composition but is most interested in the text in its final form. The book is organized around themes in the Book of Ezekiel such as the corruption of the Jerusalem Temple and its consequences, retribution and repentance, and visions of the future restoration of the people on its own land. This book is one of the few critical works on Ezekiel that is accessible to the nonspecialist searching for a serious engagement with the material. It is agreeably written and contains helpful summaries at the conclusion of each section.

McKEATING's brief book is a contribution to the Old Testament Guides, a series intended to provide the reader with "a short volume, concise and comprehensive, manageable and affordable, on the biblical book he or she is studying." Aside from some novel discussion of the last ten chapters of Ezekiel, McKeating concentrates more on a review of prior Ezekiel research and Ezekiel's place within prophetic traditions. He rejects the holistic approach of Greenberg in favor of a more historical-critical approach. This book is most valuable for the reader who seeks information on the history of scholarship, dating, composition, and redaction rather than on the literary and theological merits of the book itself.

HALPERIN's book is an interdisciplinary work that draws upon classic Freudian psychoanalysis to understand the eccentricities in the Book of Ezekiel. Salvaging and refining the initial arguments of Edwin C. Broome ("Ezekiel's Abnormal Personality," *Journal of Biblical Literature* 65, 1946), Halperin argues that problems in the text are best explained by positing that Ezekiel suffered from a mental disorder based upon childhood abuse by his parents resulting in "a frantic loathing of female sexuality." The first part of the book contains a refutation of Broome's critics and an assertion of the validity of psychoanalytic readings of biblical characters. Halperin's intent is "to make a case for the psychoanalytic perceptions of human nature and for its value as a tool for understanding literary creations of the remote past." His work raises crucial methodological questions that he does not adequately address: To what extent does a text reveal the internal life of its author? What is the place of a consideration of social contexts and literary techniques in a psychological approach?

BLOCK's commentary, a recent addition to the New International Commentary on the Old Testament series, is strongly influenced by Greenberg's work and Ellen Davies's claim that Ezekiel was a writing prophet, although Block writes that this "does not rule out editorial clarifications by later hands." The greatest strength of this commentary is its readability and its up-to-date bibliography. Block's introduction provides a lucid summary of issues such as historical and social background, literary style, and the theological claims of Ezekiel. Each section of the commentary has a discussion of style and structure, a translation and commentary, and an exposition of theological implications. The commentary is generally accessible to the nonspecialist, with technical language kept to a minimum.

The books of Ezra and Nehemiah were originally considered one book, and they were probably produced by the same circle as the books of Chronicles, in about 400 B.C.E. There are many unresolved questions about the historical reliability of these books, including issues as basic as the existence and relative chronologies of the figures of Ezra and Nehemiah.

In a work intended for both the scholar and the lay reader, MYERS includes an introduction to the books of Ezra and Nehemiah, his own translation of the texts, notes on the Hebrew originals, and a commentary on each chapter. He takes a conservative approach to the text, but he also identifies issues of scholarly contention. Myers divides the two books in roughly the following way: a history (Ezra 1–6), an Ezra memoir (Ezra 7–10, Nehemiah 8–10), and a Nehemiah memoir (Nehemiah 1–7, 12–13), while Nehemiah 11 remains obscure. Myers asserts that the author of the first six chapters of Ezra was Ezra himself, who used available material to report accurately the history of the period. Myers suggests Ezra came to Judea after Nehemiah, in 398 B.C.E., the seventh year of the reign of Artaxerxes II, and not (as the biblical text implies) in 458 B.C.E., the seventh year of the reign of Artaxerxes I. His orders were to investigate the religious sit-

uation in Judea, bring contributions for the Temple, appoint magistrates, and teach the law. Myers notes a contradiction between Ezra's orders in the so-called rescript of Artaxerxes (Ezra 7:11–26) and his actions, the most famous of which was requiring all Israelite men to divorce their gentile wives. Unlike Ezra, Nehemiah was sent by Artaxerxes I as governor of Judea. His chief mission was to provide for the security of Jerusalem. Myers believes that Nehemiah replaced Sanballat, whom the biblical text portrays as his enemy.

In another commentary intended for scholarly and lay audiences alike, WILLIAMSON presents an introductory essay, his own translation of the text, notes on the Hebrew, and an extended analysis of each chapter. Like Myers, he asserts that the two books are structured in three parts, but he is not as conservative as Myers and does not assume Ezra to be the author of the first section. Williamson argues that knowledge of the operation of the Temple in the author's own day was enough to enable him to construct his narrative. He also disagrees with Myers about the timing of Ezra and Nehemiah's activities, concluding that Ezra returned (or was sent) from Babylon to Judea during the seventh year of the reign of Artaxerxes I and so preceded Nehemiah, but both authors do agree that the rescript of Artaxerxes is an authentic text that responds to a request from a Jew by incorporating the language of that request. Like Myers, Williamson notes the lack of agreement between Ezra's actions and his orders, and both commentaries conclude that Nehemiah was sent to be governor of Judea, succeeding Sanballat.

BLENKINSOPP's excellent commentary is written for both scholar and lay readers. Blenkinsopp assumes that Ezra preceded Nehemiah, but he differs from previous commentators by suggesting that the two men were active concurrently. Blenkinsopp agrees with Myers and Williamson that the rescript of Artaxerxes I is genuine. He compares Ezra's mission to that of Udjahorresnet in Egypt, arguing that Ezra was supposed to restore the Jerusalem Temple and endow the administration of Jewish law with the authority of the Persian emperor. Diverging from the opinions of previous commentators, Blenkinsopp argues that references to the punishments of flogging and confiscation of property show that the Persian penal code was invoked for infractions of Jewish religious law. Blenkinsopp follows the conventional wisdom asserting that Nehemiah was sent out to be governor of Judea, which was surrounded on all sides by hostile forces. He posits, however, that Tobiah was governor of Ammon, and he theorizes that Sanballat, Tobiah, Gashmu, and Nehemiah were all equal in status.

HOGLUND's important and original monograph employs a sociopolitical approach to the biblical text, based on work by S. Eisenstadt, to argue that the missions of both Ezra and Nehemiah should be seen as part of the overall imperial policy. For example, the author asserts that the prohibition against intermarriage instituted by both these men was not peculiar to their religious sensibilities as Jews; rather, the edict was ordered by the emperor and served the imperial purpose. Hoglund agrees with Blenkinsopp that Ezra's mission was comparable to Udjahorresnet's, and he proposes that both the transformation of the legal system and the imperial funding of scribal institutions in Egypt demonstrate how the empire

established control over subject territories through laws and records. He further contends that Nehemiah's assignments to build the city's wall and the *birah*, or citadel, served imperial objectives. The *birah* was manned by imperial troops and located adjacent to the Temple. Its purpose was not only to protect a vulnerable portion of the city from outside attack but also to concentrate an imperial force where it would be most noticed by the city's inhabitants.

In his monograph, GRABBE presents a far more skeptical view of the historical authenticity of both Ezra and Nehemiah than previous writers have suggested. He does not view Ezra as a historical figure, and he argues that the rescript of Artaxerxes employs more recent forms of the Aramaic language than would be in evidence if it were a genuine source. He also charges that the huge sums of money that Ezra supposedly brought from Persia are preposterous; ridicules the story that Ezra did not request a guard as far-fetched; and asserts that the claim that Ezra had to resort to tearing his hair to enforce his legislation belies the fact a man in his position would have the power to appoint magistrates. According to Grabbe, Nehemiah was paranoid and the opposition to him was all in his head. Grabbe's nontraditional work certainly bears consideration.

The important book edited by DAVIES includes 11 socio-political essays about the books of Ezra and Nehemiah. Arguing that "Israel" is the subject, but not the author, of these books (since he views Israel as a literary construction rather than a historical phenomenon), Davies instructed each contributor to search the biblical text for evidence about the individuals and society that produced the works, as well as the audiences and the purposes of the literature. Each of the essayists succeeds in taking this approach to the text. In their contributions, Joseph Blenkinsopp and Richard Horsley argue that the Achaemenids (Persians) supported temples because

temples were wealthy institutions with landholdings, work forces, capital, and the corresponding ability to function as banks. Furthermore, the temples' priesthoods, under the supervision of imperial officers, ensured that tribute went to the empire. Peter Ross Bedford cautions against comparing the Jerusalem Temple to other temples in the Persian empire, arguing that it was different because it did not own land and could not have acted as a bank. He does not offer data to support this claim, however. Kenneth Hoglund, using archaeological data, argues that not all of the Jews returning from Babylon went back to their original landholdings; instead, the number of settlements in Judea exceeded the number found prior to the exile. According to Hoglund, this fact implies that the empire instituted a policy of rural development in Judea in order to increase the flow of agricultural goods to the central government. He does not discuss, however, why the number of settlements in Samaria should have decreased under such an agricultural policy. Daniel L. Smith uses a comparative approach to suggest that the Israelite exiles in Babylon created a separate community with an independent ethos, occupied with self-preservation. In an original study, John M. Halligan contends that if the economy had deteriorated to the point described in Nehemiah 5:1–5, then it could not have been restored by forgiving debt and returning all forms of security, for the removal of the credit system would jeopardize all dependent commercial transactions and cause commerce to come to a standstill. Despite the apparent success of the essayists in fulfilling the assignment given to them by Davies, David Jobling complains in the closing essay that these articles do not demonstrate that a gap existed between the real world of the Second Temple and the representation of that era in the biblical texts.

Scholars often define Judaism as featuring an “orthoprax” rather than an “orthodox” tradition, meaning that action defines Jewish obligations rather than belief. From at least the time of Philo of Alexandria in the Hellenistic period, however, Jewish thinkers have struggled with the faith that animates religious practice. Sometimes this concern has sought to understand the basic creeds or fundamental principles of Jewish belief; at other times the inner substance of religious sentiment is emphasized. Perhaps the most influential classical statement on Jewish faith was that of Moses Maimonides. In his commentary on the Mishnah, he enumerates 13 basic articles of faith that Jews must believe, and scholarship on Jewish faith often takes these as its point of departure.

BUBER introduces a classic distinction between what he thinks of as Judaic “faith” (trust in and reliance on God alone) and Hellenistic “belief” (acceptance of a particular doctrine). He argues that earliest Christianity continued the biblical tradition of faith as reliance upon the deity. He identifies Jesus’ religious perspective with that of the Hebrew prophets and

later Judaism. It was Paul, Buber contends, who introduced the nonbiblical idea of faith as belief or acceptance of a set of dogmas. Many contemporary scholars criticize this overly stark dichotomy. The distinction between Jewish and Christian faith is misleading and misrepresents the variety in both traditions.

JACOBS (1968) explores the dimensions of faith as a religious impulse. This book approaches the subject with sophistication, recognizing the modern debate over faith and the attacks on it from Marxist and Freudian analysis. Jewish faith is explained against the backdrop of key thinkers on religion such as Søren Kierkegaard and William James, as well as modern skepticism. Using copious examples from Jewish philosophers such as Maimonides, mystics such as Polish hasidim, and both biblical and rabbinic sources, the book explains how Jews have understood faith as a type of trust and as a basis for action and explores the relationship of faith to reason.

JACOBS (1964) takes a more historical approach. The book is organized around Maimonides’ 13 articles of faith. Jewish philosophers such as Saadia, Maimonides, and Judah Halevi are discussed in connection with each article of this creed. The book’s development, however, is more general than strictly philosophical. Discussion of philosophical faith is augmented with explanations of how Jewish mystics argue for faith from experience rather than from logic. Each chapter also takes up modern challenges to Jewish belief: Paul Tillich, Friedrich Nietzsche, Immanuel Kant, Ludwig Feuerbach, and modern biblical criticism figure in these discussions. Jacobs clearly seeks to defend these principles and establish their tenability for modern Jews based on the arguments developed in the past.

BLEICH provides translations of the major Jewish thinkers discussed by Jacobs. Like Jacobs, he organizes his work according to the 13 articles of faith of Maimonides. The book begins with a general discussion on articles of belief, including formulations not only by Maimonides but also by Joseph Albo and Isaac Abravanel. Bleich juxtaposes texts that often do not agree with one another or, at least, take different perspectives on the same article of faith. He shows that Jewish thinkers shared certain common themes or central concepts but also that they did not always present them in the same way. Students without knowledge of Hebrew will find these translations a useful guide to debates about faith within Jewish medieval thought.

GURARY retains the structural framework of the Maimonidean principles of faith, but these become a springboard

from which he launches into a discussion of hasidic mystical belief. The book mixes reflections on classic texts from rabbinic literature, medieval writings, 18th- and 19th-century hasidic writings, and modern concerns. The author has a devotional and practical purpose in mind. His book seeks to evoke a response of faith from its intended audience. It goes beyond expository description to defend and advocate the faith it expounds. Some readers may be inconvenienced by the continual use of Hebrew terms, the meaning of which the author makes no attempt to explain.

LAMM offers a variety of perspectives from which to understand Jewish faith. The book begins with a theoretical reflection on the place of faith and doubt in Judaism. It suggests two major ways Judaism has responded to doubt—either with the advocacy of unquestioning trust and acceptance or with rationalistic argument. Lamm explicitly rejects Buber's view of two types of faith and substitutes a threefold category of cognitive, affective, and functional faith. The various studies included in this anthology of essays fall under one or another of these categories. Several essays focus on ethics, or functional faith, examining the moral revolution, ecology, and privacy in Jewish law and theology. Other essays examine cognitive issues such as the meaning of "synthesis," or the validity of Jewish monism, or the position of the human being in the cosmos. Affective faith receives treatment in an essay on scholarship and piety, which touches upon themes that Lamm examines in great detail in other works, themes associated with the Musar movement in Judaism.

The tension between faith and reason, between affective and cognitive faith, upon which Lamm touches, provides the unifying theme for BERGMAN. Modern Jewish thought, this book argues, moves between the poles of affective Judaic faith represented by thinkers such as Buber (but also Franz Rosenzweig and Abraham Isaac Kook) and cognitive faith defended by Hermann Cohen, A.D. Gordon, and Judah L. Magnes. The former group responds to modernity by deepening the affective elements in Judaism. The latter seek to strengthen arguments for Judaism's continuing validity. Zionists such as Gordon and Magnes confronted science as a challenge to religion and developed a rational faith despite the realities of modernity.

BOROWITZ focuses on the challenges of faith confronting modern liberal American Jews. The book raises questions about faith after the Holocaust, the meaning of revelation in a secular world, the viability of faith in the university, and the necessity for cooperation between all besieged communities of faith—in particular between Jews and Christians. Borowitz offers nontechnical discussions that are generally more accessible to the uninitiated reader than the other writings here discussed.

The family has been the central institution in all Jewish societies, and its particular structures, transformations, and tensions in various eras of the Jewish past are of increasing interest to historians and literary critics. Moreover, the Jewish family is also of significant contemporary concern to social scientists and communal leaders because its ability to withstand and adapt to the pressures and challenges of the present will determine Jewish survival in the future.

BERMANT provides a beautifully illustrated survey of the Jewish family through the ages intended for the general reader; the book's title, *The Walled Garden*, evokes the metaphor of the family as an enclosed and secure space but also raises the specter of the Jewish family's breakdown and collapse as a result of modern social change. Bermant believes the survival of the family is essential to the endurance of Judaism because the two are inextricably linked through faith and ceremony. His accessible text concentrates on the traditional roles of various family members and the rituals that have bound families together throughout Jewish history.

The books by Perdue and Meyers and by Cohen are both scholarly collections investigating the Jewish family in particular eras. PERDUE and MEYERS's volume contains essays by well-known scholars of the Hebrew Bible that discuss the family and family formation in early Israel, in the First Temple period (tenth to sixth century B.C.E.), and in the time of the Second Temple (fifth century B.C.E. to first century C.E.). A final chapter by Perdue draws theological and ethical implications from the biblical context for the family today.

The essays in COHEN's anthology concentrate on the Jewish family in late antiquity (first to sixth century C.E.) as portrayed in rabbinic texts, material culture, and in the Greek writings of the Hellenistic Jewish diaspora. Topics considered include parents and children in several different Jewish contexts—including a discussion of Jewish mothers and daughters in the Greco-Roman world, an examination of slavery in the ancient Jewish family, and a comparative study of Greek families in the same time period.

COHEN and HYMAN have collected well-documented essays that break ground in the scholarly study of the Jewish family. Chapters in the first part of the volume include studies of traditional Jewish family life in Eastern Europe and in North Africa; discussions of the family's transition to modernity both in Germany and during the Eastern European Jewish Enlightenment, and also as a result of emigration from Morocco to Israel; and images of the family and family members in various Jewish literary traditions. The volume's second half delineates a variety of contemporary Jewish families in Israel, Europe, and North America from various demographic and social science perspectives. A final chapter by Cohen evaluates "Vitality and Resilience in the American Jewish Family." As Hyman observes in her afterword, these essays demonstrate how family history can enrich understanding of the critical phenomena of modern Jewish history such as acculturation, Jewish identity, and social mobility.

KRAEMER's anthology offers a wide range of historical and literary studies of the Jewish family in both Muslim and Christian societies. While Cohen and Hyman arrange their volume chronologically, this collection is organized thematically around marriage, childhood, and adolescence; family and community; and the family as metaphor. The anthology's special contribution lies in its broad coverage of the rabbinic, medieval, and early modern periods, including a study of marital imagery in Jewish mysticism.

HOUBLER's compilation of personal stories of Jewish immigration to North America from the 18th century to the present is intended for young people and general readers. This well-illustrated collage of letters, diaries, newspaper articles, family photographs, and interviews provides a detailed and engaging picture of the adjustment of the immigrant family to the new realities of American society.

Most observers would agree that the contemporary Jewish family is facing hitherto unimagined and often conflicting demands. With the disappearance of the extended family, women's rapidly changing social roles, the rising divorce rate, and increasing societal tolerance of alternative life styles, traditional assumptions that Jewish families consist of child-rearing households led by a father and an at-home mother are no longer valid. The volumes edited by Bayme and Rosen and by Linzer, Levitz, and Schnall gather essays by social scientists and social-policy theorists assessing the state of the contemporary U.S. Jewish family in an era of such challenges as increasing intermarriage, advanced age of marriage, and a lower Jewish birthrate. Chapters in BAYME and ROSEN discuss adoption, abortion, and pornography; offer analyses of these phenomena; and prescribe policy measures that intend to support and preserve Jewish family structures.

LINZER, LEVITZ, and SCHNALL collect thoroughly referenced papers by clinicians and scholars from the Wurzweiler School of Social Work of Yeshiva University. The contributors argue that contemporary Jewish families are being undermined by an increasing acceptance of secular values, promoting individualism and pluralism and discouraging community connections. Essays address the impact of domestic violence, divorce, women's changing roles, the attractions of assimilation, the stresses of mid-life, and the challenges for families of caring for elderly parents, and the authors suggest some new

approaches for dealing with these concerns. The authors are united by their commitment to the Jewish family as the ultimate guarantor of Jewish survival even as they caution against over-romanticizing Jewish families of the past.

FISHMAN examines the impact of two decades of feminism on the Jewish family in the United States, contending that the feminist movement has been a source of great moral vigor and religious renewal. However, she finds that Jewish women, encouraged to pursue higher education and career possibilities, are marrying outside their faith community more than ever before. Endogamous marriages, too, are taking place later than ever, and these delayed marriages are leading to a pattern of fewer children and an increase in infertility problems. Women's participation in the paid work force, often out of economic necessity, also impacts family planning decisions and Jewish communal involvement. In order to ensure Jewish continuity, Fishman argues that the U.S. Jewish community must recognize the implications of these social changes and respond in ways that are supportive of the contemporary needs of all Jewish families, including those who may be marginalized because of poverty, single parenthood, or parental lifestyle choices.

There is a remarkable dearth of material about the work and impact of Rabbi Moses Feinstein, acknowledged by many as one of the greatest Jewish jurists and yeshivah educators of the 20th century. There have been a number of significant articles about his influence on specific topics but few books devoted to him. Nonetheless, in discussions of complex and contentious contemporary Jewish legal issues, his work is always cited. Born and trained in Russia, Rabbi Feinstein worked as head of a New York yeshivah, Mesivtha Tifereth Jerusalem. There he taught many generations of male students but achieved prominence through his collection of responsa. Thousands of his responses to individuals' questions on problems in Jewish law are collected in his eight-volume *Iggerot Moshe*, published in Hebrew between 1959 and 1996, the last volume posthumously. In accordance with his wishes, there has never been a comprehensive English translation of his work. Rabbi Feinstein also authored a series of talmudic interpretive texts known as *Dibrot Moshe*. These were published from 1947 to 1979. A volume of his sermons and original insights, *Darash Moshe*, was published posthumously by his family in 1988. Parts were translated into English in a book by the same title published in 1994.

FINKEL includes Rabbi Feinstein among the great authors of legal decisions from the sixth to the 20th century. Finkel's purpose is to reveal the breadth and depth of Jewish law and history. After a brief biographical sketch, Finkel presents his abridgement of seven of Rabbi Feinstein's decisions. From the seemingly trivial question of whether one can use paper cups for kiddush to the graver matter of heart transplants, the range presents a fair glance at the scope of Rabbi Feinstein's expertise. It does not, however, expose the reader to the complexity of the answers or to the brilliance of his reasoning and there is no accompanying analysis.

JOSEPH (1992, 1995a, 1995b, 1998) has explored Rabbi Feinstein's unique perspective on topics such as *mehitsab*, educating girls, hair as a distraction, and women's ritual involvement. The essays analyze Rabbi Feinstein's halakhic premises and methodologies, demonstrating some of his key concerns and identifying his influential role in the Jewish world. Joseph's doctoral dissertation investigates Rabbi Feinstein's approach to gender in constructing separate spheres. The analysis demonstrates that he had a particular conception of and contribution to Jewish life in the United States. His attitude toward rabbinic authority and halakhic change is also developed.

FINKELMAN wrote the only book-length biography of Rabbi Feinstein. This volume, written immediately after his death, was promoted as the official account by the Mesivtha Tifereth Jerusalem and the Yeshivah of Staten Island. The book is a sincere hagiography, filled with material gleaned from interviews with family, friends, and students. The stories told are filled with wonder and admiration. It is not an assessment of Rabbi Feinstein's teachings or legal decisions but rather is an appreciation of his moral character and devotion to the com-

munity. He is presented as a saint, larger than life. Easy to read, Finkelman's book contains little commentary and is not an intellectual biography, but the stories do illuminate parts of his life and display the high regard in which he was held.

EIDENSOHN compiled a general index to *Iggerot Moshe* in both English and Hebrew. This book provides a quick search method, but there is neither an abstract of the discussions nor any indication of the decision rendered and the author insists that it is not to be used as an aid to personal halakhic decision-making.

ROSNER contains the proceedings of a conference on medicine and halakhah held in 1990. It is dedicated to the memory of Rabbi Feinstein, who was the *posek* (decisor) for the Association of Orthodox Jewish Scientists. The book includes two relevant essays. "Rabbi Moshe Feinstein's Influence on Medical Halachah," written by Rosner, is an appreciation of Rabbi Feinstein's decisions on medical issues. It is not a critical essay about those decisions and there is no background information. Rather, it summarizes decisions on a variety of medical issues ranging from contraception to dentistry, as well as sabbath rules for the doctor and for the patient. "Special Tribute to Rav Moshe Feinstein," written by his son-in-law Rabbi Moshe Tendler, explores the impact of several of these decisions. He cites some of the most momentous opinions in marital and medical matters and indicates the reasons for their great influence. This short essay is clear, reliable and informative.

The publication of FEINSTEIN is the first in a projected series. This volume is concerned with the care of the critically ill, focusing on Rabbi Feinstein's decisions about medical confirmation of time of death and organ transplants. The book begins with an important biographical essay presenting facts previously unknown, especially about his years in Russia. A major portion of the book is devoted to Rabbi Moshe Tendler's translation of key responsa from *Iggerot Moshe*. In order to clarify these difficult texts, Tendler analyzes the relevant talmudic sources. He also paraphrases and explains some of Rabbi Feinstein's meaning and methods. This volume attempts to define the issues while promoting Rabbi Feinstein's approval of organ donations. Aside from being very persuasive, Tendler displays his exceptional grasp of these decisions, their importance and impact. The concluding essay, coauthored by Fred Rosner, offers a succinct synopsis of Judaic sources on sanctity-of-life questions. The Hebrew texts of Rabbi Feinstein's responsa are included. It should be noted that J. David Bleich has written *Time of Death in Jewish Law* (1991), in which he also relies on Rabbi Feinstein, among others, to dispute use of brain death criteria as advocated by Tendler in this book.

Approaches to Jewish feminism have developed and evolved primarily since the 1970s. Early work in the field criticized what were seen as the patriarchal aspects of Jewish tradition, texts, and history because they accord a lower status to women than to men. Many early studies also sought to reform contemporary Jewish practices and to restore women's voices by recovering stories by and about Jewish women from the past. Later, Jewish feminist writing discovered additional ways of describing the experiences and cultures of Jewish women, both past and present, positing alternative histories alongside the available male-centered and male-authored studies. Some feminist scholars argue for gender equivalence in Jewish practice, while others advocate recognizing and honoring the difference of women's experiences. As feminist studies spawned the field of gender studies, scholars asked how incorporating women's perspectives, texts, and histories could reshape knowledge generally. In addition, they began to examine the nature of gender identity within the context of Jewish culture. Rather than regarding women's experiences as deviations from

the normative male experience, scholars interpreted the construction and contexts of Jewish genders.

Among the earliest works of Jewish feminism, HESCHEL explores the implications of woman as "Other" in Judaism. The essays included here are by scholars and writers in diverse fields such as theology, history, literature, Bible studies, philosophy, and literature, and they approach their subject primarily from the standpoint of progressive Judaism. In different ways, the essays draw out the implications of the marginalization of women's perspectives, concerns, and voices in traditional Jewish texts written by men. Taken together, the collection reveals the extent of the conflict between Judaism and feminism, and it suggests some ways toward resolution through re-envisioning Jewish thought and practice.

The essays collected in KOLTUN, another early volume, offer an interdisciplinary snapshot of the beginnings of Jewish feminism in the United States. The book includes new rituals to mark events in Jewish women's lives, as well as assessments of the status of women in Jewish life and Jewish law, historical sketches of Jewish women and their significance, feminist readings of both traditional Jewish texts and contemporary writing, and explorations in feminist theology.

Several studies focus closely on the specific details of Jewish law as they relate to Jewish women. Writing from the perspective of an Orthodox feminist, GREENBERG brings feminism and traditional Judaism to bear on one another. Arguing that Jewish law evolves slowly over time, the book contemplates how and to what extent Judaism can absorb and respond to feminist critiques, particularly in education, liturgy, and areas of Jewish law that pertain to women, such as divorce. Rejecting the view that feminism is external and antithetical to Judaism and therefore poses a threat to Jewish survival and authenticity, the book asserts that feminism need not be incompatible with traditional Jewish values and practices. Greenberg insists on keeping as much of the tradition intact as possible, incorporating feminist concerns into the existing structures.

Advocating more strongly than Greenberg for reform of Jewish practice, BIALE offers an interpretive history of Jewish law as it pertains to women. Combining selections from classical Jewish legal sources, including the Bible, Talmud, and medieval codes, with an extensive commentary and explication, the book sees Jewish law as an evolving process which can and should respond to the challenge of contemporary Jewish feminism by absorbing feminist suggestions. Topics include marriage, divorce, sexuality, rape, abortion, and participation in Jewish ritual life.

In a sustained, detailed feminist reading of the treatment of women in the Talmud, HAUPTMAN demonstrates that the rabbis were attentive to the needs of women despite the patriarchal nature of society reflected both in the Bible and the Talmud. Focusing primarily on the Talmud's treatment of marriage, adultery, divorce, procreation, rape, and laws of inheritance and testimony, Hauptman traces significant changes in important aspects of Jewish law, which were enacted to accord women broader rights and higher status. Hauptman notes, for example, the gradual evolution of the institution of marriage from one of acquisition, in which a man purchased a woman from her father, into a relationship negotiated between the man and the woman herself.

In contrast, PESKOWITZ argues that rabbinic Judaism effaces and disempowers women, even when it strives to protect women's interests and raise their status. Integrating archaeological sources and contemporaneous writing into her interpretation of early rabbinic texts, Peskowitz exposes assumptions about gender in the development of rabbinic Judaism. By analyzing stories about the ordinary work of spinners and weavers, the book examines the construction of gender that becomes interwoven with and inherent in Judaism.

From a theological perspective, PLASKOW similarly critiques Judaism as a patriarchal tradition that has acknowledged the presence and Jewishness of women only with deep ambivalence. The book explores how Jewish ideas about God, Torah, justice, and Jewish communal values can be transformed through the active participation of contemporary Jewish feminists already working to reshape the tradition. Plaskow's analysis draws upon traditional Jewish texts as well as contemporary religious philosophers and feminist theologians and thinkers.

ADLER argues that contemporary Jewish communities that value the full and equal participation of women in all aspects of life "engender" Judaism in two senses. First, they shape the tradition they inherit. Second, they infuse Judaism with new practices and an understanding of the role of gender in Jewish law, learning, and practice. Retaining a connection with the ethical foundations of Jewish law and a knowledge of classical texts, Adler advocates a transformation of liturgy and of sexual relations and marriage. The book concludes with the development of a new wedding ceremony founded on a *Berit 'Ahuvim*, or Covenant for Lovers, which asserts a commitment to a relationship of equal partners and rejects the model of acquisition that defines the traditional Jewish wedding.

In contrast to Adler's formulation of a *Berit 'Ahuvim* to equalize the power relations in a Jewish wedding, LEVITT argues that the very basis for such contractual relationships rests on the inequality of the parties. While many of the earlier works on Jewish feminism center on exposing the patriarchal aspects of Jewish institutions and texts and advocate gender equality in Judaism commensurate with the values and sensibilities of contemporary liberal democracies, Levitt insists that the liberal state has not offered a secure home for Jewish women either as Jews or as women. The book traces the concept of the social contract as it affects Jews, and it analyzes the significance of marriage in the conception of Jews as citizens of the West.

Investigating the social and cultural history of Jewish women, scholars of the Jewish past in BASKIN (1991) apply gender as a category of analysis. They probe such issues as women's socioeconomic status, their relationship to Jewish law and Judaism, their responses to persecution, and domestic arrangements such as marriage, divorce, motherhood, widowhood, and inheritance. Arranged chronologically from biblical times to the 20th-century United States, the collected essays point to the limited opportunities for women in the realms of education, political power, and access to the public arena, as well as women's roles in the shaping, preservation, and transmission of Jewish identity.

From a sociological perspective, FISHMAN argues that feminism and the activism of Jewish women in the religious arena have revitalized Jewish life in the United States. Looking at

women's participation in different facets of Jewish American life, Fishman points to the flourishing of new life-cycle rituals to mark the events in women's lives and to the burgeoning number of women in the rabbinate since the first Reform ordination in 1972.

CANTOR offers a broad-based analysis of the imprint of patriarchal values on Judaism and Jewish life and culture. The book is particularly interesting for its exploration of the ways in which internalized antisemitism fuels such modern stereotypes as the Jewish mother, affecting relationships between Jewish men and women and between generations.

A number of studies examine the impact of feminism on the academic study of Judaism. The first full-length work to examine the progress and influence of feminist scholarship within the many academic fields that constitute Jewish studies, the anthology edited by DAVIDMAN and TENENBAUM includes essays by feminist critics and scholars in a variety of disciplines, such as classical Judaism, film, literature, sociology, and history. The essays debate the patriarchal nature of Judaism, the status of women in Jewish law and Jewish communities, and the differences between the historical experiences of Jewish men and women.

Written by literary scholars, the essays in BASKIN (1994) explore the voices and experiences of Jewish women in a variety of cultures and languages from the Middle Ages to the present. Several of the essays focus on individual writers, while others explore the image of women in different literary contexts, such as medieval Hebrew or Yiddish literature, and broad themes such as women in the Holocaust and feminism in Israeli writing.

RUDAVSKY expands the scope of Jewish feminism. Building on earlier works that critique the silencing of women and the pervasiveness of patriarchal values in Judaism, the essays by scholars in a wide range of fields analyze the effects of modernity on Jewish women and men. Looking at historical and literary sources and evidence from popular culture, the essays explore what it means to think of oneself as a Jewish man or a Jewish woman.

PESKOWITZ and LEVITT acknowledge the pervasiveness of feminist and gender theory in contemporary Jewish studies. In the essays collected here, feminist critics and scholars in a variety of disciplines discuss the influence of feminism on the way they approach and think through Jewish academic work as well as the connections between their work and life. These essays implicitly debate the direction of feminism and gender studies and a variety of conflicts between feminism and Judaism, Jewish texts, practices, and identity. The volume examines the marginal, and potentially radical, position that both Jewish studies and feminist studies occupy in academic disciplines as well as the way each field has reshaped knowledge across disciplines.

All regular Jewish feasts and fasts are based on a 354-day lunar calendar year, adjusted from time to time to coincide with the seasons of the solar calendar year by means of a leap year of 13 months. More significant than the innovation of new festivals has been the imposition of new meanings, nowadays sometimes avowedly secular, on ancient holy days.

HESCHEL always expounds on his guiding axiom, "Judaism is a minimum of revelation and a maximum of interpretation." Working within a traditional framework, Heschel notes that all major world religions emphasize sacred spaces (e.g., religious sites, holy shrines, and temples). Judaism, however, focuses on sanctification of time in a unique manner. Heschel deals specifically with the sabbath as the point at which Jews usually either break from tradition or rejoin Judaism. For Heschel, Jews find definition in keeping the sabbath.

KI TOV expands Heschel's principle of sacred time by addressing the fasts and feasts of Jewish tradition throughout the cycle of the Jewish calendar. For Ki Tov, sacred time occurs again and again throughout the entire Jewish year, not just for a single day of the week. His work explains why Jewish feasts and fasts change their solar calendrical dates every year, and he also explains that the lunar calendar adds an extra month seven different times to its 19-year cycle to ensure seasonal continuity. Of the texts reviewed in this essay, Ki Tov most effectively presents the feasts and fasts, discussing how each

of them is observed according to tradition. A compendium of "insights and reasons, meanings, and allusions" addresses questions commonly asked about each holiday through comments drawn from midrashic sources and subsequent rabbinic authorities.

WASKOW also focuses on "holy time" and its spiritual meaning, hidden beneath the layers of traditional development. Waskow's interpretations sometimes seem as mythical as the traditions that he "demythologizes" by excluding them from discussion. Unfortunately, due to the vague references made to primary sources or the complete absence of any references whatsoever, the reader seldom knows whether Waskow is drawing from the deep wells of heritage or whether he is plumbing the depths of his own spirituality. Waskow does, however, include a bibliography after his discussion of each topic.

For the reader who wishes to know how to celebrate the festivals, Blu GREENBERG addresses the practical as well as spiritual dimensions of Jewish festive and holy days. Unlike Heschel and Ki Tov, Greenberg does not concern herself with the philosophical dimension, but her volume is one of the most useful texts for those seeking to put basic tradition into practice. Like Waskow, Greenberg encourages readers to consider the feasts and fasts in a hands-on manner. Both authors include recipes (and prayers in Hebrew, English transliteration, and English translation [in Greenberg only]) for each celebration. Greenberg provides a glossary and selected bibliography at the book's end.

BLOCH attempts to establish wherever possible the date of origin of elements of the feasts and fasts before tracing their development through the centuries. Bloch demonstrates how traditional interpretation and practice have changed in light of certain historical moments, including the emergence of the synagogue, the experience of exile, the encounter with Christianity and Islam, the Crusades, changing socioeconomic factors, the Holocaust, and the rebirth of Israel.

KNOBEL reflects Reform tenets pertaining to observance of the Jewish holidays, excluding the "second day" of diaspora observance as unnecessary and abandoning any traditional notion, in rabbinic or folk custom, of "unlucky days."

While somewhat pedantic at times, both Irving GREENBERG and VAINSTEIN offer most thorough treatments of the festivals from intellectual and liturgical perspectives, respectively. The reader is able to explore midrashic, talmudic, and other rabbinic discussions of the festivals and holy days by pursuing the meticulous citations provided by each author.

LASKIN describes how secular Israelis, many of whom had ceased to identify either with Judaism or even as Jews, are returning to the calendrical observance of a Jewish tradition whose symbols they find to be charged with meaning. Such renewed practice elicits beliefs that contradict the secular values of these modern Israelis and sometimes also the meanings ascribed to these practices by religious Jews.

AGNON's treatment of the High Holidays provides purple passages from nearly 300 ancient and modern sources, spanning more than 2,000 years of Jewish tradition. Outdoing Bloch and Vainstein's works in bibliographic eclecticism, Agnon regularly draws attention in his own critical commentary to what he terms "heathenish practices" contained within tradition.

Every author emphasizes the precedence of the sabbath over other holidays, and each offers an appreciation of the ancient year cycle, with its weekly, monthly, and annual rhythms. Ki Tov, Blu Greenberg, Irving Greenberg, Bloch, Vainstein, and Waskow also discuss postbiblical feasts and fasts.

"We Jews are not painters," wrote Franz Kafka. "We cannot depict things statically. We see them as always in transition, as change. We are storytellers." As filmmakers, Jews may have learned to talk in pictures, but scholars of Jewish film continue overwhelmingly to favor literary analysis over strictly cinematic discourse, exploring representation and historical context more frequently than the complex interaction of form, style, and content. The substantial corpus of recent articles and dissertations adopting a broader perspective on Jewish media tend to provide greater theoretical complexity through interdisciplinary approaches.

The geographical contours of Jewish culture shape this survey of seminal book-length works into subsections on American-Jewish, Yiddish, and Israeli cinemas.

ERENS achieves the promise of her preface: to define, quantify, and trace comprehensively Jewish character and

genre typologies in American films. Her diachronic examination of U.S. studio-produced features from 1903 (the earliest appearance of a Jewish character) to 1983 draws on rich archival and interview sources. Primarily an examination of film as text, Erens relies on literary theory to develop her discourse on positive, negative, and complex Jewish representation. The thorough filmography of works including Jewish characters and subjects provides a solid base for more specific studies.

GABLER explores the shtetl origins and vestigial quirks that render human such world powers as Harry Cohn (Columbia Pictures), Carl Laemmle (Universal Studios), and Louis B. Mayer (MGM). Drawing from extensive interviews and private documents, Gabler enlists juicy anecdotes about lifestyles and work to illustrate his thesis that assimilation-hungry outsiders constructed Hollywood's U.S. myth. Although he makes only passing reference to specific films, Gabler's study recounts the history of the immigrant Jews who created the Hollywood studio system in intimate detail.

In what is essentially a second edition of his *Hollywood Image of the Jew* (1983), FRIEDMAN considers Jewish agency in Hollywood production through a sociohistorical analysis of the explicit and tacit portrayals of Jewish characters and themes in mainstream U.S. films. The richly illustrated chapters are divided by decade (silent era to the 1980s) and provide theme, plot, and character analyses in varying depth for such films as *A Gentleman's Agreement*, *Fiddler on the Roof*, and *St. Elmo's Fire*. Friedman concludes that the range of Jewish presences on screen, from self-effacing comedian to complex and sensitive subject, serves to gauge the tensions between assimilation and otherness.

DESSER and FRIEDMAN set out "to situate a group of texts within a stream of social, cultural, historical, and ethnic factors," offering an auteuristic examination of "Jewishness" in the oeuvre of Woody Allen, Mel Brooks, Sidney Lumet, and Paul Mazursky. The authors begin their search for distinctively Jewish elements in the 1960s when, they note, ethnic diversity began to be represented more sensitively on the American screen. An awkward introduction attempts to classify as traditions in "Jewish Art" such elements as humor, social justice, the encounter with American life, and a concern with lifestyle trends. Stressing bodies of work over specific films, the bulk of the book examines the relationships that the directors maintain with their Jewish identity and concludes by predicting the loss of Jewish elements in American cinema as filmmakers become increasingly assimilated.

GOLDMAN takes the first substantive step toward the reevaluation of Yiddish film as both a popular and an artistic medium. The chapters, covering broad time periods, focus largely on sound film, with valuable studies of key figures such as Sidney Goldin and George Ulmer. Goldman also offers a detailed filmography.

Rigorously researched and brilliantly written, HOBBERMAN's study stands with Nahma Sandrow's *Vagabond Stars: A World History of Yiddish Theater* (1977) as one of the pre-eminent histories of Yiddish art. Replete with information on such obscure movies as Grigori Roshal's *His Excellency* (1928) and the first filmed version of *The Yellow Passport* (1918), which featured a young Pola Negri, Hoberman locates Yiddish

film within the context of world cinema through this comprehensive survey from the silent era through the postwar period. His careful attention to plot descriptions, production, distribution, exhibition, and reception spans low-budget melodramas (*shund* films), musicals, and art films from the United States, the Soviet Union, Poland, and Germany. Published in conjunction with the first major retrospective of Yiddish cinema, this richly illustrated volume is intelligently organized by national production periods, mapping a history of 20th-century Ashkenazi communal life and experience through the framework of cinematic production.

SHOHAT offers a richly nuanced, unabashedly political study that probes films as complex visual objects within the context of Israeli cinema. Anticolonial discourse (notably Edward Said's *Orientalism*) informs her diachronic examination of Ashkenazi/Western dominance, Sephardi/Eastern marginalization, and the exoticized, peripheral, and often invisible Palestinians/Israeli-Arabs. Five chapters delineate the slim corpus of Israeli cinema, beginning under the British mandate and extending through heroic nationalism, the *bourekas* genre of popular Sephardi films, the "personal cinema" of the 1970s, and trends of the 1980s such as the "Palestinian Wave." Each chapter combines analyses of individual films and genres with a politically critical approach to issues of production, spectatorship, and representation in Israeli film.

KRONISH looks at the history of film production as a building block of the Israeli nation-state. She traces government attitudes toward cinema, proffers a romantic analysis of pioneer culture's attitude toward film, and pays special attention to "artistic" developments in the 1970s, 1980s, and 1990s. Chapters on subjects including the post-Six-Day War period, women in Israeli film, and the individual in society are structured encyclopedically with well-organized treatments of directors, films, and historic events representative of these periods and themes. The comprehensive filmography is an excellent resource.

Published in conjunction with a conference organized to highlight Harvard's comprehensive Judaica videotape collection, BERLIN assembles four articles that may be most useful to students of Israeli media. Marilyn Gold Koolik's "Jewish Film Archives in Israel" recounts the institutional accumulation and use of newsreels, features, television, and multimedia, providing a finding aid for the most extensive collections. Igal Bursztyn's lucid and intelligent "Film in Israel: The Creation/Preservation of Jewish Culture" applies a Marxist-Barthian approach to the analysis of speech, art, and message in a series of film clips. In "The Role of Educational Television in Israel: The Sephardic Heritage," producer/director Haim Shiran discusses his own attempts to further pluralistic media representation. Bernard Cooperman's "The Uses of Film in Teaching and Research" champions the use of videos as pedagogic texts.

The Five Scrolls (in Hebrew, *megillot*) denote five short books collected near the end of the Hebrew Bible, each of which came to be read more or less widely during a particular festival in most Jewish communities. For Passover, celebrating the Exodus, the Song of Songs is read; for the Feast of Weeks (Shavuot), at the end of the harvest season and in memory of the giving of the law, Ruth is read; for the ninth of Ab, the day Jerusalem fell in 587 B.C.E., Lamentations is read; for Tabernacles (Sukkot), a celebration of the grape harvest, Ecclesiastes is read; and for Purim, when the people were saved from destruction, Esther is read.

FUERST addresses all five scrolls, following the same format in each case. He begins with a discussion of the book, including theories about most of the following topics: date and setting, formation, genre, structure, themes, history of interpretation within Jewish and Christian communities, relation to its festival, and comparison with other relevant biblical works. The text of each book follows, according to the New English Bible translation. At a series of junctures in the primary text under discussion, Fuerst provides a commentary on the foregoing section. He then offers a final discussion of the message of the scroll at hand. While a portion of Fuerst's book is devoted to providing the primary sources, his discussions offer a good survey of the main questions of interpretation and biblical scholarship on the texts in terms that are quite accessible for the nonspecialist.

GORDIS's book is devoted mostly to a detailed introduction to the Song of Songs, and a brief commentary follows the translation. His view of the text is that it is an anthology of various songs about love, nature, courtship, and marriage, which date from a period covering not less than the tenth to the fifth century B.C.E. He discusses several theories about the nature of the book, including allegorical interpretation, the view that it was a translation of a pagan cult liturgy, and the opinion that it represents an interchange between different

characters in a drama, all of which he rejects. After discussing the Song of Songs in the context of wisdom literature, he goes on to defend his own view of it as a collection of lyrics, then discusses a variety of issues including its style and symbolism. Gordis offers a lucid discussion for the general reader, but with enough detail to be of use to the specialist.

NIELSEN presents a commentary on the Book of Ruth preceded by an extensive introduction. Her approach is to read Ruth intertextually, that is, in light of the other biblical narratives on which it relies. The explicit references to Rachel, Leah, Tamar, and Judah as well as the themes of famine and barrenness show that the reader is to understand Ruth as part of the patriarchal history and to make connections with the characters already established in this earlier tradition. The purpose of Ruth's extension of this history is to defend David's suspect genealogy through the Moabite Ruth and the even earlier ancestress Tamar. She rejects the view that Ruth is a post-exilic work and suggests that it was written in the monarchic period as a response to one of a number of crises requiring a defense of the Davidic dynasty. While these matters will continue to be debated, Nielsen's analysis is clear and readable.

WESTERMANN begins with a thorough discussion of how others have interpreted the Book of Lamentations, working through each scholar individually and then summarizing the academic consensus (or debates, as the case may be) by topic. He goes on to present his own analysis, which is that Lamentations is not preplanned literature but an immediate reaction to Jerusalem's destruction in 587 B.C.E., and that the book should be understood simply as a series of laments. These laments are communal in type and are distinctive in having adopted some of the themes of the dirge. They were originally oral and probably originated among eyewitnesses to the city's fall. Westermann offers an exegesis of the book and concludes by reflecting on its theological significance and its relevance to biblical theology. His study is particularly useful for those interested in the history of scholarship on Lamentations and the diversity of approaches to it.

CRENSHAW begins with a discussion of the themes of the Book of Ecclesiastes: human existence is without profit, one should enjoy life as much as possible before time runs out, and, in the end, chance and death are the driving forces of the world. God is distant, and there is no discernible pattern of order to be perceived in human life. Ecclesiastes is an example of biblical wisdom literature, but its worldview contrasts strongly with other biblical wisdom literature such as Proverbs. Crenshaw presents a detailed survey of scholarly approaches to the structure of Ecclesiastes and concludes that the book is largely unmodified by later hands. The date he suggests for its composition is 250 to 225 B.C.E., which he supports with various data including the late stage of the biblical Hebrew employed. The commentary that follows is detailed without being impenetrable, and it shows sensitivity to the melancholy quality of this unusual biblical book. Opinions as to the meaning, structure, date, and origins of Ecclesiastes are wide-ranging, but Crenshaw provides an even-handed presentation of the issues.

FOX furnishes a commentary on the Book of Esther in the first part of his study, but the real impact of his project lies in the thorough discussion of the characters—a discussion

that aims not so much at the entertainment value to be discovered therein, but at understanding the ideology of Esther's author. Following the commentary, chapters on historicity, genres, and structures lead into the character analysis, which is provided one character at a time, with a chapter at the end of the book on the different text versions of Esther. Fox concludes that the book probably dates to the third century B.C.E. and possibly originates in Susa. Esther can properly be called a number of things with respect to genre: a diaspora story, a historical story, a festival etiology, and a festival lecture. Its central theme is reversal, more specifically, that a plan to destroy the Jewish people results rather in the destruction of their enemies, and its theology is one of possibility. Fox's presentation is cogent and useful to readers of various backgrounds.

There are at least 150 species of animals and about 100 species of plants mentioned in the Hebrew Bible, a large number for what is usually thought of as a book of morality and religion. Interest in identifying these animals has been recorded since the dawn of biblical interpretation. In the Talmud and rabbinic literature, this interest was primarily halakhic, aiming at better application of biblical law. In medieval times, interpreters often found it excessively perplexing to identify biblical flora and fauna, and European translations sometimes resorted to guesswork in rendering obscure plants and animals. The interest in biblical flora and fauna in modern times comes from two sources. On one hand, the mid-19th-century explosion in ancient Near Eastern studies, coupled with traditional Protestant focus on Scripture's plain meaning, resulted in European interest in identifying the plants and animals of the Bible. On the other hand, the rise of Zionism with its biblical inspiration led to a rise in "Land of Israel" studies, and a pre-

occupation with the topography and natural history of the biblical world.

FELIKS (1954) deals with the larger issues connected with nature in the Bible. He aims to demonstrate that the profusion of both lofty and realistic descriptions of nature in the Hebrew Bible relates directly to the literary and theological message of the Bible: "A thorough knowledge of the surrounding scenery [of the biblical world] expands the breadth of our understanding of the text and deepens our feelings of identity with the Book of Books." He reviews more than 80 biblical passages, briefly identifying the plants and natural phenomena in each but focusing on the connection between the flora and fauna mentioned and the meaning of the passage. He demonstrates convincingly that understanding the plants and animals is critical in many passages to understanding the passages themselves.

ZOHARY documents 128 distinct plants, citing biblical passages. He identifies each on botanical grounds, citing the biblical and archaeological evidence for the identification, and provides the scientific name for each. He explains very briefly the significance of each species in its scriptural context. The book is written from the perspective of the botanist, rather than the biblicist, and includes many plates and figures.

MOLDENKE and MOLDENKE summarize previous research into the identity of the plants mentioned in the Bible and provide highly detailed botanical information, organizing plants into families. The literature on plants and botany in the ancient and classical worlds is surveyed extensively. The book is organized in a user-friendly way, but unfortunately it does not cite the plants by their Hebrew names.

FELIKS (1954) aims to provide zoological identification of the 150 animals mentioned in the Bible. He argues that such identification should take full account of traditional Jewish interpretation of the Bible, and it is for this reason that he has repeated recourse to rabbinic literature. He then discusses the habitat of these animals today, placing them in a modern Israeli setting.

MØLLER-CHRISTENSEN and JØRGENSEN discuss 65 animals in their popular work. Their method is to identify the animal, to cite some of the passages mentioning it, and to provide some information on the physical characteristics of each animal as known in modern times. Unfortunately, many of the biblical identifications are unduly speculative, with comparatively little use of other ancient Near Eastern references to these animals or to the original languages of the biblical text.

PINNEY's work discusses the animals of the Bible, grouping them by phylum and family and discussing their zoological characteristics: habitat, food, and physical description. He offers more zoological information than Møller-Christensen and Jørgensen but, like them, he does not take into account the results of ancient Near Eastern scholarship and tends to identify biblical animals with those found in the region today. The book contains 86 detailed and beautiful photographs, taken in Israel by the author, and it is chiefly useful for these.

Daily conversation and moments of leisure in many Jewish communities have been great occasions for the telling of folktales, stories without a known author that are passed by word of mouth, often over many generations. The realm of folktales is one of cultural permeability: "Jewish" and "non-Jewish" folktales are often substantially identical, and Jews, spanning national boundaries, have played a significant role in transmitting folktales between non-Jewish groups. In contrast to the written texts of Jewish scholarship, folktales are shaped and transmitted largely by unlearned women and men. At the same time, given the high rate of literacy among Jews, Jewish stories readily pass from oral to written forms and back again. Boundaries are blurred further when stories of individual experiences are told alongside traditional folktales—as often happens—and when traditional stories are presented as individual experiences—as likewise they often are.

In the contemporary revival of storytelling as one of the performing arts, Jewish storytellers have been prominent and Jewish folktales have provided much of the source material. This is perhaps why so many English collections of Jewish folktales are now available. Some, however, include mainly literary material from written sources. Others present stories reworked to such a degree that one has to think of the authors as creative writers, using folktales as raw material. The collections reviewed here, presenting folktales from a variety of Jewish communities, are more authentic; most of their stories are based directly on oral tellings and are free of large-scale revisions. Several of the authors have made good use of the Israel Folktale Archives (IFA), which contain recordings of thousands of oral stories. The stories in these collections are intrinsically interesting and, for the storyteller, readily retellable.

Israeli novelist SADEH presents a rich selection of about 300 stories, some from "old . . . forgotten books" of legends and more from oral tellings in the IFA, with a substantial representation of Middle Eastern Jewish tales. Sadeh has chosen stories according to his literary taste, and he includes religious tales alongside those with a secular tone. He has grouped stories so that different versions of the same plotline follow each other and themes develop through several stories, giving the flavor of a long session of oral storytelling in which one tale

sparks another. The spare writing style is not necessarily that of the original tellers, but it presents the stories clearly and without authorial intrusion, retaining occasional pious and proverbial phrases from the original tellings. Translator Halkin has provided a foreword introducing Sadeh and drawing attention to some differences between Ashkenazi and Middle Eastern Jewish folktales. Sadeh provides a reflective afterword, by turns informative and poetic. Only the source notes at the end of the book are inadequate, providing little information about the tellers or where the texts and recordings can be found.

RUSH draws entirely on stories recorded from oral tellings, some recounted to the author in person, many from the IFA. Some of the stories are personal experiences of women; others are traditional stories that also may have been told by men, but they appear here in versions that women have told to other women. The introductions by Rush and the important folklorist Dov Noy emphasize the role of storytelling as a way in which women teach each other, passing on messages of practical and spiritual wisdom. Seventy-three stories are included, in a variety of genres, told by women from a broad range of Jewish communities, including, for example, Bene Israel of India, Kurds, and Yemenites. The tales are grouped around themes such as stages of the female life cycle: birth, marriage, motherhood, aging, and death. There is introductory material for each story, including anecdotes about the storytellers and Rush's reflections on the message of the tale and, often, on how men's and women's tellings of the story differ. Rush, a professional storyteller, writes in a straightforward, lucid style.

BAR-YITSHAK and SHENHAR-ALROY present 21 stories told by Jews from Morocco, mostly elderly, living in Shlomi, Israel, a town of Moroccan immigrants. More than half the stories are told by women. Names and photographs of each storyteller are included, with information about his or her life and the contexts in which he or she tells stories. The tales are presented not in authorial revisions but in clear translations from the Arabic of the tellers. The distinctive verbal styles of the individual tellers are well represented, along with expressions characteristic of Moroccan Jewish storytelling in general. For example, any description of something as "big" is immediately qualified: "they had a big wedding, and there is no one greater than God." Several long wonder tales are included, their ornate plots enhanced by the flavor of oral expression. There are informative notes on folktales in Moroccan Jewish culture generally and in Shlomi specifically and on the themes of each story. This book gives a vivid picture of Jewish storytelling in a particular setting and by particular individuals, at the same time presenting highly readable and retellable stories.

WEINREICH presents a varied selection of 178 stories told in Yiddish in Eastern Europe and recorded especially in the 1920s and 1930s, a time when many nonspecialists as well as scholars were involved in collecting folktales and filling archives with thousands of stories, many of which escaped destruction. Weinreich provides introductory material for the book and for each chapter, discussing storytellers, types of stories, and the contexts of storytelling. The stories represent a variety of storytellers, "men and women of different age groups, professions and religious background," and genres, with each chapter devoted to a specific genre (allegorical tales,

children's tales, wonder tales, pious tales, humorous tales, and legends). The final section on supernatural tales concludes with an eyewitness account of a contest between a hasidic exorcist and a skeptic, with disturbing results, bringing into sharp focus some of the tensions between tradition and change that manifest themselves in the diversity of the other stories. The versions presented are direct translations from the Yiddish and include such features of oral telling as rhymes and, in one story, two melodies presented in musical notation.

Weinreich includes several striking examples of hasidic storytelling, an important component of the world of Yiddish folktales. Several collections of hasidic stories are available in English, but most are based on Hebrew books, at some remove from the language and contexts of oral telling. By contrast, TWERSKI, the son of a hasidic rabbi in the United States, Jacob Twerski of Milwaukee, recounts in his own words reminiscences of his family and their milieu and stories told to him by his parents, often about the hasidic rabbis in their ancestry. He intersperses his tales with comments reflecting both his training as a psychotherapist and also the hasidic tradition of interpreting the meaning of stories. This is a uniquely personal and living book of hasidic tales, and it includes several that are not available in other English collections.

The study of the Jews of modern France is a relatively recent phenomenon. While French Jewish scholars in the 19th century shared the German Haskalah's interest in Jewish history, their work was largely confined to unearthing early artifacts that demonstrated the antiquity of the Jewish settlement in France or disseminating medieval religious tracts and philosophical writings that were seen as cultural contributions to Judaism as a whole. Since the 1960s, however, the study of Franco-Judaica has gained respectability and importance as a distinct field of research, thanks in part to the revival of the French Jewish community, on the one hand, and the writings of an influential generation of postwar U.S. scholars, on the other. The result has been an impressive array of historical monographs that emphasize the distinctive role of French Jewry within both modern French and European Jewish history. These works have also challenged traditional assumptions about such widely diverse topics as the nature of modern Jewish identity, the process of assimilation, antisemitism and the Jewish response, and the relationship between Jews and the larger society in which they live.

HERTZBERG challenges the popular assumption that antisemitism emerged in large part as a reaction to the ideals of the Enlightenment and the French Revolution. In fact, the author maintains, many of the leading *philosophes* of the 18th century (including Voltaire, Diderot, and d'Holbach) personally hated Jews and actually laid the framework for what Hertzberg calls the revival of pagan antisemitism. Hertzberg contends that in the wake of the French Enlightenment, Jews were hated not only because of their religion and their rejection of Christianity but also because of their culture and ultimately their "biology." The work has not been without its

critics, who have argued that Hertzberg's arguments are often tendentious and ahistorical. Nevertheless, the book deserves to be read for its provocative analyses of both the roots of modern anti-Jewish hatred and the complex origins of Jewish Emancipation.

BYRNES remains the classic study of antisemitism in France, despite the fact that it is an old work. The book examines anti-Jewish sentiment from the establishment of the Third Republic in 1871 to the Dreyfus Affair, which preoccupied France at the end of the 19th century. As a product of the immediate postwar era, the book is strongly influenced by the experience of fascism in the 1930s and 1940s, which Byrnes saw as growing out of precisely such antidemocratic antecedents as antisemitism. The author never clearly explains the reasons for the rise of anti-Jewish sentiment, but his detailed discussion of the various attitudes and movements that arose in France on both the Left and the Right in the last quarter of the 19th century is unsurpassed. Byrnes intended to publish two other volumes dealing with the Dreyfus Affair and France after World War I, respectively, but the books were never completed.

BIRNBAUM's book takes up where Byrnes leaves off. Documenting how anti-Jewish attitudes were incorporated into France's major political battles throughout the late 19th and 20th centuries, the author seeks to counter Hannah Arendt's contention that antisemitism occurs primarily in "weak states." To the contrary, Birnbaum argues, "[i]t is the strength of the state and not its decline which caused political antisemitism to appear," and he supports this hypothesis by contrasting the often murderous policies of "strong-state" France with the relatively ineffectual social discrimination of "weak states" such as Great Britain and the United States. Assessing the political and economic turmoil in France in the 1970s and early 1980s, Birnbaum concludes that only deep political change will eliminate antisemitism and xenophobia in general as major forces in French society.

BURNS is a richly detailed history of the Dreyfus family. Far more than a simple recounting of the events of the Dreyfus Affair, the work attempts to break through the ideological abstractions of antisemitism, Zionism, and socialism to understand the attitudes and behavior of Alfred Dreyfus and his immediate family. Reading more like a 19th-century family novel than a historical work, the book examines the fate of the Dreyfus family from its assumption of citizenship after the French Revolution to its destruction during the Holocaust, thus shedding light on the nature of the identity of modern French Jews, in which "two faiths—religious and national . . . were often, though not always, in conflict."

WILSON's meticulously researched work places the rise of anti-Jewish sentiment and movements during the Dreyfus Affair in the general context of modernization in fin-de-siècle France. The author argues that antisemitism in late 19th-century France was more a response to changing social and economic conditions in the countryside than to any changes in the place of Jews within French society. In contrast to historians who have viewed anti-Dreyfusard propaganda as largely opportunistic, Wilson emphasizes the ideology of antisemitism, arguing that antisemitic movements during the Dreyfus Affair acted in ways similar to the behavior of

modern-day sectarian religious movements, incorporating elements of unshakable belief, Manicheism, and unremitting hostility toward their enemies into their ideologies.

ALBERT's work is a massive study of the major institution of French Jewry in the 19th century—the *Consistoire centrale*. While often tedious in its detail of the workings of the organization, the book effectively illustrates various aspects of Jewish life, especially in the years between 1830 and 1870, including demographic, geographic, and occupational changes; social and institutional transformations; and religious innovations. Albert contends that French Jewry in the post-emancipatory era possessed two characteristics that are hallmarks of modern society: a conscious reevaluation of traditional values and behavior, and a movement toward secularization. The work contains useful appendixes of demographic and occupational data on 19th-century French Jewry and texts of the major laws regulating the consistories.

HYMAN (1991) departs from standard studies of modern French Jewish history, which have largely limited themselves to the attitudes and behavior of urban elites. Instead, she examines the attitudes and behavior of the majority of 19th-century European Jews, the rural masses. Her study focuses on Alsatian Jewry, the first large traditional Jewish community on the European continent to experience the benefits and challenges of Emancipation and a force in the Paris community and elsewhere after 1870. By choosing to take a “grass-roots” approach that emphasizes socioeconomic developments rather than ideology, Hyman highlights the elements of continuity that accompanied the transformation of European Jewry from aliens to citizens in the period after Emancipation. Hyman's conclusion that the Jewish masses of Alsace maintained traditional beliefs and practices throughout the first half of the 19th century and responded cautiously to demands for modernization after 1848 not only helps to explain the relatively conservative nature of the French Jewish community but also illustrates the complex interweaving of tradition and change in the modernization of European Jewry as a whole.

MARRUS was one of the first historians to question the viability of the ideal of a French-Jewish symbiosis, which had formed the basis of French Jewish identity since the French Revolution. Strongly influenced by Hannah Arendt, who had repeatedly emphasized the shortsightedness and naiveté of Jewish community leaders in her writings on modern antisemitism, Marrus sharply criticizes French Jewry for being blind to the dangers of antisemitism during the Dreyfus Affair. By the end of the 19th century, he maintains, the Jews in France had lost their sense of community and had developed a political perspective that emphasized their loyalty to France at the expense of their right to be Jews. The result was that for most French Jews the onset of the Dreyfus Affair “appeared as only a ripple in the smooth course” of their lives. Marrus concludes his occasionally tendentious study with a paean to a small group of Zionists in late 19th-century France, who the author believes defied the views of the leaders of their community by proudly asserting their Jewish identity.

GRAETZ has countered Marrus's argument with an analysis that emphasizes the bonds that tied the Jews of 19th-century France together despite their strong assimilationist tendencies. Reflecting a strong Zionist perspective, the author

contends that the 19th century witnessed the replacement of religious affiliation with nascent nationalist sentiments, as manifested in the activities of the *Alliance israélite universelle*. Graetz also insists upon the need to examine Jews on the periphery of communal life who, in their search to reconnect with Jewish life, provided emancipated Jewry with new forms of collective identification. In this sense, the author disputes the prevailing assumption that Emancipation necessarily led to assimilation and the disappearance of Jewish life.

HYMAN (1979) traces the response of French Jewry to the challenges of Eastern European Jewish immigration and antisemitism in the first three decades of the 20th century. Mirroring the arguments of Weinberg and others, Hyman maintains that fierce xenophobia (which arose in interwar France as a response to economic depression and social tensions) and the influx of significant numbers of immigrant Jews from Eastern Europe eroded the synthesis between French and Jewish values that had developed in the 19th century. Thus, an assertive and pluralistic community, which was far more vigorous in its own defense and which no longer rested exclusively on a religious definition of Jewish identity, emerged. Hyman concludes that these transformations enabled French Jewry to integrate 300,000 North African Jews in the 1960s and 1970s, becoming the largest Jewish community in contemporary Western Europe.

WEINBERG examines the often difficult relationship between Eastern European immigrants and native-born Jews in the period directly before the onset of the Holocaust. The book is divided into three sections: an examination of the population, professions, and organizations of Paris Jews in the 1930s; a study of the nature of Jewish identification; and a discussion of the contrasting analyses of antisemitism within the community and attitudes toward the question of a Jewish response. Like many of the works of young European Jewish historians in the 1970s, the book rests on the implicit assumption that, as in the United States, the classic assimilationist posture of established Jews weakened the community, while the influx of new Jewish immigrants helped to revitalize Jewish life. While Weinberg is often critical of the unwillingness of the Jews of Paris to act assertively against the threat of antisemitism in an era when the “Jewish question” existed but had not achieved a final solution, he nevertheless concludes that there was little that Jews could have done directly before or during the Holocaust to prevent their annihilation.

MARRUS and PAXTON attack the popular view that France was forced to engage in the deportation of its Jews during World War II because of pressure from the Nazi occupiers. The two authors claim that far from following the dictates of the Third Reich, the Vichy regime initiated its own anti-Jewish legislation that at times exceeded the policies of Nazi Germany in its stringency and brutality. Drawing heavily upon both German and French governmental archives, the work suggests that far fewer Jews living in France would have perished during the Holocaust if the Nazis had been obliged to carry out their murderous policies in France without the assistance of Vichy authorities. Rejecting the notion that Vichy represented a radical break from previous French governmental policies and popular attitudes, Marrus and Paxton stress the origins of the wartime regime's policy toward Jews in the anxiety and

hostility surrounding Jewish refugees in the late 1930s. The book has created considerable controversy in France and has played an important role in that nation's painful reexamination of its myth of resistance to Nazism during World War II.

COHEN examines the difficult issues of collaboration and resistance facing the leaders of the French Jewish community during World War II. His study focuses on the activities of the *Union générale des israélites de France* (UGIF), an organization created by the Vichy government that was responsible for a variety of activities including carrying out government decrees, providing for the health and welfare of the community, and eventually overseeing deportations. Cohen challenges the often simplistic assumptions about Jewish behavior during the Holocaust by suggesting that the UGIF's response to Nazi and Vichy policies was complex and varied. While some individuals and groups in the organization followed government directives to the letter, others supported illegal activities, such as the housing of Jewish children in non-Jewish homes, assistance to Jews wishing to hide themselves, and the smuggling of refugees over the border to Spain and Italy. Throughout the ordeal, Cohen concludes, the UGIF remained true to two main ideals that often diminished its effectiveness: loyalty to French culture and a desire to maintain Jewish welfare services at all costs.

ADLER's work is a useful complement to Cohen's study and represents an extension of the studies by Weinberg and Hyman of the French Jewish community in the 1930s. Far more critical than Cohen of the activity of the UGIF, Adler examines the clashes between French-born and immigrant Jews, which had their origins in the interwar period. The author emphasizes how the Pétain regime exploited the divisions between the two groups, often pitting one segment of the population against the other by inciting controversy and lulling many Jews into a false evaluation of their situation. The book has been criticized for its overly negative assessment of the UGIF, but its examination of the activities of immigrant groups during Vichy, including most notably those of Jewish communists in occupied Paris, is of great value because these actions are generally ignored in the Cohen study.

MALINO and WASSERSTEIN's volume is a collection of essays drawn from a conference held at Brandeis University in 1975. Not surprisingly, it is an uneven work, reflecting the relatively new state of the field at the time that the conference was held. Among the many topics discussed are the mutual interaction between French history and Jewish history, the relationship between immigrant and native-born Jews, the attitudes of the French Left and Right toward Jews, and French Jewish historiography. Of particular value are Michael Marrus's essays on antisemitism and Nancy Green's article on Eastern European Jewish immigrants in Paris before World War I. The volume also contains a spirited debate over the value and significance of Emancipation for French Jewry, highlighted by an often obscure but fascinating essay by a leading French Jewish intellectual, Shmuel Trigano.

HYMAN (1998), a survey of modern French Jewish history, is an excellent synthesis of the scholarship of the last third of the 20th century. In a clear and concise presentation geared to the general reader, the author argues that the history of French Jewry is a microcosm of the modern Jewish experience

in the West. Like other emancipated Jews in the 19th century, French Jews were compelled to construct new forms of identity and new communal institutions that would enable them both to maintain their distinctiveness and to participate in the larger society in which they lived. The history of French Jewry also reflects the polarities of assimilation and discrimination that characterize the modern Jewish experience. Similarly, the transformations in the French Jewish community highlight how mass migration can revivify Jewish communal life. Hyman also convincingly argues that the history of French Jewry reflects important dimensions of French history and culture, including the complex heritage of the Enlightenment, the strength and limits of the French state, the nature of the Right in national politics, and, most importantly, the attitude and behavior of the majority society toward minority groups within its midst.

The 18th century saga that began in late 1755 with the proclamation of Jacob ben Leib (Jacob Joseph Frank's birth name) as the latest heir to the messiah Shabbetai Tsevi and with Frank's passage across the Dniester from Walachia into Poland, proceeded to feature two intra-Jewish public disputations and the conversion of hundreds of Jews to Catholicism, followed by the 13-year imprisonment of a now ennobled Jacob Joseph Frank. It ended in Offenbach on the Rhine in the early 19th century with the fiasco of his daughter Ewa's messiahship. This history collocates the Ottoman Empire and Eastern and Western Europe; normative Christianity, Islam, Judaism, and heretical movements in all three; the dismemberment of Poland and the heightening tension and complexity of the relationship of Germany, Austria-Hungary, and Russia; the French Revolution and the advancement of Jewish citizenship and civil rights. While Frankism cannot be seen as causative or even central to any of these, its history, documentation, and historiography reflect them all in a profound way.

MANDEL associates Frankism with Hasidism, decrying both and defaming the latter. The work particularly emphasizes the licentious and tyrannical nature of the leaders of these movements in constructing their practices. The author also recounts the militaristic tendencies of Frank in the organization and direction of his followers, and he associates the movement with other strains of Jewish nationalism that sought independent territories other than in the Land of Israel. Guided by the work of Jacob Katz and Gershom Scholem, Mandel spends nearly one-third of his brief study on the career of Moses Dobruschka, alias Junius Brutus Frey, a "nephew" (actually cousin) of Frank's, among the Jacobins.

Although Mandel is the single book-length work in English on Frank and the movement known as "Frankism," three long essays do present comprehensive depictions. Indeed, to the extent that Mandel is more than a lurid fantasy, it is dependent on SCHOLEM (1972) for the synthesis, rationalization, and updating of the work of earlier scholarship (although he does not acknowledge his dependency and seems unaware of other work in Hebrew). On the other hand, SCHOLEM (1971) is a work that is itself marked by an uncharacteristic passion and dependence on secondary sources of pronounced partiality and unsound scholarship. Opinions, theories, and ignorance have predominated in all but one of the synthetic works to the present (both those in English discussed here and those in other languages), perhaps because central issues of modern Jewish history are at stake: the history of Hasidism, mystic tendencies toward sexual license, Jewish millennialism, nationalism and Zionism, the determinative influence of disaster, and the very shape of modern Jewish history as it relates to the Shabbatean event of the previous century are some of the points overtly at issue. A more subtle and pernicious matter is the related characterization of East European Jewry as a dark and sullen medieval residue in the movement toward Jewish modernity.

Scholem (1971) is this great scholar's single most famous essay, composed in Hebrew in 1936. Its thesis is that Frank and Frankism display the disastrous end of the doctrines of the movement of Shabbetai Tsevi in an abhorrent nihilism that further develops the teachings of Baruchia Russo, one of his heirs. All norms of Jewish social behavior and religion are turned on their head, that which was illegal becoming obligatory as the final step toward gaining emancipation from all constraints on the natural life and achieving the apocalyptic millennium. This work and Scholem (1972) are concerned to show a relationship between Frankism, the Jewish Enlightenment, Hasidism, and the beginnings of Reform Judaism. Its quotations from Frank's own speeches are error-ridden, coming not from original documents but from translations done for him either from the Polish of an earlier study with its own limitations or by his wife from the Polish manuscripts. The outline of the history of Frank and the Frankist movement in Scholem (1972) came from earlier works by others (in German, Polish, and Hebrew) of a tendentious and polemic nature, but it is clearly expressed and dependable, *grosso modo*, these works having been attentively reconstructed by him.

LENOWITZ edits, translates, introduces, and focuses on Frank's dicta from the Polish manuscripts in order to substantiate and elucidate this messiah's theology, his literary out-

put, and the conduct of his movement. It places Frank and his movement within the history of Jewish messiahs as not atypical expressions of the events and personalities associated with this history. It finds Frank a chameleon-like personality, living a life of extraordinary lability and innovating convincing literary creations suited to his time, following, and vision. Lenowitz brings Frank and his literary creations together with the hasidic "messiahs," particularly R. Nahman of Bratslav, and their literary remains.

Zacharias Frankel is considered the father of Conservative Judaism. He was the leader of the Breslau School, which combined observance of Jewish law with free inquiry into the historical development of talmudic traditions and the origin of Jewish ceremonies.

RUDAVSKY presents a clear and concise, but rather superficial, introduction to the thought of Frankel. The author discusses and examines how Frankel tried to distinguish between permanent and transitory values in Judaism.

DEUTSCH's monograph sketches the background, views, and accomplishments of Frankel, "the man of compromise." Frankel was born in Prague, a community noted for its culture, and throughout his career he played the part of a genuine ghetto patrician. His response in 1842 to the trustees of the first organized Reform congregation, the "Tempel" in Hamburg, regarding their revised prayer book is typical of the man. Theoretically, he did not believe in a personal Messiah, or in the return of all Israel to the promised land, but, practically, he wished all the prayers for the return to Palestine to be retained. In 1836 Frankel became rabbi of Dresden, a position he held for the next 18 years, during which time his views matured. While in Dresden, Frankel pursued his studies of the Greek translation of the Bible (Septuagint) and the talmudic literature, but he was by no means an ivory-tower scholar. He was, for instance, instrumental in securing abolition of *more Judaico*, the humiliating oath administered to Jews that implied that they were not to be treated like any other citizens.

A great step forward in Frankel's career came in 1854, when he was chosen as the president of the rabbinical seminary in Breslau, the first in all of Germany. Here he had a unique opportunity to disseminate his views. The school had been endowed from the legacy of a wealthy businessman in Breslau who was a friend and supporter of Abraham Geiger, the Reform leader, who expected to be invited to head the new seminary. The trustees of the legacy, however, felt that Geiger's views were too radical to win the confidence and support of the majority of congregations. The curriculum of the school included, besides the study of the Talmud and Codes, courses in Bible, Hebrew grammar, Jewish history, homiletics, and philosophy.

GINZBERG addresses the problem of how Frankel and the Breslau school could support freedom of inquiry while at the same time preserving and safeguarding Jewish tradition. Ginzberg finds the answer in the fact that Frankel never deduced the authority of Jewish law from the plenary inspiration of the Bible as the word of God. Thus a follower of Frankel could view the sabbath as originating from a Babylonian taboo-day and yet minutely observe all the sabbath laws practiced by the most strictly Orthodox. For an adherent of the Breslau school, the sabbath is holy not because its sanctity was proclaimed on Mount Sinai, but rather because it has become part of the authentic Jewish expression. It is the task of the historian to trace the beginnings and the development of Jewish customs and ceremonies; practical Judaism, on the other hand, is not concerned with origins, but regards institutions as they have come to be in the long quest of the Jewish people to discover the will of God.

Ginzberg gives a good summary of Frankel's major works, especially his introductions to the Mishnah and the Palestin-

ian Talmud. At the end of his essay, Ginzberg, an outstanding talmudic scholar, compares the contributions of Frankel and Geiger to the study of the history of the halakhah. Geiger, he says, was superior as a critic of the development of Jewish law and its underlying principles, but Frankel greatly surpassed him as an interpreter of halakhic texts. Frankel's true preeminence lies in the harmonious union in himself of traditional Jewish learning and modern critical scholarship.

SCHORSCH covers much the same ground as Deutsch, but whereas Deutsch was born during Frankel's lifetime and often writes from personal knowledge, Schorsch writes as a trained historian working with documentary sources. He carefully explains the two adjectives in Frankel's concept of "positive historical Judaism." By "positive" Frankel meant in the first place the opposite of "negative," and he condemned the radical reformers, who saw in rabbinic Judaism nothing more than a mass of superstition and sacerdotal fraud, as being utterly negative. More importantly, "positive" carried a well-established technical connotation, implying either law in general or posited law as opposed to natural law. By choosing the adjective "positive," Frankel asserted the primacy of Jewish law and the fundamentally legal character of Judaism. By adding the adjective "historical" Frankel argued for a certain flexibility in the interpretation of Jewish law; the halakhah must be conceived in dynamic rather than static terms. If Jewish law was one pole of sanctity, history was most assuredly another, and it is this nonlegal dimension of Judaism that is designated "historical" in Frankel's classic phrase.

BLAU perceptively examines Frankel's position on moderate reform of Jewish religious beliefs and practices.

As the founding father of the Reform movement in Judaism, Abraham Geiger ranks as one of the foremost German Jewish figures of the 19th century. His Judaism is a mixture born of his traditional Orthodox upbringing and his secular German university education. While still a relatively young man, Geiger began to feel that much of traditional Judaism was stalling, stagnant, and in need of change—a belief he carried with him for the remainder of his life. As a solution to what he viewed as the ossification of Judaism, he called for a reinterpretation of the tradition based on modern scientific analysis of the texts (*Wissenschaft*). Although fellow reformers embraced this position, it led to numerous, often rancorous, arguments with traditionalists, most notably with his senior colleague in the rabbinate of Breslau and the representative of Orthodoxy, Solomon Tiktin. Geiger called for radical reform throughout his life, but he nonetheless remained committed to maintaining the unity of the Jewish community and often tempered his behavior accordingly. When he died in 1874, he

left behind him a growing community of faith aligned with the principles he had promoted so staunchly.

GEIGER constitutes the first major study of the man and his philosophy. (The English translation represents a revision of the German original.) The book consists of a substantial biographical sketch followed by excerpts from Geiger's letters, sermons, articles, and books (*The Science of Judaism*, *Judaism and Its History*, and *The Original Text and Translations of the Bible*), which illustrate his approach to Judaism as well as "the vigor of his challenge." The editor, Max Wiener, charts Geiger's life, from his Orthodox upbringing to his university education to his pulpit in Breslau. Wiener also records in detail the controversies with Tiktin in Breslau that marked Geiger as a liberal. According to the editor, Geiger's greatness lay in his ideal of religious reorganization deriving from spiritual and historical insight. Yet the editor also notes that, despite his philosophical innovations in this realm, Geiger never truly developed into the kind of radical reformer for whom he called.

PETUCHOWSKI's book constitutes an amalgam of articles on various aspects of Geiger's scholarship. David Weiss Halivni looks at Geiger's critical approach to the Talmud and credits Geiger for daring to interpret the Mishnah differently from the way in which the rabbis of the Gemara did. Geiger's Talmud criticism—his absolute refusal to subordinate scientific analysis to tradition—constitutes his major contribution to the field of rabbinics. Nahum Sarna considers Geiger's Bible criticism, which likewise called for a scientific analysis of the text. While Protestant Bible criticism was already well established in Geiger's time, Jewish scholarship avoided advanced Bible studies. Through his work, Geiger reclaimed Bible studies as a legitimate concern of Jewish scholarship. Michael Meyer provides two articles in this compendium. The first consists of a comprehensive bibliography of secondary literature on Geiger in Hebrew, English, and German. Meyer's second contribution addresses itself critically to Geiger's *Historical Judaism*. Geiger's main failure, according to Meyer, was his inability to distinguish between Jewish history and the history of Judaism. For Geiger, they were one and the same, rendering the occurrences of Jewish history important only in the religious sense, relevant to a people who make up a community of faith only. In an appraisal of Geiger's prayer book reforms, Petuchowski maintains that Geiger the extremely radical liturgical theoretician differed greatly from Geiger the liturgical practitioner. While his rhetoric demanded much of Reform congregations in terms of liturgical reform, in practice he elected to work

for change within the broad framework of unified Jewish congregations. Thus, his modified prayer book turns out to feature far fewer alterations of the text than one might expect.

MEYER (1975) likewise notes Geiger's commitment to Jewish unity, which the author links with Geiger's belief in universalism. As a young man, Geiger formed the belief that Jews could achieve a universal and universalist faith only by transcending Judaism, a faith he thought to be antithetical to universalism. The older Geiger, however, concluded that universalism was inherent only in Judaism. Thus, asserts Meyer, his early flirtation with schism gave way to a commitment to Jewish unity and the importance of the collective task, a stance he embraced until the end of his life. In his efforts to modernize Judaism and bring to light its universalist principles, Geiger was influenced by the Christian forms current in his day that stressed the universalization of Christianity. Notwithstanding this element of imitation, notes Meyer, Geiger maintained his claim that only Judaism was receptive to progress.

MEYER (1971) contrasts Geiger's ideology of religious reform with those of his reformist contemporaries, Leopold Zunz and Zacharias Frankel. This comparison provides the reader not only with an understanding of Wissenschaft according to Zunz and Frankel but also a deeper understanding of Geiger. Zunz, the nontheologian of the three, advocated strongly raising the Wissenschaft des Judentums—the scientific study of all, not just religious, Jewish texts—to the level of an academic discipline. Zunz's interests were the most clearly focused on the study of the Jewish past; like Geiger, this led Zunz to demand changes in the present state of Judaism, which he viewed as stagnant and backward. Although Frankel also supported the scientific study of religion, unlike Geiger and Zunz he insisted that Wissenschaft remain subservient to Judaism and not vice versa. Where Geiger occupied himself with a primary concern for revisiting philosophy and theology, Frankel insisted on reviewing practice, contending that the people were far more interested in changes in the demands of practice than they were in ancient Jewish philosophy and theology.

MEYER (1988) expands the comparison with Frankel in a larger treatment of the development of the Reform movement and Geiger's role therein. Meyer presents Geiger and Frankel as foils for one another, a surprising departure from the more common casting of Samson Hirsch in this role.

The latest monographic study of Geiger is HESCHEL's analysis of Geiger's study of the "Jewish Jesus." She draws an analogy to Manet's *Olympia*, whose direct stare at her audience discomfited a world used to the demure artistic portrayal of women. Similarly novel, Geiger's Jewish study of Jesus unsettled the Christian, or at the very least culturally Christian, academic world. According to Heschel, by reversing the situation in which Christians, especially the biblical critics of the age, wrote about Judaism to one where Jews wrote about Christianity, Geiger made a major adjustment to the power relations between the two religions. Where Christian theologians excoriated Pharisees and Pharisaism, Geiger argued purposely that Jesus was a Pharisee par excellence; the ideal that Jesus preached so steadfastly—the democratization of Jewish society—was the ideal championed by the Phar-

isees, unmistakably Jesus' teachers. Like Geiger's reversal of the scholarly gaze, his reincarnation of the Christian "mythic potential" under the most Jewish of auspices, namely the Pharisees as defined by the Christian theologians themselves, reclaimed power for the Jews in their academic and religious relationships with Christians.

When God created human beings, the Hebrew Bible begins, he made them male and female. In the creation account in the next chapter, however, the narrative drops this nomenclature, preferring instead the terms *man* and *woman* in its description of the establishment of the social order. This terminological tension mirrors nicely the fundamental issues of gender. Males and females may be naturally differentiated by anatomy, but men and women are (or can be) culturally achieved states. Most cultures ascribe to a gender a wide range of characteristics, behaviors, and activities, and proper "men" and "women" are expected to conform to gender expectations. Feminist scholarship over the last 30 years has provided an array of methods for understanding how societies construct, reproduce, enforce, and violate gender boundaries. The relatively recent awareness of these issues not only has generated a burgeoning academic field, but it also has highlighted the gaps between modern values and traditional Jewish (and especially rabbinic) understandings of gender. There are now a number of valuable books that attempt to describe and ana-

lyze the ways in which Jews historically have constructed gender, and at the same time these studies have responded (if only implicitly) to the challenge that feminist scholarship has presented to modern Jewish communities.

RUDAVSKY presents a collection of essays by many of the leading scholars of gender and Judaism. The essays vary widely and are somewhat uneven. Nevertheless, they offer a good overview of different issues and approaches.

EILBERG-SCHWARTZ is not a book on gender per se, but his anthropological approach to the Hebrew Bible raises many issues that relate to how the different parties whose documents make up the Hebrew Bible constructed gender. Eilberg-Schwartz argues that the Hebrew Bible, especially within its rules concerning impure fluids, constructs a series of oppositions: men/women, life/death, control/lack of control. This dichotomized view of the world, in which gender plays a crucial role, is primarily the contribution of the Israelite priests, who attempted to construct a male community based on biological descent. For the priests, circumcision—the controlled release of blood from the organ of male reproduction—was the symbolic act par excellence in this construction.

Turning to early rabbinic literature, WEGNER employs a different approach. She examines how a single rabbinic document, the Mishnah (edited c.200 C.E.), constructs the legal status of women. Do these rabbis see a woman as an independent person (in the legal sense of the word) or as chattel, an object under the control of her father or husband? Wegner shows quickly that the binary nature of the question is misleading, for the Mishnah bifurcates the woman, regarding her as able to exert independent control in most areas of her life, with the significant exception of her sexuality. This bifurcation arose because the rabbis saw women as neither Self nor Other, but as ontologically ambiguous. Woman is thus an anomaly in the Mishnah, oscillating between two poles. Wegner's use of the term "chattel" is too strong (a woman's husband, for example, does not have the right to alienate her sexuality, i.e., to prostitute her), but her thesis deserves further consideration and testing in other rabbinic documents.

Instead of focusing on the way that law constructs and reproduces gender, LASSNER charts the history of exegesis of a single story—King Solomon's marriage to the queen of Sheba—from the Bible to the Middle Ages. Lassner demonstrates elegantly how in response to their perception of a tension between the biblical picture of a strong woman and their own understanding of the proper subordinate role for women, Jewish interpreters of the Bible increasingly tamed the queen of Sheba either by domesticating her or by demonizing her. By examining contemporary Islamic exposition of the same biblical story, Lassner also demonstrates that Jewish and Islamic exegetes were not working in isolation from each other but shared similar concerns about gender and even appropriated each other's readings of this story.

These later interpretations of the story of the queen of Sheba exemplify one strategy of reproducing gender roles and hierarchy, the creation of exempla or role models. WOLFSON examines a very different, and far more radical, strategy of constructing gender. According to Wolfson, many kabbalists (especially those who subscribed to Lurianic Kabbalah) understood gender constructions as ontological, based on the very

nature of the divine. These kabbalists saw God as what Wolfson calls a "male androgyne." God is fully male, but folded within God's maleness is his female nature and attributes. The most striking kabbalistic image of this understanding is the portrayal of God's female nature as being embodied as the corona of his phallus. When God and the world are put right, female will be utterly assimilated into male. Despite the radicalism of this image, it reproduces an essentially conservative notion of gender: the male possesses power and the ability to act (the phallus), whereas the female is the passive receptacle of male activity. Wolfson's book is meticulously documented.

Language too can be gendered. In a short and interesting study, SEIDMAN discusses the gendering of Yiddish as a "female language" and of Hebrew as a "male language." The early Zionists and revivalists of Hebrew desired to see themselves and their activities as "masculine," which in turn led to their attaching a subordinate status ("female") to Yiddish. The construction of an "other" against which one can define oneself is of course not new, and perhaps it is not very surprising that the early promoters of Hebrew needed to demote Yiddish in order to define their own activity. What is more interesting here is that they chose gender as the vehicle for identification. It is not as if these Hebraists were entirely unaware of what they were doing; they describe their own linguistic activities using starkly masculine metaphors.

HYMAN provides a broader historical structure in which to view this phenomenon. She argues that Jewish assimilation in the 19th and 20th centuries must be viewed through the prism of gender. Jewish men and women, both in Western countries and in Eastern Europe, experienced assimilation differently, and these experiences led in turn to reassessments of gender roles and representations. In the West, for example, men and women assimilated in different frameworks. Jewish women, like their non-Jewish bourgeois sisters, were given responsibility for domestic life, including the moral and religious formation of children. Jewish men in the West, on the other hand, were expected to be more externally oriented. The material result of this division was that Jewish men assimilated more rapidly and radically than Jewish women. Yet this difference created a paradox: because women were responsible for the transmission of religious values, male assimilation was blamed on the failure of their mothers. In the East, on the other hand, where Jewish assimilation was harder to achieve, where Jewish women traditionally worked outside of the home, and where women were not valued as the sole transmitters of religious values, gender and gender roles were not seen as a significant category or subject of discussion. Eastern Jews brought this understanding of gender with them to the United States as immigrants at the beginning of the 20th century. These early Jewish immigrants adopted Western gender roles only in part, creating the image of the "Yiddishe Mamma," a domestic powerhouse who was a source of strength and support for her children.

Two factors, however, worked against the positive image of the strong Jewish mother. First was the antisemitic critique of Jewish masculinity, which dates from 19th-century Europe. Jewish men, antisemitic authors asserted, were not real men. Jewish men who were trying to assimilate could not ignore these attacks and responded by asserting their own masculinity,

adopting the same gender values as their ambient cultures. This is the soil within which Zionism and the revival of Hebrew blossomed, and it explains the strong gender associations with these projects discussed by Seidman. The second factor in the United States was increasing assimilation. Sons and grandsons of these immigrants, caught between having lost their means for achieving Jewish status (through Torah study) and being denied status in the gentile world because of their Jewishness, turned against Jewish women. The result was the production of cultural stereotypes of the suffocating Jewish mother. "The baleboste gave way to the Jewish priestess in her home, and in the course of time the Yiddische Mamma of song and story was transmuted into Sophie Portnoy."

Although the books surveyed above focus on vastly different times and places, their wider conclusions and implications are remarkably similar. All of these authors see gender as constructed, that is, as a malleable category that Jewish cultures throughout time have manipulated for a variety of reasons. Most of these Jewish constructions of gender have been nearly identical to those of proximate non-Jews. They also have been far from salutary for women. Nearly all of the authors discussed thus far reveal the androcentric nature of these gender constructions and the valuation of "male" as superior to "female." Lassner, Wolfson, and Hyman show most explicitly how uneasy many Jewish cultures felt at even the possibility of valuing female as higher than, or merely equal to, male.

On a deeper level, these books are wrestling not only with historical cultures, but with a very delicate issue: the role of modern Jewish women. While none of these books explicitly states it, all imply that past Jewish gender constructions are deeply flawed as models for modern Jewish life. Yet none takes the next step, explaining how modern Jewish society can understand gender. In a highly original and daring work, BOYARIN attempts to do exactly this. His argument is that from the rabbinic through the modern period, there have been Jews who had an alternative construction of gender that valorizes the "sissy," the feminized and eroticized Jewish male. Boyarin locates the origin of this gender construction in the rabbinic period, as a response to Roman colonization and hegemony, and he charts its survival in the Middle Ages (somewhat weakly argued with the example of Glikl of Hameln and more strongly illustrated with examples of art from the Passover Haggadah) and its flowering within later Ashkenazi culture. It is precisely this image to which both Zionism and Freud's theory of psychoanalysis attempted to respond. Boyarin wants to reclaim this gender construction, going so far as to suggest that the ideal of Jewish masculinity be seen in a woman, Bertha Pappenheim. Whether or not all or most of Boyarin's readings of this enormous range of sources are convincing or whether his ultimate suggestions become influential remains to be seen. What is clearer is that scholars now having exposed convincingly the androcentrism inherent in past Jewish gender constructions, Boyarin points the way to the next question: must responsible academic work restrict itself to the deconstruction of gender models, or can it contribute constructively to a modern, and passionate, debate?

The stories of Genesis have generated a library of commentaries and reflective works over the centuries. These works have examined Genesis from widely differing theological and methodological perspectives. During the 20th century, scholarly preference for understanding the book has shifted from one based on source-critical methodologies to one that treats the work essentially as a unity, whether written by one hand (a minority view) or compiled by a later redactor, dated to different periods and given different agendas depending on the scholar and his or her criteria.

CASSUTO's two-volume work can be credited, at least in part, with spearheading the initial forays into literary criticism of the Bible. Cassuto sifts a vast array of ancient Near Eastern sources and provides a careful and original study of the subtle nuances of the Hebrew text. In particular, he notes parallel units within the book of Genesis that possess a chiasmic format, thus demonstrating a greater unity of the text than had been supposed by many scholars of his day. Where appropriate Cassuto also supplies information from the various other textual witnesses to illustrate how they differ from or elucidate the Hebrew text. The work was translated from Hebrew to English posthumously. Where Hebrew terms have been retained they are accompanied by transliteration and translation, making this a ready companion for students regardless of their knowledge of Hebrew. The champion of scholars who resisted the influential assumptions of Julius Wellhausen's Documentary Hypothesis, Cassuto offers a creative and scientific challenge to the atomization of the text. The two volumes cover Genesis from Adam to Noah and from Noah to Abraham, respectively.

GUNKEL's classic survey represents his reaction to and departure from Wellhausen's isolationist approach to the text. Gunkel, generally known as the founder of form criticism, treats the narratives of Genesis as a prose form of earlier poetic traditions. His work on Genesis is still regarded as an invaluable starting point.

LEIBOWITZ offers the text of Genesis in conjunction with selections from rabbinic commentaries and midrashim in Hebrew and English. In so doing, she makes accessible a world of early and diverse scholarship that is often unknown or unavailable. The work also lists at the end of each section a series of questions that challenge the reader to interrogate both the biblical text and the various commentators' positions and presuppositions. Leibowitz combines literary criticism, a feminist perspective, and traditional Jewish exegesis to make for original and engaging reading. Biographical notes on the commentators integrated into her work constitute a useful added feature.

VON RAD expands upon the theological implications of the earlier historical studies of Albrecht Alt and Martin Noth, aiming to "elucidate the relationship between Biblical historical and literary criticism and a Biblical theology of history." While adhering to the bare essentials of the Documentary Hypothesis, von Rad treats Genesis as a carefully composed "saga" and provides what is essentially a running commentary that separates the various narrative traditions (e.g., J, E, and P) while studying them within the context of a broader hexateuchal theology. Von Rad sees this as a preoccupation with a single and simple narrative theme: "God, the Creator of the world, called the patriarchs and promised them the land of Canaan. When Israel became numerous in the land of Egypt, God led the people through the wilderness with wonderful demonstrations of grace; then after their lengthy wandering he gave them under Joshua the Promised Land."

SARNA (1966) aims to elucidate the historical, philosophical, and sociological message of Genesis. He designed his work to "make the Bible of Israel intelligible, relevant and, hopefully, inspiring to a sophisticated generation, possessed of intellectual curiosity and ethical sensitivity." To this end, Sarna rejects the literalist interpretation of the Bible and instead places it in its appropriate cultural setting, treating the text as one would treat any historical document. Sarna distills for the nontechnical reader the advances of biblical scholarship, archaeology, and more recent techniques of critical analysis without leaning on jargon. While clarifying the broader cultural continuum that comprises the Near East, Sarna rightly emphasizes the differences as well, pointing out the distinguishing characteristics of Israelite religion and literature. He proceeds through the book of Genesis by pericope and cycle, providing separate treatments of creation, the flood, the Tower of Babel, the patriarchal period, the covenant, Sodom and Gomorrah, Isaac and the Akedah, Jacob and his relations with Esau and Laban, and finally the Joseph cycle.

Each page of SARNA (1989) provides Hebrew biblical text, interlinear translation, and a running commentary that highlights the most difficult and important verses. Sarna looks at Genesis with a literary eye and elucidates it with numerous references to ancient and modern scholarship. The commentary

is transliterated when discussing particular words or phrases, rendering it useful to readers who are not familiar with Hebrew. Sarna's commentary represents a transitional phase in scholarship, one that links the early efforts at literary criticism of the Bible, and hence a holistic understanding of the received text, with a seasoned and cautious regard for the oral sources that comprise the narrative fabric.

SPEISER combines a mastery of ancient Near Eastern and traditional Jewish sources with the perspective of the school of higher criticism. In addition to providing a translation and thorough philological analysis of the more difficult aspects of the text, Speiser also delves into the redactional history of Genesis. In particular, he opines as to the various editorial strands that he sees layered into a semicohesive whole, which betray a number of hands as well as a grounding in pagan mythology. Throughout, Speiser provides archaeological and comparative evidence to elucidate the text. Though a few of Speiser's observations appear today somewhat dated and even somewhat presumptuous, his overall contribution to the study of Genesis cannot be overstated.

RENDSBURG expands upon the work of earlier literary critical scholars such as Cassuto in demonstrating how the entire work of Genesis forms a complex web of interconnected stories, held together by theme-words that link paired units. His book is divided into four major units—the primeval history, the Abraham cycle, the Jacob cycle, and the Joseph story—and considers also the parallels that connect each of the cycles. Rendsburg discusses the impact that the proposed redactional structuring has on source criticism and comments on a possible date for the book, which, based on literary parallels with Samuel and Kings, he places during the united monarchy, sometime in the tenth century B.C.E. His holistic approach to Genesis provides an insightful counterpoint to the atomizing tendencies of higher criticism.

There is scarcely an aspect of the culture and history of medieval Near Eastern Jewry that has not been significantly impacted by the publication of materials discovered in what has come to be known as the Cairo Genizah. A *genizah* is a place to which written and printed Judaica and Hebraica—usually of at least a quasi-religious significance—is retired once it has become worn or unneeded, but the Cairo Genizah is the *genizah par excellence*, a quite singular example of such a repository, in almost constant use for close to 1,000 years before its “discovery” by European scholars in the 19th century. It would be impossible for a single article to embrace, in even the most cursory manner, all of the subjects—let alone the important publications—that fall within the purview of the present rubric. Subjects as disparate as biblical studies, rabbinics, Karaism, law, mysticism, philosophy, and poetry have all benefited from the discovery of these manuscripts. (See, for example, the update on research of *genizah* materials in the 1983–1985 yearbook of the *Encyclopaedia Judaica*, 163–171.) One field, however, may be said to owe its very existence to the discovery of the Cairo Genizah materials, namely the economic, political, and social history of medieval Near Eastern Jewry, especially in the period between the 11th and 13th centuries.

MANN focuses primarily on the religious and political institutions of the Jews. A number of the texts in this work reveal the complexity of the relations that existed between the central institutions of Babylonian authority (i.e., the academies and the exilarchate) and the newly emergent independent Jewish communities in North Africa and Europe. In this regard, Mann has played a critical role in demonstrating the usefulness of documentary material from the Cairo Genizah for Jewish history. Mann’s interests, however, are not limited to the realms of social and political history, as various chapters of this work reveal. There are chapters that deal with the intellectual and cultural life of the Jews, and the first section of the work makes pioneering use of Genizah documents about the history of Jews in Europe, a path that has most recently been followed by Norman Golb.

GOLB’s article, while now somewhat dated, is still a useful and entertaining introduction to the Cairo Genizah. In addition to describing the exciting events that led to Solomon Schechter’s acquisition of the contents of the Genizah for the Cambridge University Library in 1896, Golb also gives the reader a sense of the important contributions to research that the Cairo Genizah has afforded since. In a clear and engaging style, he details numerous historical issues that have had to be revised and clarified in light of new information gleaned from sources discovered in the Genizah. Golb’s article reviews the major fields of research that have been impacted by research on the Genizah materials and introduces the reader to many

of the important scholars who have been involved in that enterprise.

GOITEIN’s work is the masterful summation of a long and fruitful career of research into the economic and social history of Mediterranean Jewry based on documents from the Cairo Genizah. In five volumes of text, he recreates in particular the bustling Jewish society of Fustat (Old Cairo). But Goitein’s work is neither a local history of Fustat nor of Egypt. The Jewish community that preserved the Genizah papers was, in Goitein’s view, part of a much larger economic and cultural universe that transcended political and religious boundaries. Thus, Goitein states that his work is titled *A Mediterranean Society* “because the people described in it are to a certain extent representative of their class in the Mediterranean world in general, and its Arabic section in particular.” For all of its breadth, however, Goitein’s work does not ride rough-shod over the details of daily life; they are here in all of their vividness and complexity.

FRIEDMAN’s work, like that of Gil (1976), is a close study of a corpus of documents all of a single type, in this case Palestinian marriage contracts. The discovery of the Cairo Genizah has shed light on the ancient religious tradition of Palestine, which differed on many points from that in practice in Babylonia, and Friedman’s study uses Palestinian marriage contracts as a window onto that tradition. He notes a number of unique traits in these documents that point to a distinct Palestinian legal tradition, as well as certain scribal features that are particular to these documents. The second volume of this work contains edited transcriptions and translations of the documents upon which the study is based, together with helpful introductions and notes.

GIL (1976) is a study of documents pertaining to charitable institutions, similar in scope to Friedman’s work on marriage contracts. Building on Goitein’s preliminary investigations in the second volume of his *Mediterranean Society*, Gil extracts a wealth of data related to the economic and social conditions within the *genizah* community from 147 documents. In a lengthy introduction, he dwells on the various motivations, religious and economic, behind the endowment of these foundations and details their administration by the community. Gil also compares the role of these institutions within the Jewish community to that played by the *waqf* in Muslim society. Transcriptions and translations of the corpus of documents are offered in the second section of the work.

COHEN’s book considers a crucial development in the political history of Egyptian Jewry. The author demonstrates how the documentary sources from the Genizah can serve as a historical corrective to the programmatic medieval chronicles upon which earlier generations of historians relied. Specifically, Cohen shows that the office of the Head of the Jews in Egypt came about as the end-result of a slow and protracted process originating within the Jewish community, and not by caliphal decree as described in medieval sources. He delves into the complex interpersonal relations among key players in this process, and he highlights similar developments of consolidation within Egypt’s Coptic Christian community.

GIL (1983) is a synthetic treatment of the political, social, and economic history of Palestine. At the center of Gil’s history of the Jewish community is the Palestinian *yeshiva*, an

institution that was virtually unknown before the discovery of the Genizah and the research of Jacob Mann. Gil accords the yeshivah its rightful place among the international institutions of Jewish authority during the Middle Ages, alongside the exilarchate and the two academies in Babylonia. In addition to the wealth of data that it contains, Gil's book makes an important methodological statement by incorporating Genizah-based studies, usually of a narrowly Jewish nature, into a more comprehensive history of Palestine from the time of the Muslim conquest.

Shahak, Israel, *Jewish History, Jewish Religion: The Weight of Three Thousand Years* (Pluto Middle Eastern Studies), London and Boulder, Colorado: Pluto, 1994

Although modern scholarship has amply documented the history of gentile attitudes toward Jews, the parallel topic of how Jews and Judaism have historically viewed gentiles remains largely neglected.

The work of Katz constitutes a partial exception. His studies of Jewish views of gentiles have been directed at two primary goals: first, to demonstrate how economic circumstances that condition Jewish-gentile relations have influenced the historical development of Jewish law (halakhah); and second, to show how varying demographic conditions and cultural orientations have shaped shifting Jewish perceptions of gentiles within the social-psychological sphere.

KATZ (1961) provides a broad survey of Jewish attitudes as they emerged in Christian Europe during medieval and modern times. In part one, Katz introduces readers to the kinds of tensions that arose in early medieval Europe between inherited rabbinic prohibitions on Jewish-gentile contact, on the one hand, and the needs of Jewish communities to maintain their economic viability through business relations with non-Jews, on the other. In part two, Katz explores a range of medieval Jewish "types"—such as proselytes, martyrs, pietists, and disputants—to demonstrate the wide variety of approaches toward Christians that existed within the same broadly-defined theological and legal value system. In part three, Katz traces how the shifting pressures of the early modern and modern periods of European history gradually transformed the attitudes expressed by Jews toward gentiles. Here the author posits that the cultural (and often

physical) isolation of Jewry in the 15th and 16th centuries contributed to a revision of Jewish perceptions of gentiles, whose intrinsic metaphysical natures, as well as their theological views, were now considered to differentiate them from Jews.

Ironically, this hardening of Jewish attributions of metaphysical "otherness" to non-Jews served as a prelude to the growth of greater tolerance within Judaism during the subsequent two centuries. As Katz emphasizes, this growth did not occur solely because of intrinsically theological criteria; rather, it developed for three other reasons. First, it was a response to occupational shifts mandated by the place of Jews in an expanding European mercantile economy. Second, tolerance among Jews rose amid other increased expressions of religious toleration by European Enlightenment movements during the 18th century. Third, Jews grew more tolerant in reaction to the new Emancipation contract established by the French Revolution. Nevertheless, Katz suggests that these pressures did not altogether eliminate the traditional anti-Christian (and more generally anti-gentile) spirit of Judaism, but rather forced Jews to adapt their attitudes to the orientations of various modern secular ideologies.

KATZ's (1983) analysis of the concept of the "sabbath gentile" avoids the weaknesses of over-generalization inherent in the broad focus of his earlier study. The "sabbath gentile," a non-Jew who performs certain work for Jews on the Jewish day of rest, was an institution that entered into the life of diaspora Judaism to resolve the problems created by the elaborate prohibitions in Jewish religious law against performing various functions construed as "work" on the sabbath. However, recourse to the use of gentiles to undertake necessary or desirable tasks—already problematic from the standpoint of mishnaic and talmudic law—created a host of novel halakhic problems, particularly as Jewish economic existence and business relations grew increasingly complex in Europe during the medieval and early modern periods.

Katz examines the various ways in which Jewish jurisprudence sought to accommodate itself to fundamental alterations in the character of medieval Jewish life, especially as a consequence of the shift in Jewish economy away from agriculture and toward trade, which occurred between the ninth and 12th centuries. In a fascinating exposition, he shows how rabbinic authorities justified practices already widely engaged in by Jewish communities, such as using gentiles to light fires, milk cows, transport goods, run shops, mint coins, and perform other tasks forbidden to Jews on the sabbath.

This phenomenon became much more prevalent in Poland during the later Middle Ages, as Jews in that nation leased farms, tolls, inns, and various other commercial franchises from noble landlords. The use of gentiles to maintain such enterprises on the sabbath was justified through legal fictions, such as the temporary "sale" or "rent" of the enterprise; on the basis of competing and overriding legal provisions; and on the grounds of legal distinctions, such as those between earning profit and avoiding loss. Nevertheless, as Katz shows, widely-deployed practices occasionally so exceeded the capacity of authorities to find loopholes that rabbis often found themselves condemning such practices without being able to stop them. In this manner, Katz uses the halakhic debates

surrounding the sabbath gentile as a barometer to gauge the gradual breakdown of traditional Jewish authority under conditions of economic modernization.

NOVAK focuses on divisions in approach to the category of "righteous gentiles" within tannaitic, medieval philosophical, and kabbalistic literature. In premodern Judaism, the "righteous gentile" was a legal-conceptual, rather than a strictly ethical, category. Its origination during the tannaitic period produced a tripartite division separating Jews (those who adhere to the whole of Sinaitic revelation) from gentile idolaters (those who enjoy no part whatsoever in the Torah) and righteous gentiles (those who adhere to the seven "Noahide laws," which command the establishment of law courts and prohibit blasphemy, idolatry, sexual deviance, murder, theft, and eating the torn limb from a living animal, on the basis of the Sinaitic revelation). The creation of this third, "in-between" category led to debates within Judaism over whether or not gentile adherents of the Noahide laws can achieve divine salvation. Here, Novak explains, a rift emerged within Judaism that partially anticipated later divisions between Jewish philosophical and mystical traditions. It is in the latter, mystical, wing of Judaism that ontological distinctions between Jews and gentiles were most rigorously drawn. In contrast to Katz, who attributes this development to the "ghettoization" of late medieval and early modern Jewries, Novak posits that the demonization of the gentile dates back to various tannaitic traditions and evolved concurrently with the deepening of Jewish mystical orientations over the course of the Middle Ages.

Finally, SHAHAK presents a polemical overview of negative Jewish stereotypes of the gentile, loosely fitted into a broad historical framework. Shahak's approach is ideologically geared toward justifying an attack upon the political premises of Zionism and the constitutional prerogatives of modern Israel as the "Jewish State." While marked by broad overgeneralizations, occasional distortions, and sharp polemical broadsides, Shahak is largely right in his rejection of the apologetic emphases in mainstream academic Jewish historiography on the question of the gentile. Shahak thus provides a useful corrective to some of the weaknesses of the above-mentioned works, one that underscores the need for extensive further research in this under-investigated field.

Most of the primary source material on the geonim—the spiritual leaders of early medieval Jewry—available to 19th-century historians pertained strictly to the geonim's public role as principals of the great academies, the yeshivot, in Babylonia and Palestine. It was thus through the prism of their institutional lives—reflected in the wealth of geonic responsa literature—that historical inquiry into the geonic period began. With the publication of materials found in the Cairo Genizah, however, new windows into the geonic period were opened. Besides a plethora of new responsa, commentaries, and legal treatises, the Genizah also provided letters and documents that allowed recent scholars to see beyond the abstract intellectual activity of the geonim and explore the sociological and political dimensions of the period. At the same time, the 20th century has seen a growing appreciation of the entrenchment of geonic history within contemporary Muslim society as well.

GINZBERG's work is a pioneering step in the study of geonic history both in its scope and the source material it uses. Based to a large extent on newly discovered responsa from the Cairo Genizah, it represents the first attempt to encompass the salient features of the geonic period in a work devoted exclusively to that subject. Ginzberg approaches his subject by focusing on the institution of the gaonate rather than searching for remarkable individuals. If the geonim themselves were for the most part less-than-monumental figures, he suggests, "the more important must have been the Gaonate to be able to impress its stamp upon several centuries." Ginzberg's study has produced a groundbreaking appreciation both of the sociological forces at play within the gaonate and of the long-overlooked political dimension of geonic history. However, it should be recognized that Ginzberg focuses almost exclusively on the halakhic activity of the geonim, obviously a perspective that skews the reader's impression of the period.

Owing to the relatively meager amount of biographical information available in the relevant sources, MALTER's work on Saadya is one of only a few works devoted to the lives of individual geonim. The comparatively large quantity of data available on Saadya's stormy public career, however, makes him one of the most suitable candidates for a monographic treatment of this sort. Malter regards Saadya as "the founder of a new epoch in Jewish history," whose main contribution

lies in “the literary monuments [that he] left to posterity in nearly all branches of Jewish learning and literature.” Malter insists that a “biography of [Saadya] should primarily be a record of his literary achievements and of his spiritual influence.” Accordingly, the book’s first part, which is devoted to Saadya’s life, is offered as a backdrop to the discussion of Saadya’s literary output, which is elaborated in the second part. The book’s third section, a bibliography of modern scholarship on Saadya, was comprehensive in its day but is now sorely out of date.

MANN’s study represents an important turning point in the study of the geonic period. His concern in this article (as in all of his works) is the realia of life as it had been lived by the common Jew. This orientation had already gained some following among Jewish historians, but it is innovatively applied to the geonic period by Mann. Acknowledging the inherent limitations of his sources, Mann nevertheless asserts that geonic responsa “are a real treasure trove for the knowledge of the life of the Jews of that period, especially in such points where the information to be obtained from external sources entirely fails.” Critical of historians who, following blindly in the footsteps of Solomon Rappoport, treat the history of the geonic period as “a collection of biographies of the prominent spiritual and communal leaders,” Mann extracts information from responsa literature about the lives of Jews in the various communities to which these communications were sent. The dense writing style that plagues this and many of Mann’s other writings does not diminish Mann’s profound insights.

COHEN’s essay is an extremely informative overview of research in the field of geonic history. Ostensibly written as an introduction to the reprint of Jacob Mann’s *Texts and Studies*, it is in fact a sweeping summary of 19th- and 20th-century scholarship on the geonic age and it pays close attention to the historiographical concerns of the authors it discusses. The reader of this essay will become acquainted with all of the major writers on the geonic period as well as the issues that occupied them. A useful bibliography is appended to the text.

GIL’s work serves as an important corrective to the otherwise lopsided emphasis on the geonim of Babylonia in this article and in the field in general. Palestine was home to an academy of its own, which was also headed by individuals bearing the title “gaon.” However, unlike the geonim of Babylonia, those in Palestine produced relatively little in the way of responsa. Thus, most of the information on the Palestinian geonim derives from personal letters and court documents found in the Cairo Genizah. The paucity of legal material produced by the Palestinian geonim has led historians to conclude that the Palestinian academy served primarily as an administrative center for the regions under its authority, and it was therefore comparable in many ways to the status of the exilarchate in Babylonia. Gil’s work delineates the functions carried out by the Palestinian geonim during a period of nearly 200 years.

GRONER’s work allows the reader to see in minute detail the process whereby the Babylonian Talmud achieved canonical status at the hands of the geonim. Groner examines the responsa that can be attributed with reasonable certainty to Hai Gaon—the largest number attributable to any one figure in the geonic period—with a view to extracting the hermeneu-

tical principles that underlie them. In particular, Groner demonstrates Hai’s unwavering reliance on the Babylonian Talmud as the ultimate source of legal authority.

SKLARE’s biographical study attempts to locate the early 11th-century figure Samuel ben Hofni, one of the last geonim of the Sura academy, within the general intellectual landscape of his time. Based on a close analysis of Samuel ben Hofni’s works, some of which are published for the first time in this text, Sklare shows the close philological and conceptual affinity between these writings and those of contemporary Muslim mu’tazilite thinkers. Against the opposition of some conservative elements within the Jewish community, the rationalist spirit of the Muslims was embraced, albeit selectively, by Samuel and others like him who sought desperately to “revitalize and strengthen the intellectual life of the yeshivot and to maintain their central intellectual authority.” Sklare’s synchronic approach to the intellectual activity of the geonim represents a fresh new direction in research on the period.

BRODY offers an elegant and up-to-date synthesis of research on the major themes of the geonic period up to the 11th century. He considers the major accomplishment of the geonim to be their consolidation of Jewish culture along lines laid down in the canon of (Babylonian) rabbinic literature. This perspective is reflected both in the title of his book and the periodization that Brody employs. He develops his thesis by analyzing the various functions carried out by the geonim, paying particular attention to their literary and intellectual activity. The internationally recognized authority of the geonim within the Jewish world was critical to their success, and Brody explains how the geonim fought to maintain that status even as independent Jewish communities began to emerge in Europe and North Africa at the end of this period. In the book’s final section, which dwells on the innovations introduced by Saadya and his successors, Brody conceives of these new developments as part of a desperate struggle by the geonim to retain their position in the face of a changing intellectual climate within the international Jewish community. Brody’s patient discussion of the primary sources for the period, as well as his summaries of major points of scholarly debate, makes this a useful work for the advanced student and the beginner alike.

Jews traveled through and perhaps even settled in Germany primarily as merchants in late antiquity and the early Middle Ages. There are references to Jews in the fourth century in the city of Cologne, for example. Still, there are no substantive records or indications of permanent Jewish settlement in Germany until the late tenth century. At that time a number of Jewish families made their way to Germany from Italy, among the most well-known being the Kalonymos family from Lucca, some of whom first settled in Mainz. Later, Jews moved to other Rhenish cities, including Speyer and Worms. In general, Jews found homes in old episcopal and trade centers and settled in the east, in Regensburg and Prague, as well. The famous invitation of the Bishop of Speyer to the Jews of Mainz in 1084 offered Jews numerous privileges for settling in the city at the same time that it made clear the economic benefit that the Bishop intended to reap from the Jews' activities. The charter was thus rather indicative of much of the later development of medieval German Jewry, and "charters" were soon offered to Jews in other cities, such as Worms in 1090. Owing to the favorable economic conditions and the settlement of important scholars, the Rhenish communities flourished during the high Middle Ages. Throughout the Middle Ages, however, Jews living in Germany had to navigate through complex relations with their local and imperial overlords as well as their Christian neighbors.

The majority of books available in English on the period focus on such relations, particularly at points of conflict, such as the crusades at the end of the 11th century; the increased

restriction of Jewish social, political, and economic activity, especially in the 12th and 13th centuries; confrontations with the church; accusations of well poisoning during the time of the Black Death and the subsequent massacre and displacement of many Jewish communities; trials for alleged ritual murder and host desecration; and the eventual and almost systematic expulsion of the Jews from a variety of German cities in the 15th century and German territories in the 16th century. Less representative of the scholarship available in English, but certainly more central recently, is the internal history of the Jewish communities, in particular the growth of communal structures; the development of the rabbinate and the discussion over rabbinic ordination; as well as the intellectual accomplishments of the Hasidei Ashkenaz and the important rabbinic legal decisions of the 13th through the 15th century.

BREUER and GRAETZ focus on the 17th and 18th centuries, but the first portion of their work offers a general and very helpful overview of the history of the Jews in Germany from the beginnings of their settlement there through the 16th century. This first chapter would serve as a most useful introduction to the subject. The focus throughout is on both internal communal, cultural, and intellectual developments and on the impact of external forces on the Jews in Germany.

HSIA and LEHMANN present essays from a number of the most important international scholars of late medieval and early modern German Jewish history (from the 15th through the 18th century). While the volume addresses primarily the last phases of the Middle Ages, many of the contributors are important scholars in the more general field of medieval German Jewry, and the research presented is very current and multidisciplinary. The essays throughout the book present the history of the Jews from the "outside," that is, Jews seen from the Gentile world, as well as from the "inside," Jews looking out onto the non-Jewish world. The topics that receive the most attention are the effects of exclusion—imposed as well as self-imposed—of the Jews from the society around them; the social and economic structure of German Jewry; relations between Jews and their Christian neighbors and political lords; and representations of and prejudices against Jews.

AGUS, relying heavily on rabbinic responsa, discusses the early stages of settlement and development of the tenth- and 11th-century Franco-German (Rhenish) communities, which he considers the antecedents to a more modern conception of Ashkenazi culture that later, after the 14th century, spread to Eastern Europe. For Agus, the Franco-German communities of the tenth and 11th centuries enjoyed an improved condition over their Roman and Carolingian predecessors, featuring strong systems of education, economic opportunity, and autonomous self-government. Agus traces a number of significant aspects of the Jewish communal life of this period, especially business and economic practices, communal organization, domestic life, and relations with non-Jewish society.

SHOHET argues that Jewish life in Germany flourished in a uniquely Jewish fashion, which, although not "wholly uninfluenced by foreign ideals, was not moved nor dominated by them." The Italian and Spanish Jewish communities, on the other hand, were to a much larger degree influenced by the culture of their non-Jewish surroundings. Throughout, Shohet seeks to examine the adjustments in outward Jewish life as well

as the attempts of Jewish authorities to harmonize Jewish law with the realities of life. Shohet's focus is on the juridical as well as the historical development of German Jewry in the Middle Ages. He asserts that the rabbinic Judaism of the period was less rigid and fixed than it subsequently became, and he insists that local customs and ordinances often took precedence in the legal decisions of Jewish courts. As Jewish contact with a vast non-Jewish world grew, the exigencies placed on the Jews themselves grew; thus, during the Middle Ages frequent rabbinical synods were called to discuss current issues and promulgate new ordinances as required. Shohet offers a classic description of some of the main internal Jewish institutions and customs from the perspective of the rabbinic literature of the period. Included for discussion are the definition, rights, and administration of the community; the synagogue; the various methods of assessing and collecting community and individual taxes; the legal relations of Jews to non-Jews and to non-Jewish courts; the organization of the Jewish courts, the extent of their legislative authority, and their ability to enforce their legislation; the status of informers against the community; and the use of evidence in legal proceedings.

CHAZAN argues that although modern historiography has viewed the events of the First Crusade in 1096 as a decisive and disastrous watershed in medieval Jewish history, the actual impact of crusader violence on European Jewry was rather limited. According to Chazan, the bulk of Ashkenazi Jewry emerged from the crusades unscathed to continue their rapid development, in terms of both economic growth and cultural creativity, with little hindrance and a fair degree of tolerance until the 13th century.

STRAUS presents and compares the historical developments of the Jewish communities in the Bavarian cities of Augsburg (in Swabia) and Regensburg (in Upper Palatinate). These two communities possessed large and significant Jewish communities in the Middle Ages, though both were devastated by misfortunes in the later Middle Ages. The Jews in Augsburg were expelled from that city during the Black Death massacres and then again in the fourth decade of the 15th century. The Jews of Regensburg were expelled in 1519 in the early phases of the Protestant Reformation. Combining a variety of archival material (for which Straus's work on the history of the Jews in Regensburg is well known in German) as well as chronicles and responsa literature, Straus offers a very full and detailed discussion of the political, economic, spiritual, and communal developments of the two communities, focusing on the period before the late medieval expulsions.

KISCH (1949b) offers the most thorough and significant study of medieval German Jewry-law available in any language. Since it first appeared in 1949, *The Jews in Medieval Germany: A Study of their Legal and Social Status* has exercised an enormous influence on legal history and even more so on the study of German Jewish history. Kisch's erudite and broad understanding of a variety of difficult medieval legal texts is truly impressive. Kisch argues that the admission of Jews as permanent settlers in Germany in the tenth century was indeed a watershed, but it was the rapid expansion of commerce and trade beginning in the 12th century that defined more precisely the rights and status of aliens and foreign merchants, at least in municipal, if not territorial, law. Jewry-law

is, of course, non-Jewish in origin—the product of legislation, judicial administration, and legal theory in Christian states that confronted the issue of the legal status of the Jew and that typically treated Jews “as passive objects of legislation and law enforcement.” Jewry-law saw and treated Jews as a collective separated from Christians in more than religious ways. In part one, Kisch reviews the vast history and literature on the subject and then discusses in detail the individual lawbooks and the specific Jewry-law regulations within them, as well as the scope of Jewry-law. In part two, Kisch assesses the legal status of the Jews in Germany, arguing that there were three primary legal developments in the protection of the Jews: special rights granted to Jews through privileges during the Carolingian period until the end of the 11th century; general and imperial protection of the Jews through land-peace legislation; and finally, perhaps most significantly, the Chamber Serfdom of the Jews after Frederick II's Jewry Privilege of 1236. In part three of the book, Kisch examines the specific applications of Jewry-law in penal, civil, criminal, and administrative law. Finally, in part four, Kisch presents reflections on the medieval conception and representation of the Jew. In the companion volume, KISCH (1949a) presents the German texts of passages dealing with Jews in a number of medieval lawbooks and jury-court decisions.

EIDELBERG offers a general history of the Jews in Austria in the 15th century, a period he considers to mark the decline of Austrian Jewry. After the 15th century the center of Jewish intellectual life shifted eastward to Bohemia, Hungary, and Poland. The study is based largely on the responsa of Rabbi Israel Isserlein, the last famous rabbinic scholar of medieval Austria, who died in 1460. After drawing a broad picture of Austrian Jewry in the period, Eidelberg focuses on Isserlein and what his writings reveal about the formal community structures and relations, moral conditions, customs, occupations, food, clothing, and housing of late medieval Austrian Jews.

ZIMMER examines the disintegration of the unique medieval Ashkenazi community at the end of the Middle Ages, owing to both external and internal factors. The autonomous Jewish communities that developed during the tenth through the 12th century were seriously challenged by the crusades as well as the growing role of Christian merchants, who eventually drove the Jews out of commerce and forced them into the profitable, if unreliable and dangerous, business of finance. Nevertheless, Jewish communities managed to retain a high degree of autonomy in attempting to define internal communal structures. Zimmer's expert handling of a variety of rabbinic sources, especially the responsa of such authorities as Meir of Rothenburg, Israel Bruna, Jacob Weil, Moses Minz, and Israel Isserlein, provides clear proof of the richness of the sources as well as the breadth of the internal rabbinic discussion of the later Middle Ages. The bulk of the book examines internal Jewish communal and legal administration, as well as the interrelation of various Jewish communities and the relationship between Jewish and non-Jewish civil society.

Histories of the Jews of Germany tended for many years to emphasize the contributions of the Jews to both German and Jewish culture, the symbiosis of the German and Jewish experiences, and the tragic fate of German Jewry, the result of a legacy of German antisemitism and the Holocaust. In recent years some excellent studies have appeared that explore the experiences of German Jews after 1945 and, most recently, the situation of the Jews of Germany since reunification. New signs of the rebirth of Jewish life in that country have prompted an increased focus on contemporary developments.

BRENNER provides an in-depth survey of the restoration of Jewish life in Germany immediately after the Holocaust on two levels: a concise overview of developments in postwar Germany and extensive interviews with Jews active in helping to restore Jewish life in Germany. The author's family settled in Germany after the Holocaust, and Brenner characterizes his work as a "historian's interaction with his own history." The initial historical overview begins with the liberation of the Jews from the concentration camps, describes the difficult experiences in the Displaced Persons' camps, and catalogs the important cultural and organizational efforts of the Jewish remnant in creating a foundation for new Jewish beginnings. German antisemitism in the postwar decade is explored, as is the variety of Jewish responses. The excellent eyewitness accounts include perspectives from religious figures, Zionist activists, and community leaders such as Heinz Galinski and Ignatz Bubis. The final portion of Brenner's study surveys the last five decades of the 20th century, featuring topics that range from demographic developments and problems of Jewish identity to renewed religious and cultural endeavors. Fascinating anecdotes are offered throughout. Brenner concludes that there are signs of hope for a revival of Jewish life in Germany, but suggests that the questions of why and how Jews deal with their identity in a German environment will remain open for some time to come.

GAY has written an excellent, comprehensive survey of the Jews of Germany as well as a moving elegy on the creative interactions of the Jews with German culture, politics, society, and economy until the ultimate destruction of the Holocaust. After providing a workable background of the medieval and early modern period, Gay surveys the uneven and contradictory path of Jewish emancipation. German Jews created great

works of pioneering scholarship in the study of Judaism and at the same time developed a passion for the humanistic side of German culture and strove desperately for acceptance by their Christian neighbors. But this was not to be, for Christian Germans, not German Jews, proceeded to posit the existence of "the Jewish question," with its suggestion that German Jews could never quite become acceptable, loyal Germans. Gay's study focuses on how German Jews lived, struggled, contributed, and achieved despite great odds. The book is beautifully illustrated and contains long and revealing quotes from the luminaries of German Jewry as well as from narratives of quite ordinary people. The book ends with stories of the emigration of German Jews from Nazi Germany to Palestine and with a moving farewell letter from the last entry in the minute book of the Jewish community of Insterburg in East Prussia, written on 24 April 1941, with its closing invocation, "Have mercy on us and have mercy on the whole Jewish people." Gay does not extend her story into the postwar period. This seems to indicate a belief that the great culture created by the Jews of Germany no longer exists, that the achievements of the German Jews constituted a world-enriching epic of a thousand years, abruptly ended by the Holocaust.

LIPTZIN conceived his study during the height of the mass murder of European Jews, setting out to explore the "tragic duality" of German and Jew. He sought to investigate how the great cultural figures of German Jewry reacted toward this duality as they struggled to define the problems not only of their Jewishness and their Germanness, but also of the larger question of Jewish relationships with non-Jewish neighbors in the modern world. In this pioneering study, Liptzin chose to approach the topic by developing a series of wonderful vignettes of important and representative German-Jewish authors, writers, and artists. The book is divided into a number of major topics: Jewish reactions to emancipation and modernity, the responses of assimilation and Zionism, the high points of Jewish achievement, the end of emancipation and the rise of Nazism, and the renaissance of Jewish religion and culture that began in the 1920s and continued despite the Holocaust. The reader will encounter such remarkable figures as Rahel Varnhagen in early 19th-century Berlin and the great writers Ludwig Boerne and Heinrich Heine. The German-Jewish pioneers of Zionism, Moses Hess and Theodor Herzl, are presented along with the tragic figures of Walter Rathenau and Theodor Lessing, so uneasy about their Jewish heritage. Some of the most fascinating chapters deal with Jewish Christians and the self-hating Austrian Jews Otto Weininger and Arthur Trebitsch who added to the Nazi storehouse of anti-semitic stereotypes. The rediscovery of Judaism and the Jewish renaissance led by such figures as Martin Buber, and the emergence of "Pan-Humanists" including Erich Kahler and Kafka's first biographer, Max Brod, indicate for Liptzin a new synthesis of Judaism and humanism that would take the place of the shattered German-Jewish duality. It is remarkable that Liptzin realized in 1944 that Jewish life in a new Palestine would have to fashion a new amalgam of Judaism and humanism that could overcome a century of failed emancipation and the extreme responses of assimilation, surrender, and self-hatred. Although old, Liptzin's work turns out to be not only a perceptive study but also a historical document in its own right.

The “third force” to which MOSSE (one of the preeminent historians of German nationalism and antisemitism) refers in his subtitle is the 19th-century “Volkish” tradition in German nationalism that defined nationality on the basis of traditional links to the land and to the language, emotional ties, and later race and blood—as opposed to a conception of belonging based on civil rights, civic participation, and tolerance. This important force in German nationalism tended to exclude Jews, since German nationalists often associated Jews with the capitalism, liberalism, and materialism of modern, rather than traditional, society. Mosse argues that Jews were blamed by many German nationalists for the ills of modernity. Specific essays in Mosse’s book develop variations on this theme. The chapter on the image of the Jew in German popular culture explores the stereotype of the Jew as greedy, dirty, and dishonest. Nevertheless, the German Volkish idea that a nation possessed a mystical folk soul influenced German Zionists and even Martin Buber, one of the preeminent Jewish theologians and cultural Zionists of the 20th century. Mosse’s essays “Conservative Revolution” and “Fascism and the Intellectuals” illustrate how a deeply held antisemitism became fully integrated into German nationalism and prepared the way for the extremes of Nazism. The last essay in the book deals with left-wing Jewish intellectuals in the period of the ill-fated Weimar Republic. Many German Jews were attracted to the ethical idealism of humanitarian socialism, but this did not succeed in saving German democracy. Writing the book in the late 1960s, Mosse draws a parallel between these German-Jewish intellectuals and the young American “new left” radicals of the 1960s, who could be as impractical as their German counterparts and who similarly faced a society in turmoil that was turning to conservative solutions.

STERN is a British-born, American-educated Jew who has been living in Germany for more than 20 years. She exemplifies the kind of younger activist intellectuals who are participating in the new German-Jewish dialogue. She has edited an important collection of essays by 20 prominent German Jews. The unifying theme of the book explores the ways in which leading German Jews struggle to come to terms with themselves and their environment in the light of the recent past and of the new reunified Germany. For Ralph Giordano, a survivor and eminent novelist, the question, “Why have I remained,” is crucial. Although critical of the problems of Germany, Giordano is hopeful that Jewish life will continue in a democratic framework. The historian Julius Schoeps deals with the guilt that some Jews feel for living in Germany, while other intellectuals and scholars affirm their ties with Germany. The problem of antisemitism is a recurrent theme in the book, and while leaders such as Ignatz Bubis are aware of the increasing respectability of antisemitism, others note the philosemitism of some Germans who look upon the Jews as a community of victims who can do no wrong, again creating a distorted image of Jews. Then there is the question of the transplanted Jews from the former Soviet Union, who comprise half of the 50,000 Jews living in Germany today. How will they come to define their Jewish identity? The final essays deal with the revival of Jewish religious and cultural life in Germany. Stern concludes that “there *is* Jewish life in contemporary Germany, and that this life is becoming ever more firmly established,” both in the eyes

of Jews and of non-Jewish Germans. The great value of this book is in the variety of perspectives it offers on the problems and the strengths of Jewish life in Germany today.

Talmudic thought in medieval Ashkenaz effectively begins with Gershom ben Judah, or Rabbenu Gershom as he is usually called. He headed the academy at Mainz and composed a talmudic commentary (embellished by his successors at Mainz) as well as liturgical poems and many responsa. Rabbenu Gershom is perhaps best known, however, for the series of ordinances attributed to him, which deal with a wide variety of issues including polygamy, personal privacy, and communal government.

AGUS traces the economic, social, and intellectual history of the Rhineland in the pre-Crusade period, utilizing the responsa and comments of Rabbenu Gershom and other rabbinic figures. Rabbenu Gershom dealt with the structure, parameters, and efficacy of *ma’arufiyya* (acquaintance), a monopolistic relationship in which a Jew had quasi-exclusive rights to business dealings and transactions with certain gentile clients. A great deal of trust between Jews was necessary in order to sustain this form of livelihood in early Ashkenaz, and the same can be said for Jewish involvement in moneylending at this time.

Rabbenu Gershom functioned as the leading scholar in his academy, to which students came from a very wide geographic area. At the same time, Rabbenu Gershom apparently decided matters of ritual and communal policy in consultation with a group of senior scholars and teachers. Agus notes that the

writings of Rabbenu Gershom also suggest that at least one group of students in the academy consisted of adults who were already responsible for earning a livelihood for their families. The absence of a professional rabbinate, coupled with the goal of pursuing lifelong study nonetheless, typified early Ashkenaz in the pre-Crusade period. Agus also outlines the approaches of Rabbenu Gershom to domestic issues such as childlessness, divorce, and the payment of the ketubbah.

Many of these and other related issues are discussed briefly throughout the collection edited by ROTH. In addition, two chapters contributed to this volume by Agus, "Rabbinic Scholarship in Northern Europe" and "Rashi and His School," describe in some detail the rabbinic writings of Rabbenu Gershom and their place within the transmission of the study of the Oral Law. Included in this discussion are also a listing and a description of the ordinances (takkanot) attributed to Rabbenu Gershom. In the view of modern scholarship, these ordinances were not the product of one person. Several may have been enacted before Rabbenu Gershom; others were probably enacted in later centuries. The ordinances fall into three categories: regulation of marriage and divorce; the relationship of communities to nonmembers, new settlements, or other communities; and personal status (e.g., an ordinance against insulting penitent converts and another that protected the privacy of a person's letters). These ordinances were enforceable by means of anathemas or bans (such as *herem beit din* and *herem ha-yishuv*), procedures also attributed to Rabbenu Gershom. Rabbenu Gershom's contributions to the writing and interpretation of liturgical poetry and hymns are referred to in A.M. Habermann's chapter on the beginnings of Hebrew poetry in northern Europe and France.

FINKELSTEIN delineates the wide scope intended by Rabbenu Gershom's ordinances, the legal underpinnings of enacting ordinances, and the nature of the synods that promulgated them. He describes the provisions of the ordinances and reviews their attribution to Rabbenu Gershom. The best-known ordinance of Rabbenu Gershom forbade a man to marry more than one wife and was accepted throughout Ashkenaz and beyond. Bound to the ordinance that prohibited polygamy was another that prohibited contested divorce. The synods convened by Rabbenu Gershom became a model for supercommunal government throughout the Middle Ages. Finkelstein records the extant Hebrew versions of Rabbenu Gershom's takkanot and provides annotations and an English translation. Despite original publication some 75 years ago, this book remains a valuable textual resource.

GROSSMAN seeks to confirm that those ordinances that deal with familial issues were composed in 11th-century Ashkenaz, and in all likelihood by Rabbenu Gershom, by demonstrating that the social and religious milieu of this period comports quite well with the historical realia implicit in the ordinances. Grossman reviews and evaluates the factors that caused some historians to doubt even the attribution of the ordinance prohibiting polygamy to Rabbenu Gershom. He then demonstrates that monogamy was the accepted rule among Jews in Germany in the second half of the 11th century and that Ashkenazi sources from the mid-12th century explicitly mention Rabbenu Gershom as the author of the ordinance. Grossman discusses the historical motives and

developments that may have prompted this ordinance. Jewish husbands were often absent from their homes for long periods of time due to their involvement in trade and business. Grossman argues that this development also may have been a factor in the ordinance that prohibited divorcing a woman against her will and in the ordinance against reading another person's mail without permission. He further discusses the historical factors that support an 11th-century date for the ordinance concerning the breach of a betrothal.

KANARFOGEL includes a number of formulations by Rabbenu Gershom that relate to Jewish education and academies of higher talmudic studies. He reviews Rabbenu Gershom's rulings concerning the payment and support of the elementary-level tutor (*melammed*) and the teacher of older students. Kanarfogel also notes that pre-Crusade academies were typically identified with the city in which they were located rather than with a particular teacher, as was the case in the 12th century and beyond. References to Rabbenu Gershom and the academy at Mainz clearly reflect this distinction. In addition, Rabbenu Gershom and other pre-Crusade rabbinic scholars typically are shown issuing halakhic rulings based stylistically on biblical verses, another convention that was discontinued in the period following the First Crusade.

FINKELSTEIN's portrait of Louis Ginzberg is representative of several short laudatory biographical sketches that eulogized the scholar of Jewish "Law and Lore." Finkelstein reflects upon the pious and intellectual life of the great talmudist, characterizing Ginzberg's five decades at the Jewish Theological Seminary in New York as a life devoted to the translation of both the Talmud and talmudic culture "into a philosophy of life capable of guiding the modern world." Finkelstein then

describes Ginzberg's three primary concerns: research, guidance of others, and self-discipline, demonstrating that in each of these dimensions of his life, Ginzberg followed the model set for him by his illustrious ancestor, the Vilna Gaon.

Eli GINZBERG's loving memoir of his father offers the most extensive biographical account of the life of the scholar available in English. The author considers his work a memoir, rather than a biography, due to the selective nature of the tale. Although Eli Ginzberg draws upon several different sources for the portrait, he does not seek to investigate exhaustively all channels. For instance, he does not gather the perspectives of contemporaries and students of his father; Eli neither conducts interviews with these sources, nor does he write letters soliciting information from the many individuals whom his father trained and influenced. The author draws on an earlier Hebrew biography for which Louis provided material, autobiographical fragments that Eli's wife recorded while Louis was alive, letters, biographical details from Louis's academic publications, and Eli's personal recollections of conversations with and stories told by his father. The book moves chronologically from Louis's early youth through his years in academe at the Jewish Theological Seminary, at which point the author takes a more thematic approach, presenting chapters on friends, Zionism, Louis's wife, his views as a halakhic authority, and a final chapter titled "The Gentle Skeptic." This memoir is not a critical appraisal of Ginzberg's life and work, but a portrait in the form of a pastiche of stories, anecdotes, and letters.

GOLINKIN introduces the reader to a little-known dimension of Ginzberg's life work by publishing more than 100 of the scholar's responsa. After briefly describing Ginzberg's ancestry, upbringing, education, and innate genius—the ingredients that Golinkin proposes constitute the uniqueness of Ginzberg—and presenting a cursory sketch of Ginzberg's three areas of academic research, the author concentrates on introducing Ginzberg the halakhic authority and activist. Golinkin provides an overview of the contents of the responsa as well as of Ginzberg's legal approach. With the publication of this resource, Golinkin hopes to correct the mistaken scholarly assumption that faculty at the Jewish Theological Seminary in general, and Ginzberg in particular, were not actively engaged with the concerns of the community at large. This volume is an indispensable work for any serious student of Ginzberg.

HELLER's review of *The Legends of the Jews* is the only extensive analysis of this great work by Ginzberg. Heller categorizes the legendary material according to its different orbits of cultural influence, borrowing, and exchange. He discusses legends in relation to Egypt, Babylonia, Persia, India, classical antiquity, Jewish Hellenism, Christianity, and Islam, and he further divides Ginzberg's material according to folklore genres, such as myth, fable, and fairytale. When appropriate, Heller corrects Ginzberg's assumptions about borrowing and origins, and the author offers several pages of corrections to Ginzberg's notes, as well as additions to Ginzberg's already voluminous sources and traditions. Heller criticizes Ginzberg for failing to relegate consistently all the variants to the notes and challenges some of Ginzberg's specific decisions about which texts to place in the narrative section of the work. This essay is highly useful for anyone interested in assessing questions of Jewish legendary origins

and transmission. It does not, however, place the particular function and meaning of a folklore tradition in its literary and cultural context.

SHARGEL's article focuses on Ginzberg's work as a polemicist engaged in acts of communal self-defense. Ginzberg considered such polemics to be the proper task of the theologian, and Shargel relates his activism in this realm to his ambivalence about academia and his place within it. Shargel details "four separate occasions [when] he employed his erudition in the service of self-defense." Ginzberg twice defended Jewish ritual slaughter. Another time he wrote to dispel the faulty accusations at the heart of the infamous blood libel trial of Mendel Beilis in 1913. Fourth, he responded to Polish anti-Jewish propaganda circulating in the wake of World War I that sought to persuade Americans that the persecution of the Jews in Poland was a defensive measure. This article also offers a compelling historical explanation for Ginzberg's relative reticence regarding matters of apologetics.

In his introduction to the abridged version of Ginzberg's *Legends*, SPIEGEL begins with a broad overview of the meaning and history of Jewish legends and the variety of literary efforts to collect and organize them. He then briefly sketches Ginzberg's family lineage and education, singling out Ginzberg's doctoral dissertation titled "Haggadah in the Church Fathers" as the project marking Ginzberg's early interest in the recovery of lost aggadah. Spiegel then illustrates Ginzberg's work of recovery and reconstruction in *Legends*. In the second half of the essay, Spiegel discusses the etiology of Jewish legends, which he describes as a function of the dynamic interrelationship between Scripture and folklore, the work of the schools, and the common wisdom of the folk. Spiegel's portrait of this creative tension offers a much more dynamic and complicated relationship of folklore and the rabbi than the one glimpsed through Ginzberg's introductory remarks and notes to *Legends* (which are omitted from this one-volume edition). A classic piece on the history and nature of Jewish folkloric production and creativity, Spiegel's essay thus reframes as it introduces the original work.

Glikl of Hameln (also known as Glückel) was a 17th-century Jewish woman from Hamburg who wrote a lengthy memoir in Yiddish. While she was not a famous person in her time, Glikl's manuscript is both the most important document for European Jewish history of the late 17th and early 18th centuries and the earliest extant text by a Jewish woman. The memoir was passed down from her son to her grandson, who collaborated on copying the original text, which was later lost. In 1896, the distinguished scholar David Kaufmann published the first edition of Glikl's work in German, and reaction to its appearance was swift and impressive. For example, the first *Jewish Encyclopedia* (1901–1906) refers to Glikl in 11 different entries. Since then, translations have appeared in almost every decade, with the exception of the extended World War II period. There are editions available in each of the major languages of the Jewish people in the 20th century, and German and English readers can choose from several versions.

ABRAHAM'S translation of Glikl's work is the only English version adapted directly from the Kaufmann edition. Parts of her introduction, however, are dated since she wrote before important studies of life in 17th-century Hamburg were published in the late 20th century. The volume's 40 illustrations depicting the changing times in which Glikl lived contribute greatly to the book's worth. There are both engravings and woodcuts, a reflection of the fact that Glikl's life spanned these two artistic forms. The book also contains annotations and indexes of persons and places from Glikl's world.

BILIK emphasizes three issues crucial to the study of Glikl's autobiography and its historiography. First, she compares five different translations—two in German, two in English, and one in modern Yiddish, with emphasis on the first four versions. Second, the author examines Glikl's education in the context of early Yiddish writing for women. Finally, Bilik argues that an ethical will serves as the force that motivates Glikl's autobiography. The final word has not been written on any of these topics.

DAVIS's book on Glikl and two other 17th-century women has introduced many late 20th-century readers to Glikl's name. Davis analyzes many of the folktales in Glikl's text and identifies the wide-ranging sources from which she created her stories. The book highlights the last third of Glikl's life, which she spent in Metz, and the author reviews different naming practices used by Jews of that period, explaining how Glikl became Glückel von Hameln. The notes are rich with valuable information.

ISRAEL provides vital insights into the economic context of Glikl, her husband, Hayyim, and the network through which they conducted business, including a discussion of their connections to some "Court Jews." Their good fortune began to decline at the end of the 17th century, as changes in trading patterns, shifts in population, and new areas for economic expansion destabilized the existing economic situation.

SCHMELZER concentrates on the extraordinary efflorescence of Hebrew printing during Glikl's lifetime, thereby underscoring the religious-cultural dimensions of the society in which she wrote her memoir. While Glikl's formal education probably ended by 1660, her informal education could well have continued beyond that point as she maintained close contact with the Hamburg *shul* and traveled extensively to fairs and other sites where books were distributed. Schmelzer also argues that Jews of Glikl's class, including rabbis, those connected to the *klaus*, and *parnassim*, typically owned many books, and therefore Glikl probably had access to literary works possessed by her father and other relatives.

WHALEY's outstanding analysis of primary and secondary sources on Hamburg provides an original description of political and religious realities faced by non-Lutherans in that city during Glikl's lifetime. Lutheran clergy and lay adherents of the state religion discriminated against Catholics, Calvinists, and both Sephardi and Ashkenazi Jews, and this monograph explains the expulsion of Ashkenazim, Glikl's family included, as well as their later return. Whaley emphasizes the overall economic motivation for keeping Jews in the cosmopolitan port city, the role of the burghers, and changing tax demands during this era.

Recognition that Jewish mysticism has more ancient postbiblical sources than the early kabbalistic literature is a fairly recent development. Prior to the groundbreaking work of Gershom Scholem in the 1950s, the body of literature now considered to be evidence of early Jewish mysticism, the Hekhalot corpus, was regarded as part of the talmudic tradition. The esoteric character of these texts had been recognized, but, for the most part, neither their antiquity nor their uniqueness had been suspected. Scholem claimed, however, that the texts originated in the first or second century C.E., and this hypothesis is now generally accepted, although some recent authors argue for a later date. The texts that belong to the Hekhalot litera-

ture are *Hekhalot Rabbati* (*The Greater Palaces*), *Hekhalot Zutarti* (*The Lesser Palaces*), *Ma'aseh Merkabah* (*The Working of the Chariot*), *Merkabah Rabbah* (*The Great Chariot*), and the so-called Hebrew book of Enoch, also known as 3 Enoch. Two other texts, *Re'uyot Yehezqel* (*The Visions of Ezekiel*) and *Masekhet Hekhalot* (*The Tractate of Palaces*), have a more tenuous relationship to the corpus. For the most part, the texts of the Hekhalot corpus document the visionary experiences of the *yored merkabah*, the one who “descends” (that is, ascends) to the chariot (merkabah) and journeys through the seven heavenly palaces (hekhalot) to witness the enthronement of God. Hence, the type of mysticism expressed by these texts is called merkabah mysticism. In addition to God and the initiate who makes the journey, the texts are populated with myriad angels of various ranks, special seals, dangerous tasks, divine names, and magical words and actions. The form of mysticism under consideration is also referred to as theosophic, for the literature explores the mysteries of the divine life and the reciprocity of the relationship between the divine and human worlds. The texts suggest that divine life influences creation, but humans also influence the divine, creating a relationship that perhaps results in theurgy—the coercion, manipulation, or mastery of God. In this respect, the Hekhalot texts have an air of Gnosticism about them: they embody secret knowledge of an esoteric, partisan nature that is secured by way of illumination. Scholars continue to debate, however, whether the texts can be classified as Gnostic per se and whether they suggest that Gnosticism arose from within Judaism.

DAN presents a fine summary of the elements of early Jewish mysticism, beginning with a chapter discussing the history and composition of the Hekhalot texts (including a helpful survey of the relatively brief history of interpretation of the literature) and concluding with a chapter setting out his understanding of the essence of ancient Jewish mysticism. Dan also presents chapters devoted to aspects and themes that appear in the various texts such as the merkabah itself, the anthropomorphism of *Shi'ur Komah* (a tradition of gross speculation about God's physique), the Prince of the Torah, the angel Metatron (i.e., Enoch), and the character and itinerary of the one who “descends” to the chariot. Dan takes a reasoned approach to the particular issue of Gnosticism and the possibility that Gnosticism arose from within the Jewish world during the late Second Temple era. Although it remains a matter of speculation whether Christian forms of Gnosticism originated from within the Mandaean sect rather than in Gnostic trends within Judaism, Dan doesn't entirely discount the possibility. The Mandaean community clearly predated the rise of Christianity, had close ties to the Jewish community in Jerusalem (before fleeing to Transjordan and then to Iraq), and perhaps observed Jewish traditions such as the dietary laws. It is not known, however, whether the late literature of this sect reflects its origins. Dan also addresses the mysticism of the Hekhalot literature and its relation to Gnosticism, but here again he concludes that it is impossible at this time to determine the direction of influence. Although it is possible that the traces of Gnosticism in merkabah mysticism were stimulated by explicitly Jewish Gnostic sources, such texts have not been discovered. Therefore, the most that can be said

is that the Hekhalot texts and merkabah mysticism participate in the overall spirit of Gnosticism. Because other works on early Jewish mysticism are rather specialized, this book is recommended as a sound general introduction to the topic and the current state of research.

HALPERIN's extraordinary book brings the reader into immediate contact with the mysteries and dangers of the merkabah. Indeed, while this text is a work of remarkable scholarship, it sometimes takes on the character of a mystery novel as the author seeks to explain why the vision of Ezekiel's chariot so fascinated early rabbinic Judaism. Halperin reminds the reader that this vision once inspired such pronounced awe and fear that warnings were issued that its exposition in unlearned hands might result in death or disease. The central topic that occupies Halperin is the merkabah itself. In fact, this mysterious chariot plays a very minor role in the Hekhalot literature, whereas in the secondary literature about the ascension of the mystic, rabbinic allusions to the merkabah and the Hekhalot material are nearly always linked. In order to begin to untangle these puzzling associations, Halperin examines the source of the tradition, Ezekiel 1 and 10, through a psychoanalytic theory of desire and dread. This approach has aroused the suspicions of some of Halperin's critics, who accuse him of inappropriately applying (post)modern methods to ancient materials, but Halperin contends that rabbinic exegesis resembles psychoanalysis, for forms of interpretation work by both associations and linkages rather than by direct linear reference. According to Halperin, the “associative wires that gave the *merkabah* its extraordinary charge of excitement and fear” must be traced back to “something which [the rabbis] found inherently thrilling or appalling.” Halperin argues that the key to unlocking the mystery of the merkabah is found in the prohibitions that regulated the exposition of the merkabah. While some readers may find Halperin's revelations controversial (even outrageous), there is more than enough in this fine book to satisfy any reader interested in a close and imaginative reading of the texts that produced merkabah mysticism.

SCHÄFER's book is the product of many years of acclaimed work on the literary aspects of the Hekhalot literature. The author strives to allow these works to determine their own themes, rather than imposing modern questions upon them as, according to Schäfer, Scholem did when he argued that the texts mainly concern the ascent of the mystic and the final vision of the enthroned king. Schäfer insists that the Hekhalot texts themselves do not speak with one voice (he refers to the texts as macroforms, that is, crystallized forms of smaller literary units), and he contends that they do not demonstrate a consistent vision, but he nevertheless finds three central themes that are elaborated, although without unanimity, throughout the literature—conceptions of God, angels, and humanity. The central sections of the book explore and elaborate how these conceptions are expressed in the literature and how the themes stand in relation to one another. The author offers abundant quotations from original sources to assist readers without access to the primary literature. The concluding chapter is especially important because it sets the terms for all subsequent debates concerning the nature and meaning of merkabah mysticism and the Hekhalot texts, particularly as they relate to God's character and position relative to Israel,

questions of the magical or theurgic elements found in the literature, and the use of secret names to command angels, the Torah, and perhaps even God. Schäfer concludes that the Hekhalot literature gives evidence of a plurality of views on the themes considered, and he contends that this complexity stems from an as-yet unidentified community's struggle to formulate a new and revolutionary conception of God as both essentially hidden and simultaneously manifest.

SCHOLEM's book is the first scholarly work to explore the Hekhalot literature and advance an argument for its distinct status as early Jewish mysticism. In 1957, Scholem delivered the Israel Goldstein Lectures at the Jewish Theological Seminary in New York. This book is based on those lectures and includes several appendixes, one of which is the first publication of *Ma'aseh Merkabah*. At the time when Scholem originally presented his lectures, the Dead Sea Scrolls and the Gnostic texts from Nag-Hammadi had just been discovered, and scholars were hotly debating whether Judaism and Christianity had Gnostic origins. Scholem reorients this debate in two ways. First, he contends that the Hekhalot texts represent an esoteric Jewish tradition that originated contemporaneously with the emergence of Gnostic traditions in Christianity (not during the Middle Ages, as had been previously assumed). Second, Scholem argues that merkabah mysticism cannot be classified as Gnostic, even though the Hekhalot texts promote a secret and dangerous knowledge and offer procedures for a mystical flight through heavenly palaces. Scholem's call for a new evaluation of the inner development of Judaism continues to inspire scholars.

WOLFSON's book is one of the most lushly written, meticulously researched scholarly works to appear in recent memory in any field. The subject matter—the tension between iconic (visual, corporeal) and aniconic representations of God in Jewish mysticism—is difficult and controversial, but Wolfson manages to produce a text that is a model of clarity and economy. The author argues that the tension between iconic visionary forms of mystical experience and other forms (such as aural) is an essential component of mystical speculation. Wolfson claims that “literary evidence attests that the religious experience described in the different currents of Jewish mysticism from Late Antiquity through the Middle Ages is overwhelmingly visual.” Ironically, the aniconic bias of the Hebrew biblical corpus helps to provide the context for the obsession of early Jewish mystics with imagistic visualization of the divine form, the body of God. Wolfson primarily concentrates upon the development of mystical theosophies in the High Middle Ages, but chapters three and four contain a fascinating discussion of the nature of visions in the Hekhalot mystical literature. Contrary to other interpreters (such as Scholem), Wolfson argues that visions of glory such as those recorded in this literature refer to the transcendent God in essence and not merely a luminous reflected glory. There is, in these texts, the suggestion that the essentially invisible God can be seen by humans, although he simultaneously remains hidden. Wolfson contends that this paradox of “seeing” God should remain in tension and not be resolved one way or another, for this tension generates and tolerates a discursive experience that simultaneously reveals what cannot be seen and conceals what must not be seen. Perhaps Wolfson's most singular contribution to

the study of early Jewish mysticism is his use of an erotic mythology to interpret the paradoxical vision of the divine form in light of a prohibition against uncovering the divine phallus. Wolfson also takes up the challenge of determining how these traditions find their place within normative rabbinic Judaism. The copious notes and bibliography that accompany the text are especially valuable for any reader wishing for an exhaustive guide to the literature of early mysticism.

While doctrines of God may have been formulated as dogmas in order to sustain a theological framework, concepts of God are more flexible in nature as they continue to be discussed with the aim of providing an intellectually coherent and meaningful idea of God as an integral part of Jewish belief and practice.

A guide to the fundamental concepts of Judaism has been edited by KATZ, collecting for the most part material written for the *Encyclopaedia Judaica*. The resultant topical approach, together with notes, glossary, biographical index, and bibliography, is particularly suitable as an introductory work for the nonspecialist. Two of the three sections focus on “God” and on “God and the Jew.” While the latter examines the relationship between God and the individual in Judaism through concepts such as covenant, chosen people, revelation, Torah, mitzvot, piety, and study, part one explores the concept of God in the Bible and Talmud, in medieval Jewish philosophy and Kabbalah, and in modern Jewish thought. It further examines the names given to God and God's attributes, such as providence, justice, and mercy, and it addresses the referential designations, such as Ruah ha-Kodesh and Shekhinah, in their significance as divine manifestations. Altogether, this volume

provides a clear overview of the different shades of meaning of the “God” concept as reflected in classical, medieval, and modern Jewish sources.

The manual by SONSINO and SYME also addresses “the different ways Jews have spoken of God throughout history,” and it presents ten “options,” all of which grapple with the questions: How can God be defined and named? How can we know God, and what is God’s relationship to the world in general and to the Jews in particular? How can God allow evil to happen, and how can we act in accordance with God’s will? The authors look at concepts of God in the Bible and in rabbinic literature, as well as those held by Jewish theologians from Philo of Alexandria via Maimonides, Isaac Luria, and Spinoza to Buber, Steinberg, Kaplan, and Fromm. Each period or individual is given a brief introduction, which is followed by a number of theses encapsulating the quintessence of each position, before a conclusive summary is added for the benefit of the uninitiated reader. In spite of its conciseness, this small book should stimulate and encourage the beginner to reflect upon challenging questions and answers regarding past and present discussions of Jewish ideas of God.

The concept of God is central to the thought of Spinoza to such an extent that he has been hailed as a “God-intoxicated man,” while he also has been accused of atheism for choosing to live outside any religious community. Bringing together the philosopher’s fundamental conclusions about God and religion, MASON’s clear and carefully reasoned book “is the fullest study in English for many years on the role of God in Spinoza’s philosophy.” While the first part of this study examines God’s existence, nature, and relationship to the world in terms of causality and is, “of necessity, more philosophically technical, the conclusions should be of interest to theologians and philosophers of religion as well as to philosophers.” The second part deals with Spinoza’s judgment of religion in general, its origins, history, and practices, while the third part addresses Spinoza’s ideas on religious freedom. Some of Mason’s conclusions challenge the stereotype of Spinoza as a rationalist and emphasize his commitment to consistency in an overall immanent worldview. This commitment is apparent in Spinoza’s identification of the study of nature with the study of God: only if we understand the world’s phenomena scientifically, he maintains, can we achieve a proper, God-like view of the universe.

GOODMAN’s profound and compelling study responds to the equation of empiricism and atheism of British philosophers such as Sir Alfred Ayer. Based on his Baumgardt lectures at Oxford, it is addressed to the philosophically literate reader. The chapter titled “The Logic of Monotheism” analyzes God with reference to Greek ideals of divinity and value judgments and compares them with the Hebrew tradition and its innovative “moralization” of the notion of the divine. Goodman claims that, by introducing ethical standards of behavior, the Hebrews met the challenge “to retain the divine within the range of human grasp” and yet managed to work out a coherent concept of divine absoluteness. The second chapter examines philosophical arguments for the existence of God, while the last chapter, on monotheism and ethics, addresses moral obligations and standards of morality in view of God’s transcendence and demonstrates “how moral rules are made possible in a monotheistic conceptual framework.”

MARMORSTEIN’s comprehensive work “endeavours to present the doctrine of God according to the sources of information as preserved in the ancient writings of the rabbinic teachers and sages, homilists and thinkers.” This thorough, in-depth study of a vast corpus of original source material has become a standard work indispensable to all serious students for its eloquent demonstration of how the various theological conceptions must be judged in relation to the time and country of their teachers. The first volume deals with the use of the old biblical names and attributes of God, which were “of the utmost influence on human society and institutions.” The second volume comprises five essays covering “some of the aspects of rabbinic teachings and speculations on the subject of anthropomorphism, anthropopathism,” and the imitation of God. It examines ideas put forward by Philo and the aggadah, such as the (in)visibility of God, as well as the terminology of the literalist and the allegorical interpretations of the Bible and the discussions between these two schools.

A modern understanding of belief in God, together with a whole new approach to Judaism, is presented by KAPLAN in what has become a fundamental text for the Reconstructionist movement. Although first published in the 1930s, it should still be of great interest to the present-day reader searching for a meaningful concept of God. “Designed to reinterpret the idea of God in such a way as to render it spiritually exalting, intellectually acceptable and ethically potent,” Kaplan reconstructs God as “a power that makes for salvation.” This idea of God attempts to achieve personal regeneration by releasing the potentialities of ethical personality for a better social life and thereby an improving social order. Jewish “peoplehood” and the “God-idea” are therefore linked, and God functions as an affirmation of life’s value and holiness. Kaplan’s methodological approach has been called a “predicate theology,” emphasizing that God should be thought of not as a being or as a philosophical idea, but as a power radiating divine qualities. This study is less concerned with what God is or with describing God than with offering a view of what it means in practice to believe in God.

The uncertainty of the modern Jew concerning what to make of belief in God lies at the heart of DORFF’s study. Without assuming of his readers a background in philosophy, Dorff skillfully takes them through some of the major traditional and modern options and examines their “soundness” as sources of knowledge about God. Motivated by the need to explain to himself intellectually how his belief in God relates to his traditional practices, this study is also a record of Dorff’s own personal quest. Using the *Shema* as a leitmotiv, Dorff examines how one can serve God through heart (intellect), soul (emotions), and might (bodily strength). He probes into what can be known about God through the experience of prayer, through human reason and conduct, and, more importantly, through divine revelation and divine action, while not shunning the problem of evil and its apparent contradiction of God’s justice and goodness. This clearly articulated personal odyssey of faith concludes with a discussion of the function, truth, and authority of images of God.

Extracting a name's meaning from its multilayered valences involves a struggle to reveal that name's concealed essence. The power that such a quest still exerts in particular regarding the names of God, and the field of semiotics in general, is evinced in the perpetual struggle to stabilize momentarily a concealed essence through the act of writing. In its most essentialized form, the Ineffable Name of God conceals so as to retain its primordial sacredness. The (un)veiling of signifier from signified comes to the fore as the Name can only be uttered in full by the High Priest yearly from within the Holy of Holies of the Jerusalem Temple. Thus, a substitute name must take its place the remainder of the year. Ultimately, there are not Names, but the Name: the very name that is written as YHWH is pronounced Adonai. As E. Wolfson has articulated it: the inexpressibility of the inexpressible is preserved only through that which is expressed. While such a nominal interplay pervades much of Jewish praxis and dogma, it also explains much of the hermeneutic obsession with reading, writing, and the recitation of text that marks this age.

KAUFMANN's classic work offers a demythologization of biblical Israel's conception of God as the Name. Israelite folk religion evidently passes through polytheistic and monolatrous stages of naming before attaining the transcendence of biblical thought. Even isolated traces of pagan mythology do not counter the biblical contention that its subject matter is a relation of the Name to its creation. Any theophanic encounters are not aspects of God's life, but rather are external adjuncts of the Name's self-revelation within the world. Contrary attributes, which in paganism constitute opposing divine realms, are united in the Name. Kaufmann's thesis demonstrates how the tetragrammaton is shown to be titular syncretism and not mythological. The underlying assumption is an amalgam of natures and roles as only possible in an unfettered, transcendent Name.

MARMORSTEIN focuses on the rabbinic doctrine of the names of God. He traces prohibitions on the use of the Tetra-

grammaton back as far as the third century B.C.E.; this interdiction is shown to apply in conversation, in greetings, and in the notarization of documents alike. Marmorstein proceeds to collect and assess an array of rabbinic traditions such as the claim that after the death of Simeon the Just, the priests ceased to use the Name in pronouncing blessings; that inside the Holy of Holies the priests would utter the Name according to its writing, whereas outside by its substitute; and that even in its pronunciation within the Temple precincts, utterance was not distinct enough to be discernable. Marmorstein also explores the extent to which rabbinic lore discerns a dualistic naming: that God (the Tetragrammaton) connotes mercy, whereas "Power" (*Elohim*) connotes judgment. This nearly Gnostic interpretation of names typifying rabbinic monotheism is one facet of Marmorstein's elaborate picture. Although rabbinic tradition commonly speaks of 70 names, Marmorstein assembles and alphabetizes a total of 91, documenting his sources carefully. The author's traditionalist standpoint seems to predispose this important study to both an early historical dating of the various names and to the rejection of any possibility of syncretism.

TRACHTENBERG redresses the general neglect of the folk religion of Judaism, whose casuistic counterpoint has dominated scholarship. Limited to the literature of medieval Germanic Jewry, his scope excludes the influential corpus of Lurianic mysticism emanating from 16th-century Safed. Nevertheless, this study remains an invaluable standard account, with useful appendixes of Jewish sorcery, magic, amulets, folk medicine, divination, astrology, and dream interpretation, each of these fields being heavily contingent upon conceptions about the names of God. The expansion of the Tetragrammaton is traced in names composed of from eight to 72 letters or syllables, and here Trachtenberg's reliance on the compilation efforts of Nathan Hannover, a 17th-century composer of mystical prayers, is marked. Trachtenberg fills to the brim a diverse bag of tricks from which the Jewish magician can draw, depending on the existential moment.

SCHOLEM (1941) surveys the history of Jewish mysticism in nine lectures, touching repeatedly on transmutations in the understanding of the names of God. Merkabah mysticism focuses on God as King in glory, where the master of the secret names transforms mysticism into a theurgic affecting of the supernal realm. From the end of the 13th century, prophetic kabbalism, a contemplation of letters and their permutations, marks an ecstatic path transforming the ineffable name into the object of meditation. At the same time, Zoharic theosophy conceptualizes the whole Torah as a corpus symbolic of the concealed name in its ten emanations, awaiting elucidation by the mystic. In the 16th and 17th centuries, Lurianic Kabbalah envisions a harmonic restoration, repairing the damage inflicted by the primordial catastrophe through a praxis of continually unifying shards of the divided name. SCHOLEM (1970) describes an implicit hermeneutic system that views the Name as the original source of all language. While the Name bears no concrete signification, in projecting beyond meaning it invites infinite interpretations in a way that typifies a hermeneutic of Jewish thought.

WOLFSON revises visions of Jewish hermeneutics in particular and semiotics in general. In the former he builds on

Scholem's research, while in the latter he extrapolates principles from the name's secrecy. Wolfson's rigorous investigation of the Zohar reveals an "othering" of the feminine aspect of the Godhead (in all of its emanatory denominations) to be evaluated strictly from the Zohar's phallogocentric point of view. Through the apt lens of contemporary feminist reflection, Wolfson returns to the rabbinic paradox explored by Mar-morstein and pervading the Zohar: how the two names are one. For the Zohar, the ultimate secret is the mystery that marks the path of secrecy, centering around an occlusion of the feminine whose femininity is no longer ontologically distinct from the male. The erotic nature of the names' union necessitated concealment of the exposed, underscoring the dialectical tension of concealment and disclosure. In much of modern scholarship, this secret has translated into a fear of uncovering the hidden in the symbol of the concealed woman. It transpires from Wolfson's work that the secret of the names of God has hidden itself precisely from the very scholars who have undertaken the systematic exposure of the mysteries of the tradition.

The Acts of the Apostles in the New Testament speaks 11 times of "those who fear God" (10:2, 22, 35; 13:16, 26) or "those who reverence [God]" (13:43, 50; 16:14; 17:4, 17; 18:7). In four instances they form a group of attendees at a synagogue, distinct from the Jewish members (13:16, 26, 43; 17:17). Most readers to the present day have understood that undefined numbers of Gentiles in the Mediterranean world of the first century C.E. were attracted to Judaism and went regularly to their local synagogues to hear the scriptures read and expounded, without becoming proselytes by circumcision. Presumably some undertook to keep more of the commandments than others.

Since the 1980s scholars have debated whether the so-called God-fearers actually existed, and if so, what prompted them

to associate with Jews and why they had reservations about converting. The issue of the God-fearers bears on larger questions: how Jews were perceived by Greco-Roman society, whether they missionized, and how they defined membership of their own people. Since important books now cover these related matters (e.g., Menahem Stern, editor, *Greek and Latin Authors on Jews and Judaism*, 3 vols., Jerusalem: Israel Academy of Sciences and Humanities, 1974–1984; E.P. Sanders, editor, *Jewish and Christian Self-Definition*, 3 vols., Philadelphia: Fortress, and London: SCM, 1980–1982; David Rokeah, *Jews, Pagans, and Christians in Conflict*, Jerusalem: Magnes Press of Hebrew University, and Leiden: Brill, 1982; John G. KRAABEL presents the most outspoken challenge to the traditional consensus. While teaching Classics at the University of Minnesota and specializing in archaeology, Kraabel came to suspect that the God-fearers might be a figment of Acts' imagination. Two factors suggested this. The archaeological data, in his view, contained no trace of Gentile "God-fearers," although six excavated synagogue sites with more than 100 inscriptions were known at the time he wrote his article. Also, a critical stance toward Luke-Acts had recently come into vogue, according to which the author sometimes played fast and loose with the facts of history in order to get across his theological message. Part of his message was the idea that Christianity developed out of Judaism in natural stages, its acceptance by Gentiles in synagogues being an intermediary step. In this way the author tried to reconcile the church's Gentile constituency with Christianity's claim to rootedness in God's revelation to Israel.

By the time his iconoclastic article came out, Kraabel knew of the discovery five years earlier of an inscription at Aphrodisias in Caria, which, after its full publication in 1987 (Joyce Reynolds and Robert Tannenbaum, *Jews and God-Fearers at Aphrodisias: Greek Inscriptions with Commentary: Texts from the Excavations at Aphrodisias Conducted by Kenan T. Erim*, Cambridge: Cambridge Philological Society, 1987), would turn the judgment of the scholarly world against his skepticism. A year before the final report, MILLAR, one of the world's foremost experts on the history of Judaism in late antiquity, put the great weight of his reputation behind Acts and the tradition on the basis of the same datum. The inscription lists the names of people who contributed to the foundation of something, presumably a building. A first group includes many Hebrew names. After a one-line break, a sub-heading reads, "and such as are God-fearers," followed by a list containing names that are not Hebrew. "The new inscription thus provides the conclusive evidence for the reality of a

defined category of gentile ‘God-fearers’ attached to a Jewish community”; indeed, he concludes that “it would be difficult to imagine clearer evidence.”

To date, the most complete assemblage of data bearing on the issue is the chapter-length treatment by FELDMAN. He agrees with Kraabel that Acts requires independent confirmation and should not be used as the control for other potentially relevant data. Therefore he marshals other sources: “circumstantial” evidence, by which he means the analogy of degrees of conversion in other religions ancient and modern; Greek and Roman references to pagan sympathizers with Jews; Jewish references (in Philo, Josephus, the apocrypha and pseudepigrapha, and talmudic writings); Christian references other than those in Acts, taken mainly from the early church fathers; and the evidence of inscriptions and papyri (of which Feldman finds perhaps as many as 14, including those from Aphrodisias, in contrast to Kraabel’s none). Feldman simply lays out the facts with minimal comment. The effect is to place the Acts material in a wide context of converging lines. Feldman goes on to enumerate several dozen factors that likely attracted pagans or Christians to Judaism. Among them were its antiquity, the Jews’ respect for law and order, and their ethical behavior, as well as social, political, and business concerns. Reasons why sympathizers did not convert varied; some may have wanted to avoid being accused of atheism for not worshipping pagan deities.

LIEU offers a postmodern perspective on the problem. She lays aside the historical questions of whether and why the “God-fearers” existed; instead, she asks what rhetorical benefits people gained by applying the adjective to themselves. (Curiously, she criticizes scholarship for not distinguishing between *theosebes*, “God-fearing,” and the Greek participial expression *hoi sebomenoi ton theon*, “those who fear God”; she is interested only in the former, which is not in Acts, and so sidesteps the book of Acts altogether.) She concludes that “God-fearing” Jews or Christians wished to be regarded as pious and to exclude each other from that honor, and to be regarded as religious rather than atheistic or superstitious in the face of pagan charges.

HENGEL adds his authority to that of Millar and Feldman in accepting ancient testimony concerning the God-fearers. But in analyzing what drew pagans of high standing to synagogue worship, Hengel puts his finger on an obvious theological matter that Feldman seems to have overlooked: simply that Jewish scripture readings and sermons taught ethical monotheism.

The figure of the golem—an anthropoid created and animated by human magic—has evolved beyond its origins in the Jewish mystical tradition into one of the most potent and ubiquitous legends of contemporary folklore. The history of golem-making has attracted the attention of leading scholars of Jewish mysticism, while an extensive literature also exists on the diverse cultural representations of this legend over the past 150 years. There remains considerable uncertainty and controversy regarding the relationships among late antique, medieval, and modern notions of the golem. However, the diversity of analytical approaches taken to this theme—textual-critical, philosophical, historical, visual, and literary—generally complement rather than directly conflict with each other.

SCHOLEM’s pioneering essay, first published in 1955 in German, remains the most elegant and accessible study of the history of the golem in Jewish mysticism. He traces the subject from the biblical and talmudic discussions of God’s creation of Adam (which the magical process imitates) to Jacob Grimm’s 1808 account of golem-making among Polish Jews. The author focuses on the exegesis of the late antique *Sefer Yetzirah* by the French and German Hasidim of the 12th and 13th centuries, who interpreted this text as a magical manual for the creation of life. In this period, he argues, a standard ritual for golem-making emerged, involving the kneading of earth and water and the mystical recitation of combinations of the Hebrew alphabet. According to Scholem, this procedure was understood as a mystical representation of the creative act, intended to induce ecstatic experience rather than the actual creation of life. His taut historical account explains that the Safed kabbalists of the 16th century abandoned these rituals and considered the golem only as a theoretical notion, whereas early modern German and Polish Jews for the first time conceived of the golem as a mechanical automaton, capable of performing tasks and even of overpowering its master.

IDEL provides by far the most detailed textual study of this subject. He acknowledges his profound debt to Scholem but takes issue with what he sees as the earlier historian’s overly unified account of the evolution of a single “idea” of the golem. Idel also queries Scholem’s sharp differentiation of Jewish beliefs from pagan astrology and animation of statues, as well as Scholem’s claim that all medieval golem practices were oriented towards mystical experience. Idel argues that while the Sephardi ecstatic Kabbalah strongly privileged spiritual over material creation, the golem-making of the Hasidei Ashkenaz can be more plausibly interpreted as a magical ritual. He also gives more credence than Scholem to the possibility that there was a subterranean transmission of the

tradition from late antiquity to the medieval period, and to the variegated influence of Neoplatonic and Aristotelian ideas on Jewish mysticism. Based on the close reading of source texts, from which he quotes extensively, Idel advances a subtle analysis of both the theosophical and experiential dimensions of golem beliefs, from the ancient period to contemporary ultra-orthodoxy. However, despite his critique of Scholem's historical schema, Idel by no means conclusively displaces the earlier paradigm.

SHERWIN's brief study covers both the textual origins and 20th-century significance of the golem. He summarizes the ancient and medieval sources and 18th-century coalescence of the legend around the 16th-century figure of Rabbi Judah Loew, the Maharal of Prague. The author then turns to a philosophical consideration of these narratives in the context of recent understandings of the possibilities and perils of human creativity. Rabbinic discussions of such issues as whether a golem can be included in a quorum are related to 20th-century debates on genetic engineering, *in vitro* fertilization, and artificial intelligence. Diverging considerably from his starting-point, Sherwin thoughtfully explores the inner significance of the legend.

BILSKI's volume is the catalog for an exhibition on the golem mounted at the Jewish Museum in New York, and it is lavishly illustrated with images from all media inspired by this theme. Bilski's own essay comprehensively traces the visual history of the golem, from late 19th-century drawings and early 20th-century film, theater, and opera to abstract and installation art of the late 1980s. A separate essay by Elfi Ledig is devoted to Paul Wegener's three *Golem* films (1915–1920). Idel contributes a historical overview, which usefully summarizes the arguments of his book. However, the volume focuses primarily on the impact of the Golem motif on the visual imagination of the 20th century.

GOLDSMITH usefully complements Bilski, providing a roughly parallel account of 20th-century literary representations of the golem. He notes the irony that the Maharal, a determined opponent of magic, has become the primary figure associated with the creation of a golem. The author closely examines the two texts most responsible for popularizing this myth: Rabbi Yudl Rosenberg's publication, in Hebrew and Yiddish, of a purported eyewitness account of Rabbi Loew's golem-making (1909), and Chayim Bloch's German re-telling of these tales (1919). Goldsmith also offers a perceptive reading of Gustav Meyrinck's febrile, "psychological gothic" novel *The Golem* (1915), as well as interpretations of later golem literature, including poetry by Jorge Luis Borges and John Hollander.

WINKLER's volume should be approached with caution. In defiance of almost all scholarly opinion, he argues that Rosenberg's text was based on a genuine and authoritative manuscript account of the Golem of Prague. Although this claim can be safely discounted, he nonetheless provides a readable—but modified—version of these influential stories, together with a non-historical summary of the place of the golem in Jewish teachings on magic, witchcraft, and the occult.

Finally, KIEVAL's article usefully illuminates the history of the association of the Maharal of Prague with the golem legend. While acknowledging the uncertainty that still surrounds

this issue, he dates the beginnings of the charismatic veneration of the Maharal to the early 18th century and traces the literary debut of the Golem of Prague to two texts from the 1840s. The most noteworthy and influential innovation in Rosenberg's version, Kieval notes, is that the golem is cast as the protector of a Jewish community threatened from outside, in contrast with the traditional understanding of golem-making as a reminder of the dangers inherent within the creative process itself.

Judah Leib Gordon is renowned as a Hebrew poet, journalist, and exponent of Jewish Enlightenment in Russia. Gordon is preeminent in 19th-century Hebrew literature as a master of language, as a poet, and as a humorist.

SLOUSCHZ's account of the revival and renaissance of Hebrew letters in the 18th and 19th centuries contains an early appreciation of Gordon. The chapter devoted to Gordon discusses his place in the resuscitation of Hebrew poetry.

RHINE's pioneer biographical sketch of Gordon is also useful, but it is very dated as to the cultural background material. The last two chapters on Gordon's epic and lyric poetry are well worth reading, however, and contain some excellent translations.

WAXMAN's standard history of Jewish literature includes an account of Gordon that is largely dependent on Rhine. It may be consulted, however, by those who have no access to Rhine's monograph.

STANISLAWSKI's work is the first full-length biography of Gordon in any language. The author is more interested in Gordon the thinker than in Gordon the poet. His study places Gordon in the twin contexts of 19th-century Russian and Jewish history. Stanislawski shows the interplay between Russian intellectual and political developments and the emergence of modern Jewish cultural and national consciousness. Gordon holds a unique position among the men who made

the Jewish Enlightenment movement (Haskalah) a success. He played a prominent part in the battle against the exclusiveness of traditional Judaism and advocated the adoption of European modes of life and thought. Gordon championed a humanist and liberal approach to all the major questions facing the Jews in their tortuous transition to modernity: the religious reform of Judaism, the attractions and limits of political liberalism, the relation of Jews and gentiles, the nature of modern antisemitism, the status of women in Jewish society, and many other burning questions and issues that remain largely unresolved. Gordon's slogan, "Be a man outside and a Jew at home" taken from his poem "Awake My People" (c.1862) is usually interpreted in an assimilationist fashion. Gordon, it is generally said, advocated a split in Jewish identity between formal religious observance limited to the private domain of the home and synagogue, and suppression of all outward manifestation of Jewishness in deference to the host culture. Stanislawski, on the contrary, argues that Gordon had something far more noble in mind: continued adherence to Jewish values, in both the religious and national sense, accompanied by openness to general European culture, to which, indeed, the Jews had much to contribute. Gordon's slogan "therefore, was a call not for the bifurcation of Jewish identity, but for its integration." The watershed pogroms of 1881, the emergence of European nationalism, and antisemitism rendered Gordon's worldview irrelevant, and he died an isolated and disappointed man.

SPIEGEL is a very perceptive critic. Gordon believed that his satire "The Point of the Yod," loosely translatable as "The Dot on the I," was his most successful poem. The poem is directed against the rigorous interpretation of the law by narrowminded rabbis who are insensitive to the hardships and sufferings they cause. It is also a plea for the emancipation of Jewish women. The story sounds like a soap opera. The beautiful Bat-Shua is married to Hillel, an ugly, unmanly, and unworldly weakling who has never learned anything but Talmud. She lives with her husband for three years, giving birth to two children and supported by her father. When this subsidy runs out, her husband leaves her to seek his fortune abroad. At first she receives letters from him regularly; then he stops writing, all trace of him is lost, and Bat-Shua becomes a grass widow. She is able to eke out a living by painful toil and pours out all her love on her children. Salvation comes in the person of Fabi, an engineer, who supervises the construction of a railway line in town. Fabi is an enlightened Jew, educated, intelligent, handsome, and generous. He falls in love with Bat-Shua and learns of her plight. Through a friend in Liverpool, Fabi discovers that the faithless husband is peddling there and would be willing to divorce his wife for a consideration of \$500, with which he intends to go to America. The writ of divorce is properly drawn up, attested to by the local rabbinical court, and sent to the wife. Finally it seems that Bat-Shua will enjoy the happiness that she has amply merited. But alas, the course of true love does not run smoothly. After taking the payoff Hillel embarks for America, but his vessel is shipwrecked and all on board are lost. When the divorce arrives, the local rabbi, a rigid legalist, insists that the name of Hillel should have been written *scriptio plena* with the vowel letter i (yod), even though this dogmatism offends the elementary laws of Hebrew grammar.

He declares the divorce invalid, and since Hillel is dead and cannot correct the scribal error, the talmudic law applies: "the wife of a man lost in bottomless waters cannot remarry." Thus is the happiness of Bat-Shua shattered forever by the jots and tittles of an inhumanly rigorous legalism.

Spiegel considers Gordon's extravagant satires directed at rabbinic despotism to be artistic failures—gross caricatures that lack even poetic verisimilitude. The tragedy of the Jewish woman as described by Gordon is superficial and contrived. The poet rants and raves against heaven because his heroine cannot marry a wealthy man, and he defames religious leaders by drawing a hate-distorted picture of rabbinic cruelty. Spiegel notes that in another poem Gordon shows an appreciative understanding for the necessities of the non-Jewish Russian law: the law may have prescribed certain formalities in order to prevent fraud and must be obeyed despite any individual hardships it may cause. Spiegel notes Ahad Ha'am's opinion that Israel Zangwill's novel *The Children of the Ghetto* more fairly presents the problem of the conflict between the proscriptions of a rigid code lagging behind the developing social conscience because there, the heroine's happiness is destroyed not by a narrow-minded fanatic but by her own doting father.

Heinrich Graetz was one of the foremost German Jewish historians of the 19th century. Partially self-taught, Graetz served as a professor at the Jewish-Theological Seminary at Breslau (now Wrocław, Poland). Graetz was also a prolific writer who produced, in addition to many well-researched essays, an 11-volume history of the Jewish people (1853–1876) that represents the first comprehensive treatment of this subject according to modern scholarly standards. (The work appeared in English translation in 1891 in a five-volume version titled *History of the Jews*.) Having been influenced as a historian by the ideas of the German philosopher G.W.F. Hegel, Graetz became a pivotal figure in the attempt of German Jews to reshape their identity in the wake of their societal emancipation.

BARON presents a short biographical sketch of Graetz's life and work. While essentially descriptive, Baron discusses briefly

Graetz's stand concerning Orthodox Judaism and Reform Judaism and his "proto-Zionist" leanings. Baron also includes remarks on Graetz's critics and on those writers who influenced Graetz most, for example, Hegel and Leopold von Ranke.

HERLITZ places Graetz's writings in the larger context provided by the writings of Isaak Markus Jost and Eugen Taubler, two eminent Jewish historians that preceded and succeeded Graetz, respectively. In addition to providing some biographical details, Herlitz analyzes Graetz's conception of Jewish history, liberally citing his writings. Herlitz is primarily interested in Graetz's shortcomings as a historian and remains fairly superficial in his descriptive analysis.

SCHORSCH offers an excellent and detailed introduction to the writings and thinking of Graetz and also provides annotated selections from Graetz's oeuvre (especially his essays), many of which are presented here in English for the first time. Schorsch is particularly interested in the ideological forces at work in the writings of Graetz and in the question of how Graetz's ideas related to the events that shaped Jewish life in 19th-century Germany.

Notwithstanding the discovery in England of minor Jewish artifacts dating from Roman times, the presence of a Jewish

population in Britain in Roman or Saxon times remains an issue of speculation. The first substantial Jewish population arrived following the Norman conquest in 1066.

A standard work on the history of medieval English Jews is RICHARDSON. Concerned mainly with the reigns of Henry II and his successors, this work represented, in its day, a significant reappraisal of the medieval Jewish experience, and it has not been rendered obsolete by subsequent scholarship. Richardson corrects widespread misunderstandings concerning the situation of Jews in England and presents a balanced account of Jewish-Christian relations. He goes to considerable trouble to make it clear that the Expulsion of 1290, which brought to a close medieval English Jewish life, was not the outcome of radical shifts in the economic situation. Jews were not as heavily engaged in money-lending as had been portrayed, nor had they been taxed into poverty. To the contrary, evidence suggests a significant diversity of economic activity among medieval English Jews. In Richardson's view, the expulsion arose from a growth of intolerance and oppression directed toward those represented as heretics or infidels.

A more recent treatment of the situation of medieval English Jewry and the expulsion is MUNDILL. This work has a more modern feel to it than Richardson's account, reflecting the influence of contemporary social sciences on the writing of history. Mundill's examination of the complex currents of events, both in England and on the European continent, in the decades prior to 1290 shows that the expulsion was part of a larger pattern of discriminatory acts against Jews. The analysis of King Edward's situation lends substantial credibility to Mundill's surprising conclusion that the expulsion was executed virtually on a whim and because "the time was right."

For three and a half centuries following the expulsion, there were virtually no Jews in England, save for clandestine visitors or illegal immigrants whose presence the authorities often ignored. The stereotype Jew, however, survived during this period as a figure of English legal discourse and literature, and the Israeli historian KATZ broke new ground in the writing of Anglo-Jewish history by "tracing the Jewish thread throughout English life between the Tudors and the beginning of mass immigration in the mid-nineteenth century." Many of Katz's contemporaries viewed the work of earlier generations of Anglo-Jewish historians as flawed, being little more than "Whig history," that is, an optimistic and teleological account of events culminating in the admission of the first Jewish member to Parliament in 1858. Katz counters the assumptions of such earlier works as he takes a novel approach to English Jewish history that looks for explanations of events less in the circumstances of the Jews than in the circumstances of the Christian majority of England and their attitudes regarding Jews and Judaism. Katz's book displays immense learning combined with great storytelling skill.

The Jewish population in Great Britain grew steadily beginning in the early 18th century. ENDELMAN comprehensively documents the experiences and concerns of Anglo-Jews in the 18th and early 19th centuries, presenting a highly readable account of the struggle of some Jews to remove the (not very onerous) civil disabilities under which they, as well as other nonconformists, labored. Endelman produces important insights into both the internal politics of Anglo-Jewry and

Jewish relations with the developing liberal state during a period that has had a long-term impact upon the subsequent development of Anglo-Jewish institutions and social life.

Although LIPMAN is dismissed by some as belonging to the older generation of "Whig" historians, this judgment is too harsh. Lipman was one of a small number of English historians who pioneered the writing of the history of late 19th- and 20th-century Jewish immigrants and who depicted Jewish life in the East End of London. His book on Anglo-Jewish social history from 1850 to 1950 remains a reliable account of a key period during which Anglo-Jewish life was transformed. His descriptions of the demographic changes; occupational and economic structures; and the development of charitable, educational, and religious institutions in Anglo-Jewry are models of clarity.

GARTNER's monograph remains the definitive work on immigrant Jews in England, and it has contributed greatly to the development of a critical historiography of Anglo-Jewry. Gartner conjures up the world of the mainly poor and uneducated Eastern European immigrants who crowded into London's East End. In an intensely moving account, Gartner documents the almost relentlessly grim daily life of the immigrants, as they struggled first to survive and then to better themselves, eventually laying the foundation for contemporary Anglo-Jewish prosperity.

BLACK focuses on the world of social relations among different groups of Jews and between Jews and others in England. The author is at his best when he contrasts the milieu

of the established, Anglicized, and wealthy Jews with the world of the newly arrived ethnics from Eastern Europe. Black creates beautifully drawn vignettes of Anglo-Jewish life, such as accounts of the Anglo-Jewish aristocracy, who took very seriously their mission of socializing the immigrants and turning them into members of the "respectable poor" who would embrace the virtues of self-help and upward mobility.

CESARANI's volume is not a general history of Anglo-Jewry but a collection of essays on (often neglected) aspects of the community, including discussions of trade unions, women, and the household economy. The collection reflects contemporary historians' increased focus on issues such as class, ethnicity, and gender. It is ideologically the opposite of "Whig history," for it stresses diversity and rejects a view of history as moving in linear fashion from intolerance to inclusion.

ALDERMAN's concerns as a scholar of government and politics are reflected in his fine study of political relations within the modern Anglo-Jewish population and the Jewish community's relationship to the British state. Of particular interest are the final two chapters of Alderman's history, which set recent debates and divisions within Anglo-Jewry into clear relief, mapping the community's trend toward both fragmentation and pluralism within an overall context of gradual numerical decline in the Anglo-Jewish population.

Habad is the name of a hasidic school of thought founded in White Russia around the turn of the 19th century by Rabbi Shneur Zalman of Lyadi in reaction to accusations that Hasidism was suitable only for the unlearned simpleton. The movement sought to sow a dimension of scholarship, sophistication, and methodic mysticism into the hasidic revolution. The name *HaBaD* in itself indicates the movement's purpose: the term is an acronym for *hokhmah* (wisdom), *binah* (understanding), and *da'at* (knowledge). In its origin, the role of the rebbe was significantly different in Habad thought from the role played by the rebbes in other hasidic groups. He was a teacher and guide more than a miracle-worker and saint. The

Habad movement is more famous today for the social role it played among Russian Jewry and later among Jews in the United States and Israel than for its scholarly origins. Habad hasidic thought has become synonymous with the Lubavitch dynasty of rebbes because they were the most effective in disseminating the school's philosophy. A clear continuum of ideas and philosophy from the early days of the movement until the present does not exist, however. Following his appointment in 1951, a messianic cult began to develop around the personality of the seventh Lubavitcher rebbe, Menahem Mendel Schneersohn, reaching extreme levels of hope and disappointment upon his death in 1992. The movement has not appointed a new rebbe and presently remains split between messianic elements and less defined groups.

DEUTSCH's two-volume work on the life and times of Schneersohn is not purely academic in tone, and it is troubled by unnecessary errors, unprofessional editing, and a lack of objective commentary. Despite these problems, it is indispensable to an understanding of the leadership of the seventh Lubavitcher rebbe, and it offers indirect insights into the Lubavitch movement and the evolution of what is known today as modern Habad Hasidism. Particularly valuable is the information that Deutsch found in the private files of the dynasty. The study is important for sociologists and historians alike. Volume one covers the early years of Schneersohn's life by drawing from documentary sources and interviews with acquaintances of the family. Deutsch discusses the political circumstances of the period, the difficulties that Jewry and Habad Hasidism encountered, and the reasons that Schneersohn was chosen to marry the sixth Lubavitcher rebbe's daughter. Volume two continues in this strain; included are fascinating interviews with leading religious figures in American Jewry that illuminate Schneersohn's personality. Descriptions of Deutsch's personal life, his break with Lubavitch, and his claims to be a contemporary Habad rebbe add a curious dimension to this work.

EHRlich has written the most comprehensive work on the history of Habad leadership; it draws from the rebbes' published writings and from primary and secondary sources, interviews, private diaries, and oral traditions. Describing the various leaderships of the respective Habad rebbes, Ehrlich theorizes about how they rose to leadership and recounts what they did with the mantle of authority. While quite a few works address the early period of Habad, little information exists

about the intermediate period. Ehrlich summarizes the process of transferring authority, including the arguments and splits that took place in the Habad movement from its inception under the leadership of Rabbi Shneur Zalman until the election of Rabbi Menahem Mendel Schneersohn in 1951. The author considers how the Lubavitch dynasty emerged as the sole surviving Habad subgroup and tries to identify leadership patterns. The book is presented in three sections: a general study of the principles of Jewish, hasidic, and Habad leadership; a summary of all the successions and leadership struggles in Habad history; and a study of how Schneersohn became the seventh Lubavitch rebbe. As the bibliography of political, sociological, historical, and theological sources suggests, this work is a study of leadership dynamics as much as it is an analysis of the Habad movement.

ELIOR's work focuses primarily on the first and second generations of Habad philosophy, and it does not address the modern movement or the dramatic later shifts in Habad thinking. The author analyzes early influences on Habad and the paradoxical nature of the complex hasidic view of God and the world. She describes the interaction between Habad and more traditional schools of thought; explores the differences between Habad and other hasidic schools; and identifies the essential novelty of the hasidic endeavor as the movement's effort to design a spiritual process and paradigm that facilitated a refined religious consciousness while demanding scholarship, piety, and an unceasing commitment to activism and halakhah within the "lower worlds." Elior also addresses the relationships among different categories of mystical thought and explains the way in which these ideas are reflected in community life.

FOXBRUNNER's work on the philosophy and method of Rabbi Shneur Zalman's mysticism is exhaustive. Focusing almost entirely on the founder's beliefs, the author tries to place these ideas into broad religious-ethical categories. Foxbrunner's work lacks a critical dimension, but it is a good overview of the concepts of early Habad mysticism and the personal religious aspirations of Rabbi Shneur Zalman.

FRIEDMAN, an authoritative sociologist of religious movements, traces the evolution Lubavitch from the local dynasty led by the fifth rebbe through its emergence as a worldwide religious movement inculcating extreme messianism under the seventh rebbe. The author presents various interesting theories regarding the evolution of Habad thought, and he tries to understand the present movement in light of its history.

LEVIN (1988a, 1988b, 1989), chief librarian at the Habad headquarters in Brooklyn and the ultimate Habad historian, is the author of three monumental volumes on modern Habad history that are a veritable treasure chest of materials culled from the library he heads. These works are based on official Habad sources and have undergone censorship, but Levine nevertheless provides highly scholarly discussion on potentially controversial subjects; the careful reader will appreciate these studies.

LOEWENTHAL's work on the first two generations of Habad leadership is notably comprehensive, well organized, and thoroughly scholarly as it presents important names, dates, maps, and other details relevant to the subject. Loewenthal deals with social and political dimensions of Habad thought and development, including discussions of such topics as war,

poverty, persecution, the use of printed matter, and the fight over the future leadership. He identifies different hasidic populations with different needs and describes how the Habad movement catered to the various groups. In addition, he describes the broad and original theological contributions that Habad made to the hasidic world. His endnotes are scrupulously written and fascinating in their own right.

The Passover Haggadah—a compilation of biblical passages, prayers, hymns, and rabbinic literature—was probably assembled sometime during the Second Temple period in Palestine and is read during the Passover Seder, the ceremonial meal held in Jewish homes to commemorate the Israelite redemption from Egypt in biblical times. The earliest extant version appears in a tenth-century prayerbook from Babylonia (modern Iraq). The Haggadah became an especially cherished text for Jews all over the world, and nowhere is this high regard more evident than in the illustrations lavished on it by generations of Jewish artists from medieval times to the present. These illuminations represent biblical scenes as well as images based on rabbinic legends.

The first printed version of the Haggadah appears to have been published in Guadalajara in 1482, ten years before the expulsion of the Jews from Spain. One cannot be certain, however, because no place or date of publication is given in the text. The first illustrated Haggadah printed in Hebrew that has survived in its entirety was produced in Prague in

1526. This influenced a long line of illustrated Haggadot, a tradition that continues to this day.

In modern times, the Haggadah has taken on a new significance as Jewish life has changed and evolved. The text and the illustrations that were fixed for centuries have started to vary as the Haggadah has begun increasingly to reflect not only Israel's ancient history but also contemporary Jewish agendas and events. Some of the most interesting modern Haggadah editions come from Israel, where the importance of the return to Zion predominates as a theme both in the text and in the illustrations. The various movements in the lives of American Jews have produced Haggadot that reflect their own vision of Judaism and their understanding of themselves as American Jews. Jewish artists such as Arthur Szyk, Ben Shahn, and Yaakov Agam have further enriched the modern repertoire with their illustrated Haggadah editions.

YERUSHALMI surveys the development of the printed Haggadah over the last five centuries. He does so by means of facsimile pages from representative editions found in the libraries of Harvard and the Jewish Theological Seminary of America. Each facsimile page is accompanied by a discussion of the history and important features of the particular edition. The book appeared in 1975, and thus only Haggadot printed before that date are surveyed. Yerushalmi includes a lengthy and informative introduction, which provides an overview of the history of the Haggadah from its earliest development to the present. This book, unique in its approach, is an erudite and fascinating study by an eminent American scholar of Jewish history.

GOODMAN devotes two chapters to the discussion of the Haggadah in the context of his book on the Passover festival. Chapter five is concerned with the development of the Passover Haggadah. The chapter traces the evolution of the text and analyzes its relationship to the Bible, the Mishnah (the primary rabbinic legal text), and the Midrash (rabbinic exegesis of the Bible). He then reviews the history of the printed Haggadah, its commentaries and translations, and concludes with a look at modern variations of the traditional text. Chapter 16 examines Haggadah illustration. Written by Rachel Wischnitzer, a noted historian of Jewish art, the chapter traces manuscript Haggadah illumination through a study of the development of several themes: the sages in Bnei Brak, the family seder, the four sons, the Exodus, and various other biblical motifs. She also examines the illustrations of the early editions of the printed Haggadah and concludes with a discussion of the revival of Haggadah illustration in modern times. Goodman's book originally was published in 1961 and is, therefore, not current. It is, however, an excellent resource for the historical study of the Haggadah and of Haggadah illustration.

RAPHAEL's book consists of the full text of the Haggadah in Hebrew and in English translation and an examination of its history. Chapter one discusses the Haggadah in modern times and focuses on its adaptability to modernity. Chapter three, *The Development of the Haggadah*, traces the evolution of the text from postbiblical times through the 17th century. He discusses the Haggadot of the medieval period and provides many illustrations of the superb art that accompanied these manuscripts. He continues with a review of the early printed

Haggadah editions. Raphael's book is a resource for the study of the Haggadah in medieval and early modern times, with the profuse visual material significantly enhancing the text.

GLATZER presents the traditional Hebrew text of the Haggadah with a facing-page English translation that attempts to imitate the elevated tone of the Hebrew. It thus uses archaic English forms (such as "thee" and "thou") and is not gender neutral. The introduction, running commentary, and explanatory notes are based largely on the writings of Ernst Daniel Goldschmidt, one of the great scholars of Jewish liturgy. Assembled for this edition are additional readings: "Legends and Teachings," "Readings on the Holocaust," and "Some Contemporary Seder Thoughts." Also included are a guide to names, works, and terms, and illustrations from Haggadot of the past.

FREEDMAN's work derives its title from the manner in which the editor attempts to highlight by means of color the era from which each stratum of the Haggadah text derives. He uses colored squares at the head of paragraphs and sections to indicate the era when they were introduced and presents parts of the text in different colors in order to indicate their source. It is an innovative if at times confusing way of presenting the Hebrew text of the Haggadah. This edition is, thus, a good choice for readers with some knowledge of classical Jewish texts who wish to gain a better understanding of the Haggadah's textual sources. In addition to the English translation and the many explanatory notes, the volume includes numerous black-and-white and colored plates of medieval illuminated manuscripts and early printed Haggadot.

STEINGROOT discusses the Haggadah in chapter five of his book. He notes its sources and provides a rather modern and even hip commentary on the text. He concludes with what must be the most exhaustive catalog of extant Haggadah editions that currently exists in English. The list covers Haggadot produced by the three main modern movements in Judaism (Orthodox, Conservative, and Reform) as well as alternative versions such as feminist, secular, and even Christian Haggadot. His comments on each of the more recent editions are meant to assist in the choice of a Haggadah edition for use at the seder.

Until the late 20th century, introductions to halakhah—identifying the basic concepts operative in Jewish law and tracing their historical evolution concept-by-concept and institution-by-institution—were severely limited in quantity and quality. What few attempts there were in English were often the work of practicing lawyers equipped with a greater or lesser degree of traditional Jewish learning. These amateur if worthy efforts generally left much to be desired. Aside from academic method, there was lacking both the breadth of erudition to allow for a genuinely comparative perspective and a proper recognition of the ongoing evolution of halakhic ideas. Menachem Elon notes that “most scholarly activity in the field was confined to the Biblical and Talmudic periods,” and he attributes this shortcoming in large measure to “the failure to appreciate the significance of the juridical autonomy enjoyed in most Jewish population centers from the time of the Talmud until the eighteenth century (and in certain ‘eastern’ Jewish communities even later) and the consequent widespread ignorance of the continuous creativity and development of Jewish civil administrative, public, and even criminal law throughout that long period.”

One notable pioneering exception was the two-volume work produced by HERZOG, the first chief rabbi of Israel, while he was still chief rabbi of Ireland. Volume one is devoted to the law of property and volume two to the law of obligations. Original and profound, the book remains of much more than historical interest, but it is also a good deal harder going than the best of introductions that have followed in its wake. Even the author himself is willing to admit the scale of the challenge involved when he writes “Only experts who know from first-hand study the intricate, the bewildering, semi-enigmatic nature and often semi-chaotic state of so much of the stupendous mass of material of which this work forms the methodised, reasoned quintessence, presented in Westernised and modernised form, will be able to gauge the mental effort which this must have entailed.”

In subsequent decades, in line with an emphasis on an expanded canon, the academic study of halakhah has undergone a radical transformation, with activity centered around the law faculty of the Hebrew University of Jerusalem, as well as the law schools of British and American universities, chiefly among the faculty inspired by the charismatic teacher of Roman law, David Daube. The exhilarating new research that has ensued has largely taken the form of articles and conference proceedings, and the main vehicle of dissemination has been Bernard JACKSON’s *Jewish Law Annual*, published since 1978 under the auspices of the International Association of Jewish Lawyers and Jurists, and latterly in conjunction with the Boston University School of Law. The first issue announced that the series would “seek to promote research in Jewish

Civil Law; to foster interest in the Jewish legal system among comparative lawyers and secularly-trained Jewish lawyers; and to provide a medium for communication between lawyers and students of halakhah, and between Israel and the Diaspora.” Jackson went on to state that “by and large, the halakhah has served as a unifying force for the Jewish intelligentsia throughout the centuries.” He admitted that “Jewish emancipation and secularisation have posed major problems in this regard,” but he aspired nonetheless to witness a restoration of the status quo ante through the application of modern scholarly methods. If this has not fully come to pass it is only because the hope was so extravagantly ambitious. For its part, the annual has established itself as a hardy perennial, consistently delivering a remarkably high number of important contributions to knowledge across an often startlingly broad range of Jewish and cross-cultural inquiry.

In later issues a tripartite format has emerged. A typical issue will comprise studies relating to a single if loose theme, usually the topic of the association’s annual conference; a “chronicle” surveying major recent developments in “hot” areas of halakhah (e.g., women’s rights in the custody of children, or the determination of brain death); and finally an exceedingly thorough “survey of recent literature,” in which an impressively inclusive range of relevant monographs and articles appearing in the journals (irrespective of language) are classified by subject and admirably abstracted.

The cadre of adepts responsible for this distinguished journal is also to be credited with three related publications, two of them published as supplements to the *Jewish Law Annual*. The first supplement (JACKSON 1980a) is a discussion of methodologies in this emerging specialty. Supplement two (JACKSON 1980b) includes contributions by David Daube and Shelomo Goitein as well as Israeli Supreme Court Justice Haim Cohn.

The third volume, edited by HECHT et al., sets out to fill “a serious gap” in terms of the lack of “a single-volume introduction to Jewish Law, designed especially to provide essential background information for those seriously encountering Jewish Law for the first time.” It need hardly be said that this collaborative effort is a triumph of good judgment, a consistently pleasant read of assimilable size yet detailed enough to be both useful and satisfying. Each contributor to the 16 essentially chronological chapters remarks on “the political and juridical background of the particular period, the character of the sources from it, and some salient features of its substantive law and legal practice,” and also presents “a brief list of major authorities of the period and a basic bibliography.” A notable feature of Hecht’s volume is its inclusion of sections on developments at the margins of the mainstream: notice is taken of the Aramaic papyri, the Apocrypha and Pseudepigrapha, and the Dead Sea sectaries, and there are whole chapters on Samaritan and Karaite halakhah.

ELON’s summa—at over 2,300 pages in four large-format volumes, no other word will do—is indisputably the standard comprehensive work. This is not a compilation of contributions by a multitude of specialist hands, but a tour de force of rather 18th-century proportions on the part of its single author, a long-time law professor at the Hebrew University and latterly deputy president of the Israeli Supreme Court. Elon is best known for his work in the field of *mishpat Ivri* (“Hebrew jurisprudence”),

especially in terms of the integration of halakhic concepts and values within the framework of the fundamentally English legal heritage of the “Jewish State,” and this is central to his final volume here. Conversely, he also considers the novel implications of Israeli sovereignty, which called into being a legislative authority, the Knesset, sanctioned to enact what is in a sense “Jewish law” without recourse to halakhic tradition.

Of the earlier volumes, the first comprises: (1) an extended introduction to “The History and Elements of Jewish Law” (Elon’s discussion includes chapters on such crucial topics as “The Oral Law: Definitions and General Principles” and “The Prerogatives of the Halakhic Authorities,” as well as a review of the history of the academic study of halakhah); and (2) a section on “The Legal Sources of Jewish Law: Exegesis and Interpretation,” an introduction to the legal hermeneutics of the rabbis. This section is particularly valuable for the extent to which it goes beyond the principles of midrash well-covered elsewhere, to discuss such issues as the interpretation not of Scripture but of communal enactments. In volume two, Elon continues to review legal (i.e., conceptual) sources of Jewish law, specifically in terms of legislation, custom (*minhag*), precedent (*ma’aseh*), and legal reasoning or logic (*sevarah*). Volume three provides a historical review of halakhic literature by genre: commentaries, novellae, codes, and responsa, as well as reference tools and secondary literature.

The author’s clarity of exposition is remarkable enough in itself, but his work is rendered still more accessible by its exemplary front and end matter. A summary of contents listing volumes, parts, and chapters is followed by a fuller table of contents in which analysis is carried beyond chapters to sections and subsections. Volume four ends with three appendixes (a “Cross-reference Table” correlating decisions in Maimonides’ and Joseph Caro’s codes; “Comparisons of the Language and Style” of the chief medieval codifiers; and a bibliography of collected responsa), a handy glossary, bibliography, and indexes of sources and subjects.

Finally, mention must be made of a substantial tome that makes a monumental contribution to the field, and, in a handsome translation, to the literature in English, even if its scope is less comprehensive than its sweeping title may suggest. URBACH promises to treat *The Halakhah: Its Sources and Development*, but he elects to arrest that development around the fifth century C.E. with the redaction of Talmud. Unlike the authors of the works described above, Urbach belongs (in terms of academic pigeonholing) to the department of Talmud rather than to the law school, but it is not a matter of disciplinary propriety that induces him to exclude from consideration both the earlier and the later medieval periods, the epochs of the geonic responsa and of the great enterprises of codification, two golden ages of halakhic development. After all, Urbach’s own study of the Tosafists, still available only in Hebrew, is among the most valuable contributions that Jewish studies has made to an understanding of the evolution of halakhah in the Middle Ages. Rather, the cut-off is dictated by his assigned role in contributing to a series aimed at putting the fruits of the scientific study of Judaism at the disposal of lay people whose lifestyle includes the traditional component of Talmud study.

To that end, Urbach offers a grand historical survey of the budding and flowering of the legal categories invoked by the

rabbis and their Pharisaic progenitors that is awesome in its apparent simplicity. “The discussions of the various halakhic subjects in this volume are based on the opinions of many generations of scholars who have applied scientific, philosophical and historical methodology to this study of talmudic literature,” he writes. “However, since this present work is intended to be a wide-ranging summary, I have also offered my own solutions to various problems, without going into details of why I reject the opposing views, although I have always tried to indicate such in the footnotes. In the body of the book, I have let the sources speak for themselves—more perhaps than is usual—with only necessary explanations.” Urbach is a model of conservatism in the best sense. The writing here of this leading Israeli scholar feels almost as if it were crafted to represent an unspoken repudiation of Jacob Neusner, the dominant presence in contemporary U.S. Talmud scholarship, whose voluminous publications feature a bizarre mix of extreme skepticism in theory and extreme confidence in practice. By contrast, Urbach is deliberate in judgment and at pains to avoid harmonizing his sources any more than he is compelled to believe that they allow. That, however, is a good deal, for the halakhic sphere is shown to reflect broad consensus (lawyers, after all, must agree upon basic principles). Urbach does not dwell on rabbinic hermeneutics, the mechanics of midrashic justification for legal constructions, a matter for quasi-literary scholarship, but he brings his skills as a preeminent historian of talmudic ideas to bear on a great range of larger concepts. Among them are “regulations and ordinances” (for which no biblical sanction is claimed), “the place of custom in halakhah”; the history of law courts and the punishments they administered; precedent; testimony; theory and practice; legal argumentation and decision-making; legal fictions; and equity. He tries “to place the laws discussed within the general framework of Jewish social and cultural history” and to trace “the influences of laws and commandments and the everchanging stream of life in the hope of revealing how the personalities of the Halakhah succeeded in coping with new conditions.”

Urbach’s best-known work, *The Sages: Their Concepts and Beliefs*, to which the present work serves as a counterpart, is an attempt to synthesize the notoriously unhomogenous theological beliefs of these same rabbis. Given the centrality and the priority that these sages ascribed to halakhah, however, perhaps the title given to his work on the aggadah would have served better to convey the content of his statement on the halakhah.

Responsa are legal rescripts written by recognized rabbinic authorities in response to questions put to them by other rabbis or communal leaders. First appearing in about the ninth century, the genre soon spread throughout the Mediterranean basin, and by the 11th century responsa could be found coming from, or being addressed to, rabbinic authorities in virtually every corner of the Jewish world. Such texts became a standard vehicle for the dissemination of rabbinic legal decisions and continue to be written in the present day. Although usually dealing with practical matters connected with the application of Jewish law, especially in cases involving civil disputes, responsa have in fact been written on virtually every aspect of Jewish life and thought. The responsa literature thus offers a rich source for reconstructing the history of rabbinic law as well as for illuminating the details of day-to-day life in Jewish communities.

LAUTERBACH presents the first "scientific" overview of the genre. He takes for granted the traditional view that responsa represent a specifically Judaic type of literature that has its origins in biblical times and stands behind much of what appears in the Talmud. He proceeds to reconstruct the subsequent development of the literature by identifying six periods of historical development: the geonic period (seventh to ninth century), the rise of local responsa (tenth to 11th century), the first rabbinic (11th to 12th century), the second rabbinic (13th to 14th century), the third rabbinic (15th to 18th century), and the fourth rabbinic periods (19th century to the present). In each case he notes the paradigmatic writers and the important social and political conditions that shaped their activities.

MANN follows Lauterbach's lead by using responsa as historical sources to reconstruct Jewish life in geonic times, which he defines as the seventh through the mid-11th century. In a series of articles first published in various installments in *The Jewish Quarterly Review* between 1917 and 1921 and collected in this volume, Mann undertakes a largely philological investigation of the responsa literature, discussing the probable provenance of the materials found in the medieval collections of geonic responsa, the apparent method by which these texts were preserved and collected, and various critical issues connected with use of language. Throughout the book, a number of responsa are presented in the original without translation and then are subjected to detailed literary analysis so as to throw light on various aspects of Jewish life in Babylonia.

FREEHOF is largely responsible for reviving the responsa as a subject of scholarly investigation. He himself became

interested in the literature as a result of his experiences as an army chaplain during and immediately after World War II. He became involved in helping recover lost Jewish libraries and developed a large personal collection of responsa literature and subsequently revived the art of responsa writing in the Reform movement all but single-handedly. Freehof's book is an attempt to introduce the genre to a wider public. His review of the history of responsa is largely a repeat of Lauterbach's seminal encyclopedia piece. The rest of the book is an exploration of the depth and richness of the literature. In such chapters as "Widespread Debates," "History in the Responsa," "Modern Inventions," and "Curious Responsa," Freehof shows that the responsa literature is a gold-mine of information that throws light on countless aspects of Jewish studies beyond the development of Jewish law. He also provides brief biographies of some major responsa writers and offers some translated sections of selected responsa.

AGUS's two-volume study of pre-Crusade Jewish life in Europe is one of the first major studies since Mann's to take responsa seriously and systematically as historical, not just legal, source materials. His study reconstructs various aspects of Jewish life on the basis of rulings and discussions in the responsa literature of the time. Included in his work are not just business and economic issues, but also matters of family life, education, and relations between Jews and their non-Jewish neighbors. One of Agus's most important contributions is to offer translations of the responsa on which he bases his work, thus making this literature available for the first time to an English-speaking audience.

JACOBS's study should be seen as part of his larger project of developing a systematic statement of Jewish belief and theology. His interest in the literature is primarily in showing that speculation on philosophical or theological issues was not alien to rabbinic activity. Beginning with geonic responsa and then arranging his material by century, Jacobs leads the reader through the world of Jewish thought by examining the responsa of major thinkers who deal with more theoretical or philosophical issues, especially those regarding fundamental principles of Jewish faith.

ROTH published his study on the occasion of the centenary of the Jewish Theological Seminary of America, the central training institution for Conservative rabbis. The Conservative movement has always been concerned with the process by which Jewish law is authentically changed, and Roth uses his study to throw light on the inner workings of this process. By reading responsa as one would court briefs, Roth attempts to extract from them a sense of the inner logic of the Jewish juridical process. His book thus covers such themes as judicial discretion and precedent, sources of rabbinic authority, the role of custom, and the use of extralegal sources in decision-making. In this effort he draws on Bible, Mishnah, Talmud, commentaries, and a melange of responsa from various times and places to trace the intellectual limits of what he regards as a single and unitary legal system.

GRONER's study, which developed out of his doctoral dissertation at the Hebrew University, is a much more modest and methodologically controlled attempt to adduce the principles behind Jewish jurisprudence. Groner limits his interest to the legal methodology of the Babylonian Geonim, and in fact

focuses on only one of these: Hai Gaon, who lived from 939 to 1038 and who served as the last great head of the talmudic academy in the Babylonian town of Pumbeditha. This gaon was not only in a position to have a major influence on Jewish legal thought in the crucial transition from geonic authority (centered in the academies of Babylonia) to more local rabbinic authority, but also has had a large body of his responsa preserved. Groner's study shows the extent to which the jurisprudence of the Geonim was an extension of the Talmud.

HAAS's review of the history of the responsa genre is the first comprehensive look at the literature and its history since Lauterbach. Haas, a Reform rabbi, is interested in the diversity of forces and ideas that have shaped the history of Jewish law. For purposes of this study, he has divided the genre into six groupings: geonic, early Spanish, early German and French, classical Rabbinism, modern Orthodox, and modern English-language. He then proceeds in each case to place the constituent responsa into their historical, social, and political context and to adduce how that context shaped the legal rhetoric of that age. Through an analysis of the shifting rhetoric of the responsa genre, Haas attempts to articulate different underlying theories of authority and conceptions of law that have operated at different times and places in Jewish history.

Haredim, the preferred designation for ultraorthodox Jews, is best translated as “fearful ones” or “shakers.” The Quakers also acquired their name from the same phrase in Psalms, “to be fearful (or shake or quake) before God”, and the piety of their respective lifestyles is comparable. The term Haredim satisfies the need of others to describe the phenomenon of black hats and coats and a fierce observance of Jewish ritual law, but it obscures the nuances that constitute the many strains of ortho-

doxy, with their respective theologies, practices, ethnic origins, and social structures. Haredim are not homogenous, although the founding of a political organization, Agudat Israel, in 1912 helped forge unity. The holocaust in the Haredi heartland, however, and internal dissension have left Agudist ranks decimated. Schisms brought the defection of rejectionists of accommodation to Zionism (Neturei Karta), and of Mitnaggedim (Degel HaTorah, rejecting hasidic dominance) and Sephardim (Shas, rejecting Yiddish-oriented Ashkenazi dominance). At present, the term Haredim loosely describes three major groupings united by piety yet almost as strongly opposed to each other: the hasidic movement with its subgroups, the Lithuanian-style Mitnaggedim (or opponents of Hasidism) who developed their own style of spirituality alongside Hasidism, and the emerging community of Sephardi Haredim, newly organized in Israel in the image of both Mitnaggedim and Hasidim. No academic studies have been written to date about Shas; it reflects primarily an Israeli phenomenon and has only recently come to be a force within ultraorthodoxy.

GOLDBERG's work is one of the first academic studies of the 19th-century rabbi Israel Salanter's life, thought, and contribution to nonhasidic Orthodox continuity. So far as an understanding of community hierarchy and leadership and ideology enable an understanding of the Haredi community, a study of one of its early proponents is important. As founder of the Musar movement, Salanter established a spiritual discipline of ethical self-improvement intended to maintain a vigil against the growing attraction of Hasidism. Arguably, by affirming his ethical teaching and ideological foundation it became unnecessary for Mitnaggedic orthodoxy to define itself purely as a reaction to Hasidism. Goldberg seeks to portray Salanter as an early psychologist who recognized the benefits of certain religious habits for the welfare of the individual, including the study of the Torah, tight communal life, and obedience to the law. Goldberg describes Salanter's essential ideas concerning the nature of the soul, good and evil, reward and punishment, and the struggle of mind over heart, which remain prevalent today among Haredim of the Mitnaggedic persuasion. Goldberg assesses the extent to which a continuity of Salanter's teachings exists in the contemporary Orthodox world and to what extent it has passed, recognizing that there are many who will argue that the Musar movement ended with the death of its founder.

HEILMAN, an anthropologist and ethnographer, admits that his interest in Haredim was entwined with his personal search for the utopian past of his ancestors, a search that he concludes was in vain. Heilman briefly describes the Haredi world and then outlines its social history. He focuses on three subjects: community, education, and passages (e.g., matchmaking, weddings, and funerals). He also looks at the sexual habits of Haredi communities. While this work purports to analyze the general subject of the ultraorthodox, Heilman's subjects are mainly from hasidic sects and less from the Mitnaggedim. This in itself may be a legitimate reflection of the diminished sociological differences between the two.

JUNG collects essays describing and representing a cross-section of Jewish spiritual leaders from Eastern Europe, the United States, and England from the mid-18th century until the 1940s. While the figures discussed here represent strict

Orthodox traditions, not all are considered Haredi. This, however, is primarily because of changing trends and the success of one group in establishing a broader following rather than the unorthodox nature of the other's teachings or activities. The spectrum of people discussed is impressive and includes Elijah ben Solomon of Vilna, Shneur Zalman of Lyadi, Akiba Eger, Moses Sofer, Menahem Morgenstern of Kotzk, Samson Raphael Hirsch, Israel Salanter, Ezriel Hildesheimer, Marcus Horowitz, Hayyim Ozer Grodzinski, Israel Meir Hachohen, and others. While Jung tries to emphasize certain ethical standards championed by these individuals, and in doing so sets them up as role models to inspire Jewish continuity, he also provides a glimpse into the desired ethos of a community as illustrated by leaders who by their communities' acclamation are their representatives.

HELMREICH provides insight into the world of the Haredim by offering a portrait of life in their chief educational instrument, the yeshivah. He interviews renowned deans and spiritual leaders of these academies including Rabbis Moshe Feinstein, Yitzhak Hutner, Shneur Kotler, and Joseph Soloveitchik. He offers a sketch of the historical development of the yeshivah, but the value of this work is in his description of various contemporary American yeshivot. He discusses the various styles of yeshivah and their hierarchal structure. Helmreich looks at the types of people likely to go to a yeshivah and quotes interviews with some; he also focuses on the relationship that students have with their parents and particularly with their teachers. Helmreich's investigation of students' extracurricular activities, the particular nature of peer pressures, and the formula for social success in the yeshivah are poignant. While Helmreich is writing as a sympathetic insider, almost as an apologist, his observations of the pervasive influence of the yeshivah and the absolute halakhic authority it enjoys in the eyes of the students and parents is crucial to understanding the development of Haredi society.

HUNDERT brings together an impressive collection of essays on all facets of Hasidism including studies of its social and religious origins, teachings and customs, social and ideological development during the 19th century, and modern manifestations. The contributors are leaders in their fields, with each offering his or her perspective on an aspect of Hasidism. The collection provides insight into the academic debate regarding the development of hasidic thought.

NADLER's work is a rare academic study dedicated to Mitnaggedic ultraorthodoxy. Despite the fact that half of today's ultraorthodox Jews are Mitnaggedim, virtually nothing has been written about them, while an abundance of research has emerged around the study of Hasidism. He warns against viewing ultraorthodox Haredism as a religious monolith and encourages the detection of significant distinctions. One senses Nadler's engagement as he bemoans the academic trend to see Hasidism as an almost organic continuity from the rich Jewish mystical tradition instead of a deviation from tradition. He proceeds to elucidate the theological and historical differences that make Mitnaggedism the quintessential continuation of tradition. Nadler's work can be summed up as an analysis of the major works of three Mitnaggedic proponents: Elijah ben Solomon of Vilna, Hayyim of Volozhin, and Phinehas of Polotsk. But he does have a good deal to say about the hasidic

portraits of spirituality, if only to demonstrate how Mitnaggedic views differ. By describing how their perspectives on Kabbalah, prayer, asceticism, and scholarship are at variance, he bolsters his thesis that the Mitnaggedim represent a classical tradition and Hasidism deviates from it. This work is an important contribution to the study of Haredim for its sharp and critical attack on the perception of homogeneity and harmony that might otherwise be suggested by the blanket term ultraorthodoxy.

The Hasidei Ashkenaz, or German Pietists, appeared at the end of the 12th and beginning of the 13th centuries in the Rhenish communities and in Regensburg, and thereafter spread throughout Germany and France. It has been argued that the Hasidei Ashkenaz were influenced by internal Jewish developments dating back to eighth- and ninth-century Italy. It also has often been assumed that they were affected by external Christian traditions, including monastic, mendicant, German pietist, and even troubadour movements. Frequently it has been asserted that they developed in response to the violence against the Jews during the crusades. More recently this theory has been viewed as insufficient, although it could be argued that it is precisely in the period after the crusades that the Pietists attained a mature, solid, and recognizable identity. It is clear, in any event, that the theology of the Hasidei Ashkenaz shows important strands deriving from Jewish *hekhalot* and *merkabah* literature as well as Christian Neo-Platonism.

The Pietists often gathered around a leading figure, a pietist sage, and at times were pitted against the traditional leadership of the communities in which they lived. On the one hand, the Hasidei Ashkenaz sought positions of leadership and service within the Jewish communities; on the other hand, at times they secluded themselves from the community. The most prominent early members of the Hasidim were Samuel ben

Kalonymos he-Hasid, Samuel's son Judah ben Samuel he-Hasid, and Judah's relative and pupil, Eleazar ben Judah Kalonymos of Worms. Among the important works produced by the Hasidim are the *Sefer Hasidim* and the *Rokeah*. Although Hasidic thought evolved over a long period of time, certain generalizations are typically made about the Pietists' religious observance and theology. Like their Christian pietist peers, they feared sin and sought to live according to a simple but strict fashion, noting that the inner or "true" belief was more important than external appearance. The Hasidim produced both ethical and theological works, and throughout they stressed the unity and incorporeality of God, even though they subscribed to the idea that there exist intermediary powers between God and man. They believed that mortification of the body could serve as a method of repentance, and they argued that *kiddush ha-Shem* (martyrdom) was a most worthy act. The Hasidim stressed the importance of overcoming physical temptation, and they emphasized both the power and danger of love and sexuality in a language that is frequently cited as erotic.

MARCUS presents the most thorough discussion of the Hasidei Ashkenaz available in English. He avoids the discussion of historical causation by not focusing on the "alleged" historical factors that affected the German Pietists, such as Christian influence, anti-Jewish persecution, or even the challenge of northern French Jewry's talmudic scholasticism (tosafism). Instead he emphasizes the previously unnoticed differences among the Pietist authors in order to understand the developments within the pietistic movement. In his "Introductory Perspectives," Marcus offers an extensive summary and assessment of the work that has been done to date on the Hasidei Ashkenaz, particularly that of Yitzhak Baer, Gershom Scholem, and Joseph Dan. Marcus then quickly jumps into the dense pietistic literature to explore what he terms the first medieval European Jewish religious revival and adjustment. He finds that although Samuel, Judah, and Eleazar agreed that the ideal Jew (i.e., the *hasid*) should pursue the personal goal of otherworldly salvation, they differed regarding the social implications of that ideal. Little information is available about Samuel, so, accordingly, Marcus focuses on Judah and Eleazar. In Judah's *Sefer Hasidim*, Marcus explores the ways in which the Pietists interacted with non-Pietist Jews, who often expressed contempt for them. But Judah's attempt to forge a community of "Jewish saints" lasted only briefly. It was not until Eleazar that elements of Pietism became "respectable" even among non-Pietist Jews. Eleazar codified pietistic behavior into daily life, and thus "European Jewish piety was reshaped by the practices and norms that had formerly been characteristic of the Pietist fellowship alone."

SCHOLEM's work on Jewish mysticism is the classic text on the subject. As would be expected in the context of the larger work, Scholem's discussion of the Hasidei Ashkenaz moves from a general discussion of the rise of Hasidism in medieval Germany to a fuller consideration of the mystical tradition in German Jewry—eschatology, ascetics, magical power, the mysteries of prayer, and the conception of God—focusing on the *Sefer Hasidim*.

SCHÄFER notes recent research that, unlike the earlier work of Baer and Scholem, argues that the ethical code of the German Pietists had substantial Jewish roots and motivations,

particularly in the early mystical *bekhalot* literature. The ethical codes of the Pietists, therefore, cannot be seen as deriving solely from contemporary Christian influences.

KANARFOGEL uses rabbinic literature and focuses on the various facets of education in the world of the Ashkenazi talmudists, the tosafists, between 1096 and 1290. He explores elementary education and the attitudes toward childhood and the educational process, the economic considerations of higher education, and the relationship between talmudic academies and the communities in which they were located, as well as the intellectual milieu of the academies. The final chapter of the book looks more specifically at the educational theory and practice of the German Pietists.

DAN is one of the acknowledged leaders in the field of medieval Jewish intellectual history, and his writings are much cited. In this essay, Dan focuses on the strict ethical system created by the Hasidei Ashkenaz and argues that the mystical element within their system of thought made their rigorous ethics bearable by creating a bilateral movement between human and spiritual realms.

SOLOVEITCHIK offers a close reading and expert analysis of the *Sefer Hasidim*, particularly in assessing the apparent disparity between rabbinic and hasidic norms. In the end, Soloveitchik asserts that the Hasidei Ashkenaz movement ran into difficulty when it coupled extreme spirituality with an ideology of public service. He argues also that the Hasidei Ashkenaz must be understood against the backdrop of the 12th-century intellectual revolution of the tosafists.

CRONBACH notes that the *Sefer Hasidim* does not deal with spiritual matters alone. In this book he analyzes the earthly matters discussed throughout the *Sefer Hasidim*, such as sales, loans, investments, business ethics, charity, community management, and ransoming prisoners, and he offers translations of the relevant parts of the book.

KRAMER also focuses on the *Sefer Hasidim*, but with an eye to uncovering the ethical teachings of the 13th and 14th centuries, particularly in the context of the relationship between man and God, focusing on the precepts of fear and love of God. Ethical goals may be achieved, according to the author of *Sefer Hasidim*, by holding the same standards of behavior for oneself as for others; appealing to practical reason; resisting evil with all one's strength; and realizing that the power and responsibility of proper ethical decision making lies in one's own hands.

Modern Hasidism originated in rural areas of Poland and Ukraine during the 18th century and has inspired a number of very complex interpretations. It has been labeled ecstatic, quietistic, gnostic, messianic, and spiritualistic; it also has been labeled the antithesis of each of these qualities. Even the movement's first two generations, with unitary leadership under Rabbi Israel ben Eliezer Ba'al Shem Tov and the Maggid of Mezhibezh, respectively, are viewed by scholars in widely divergent ways.

Scholarly inquiry into Hasidism began during the 19th century, but it was not until 1906 that a wider community of scholars and readers noticed the movement with the first of philosopher Martin Buber's publications. Buber was attracted to Hasidism by the many legends told by and about its charismatic leaders, and he began to translate them into German. Over time, Buber came to believe that the society that produced these tales was "the greatest phenomenon in the history of the spirit, greater than any individual genius in art and in thought." The way that a hasidic community achieved a "hallowing of the everyday" struck Buber as a model for modern life. BUBER seeks to communicate to the wider world the message that he feels is contained in Hasidism. The author, however, is criticized for allowing his own existentialism and his passion for that message to impair his analysis of Hasidism, causing him to ignore its historical context and its otherworldly tendencies.

Gershom Scholem, who initially agreed with Buber that in Hasidism "personality takes the place of doctrine," eventually turned to the extensive homiletic literature of the hasidic masters and concluded that Hasidism was a doctrinally innovative branch of Jewish mysticism. His chapter on Hasidism in SCHOLEM (1941) is from an early period, when he writes: "In the place of the theoretical disquisition, or at least side by side with it, you get the Hasidic tale." Later, after much study of the theoretical literature, he concludes that the innovation of Hasidism lies not in folktales and hagiography but in creating and recasting mystical doctrine. SCHOLEM (1971) is an example of this later thinking.

SCHATZ UFFENHEIMER, a student of Scholem, has written a comparative study of early hasidic quietism, or reaching God through abandonment of the self. Her study extends Scholem's view in that she often portrays the hasidic masters as theological innovators. The book has the feel of a collection of essays, but the translation is exacting and there is a great deal of documentation.

IDEL wishes to stand "on the shoulders" of the giants—Buber and Scholem—and to supply readers with "another vision of Hasidism." Idel is a scholar of Jewish mystical literature, and he aims to show that the origins of Hasidism are much more complicated than most would suppose. Previously, scholars assumed that the mystical basis of Hasidism was the Kabbalah of Rabbi Isaac Luria and his school and that the early modern messianic tragedies of Sabbatianism and Frankism were crucial to understanding Hasidism. Idel seeks to revise this by rejecting what he calls "proximism," in this case the view that relatively recent events in history (e.g., Sabbatianism) and in mysticism (Luria) are necessarily more important to Hasidism than older trends. He proposes a "panoramic" approach that reveals the indebtedness of Hasidism to early Castilian Kabbalah, ecstatic Kabbalah, Rabbi Moses Cordovero, the Maharal of Prague, and other mystical and magical sources, all widely available in 18th-century Poland. Interestingly, Scholem's essay on *devekut, imitatio Dei* with aspirations to *unio mystica*, cites some of the sources that Idel claims have been ignored. Idel's book is dense but invaluable.

LOEWENTHAL has written a very readable book on what he calls "the communication of the esoteric" in Hasidism. Until now, he writes, Hasidism has been studied either as a sociopolitical phenomenon that succeeded in reordering Eastern European Jewish life during a period of turmoil or as a mystical phenomenon, drawing attention to its doctrinal variations, mystical forebears, and the theological debates among contemporaries. Yet neither method accounts for the extent and manner of communicating mystical teachings within the hasidic group. In one group, these teachings may be kept to a select few; in a second group, they may be hinted at only in the form of tales; and in a third they may be explained to all in printed form. These differences in the ethos of communication combine social and mystical elements. Loewenthal shows how the communication ethos of Habad Hasidism differed from that of its hasidic precursors and how it developed internally. While some premises remain unexamined, this is a good case study in an area ignored by most scholars of hasidic texts; there is little that is abstract or musty here.

JACOBS has also written an excellent volume on a specific and important aspect of Hasidism, namely prayer. The fine introduction, lucid prose, and extensive quotation show how hasidic prayer in all its variety was often, by its very centrality, revolutionary. Besides showing the scale of innovation, the book is a comprehensive treatment of a variety of hasidic attitudes toward Jewish prayer. It is not overly theoretical nor is it polemical as are some works on Hasidism. Neither Jacobs nor Loewenthal seeks to prove either side of the protracted debate between partisans of Buber and those of Scholem. Jacobs's and Loewenthal's works use both tales and homilies, demonstrating that neither source is self-sufficient for understanding a phenomenon as complex as Hasidism.

WERTHEIM's unique work presents hasidic thought as more than theoretical and mythological; the author maintains that in a thousand ways it has affected everyday Jewish customs with which its academic interpreters have not always been familiar. This compendium of such changes, presented in their incredibly detailed context, helps readers grasp how much hasidic thought has transformed Jewish life and practice.

The Haskalah was the movement among Central European Jews of the 18th and 19th centuries to modernize their religion and make it more cosmopolitan by adopting the standards of the Western European Enlightenment. It soon spread from Central Europe to Eastern Europe. Haskalah (the Hebrew term for Enlightenment) is acknowledged as a major movement of Jewish transformation.

In his leading study of 1967, MEYER examines the work of several major figures of the Haskalah, including Moses Mendelssohn, David Friedländer, and Saul Ascher. Meyer describes Moses Mendelssohn as an amazing and paradoxical figure who exerted a modernizing influence on German Jewry by championing the nascent German culture of the 18th century. Meyer rightfully describes Mendelssohn as a "master of German prose" at a time when most German Jews spoke Yiddish instead of German. Meyer points to the priority Mendelssohn placed on being accepted by the German intellectual elite. He viewed his acquaintance with such non-Jewish intellectual luminaries as Gotthold Ephraim Lessing, Friedrich Nicolai, Christoph Martin Wieland, and Johann Gottfried von Herder as among the great fortunes of his life.

Mendelssohn viewed morality as the cornerstone of any religion, and his personal practice of virtue made him much admired by Christian society and added to his reputation as an intellectual meriting wide attention. The cultivation of virtue seemed to him, says Meyer, "the most effective assault upon the stereotype of the greedy moneylender."

Mendelssohn's recognition by non-Jewish society led to pressure to convert to Christianity from the Swiss theologian Johann Caspar Lavater. Meyer describes Mendelssohn's resis-

tance to this pressure: "since God desires only the best for man [Mendelssohn found] it is inconceivable that He should, as Christianity claims, make salvation dependent upon a revelation bestowed only on a small percentage of the human race."

In his examination of David Friedländer, Meyer describes differences in viewpoint between Friedländer and his mentor Mendelssohn. Friedländer found less value in Jewish ceremonial law than did Mendelssohn, and he wished to see it abolished altogether. He viewed Jewish ceremonial law as keeping Jews in an infantile state and hindering their emancipation.

Saul Ascher, bookdealer and political journalist of the late 18th and early 19th century, is also examined by Meyer. He concentrates on Ascher's 1792 tract, *Leviathan; or, On Religion with Respect to Judaism*. Ascher defends Judaism as a religion with dogmatic content: he sees no schism between natural religion (religious morality based on rationalistic principles) and dogmatic religion based on mysticism and ceremony. Meyer touts Ascher as a highly unusual figure who merits further examination.

The Haskalah is also examined in depth by KATZ, who is interested in the historical sociology of the Jewish Emancipation movement and its relationship to the Haskalah. He describes Moses Mendelssohn and the Mendelssohn circle as a phenomenon that reduced the degree of separation between Jewish and Gentile societies. At the same time, Katz notes that the acceptance of Jews such as Mendelssohn into Christian society was based on the belief that they would convert. Katz examines the influence of the Enlightenment on Jewish thinkers in terms of their desire to influence their fellow Jews. He discusses the "spreading of Enlightenment to Jewish communities" by writers, educators, and reformers working to better the lot of their Jewish coreligionists. The Enlightenment is seen as an important locus of communication between Jewish and non-Jewish intellectuals.

SORKIN incisively examines the ideology of emancipation. His central thesis is that emancipation was conceived in terms of a quid pro quo: Jews were to reform and modernize themselves in exchange for increased rights. Sorkin examines the writings of Naphthali Hartwig Herz Wessely in terms of Wessely's dissatisfaction with traditional Jewish intellectual and religious life. He explains that for Wessely there are two realms of knowledge: the particular and the religious. The particular realm of knowledge deals with teachings of man, and the religious realm of knowledge deals with teachings of God. The teachings of God are not bound by the laws of reason; the teachings of man are, however, bound by the laws of reason and are fundamental to all societies. The teachings of man cover such issues as etiquette and civility and technical and scientific knowledge.

Wessely believed that Jews and Judaism should conform to universal standards dictated by the teachings of man. This constitutes a break with the rabbinic literature that denoted that divine law was the source of all values. Wessely's writing is tinged with vague notions of a tutelary state because he sees monarchs as educators. Jews' ills demanded a nonreligious remedy. He discusses educational reform: he feels that Jews should give up Yiddish and speak proper German. Sorkin sees David Friedländer as a key figure in developing the notion that the state should play a tutelary role in the reform of the Jews.

ERSPAMER discusses some figures of the Haskalah not covered by other authors, including Elcan Isaac Wolf and a writer known only as Arenhof. Wolf wrote a book of medical advice for his Jewish coreligionists titled *On the Illnesses of the Jews*. In this book of medical advice, Wolf draws a close correlation between the adverse medical circumstances faced by the Jews and their problematic social and political situation. He maintains that the contemporary situation of the Jews is not as bad as in earlier times, but that current illnesses are a product of past adversities faced by the Jewish people. This is a subtle rhetorical device for pointing out how restrictive social circumstances harm the Jews without appearing to be critical of the current government or society.

Erspamer also examines one of the few pieces of "fictional" literature of the Haskalah, Arenhof's drama *Some Jewish Family Scenes* (1782). The play, written in the wake of Hapsburg Emperor Joseph II's tolerance patent of 1781, argued that the emancipatory reforms enabled the Jews to take their place as Germans without abandoning their Jewish identity. The play reflects the great hopes and expectations with which members of the Haskalah greeted the tolerance patent. It gave Jewish intellectuals a feeling that they, too, belonged to the dominant Austrian society.

The article by HEALEY gives a very clear picture of the origins and development of the Hebrew alphabet as one of the scripts used in the Syro-Palestinian area from the beginning of the second millennium B.C.E. Shortly before the third millennium B.C.E. the two great ancient civilizations of the Middle East, the Akkadian (Mesopotamian) and the Egyptian, were using word-syllabic writing. In such a system, each sign (grapheme) stands for a syllable or for a whole word; the

Egyptian script also had a set of 26 uniconsonantal signs, but not much use was made of them. From the early second millennium B.C.E. a number of inscriptions were found from Sinai and Palestine in an alphabetic writing—a writing in which each sign stands for one sound (phoneme) only. The advantage of an alphabetic script is quite clear, because it makes it possible to write all the words of a language using a small number of signs. The first texts of this kind that are known to scholars are the Proto-Sinaitic inscriptions of c.1700 B.C.E. Scholars do not know (and probably will never know) where and by whom the West Semitic script was created. Over the course of a few centuries, the Phoenician, Hebrew, and Aramaic alphabets (and others) stemmed from this script, and the Greeks learned the alphabet from the Phoenicians. The signs of the West Semitic script indicated only the consonants of the words, leaving out the vowels. In the beginning it was pictographic and acrophonic, each sign representing a concrete object and standing for the first sound of the name of this object: *b* from *baytu* (house), *k* from *kappu* (palm of hand), *m* from *mayyuma* (water), *r* from *ra'shu* (head), and so on. This system of writing was inspired by the set of uniconsonantal Egyptian signs. The pure consonantal character of the West Semitic script caused ambiguity in the reading of many words; to obviate this shortcoming, beginning about the eighth century B.C.E. and maybe earlier, some letters (*w*, *y*, *b*, and later ' [aleph = glottal stop]) were used also as vocal signs. Much later, around the seventh or eighth century B.C.E., Hebrew (as well as Syriac and Arabic) adopted a set of special signs (vowel points) that were added to the letters in order to indicate the vowels. The beginning of the alphabet is detailed much more thoroughly by DRIVER within the general picture of the scripts of the Semitic languages.

GELB puts forth a complete theory of the beginning and evolution of writing, and in this framework he deals also with the Hebrew alphabet. He takes the view that because the West Semitic script is purely consonantal, it is not in fact a true alphabet but should be regarded as a syllabic writing in which each sign stands for a consonant followed by any vowel. According to him the first real alphabetic writing is the Greek script, because when the Greeks adopted the Phoenician script they changed the meaning of some letters from consonants into vowels.

NAVEH (1982) traces the evolution of alphabetic writing from its inception up to the crystallization of modern Semitic scripts and deals also with its adoption by the Greeks, which according to him happened in the eighth century B.C.E. The Hebrew as well as the Aramaic alphabets stem from the Phoenician alphabet, having developed in slightly different ways. After the Babylonian captivity the Jews discarded their traditional script and adopted a new one stemming from the Aramaic script: Naveh calls the old script "Hebrew script" and the new one (usually called "square script") "Jewish script."

NAVEH (1972) traces the history of the Hebrew alphabet to the present day, specifying the different types of script according to their chronological and geographical distribution.

CROSS summarizes our present knowledge of the early square Hebrew script of the last centuries B.C.E. and first centuries C.E., relying on the Qumran material and on various inscriptions. He gives a detailed description of the different

types of script according to epochs, such as Hasmonean, Herodian, and post-Herodian, and according to scribal traditions, such as formal, protocursive, and semicursive hands.

The Hebrew language is 3,000 years old. It was a spoken and written language from the beginning of the first millennium B.C.E. to about 200 C.E., then only a written language until the beginning of the 20th century, when it was revived also in speech. Modern Israeli Hebrew is remarkably close to biblical Hebrew in its basic morphological structure and in its vocabulary. Nevertheless, Hebrew has known many changes during its long life, so a detailed study is usually divided according to its different chronological layers: biblical Hebrew, mishnaic or rabbinic Hebrew, medieval Hebrew, and modern Hebrew. Biblical Hebrew has been painstakingly studied (by Jews and non-Jews) over the centuries; the scientific study of mishnaic Hebrew began only in the 20th century and so, necessarily, did that of the modern language. The medieval period still lacks a detailed and comprehensive description. The best

introduction to the study of Hebrew is the study of its history. Dictionaries and grammars of the biblical stratum detail its basic structure, its place in the Semitic family, and its relationship to other languages.

SÁENZ-BADILLOS begins with the earliest discernible layers of the language in its Semitic origins and continues through the period of the Bible, the rabbinic writings, the rich medieval literature, and up to the astonishing revival of the spoken language in recent times.

The first modern grammar of biblical Hebrew was Gesenius's *Hebraeische Grammatik*. First printed in 1813, it appeared in German in 29 editions revised by various scholars. It was translated into English by G.W. Collins and A.E. Cowley (1898), and this translation was published again (1910) as revised by Cowley according to the 28th German edition by KAUTZSCH. In spite of its age it is still a useful basic reference book. BROWN, DRIVER, and BRIGGS, based on Gesenius's lexicon, is still a reliable and useful tool. KOEHLER and BAUMGARTNER is the English translation of the third German edition of the lexicon by these two scholars. To date, three volumes have appeared, containing all the Hebrew material except for the last two letters of the alphabet. It is detailed and up to date. This dictionary is alphabetically ordered by words and not by roots, as Brown, Driver, and Brigg's work is, so that is easier for the beginner to use.

JOÜON, published in French in 1923, was very well received by scholars, especially its third part, on syntax. T. Muraoka's English translation, published in 1991, is a revision of the original book that takes into consideration documents and languages (such as Ugaritic and Eblaite) made known to scholars after Joüon's publication. This revision, in the form of added footnotes, rewriting of paragraphs, and sometimes deletion of a whole paragraph or insertion of a new one, makes this the most up-to-date work on the subject.

SEGAL is the only modern book completely devoted to mishnaic Hebrew. Since it appeared it has been the target of criticism, mainly because it does not distinguish between the different chronological layers within mishnaic Hebrew and because it relies on the printed text of the Mishnah (which differs in many points from the ancient manuscripts, whose language is presumably nearer to the original). A more modern and sound approach can be found in BROVENDER et al.'s chapter on mishnaic Hebrew in the article "Hebrew Language" in the *Encyclopaedia Judaica*. This monograph-length article describes the various periods of the Hebrew language. It was coauthored by various scholars, each an expert in a given field, and it is a main source of information on medieval Hebrew. Modern Hebrew is also described in detail by BEN-HAYYIM and ORNAN.

Modern Hebrew is the subject of ROSEN's brilliant and original work, which is particularly remarkable for its fourth chapter, "Content and Lexicon," dealing with semantic topics.

Modern Hebrew literature, in the limited sense of the body of fiction written in Hebrew primarily by Jews since the waning of the Haskalah period at the end of the 19th century, has its roots in Jewish Europe and is characterized by a secularist impetus and the adaptation of Western literary forms.

BARGAD's methodology of literary criticism is constructed along the lines of the stylistic and linguistic theories of the Russian Formalists. As such, it brings something fresh to the supersaturated study of modern Hebrew literature. Noteworthy is his essay on the "binary oppositions," the "semantic structures of equivalence or opposition," in the poetry of Amir Gilboa. Bargad concludes that by implementing these binary oppositions, Gilboa's poetics bring the reader closer to the poems' beauty and innovation.

MINTZ's collection of five essays covers the Israeli literary scene from 1973 to 1993, a short period that witnessed "an explosion of literary creativity" unparalleled in the history of Hebrew literature. Mintz contends that the political, social, and economic developments of the time can be interpreted as sets of opposites—male/female, Ashkenazi/Sephardi, religious/secular, land of Israel/diaspora, collectivism/individualism, native Israelis/Holocaust survivors—that are then reflected in literary works by various Israeli authors. This volume focuses on the creation of the "new Jew" in Israel, who challenges gender roles and imposes new meanings onto traditional values.

Anne Golomb Hoffman's essay examines two major novelists, Yaakov Shabtai and A.B. Yehoshua, asserting that Shabtai works his "way out of an oppressive masculinity," while Yehoshua "engages the dynamics of gender and sexuality on an interpersonal level that resonates with implication for the history of the nation." Gender issues are also addressed in Yael Feldman's essay, which evaluates the work of Amalia Kahana-Carmon, Shulamith Lapid, Shulamith Hareven, and Ruth Almog and identifies two major trends, "feminist romance" and "masked autobiography," in the literature by these female writers. Additionally, Berg investigates how Sephardi literature has moved from the margins to the mainstream with the rise of such writers as Sami Michael, Amnon Shamosh, Yehoshua, Shimon Ballas, and Dan Seri, who have developed the genre of "immigrant literature" and the political novel.

DOMB discusses the theme of displacement in six Israeli novels, five of which were published in the 1980s and are charged with politics, ideology, and social realism. Rather than analyzing "protagonists who are expatriates," Domb focuses on "those who leave and then return, and . . . novels where the tension between home and abroad is manifested in the dialectics of inside and outside." The study examines the works of Yehoshua, Almog, Benjamin Tammuz, Shlomo Nitzan, and Yehuda Amichai. Domb's broad vision and clarity make this short work a valuable contribution to the literary criticism of modern Hebrew literature.

FISCHMAN investigates the outcome of the encounter between Ashkenazi and Sephardi cultures as reflected in contemporary Hebrew fiction. The study explores the romantic aspects of exoticism (that is, "the total feelings and emotions that are aroused by the encounter with new countries and their inhabitants") that are evoked in fictional characters of Yemenite and Sephardi descent. The works of five authors are evaluated according to their ability to "paint" Yemenite or Sephardi cultures. In particular, Haim Hazaz and Mordecai Tabib are the featured as the "painters of Yemenite life." Hazaz, an Ashkenazi Jew, felt the allure of the Yemenite Jews, whose culture differed so from his inherited perspective. Tabib, a native Israeli of Yemenite descent, writes about the interrelationship between Yemenites and Ashkenazim, which is what Fischman sees as making his account so fascinating and exotic.

FUCHS surveys the Israeli fiction scene from the late 1950s to the early 1980s, including the works of Yehoshua, Amos Oz, and Kahana-Carmon, from a feminist literary viewpoint. Fuchs coins several new terms in her literary criticism: mythogyny, "the patriarchal myth(s) of womanhood"; gyniconologies, "androcentric representations of womanhood"; and gynography, "revisionary writing that subtly parodies the patriarchal mythologies." Despite a literary climate that devalues women writers and women protagonists, Fuchs is able to penetrate the sociopolitical realities of the Jewish women who are portrayed by mainstream Israeli authors.

ABRAMSON and PARFITT's collection of essays contributes much to the establishment of context by concentrating on the shifting importance of various literary centers in the historical development of modern Hebrew literature, emphasizing in particular communities in Central and Eastern Europe and in Israel. The anthology traces developments chronologically, beginning with the transition from Austria

and Germany to Odessa and Vilna as the foci of Hebrew literary activity and concluding with the establishment of a literary community by the early settlers in Palestine at the dawn of the 20th century. Especially noteworthy are the chapters devoted to the often-overlooked importance of Odessa as an important Hebrew cultural center.

HAKAK divides his book between a study of S. Agnon, on the one hand, and interpretations of the literature of Yehoshua and the poetry of David Vogel, Nathan Alterman, Nathan Zach, Aharon Almog, and Erez Biton, on the other. Hakak uses Agnon's "Simple Story" as the basis for a critical analysis of the motif of the cock-gewer (male), which runs through the story and "makes the reading process particularly intensive and creative." In another interesting chapter devoted to Agnon, the author compares Agnon's "In the Forest and in the City" and Charles Dickens's *Great Expectations*, arguing that these texts not only have similar characters, settings, and plots, but also share common themes and social ideologies. The book ends with a chapter about the poetry written by Sephardim; valuable in itself, it makes for an abrupt conclusion when an overall summation is so palpably called for.

HALKIN surveys the history of modern Hebrew literature as it reflects "the socio-historical forces which have motivated Jewish life during the last two centuries." Clearly, this is a shift from literary criticism to a historical and ideological study. Halkin moves from Haskalah literature to the new Israeli fiction, insisting that a "thread of continuity" has run through the centuries, enabling the restoration of an independent Jewish state, and he asserts that "the symbol of this spiritual thread of continuity has been the Hebrew language."

SHAKED stresses that his collection of essays tells "the story of a spiritual emigration from Jewish Europe." Modern Hebrew literature has its roots in the diaspora and even in Israel it still reflects the lives of both the new immigrants and their ancestors. Shaked explains that his generation of authors, like other generations of Hebrew writers since the Middle Ages, went through an identity crisis that involved internal and external struggles. More specifically, he claims that modern Hebrew fiction assimilated literary forms, such as the novel, the short story, and even fairy tales, from external cultures, but he also argues that this assimilation is not complete because traditional elements of rabbinic and hasidic literature continue to exert enormous influence. In fact, as the tension between the traditional and Western components increases, this literature becomes more interesting and complex.

Tcherikover, Avigdor, *Hellenistic Civilization and the Jews*, Philadelphia: Jewish Publication Society, 1959

The cultural, social, and political interchange that marked Hellenism was by no means a uniquely Jewish experience, but the records for Jewish interaction with the West are more extensive than for other ancient peoples of the Near East. In recent decades researchers have been busy retranslating and reinterpreting long-known documents (such as the books of Maccabees), analyzing new archaeological discoveries (notably the Dead Sea Scrolls), and integrating all of these materials in accordance with long-established as well as recently developed methodologies and approaches. Because the Hellenistic era is a pivotal one in Jewish history and shares many characteristics with the modern age, scholars have not been reluctant to apply critical appraisals to aspects of Hellenism they perceive as fruitful syntheses or momentous crises.

TCHERIKOVER's volume is the oldest of the books under review aimed primarily at a scholarly audience. At this level, it represents both a masterful presentation of consensus views at the middle of the 20th century and a springboard for some of its author's creative and still-influential hypotheses, especially in regard to the complex events leading up to the Maccabean Revolt. Although more than four decades of exciting new discoveries and reinterpretations pertaining to the Hellenistic era separate today's readers from Tcherikover and his contemporaries, his well-written and vigorously argued study is essential reading for anyone with a serious interest in the history of Jews and Judaism during this period.

BICKERMAN's account of Hellenistic Judaism was designed primarily for the general reader. For such an audience, it constituted a fine synthesis of pre-1950 scholarship. Although the copyright date of Bickerman's book is four decades later, its contents draw heavily on two earlier works: a 1949 essay entitled "The Historical Foundations of Post-biblical Judaism," and his controversial 1937 monograph, *Der Gott der Makkabäer*. Bickerman's mastery of the material and his easy-to-follow style have contributed to the continued

popularity of this work among nonscholars. It should, however, be supplemented by more recent nonspecialist publications, some of which are described below.

HENGEL's two volumes had their genesis in the 1966 thesis that the author presented to the Faculty of Protestant Theology in Tübingen, Germany. As indicated by the book's subtitle, the primary historical focus of Hengel's work is on the first half of the Hellenistic period through the mid-second century B.C.E. But Hengel's focus is broader than history, encompassing just about every imaginable aspect of the Jewish-Greek encounter. The scholarly structure upon which Hengel built his analysis is unusually impressive and solid: the 320 or so pages of text in the first volume are matched by an equal number of pages of notes, bibliographies, and indices in the second volume. It is for this reason, among others, that subsequent scholars over the past 25 years have continued to mine (if not always mind) Hengel's interpretations and the sources upon which he relied.

DAVIES and FINKELSTEIN's edited volume on Judaism in the Hellenistic period is in general on the same lofty and weighty level as other studies in the "Cambridge History" series. Themselves superb scholars, Davies and Finkelstein have assembled a stellar group of colleagues to compose authoritative essays on the major topics and movements of relevance to the study of this period. These studies are not, however, as up-to-date as the volume's copyright would indicate, since there was an unusually long delay (even by scholarly standards) from the time articles were submitted to their eventual publication. Nonetheless, it remains the case that no one, from advanced undergraduate to senior specialist, can afford to overlook the various contributions in this collection.

KRAFT and NICKELSBURG edited their volume as part of the centennial celebration initiated by the Society of Biblical Literature in 1980. With few exceptions, the 17 essays that make up the collection also date from that year, even though another half-decade passed before publication. The term "early Judaism" is here taken to encompass the period from Alexander the Great through the Roman emperor Hadrian. Thus, some of these chapters are not immediately relevant to the Hellenistic period, though all cover historical, literary, numismatic, and other phenomena of singular importance for an understanding not only of Hellenism, but also of its antecedents and successors. Perhaps the greatest merit of this volume is the authors' shared determination to allow the ancient documents to speak for themselves, revealing strengths and especially weaknesses in previous scholarly consensus and also the fluid, often dynamic character of ancient Jewish society and religion in their relations with other peoples and cultures. With its lack of a subject index or cross references, this volume is not nearly as user-friendly as it could be, even for advanced scholars, but the richness of its contents at least partially justifies the extra effort such shortcomings entail.

COHEN's book would function well in many classroom or study group settings, since its author envisions such an audience in his preface and, as is all too rare these days, actually keeps this general audience in mind throughout. He includes a minimum of footnotes and technical language, does not presuppose extensive prior knowledge on the part of his readers, and refers the interested to well-chosen resources for

further study. Cohen has not organized his book in terms of an overall chronological structure, with the first chapter dealing with the earliest events and the last with the latest. Instead, most of his individual thematic chapters, which deal with history, religion, communal institutions, sectarian movements, and canonization, are themselves structured chronologically. This will put a bit of a burden on the reader with exclusive interests in Hellenism. However, there is nothing daunting about Cohen; his erudition is as deep as it is wide, and many of his readers may end up being led by him to expand the horizons of their interest.

GRABBE's two-volume discussion and analysis of Judaism from the mid-sixth century B.C.E. to the mid-second century C.E. is, in a word, superb. It is, in fact, difficult to imagine any one, from out-and-out beginner to well-traveled veteran, who will not benefit enormously from working through relevant sections of Grabbe's erudite and exceptionally well organized tomes. Although only a portion of one of his volumes deals specifically with Hellenism, the same lustrous quality of presentation is apparent throughout. For most chapters—including the two devoted to Alexander, the Ptolemies, the Seleucids, the Maccabean Revolt, and the Hasmoneans—Grabbe begins with a short section discussing and evaluating major secondary studies. This is followed by a full appraisal of primary sources, not only literary but also archaeological and artifactual (to use Grabbe's term). He then focuses on important individual events or phenomena, especially those that have occasioned substantial previous debate. Each of Grabbe's chapters ends with an extensive synthesis, which itself concludes with his own interpretation and reconstruction. These will not always garner immediate assent, but they will inevitably command respect. Through a detailed system of cross-referencing, readers can easily move from one topic to another and from one era to preceding and subsequent ones.

FELDMAN's substantial volume is focused, in the words of its subtitle, on attitudes and interactions, both positive and negative, between Jews and non-Jews throughout the ancient world. On the one hand, his chronological boundaries are far wider than the Hellenistic period; on the other, his emphasis does not allow for a discussion of a wide range of phenomena in antiquity, though this last remark is in no sense a criticism, since Feldman never intended this particular work to function in that way. After detailing Jewish-Gentile relationships in the land of Israel and in the Diaspora, he looks at evidence of anti-Jewish bigotry or prejudice from governments, the general populace, and the intellectual classes. Feldman balances these three chapters of negatives with three further essays on the attractions of Jews, namely, their antiquity (this was so even in the ancient world), the cardinal virtues, and Moses as an ideal leader. These are in turn followed by chapters on the success Jews enjoyed in winning converts and sympathizers. It was Feldman's perception of Jewish success in these latter areas, in spite of often bitter opposition, that led him to construct this massive study in the first place. Feldman's presentation is vigorous and his annotation extensive. His work has been criticized on several different levels by many of his fellow scholars, but in any case it is well worth consulting, even if (or, perhaps, precisely because) it does not represent the current consensus.

MODRZEJEWSKI's comprehensive study of the Jews in Egypt first appeared in French in 1991. Its prompt translation and appearance in English are especially welcome; there is nothing else that compares to its scope and elegance of presentation. Ptolemaic (Hellenistic) Egypt occupies the middle of Modrzejewski's volume; befitting an era he titles "the Zenith," it receives the bulk of the author's attention. In successive chapters, Modrzejewski addresses topics relating to Alexandrian Judaism; Jews outside of the capital, including those in military service; the Septuagint, law, and justice; the Jewish temple at Leontopolis; and texts and incidents that lie "at the wellsprings of pagan anti-Semitism" (to use the author's phrase). Modrzejewski's prose (as translated) is eminently readable; his annotations and bibliographical references are full and up-to-date; his glossary, calendars, conversion charts for weights and measures, and related material are all very helpful; and the numerous illustrations, often depicting little-known artifacts, are well chosen and beautifully reproduced. In many ways, Jews in Hellenistic Egypt enjoyed a veritable Golden Age. It is fortunate for them and for us that Modrzejewski has chosen to be one of its chroniclers.

A wide array of genres and themes awaits the reader of literature produced by and for Jews during the Hellenistic period. Some of this is canonical for Jews and Christians; other works, although not included in any known canon, nonetheless had wide circulation and authority. Recent decades have seen the discovery and publication of hitherto unknown documents or new versions of well-known Hellenistic literature. In many cases it is necessary to work back to the original or earliest recoverable form (in Greek or Hebrew/Aramaic) by retroversion from one of the more "exotic" ancient languages or by stripping away Christian accretions from earlier Jewish writings. There is also increased interest in phenomena such as audience reaction and interplay between Jewish and non-Jewish literature of this era.

Stone and Mulder's collections, which are part of the authoritative *Compendia Rerum Iudaicarum ad Novum Testamentum* series, form indispensable starting points for anyone with a serious interest in literature produced within Jewish communities during the Hellenistic period. The material gathered together by STONE is most relevant for this purpose. Specialists deal with biblical (understood in its most inclusive signification) materials; historical documents; examples from wisdom, testamentary, oracular, and apocalyptic literature; and sectarian texts from Qumran (the Dead Sea Scrolls). The discussions are well balanced, fully documented, and aimed at a sophisticated but not specialist audience. There is an extensive (one is tempted to say exhaustive) bibliography for the volume as a whole, as well as for individual chapters, and the indices of sources and of ancient names and subjects are satisfyingly ample. All in all, the editor and contributors to this volume have done everything possible to disseminate knowledge and facilitate further research.

MULDER's volume is as reliable, well organized, and complete as Stone's. Like Stone's, it covers areas not directly relevant to the study of Hellenistic literature. Mulder's volume is especially strong in its examination of translations of Scripture (*Mikra*), such as the Septuagint and the Targumim, and its varied interpretations at Qumran, in the Apocrypha and Pseudepigrapha, and in the fragmentary works of a handful of Hellenistic poets and historians. Both the biblical text and its exegetical authority among the Samaritans are given due notice and analysis.

NICKELSBURG's study is another point of entry into Hellenistic literature, more accessible for the general reader than the two volumes just described. Nickelsburg, a widely respected scholar of this period and a contributor of two chapters to the volume edited by Stone, manages with remarkable success to remain true to all three elements in his subtitle: although literature is the main topic, he provides ample historical background to contextualize the many texts he mentions. Moreover, he neither forgets nor talks down to the general reader who forms his intended audience. Like the Stone and Mulder volumes, this work covers more than Hellenistic literature, which may induce users to move beyond the consideration of strictly Hellenistic documents.

CHARLESWORTH has produced a magisterial two-volume collection that all researchers, from tyros to veterans, will need to consult at some point. A worthy successor to the earlier collection by R.H. Charles, the Charlesworth volumes

contain authoritative translations of key documents (Hellenistic and later) within the general categories of apocalyptic literature and testaments (volume one) and expansions of the Hebrew Bible and assorted other works (volume two). Each translation is fully annotated with both textual and exegetical comments and is preceded by a full introduction, which summarizes the work and provides an in-depth presentation from many perspectives of nearly every issue relevant to a correct understanding and appreciation. A combined index of topics and names for both volumes can be found at the end of the second volume. For the many individuals with a deep interest in Hellenistic literature but without the linguistic facility to read the documents in their original (or at least ancient) forms, Charlesworth's volumes are as close an encounter as they are likely to experience.

SCHIFFMAN's wide-ranging and vigorously argued book is essential reading for anyone who wishes for an in-depth understanding of the Dead Sea Scrolls, most of which were produced in the second and first centuries B.C.E. It is Schiffman's contention that the bulk of previous scrolls research, focusing as it did almost entirely on their relationship to early Christianity, failed even to begin to do justice to the Jewish context(s) in which the scrolls were produced. Only by restoring these documents, including sectarian regulations and biblical (re)interpretations, to their rightful place in the history of Judaism will their full significance become clear—for believing Jews and Christians and anyone else with a lively interest in the history of religions. Given the fragmentary nature of many of the documents and the many unanswered (and perhaps ultimately unanswerable) questions about the identity of those who authored the scrolls, their connection with the site at Qumran, and the inner connections between one scroll and another, it is inevitable that many of Schiffman's interpretations are speculative and controversial. But he remains faithful to the text and to his readers, who are well served by the overall organization as well as the discrete discussions that constitute this volume.

WILLS's focus is also on a body of literature, but one united—in his analysis—by genre rather than by place of discovery. He makes cogent and imaginative arguments in favor of an understanding of Daniel (in its fuller Septuagint form), Greek Esther, Tobit, Judith, and Joseph and Aseneth as ancient Jewish novels. As such, these works (all of which, except Joseph and Aseneth, are contained in the fuller canon of Roman Catholicism and Eastern Orthodoxy) should not be used as sources for valid historical information (as would be the case with historical novels, a related but separate genre exemplified by 2 and 3 Maccabees), nor should they be criticized or even ridiculed for supposed historical bloopers, often of mammoth proportions. Rather, they are to be enjoyed by audiences today, as presumably they were by a growing Jewish middle class in the Hellenistic period and later, for their exciting narratives; their extraordinary interest (especially by comparison with earlier biblical texts) in the inner or emotional lives of their characters, in particular female ones; and other related entertainment-enhancing elements.

MOORE's commentary on Judith both anticipates and expands upon many of the insights Wills expresses. Unlike many other volumes in the well-known Anchor Bible series,

Moore's really does have something important to say to the general readers who were the original target audience for the series. Like Wills, Moore seems genuinely to enjoy the material he is commenting on; additionally, he is exceptionally adept at conveying that sense of enjoyment to his audience as he writes about everything from historicity to canonicity, from sex to text. He is especially effective when he discusses the literary qualities of Judith, among which irony stands preeminent as the key that unlocks many hitherto obscure and frequently surprising elements in this book. Moore's translation reads well, and he provides a plethora of useful notes and stimulating commentary. In short, this is a charming introduction to the story of one of Hellenistic Judaism's most extraordinary female characters.

GOLDSTEIN's two volumes of commentary, one each on 1 and 2 Maccabees, are amazingly full compendia (with a total of more than 1,100 pages) of knowledge and insight on these two influential books of the Apocrypha. The two volumes are intended to be used together not only because of their common subject matter (although often differing perspectives), but also because Goldstein has chosen to "introduce" both 1 and 2 Maccabees in the first volume. This does not, however, deter him from providing 2 Maccabees with a separate and extensive—more than 100 pages—introduction of its own. Although he does not neglect the work of others, Goldstein's strength lies in his ingenious, although not always widely accepted, solutions to many of the major historical and literary puzzles that have vexed generations of researchers. For this reason, readers of Goldstein will probably also wish to consult other works discussed if their goal is, for example, to follow the thread of scholarly interchange on particular topics. But Goldstein does succeed, in both introduction and in commentary, in provoking thought about the nature of ancient historical writing and modern interpretations of this important genre.

Anyone who decides to study Theodor Herzl will not suffer from a lack of interesting biographies of this charismatic figure. The first major biography to appear in English was that of DE HAAS, an important Zionist leader in his own right and a close associate of Herzl. His biography gains from a firsthand familiarity with many of the events he describes, including the six international Zionist Congresses over which Herzl presided. He also discusses Herzl's negotiations with the Grand Duke of Baden, Kaiser Wilhelm II, and Sultan Abdul Hamed II of Turkey for the establishment of the Jewish State in Palestine, with the knowing way of one of the Zionist movement's insiders. De Haas's biography confines itself to Herzl's political life, whereas other biographers are interested in the impact on Herzl's developing thought of his childhood, education, family life, and pre-Zionist professional life as a minor playwright and successful journalist.

De Haas, however, begins his biography with the journalist Herzl's coverage of the Dreyfus Affair, which encouraged Herzl to become an activist for the establishment of a Jewish State. De Haas has written a fine biography, well worth reading for its in-depth coverage of early Zionism and Herzl's seminal role in making it into a movement of major political significance. Archival materials, including letters from Herzl and important documents of early Zionism, complement the book as illustrations.

BEIN's biography is a thorough examination of the Zionist leader in remarkably well written prose. The work is frequently criticized for the extreme admiration that Bein lavishes on his subject. One example of this is the way Bein describes the pre-Zionist playwright Herzl as a literary genius, whereas most modern scholars would characterize him as at best a middlebrow writer whose Zionist writings have substantial political and historical interest but whose earlier writings are not particularly significant.

Noted novelist and biographer PAWEL is aided by a dramatic style that makes his work accessible to a wide readership. It is nonetheless a rigorous examination of Herzl as a political leader and the developments that brought him to that point. His presentation is balanced and in no way suffers from hero worship. Much of Pawel's biography is based on speculation, and the craft of the experienced novelist is well in evidence. The work contains extensive analysis of Herzl's personal life and marital problems; elements of psychobiography give the work considerable deftness.

Pawel maintains that the rejection of Herzl's play against antisemitism, *The New Ghetto* (1894), helped move him in the direction of becoming a Jewish political leader. Pawel sees additional motivation in the failure of Herzl's meeting

with Baron Maurice de Hirsch, in which Herzl discussed the founding of a Jewish state for the first time. De Hirsch's rejection of the idea prompted Herzl to write his major manifesto of Zionism, *The Jewish State*. In describing *The Jewish State*, Pawel remarks, "The measure of a manifesto is not its intellectual profundity but its emotional impact," and Pawel credits it with having been more emotionally persuasive than the earlier Zionist efforts of Leo Pinsker and Moses Hess. The work had its greatest impact not on the wealthy whom Herzl was trying to influence but on the masses of poor Jews.

Similarly, in ELON's biography, the author points out that Herzl did not invent Zionism but "he forged the instruments that would put Zionism into practice." Elon remarks, "There is always a trace of quixotism when devotion to a cause is extreme, logical, and saintlike. . . . He [Herzl] walked a tightrope between charlatanism and genius." Elon stresses how for Herzl the Jewish state could have been established anywhere Jews could acquire territory, not necessarily Palestine. However, the bulk of his followers, notably Martin Buber, were in favor of establishing a Jewish state only in the biblical homeland of Palestine. The Zionist movement was tragically split by Herzl's negotiations with the British to establish a Jewish state in Uganda, and the resulting quarrels inside the movement may have hastened Herzl's death of heart failure at the age of 44.

HANDLER concentrates on Herzl's childhood and student years. It is a highly speculative account of the influence that Hungarian/Magyar (as opposed to German) culture may have had on Herzl's life, given his childhood in Budapest.

KORNBERG presents an incisive account of Herzl from his 18th to his 36th year, when he converted to Zionism. The study contains an interesting critique of Herzl's play, *The New Ghetto*. According to Kornberg, the play argues that assimilation of Jews into German society leads toward contempt of all things Jewish (i.e., Jewish self-hatred). Jacob's assimilation into non-Jewish society is a tragedy that brings about his early death in a duel. Dueling is a gentile custom that Jacob accepts in order to bring about his acceptance into gentile society, but in fact it only hastens his death.

BRUDE-FIRNAU points out in her article that while Herzl was covering the Dreyfus Trial for *Die neue Freie Presse*, his dispatches reflected on the resolute character of the maligned defendant, and this brought him closer to assuming a role as a political leader. She provides a concise and readable outline of Herzl's biography, based on his primary writings and diaries. She maintains that Herzl's meetings with Sultan Abdul Hamed II were important despite the sultan's refusal to cede Palestine for the building of a Jewish state. These meetings helped Zionism to become an international political force by inspiring others to take it seriously.

Abraham Joshua Heschel made a lasting impression on a generation of thinkers in every sphere of American Jewish religious life. He influenced Reform, Conservative, and Orthodox Jewish leaders as they sought to develop an authentic American Judaism. He inspired Jews to undertake social projects and to join with non-Jews in seeking to remedy the “insecurity of freedom.” He also expounded a biblical philosophy of Judaism that has influenced the way both Jews and non-Jews think about religion. The many writings about the man and his work reflect the multiplicity of facets in his achievement.

FIERMAN offers a useful introduction to Heschel's work. The author had been studying Heschel for 23 years, and this considered work synthesizes the various monographs and papers that have evolved from that early interest. The book was written primarily for the author's students studying Heschel, but it has a secondary purpose of introducing the breadth and depth of this thinker to anyone beginning to read of him. Heschel's theology was distinctive, and the book includes studies of Heschel's ideas on prayer, faith, humanity, Israel, the Sabbath, the prophets, the Bible, and religious action generally. Heschel's social activism appears in chapters on freedom, peace, racism, justice, and brotherhood. Heschel the teacher is introduced in a chapter on education. A moving epilogue, “Moments of Remembrance for Dr. Heschel,” helps readers catch a glimpse of the human being behind the theologian and activist. The book remains expository and descriptive. The author summarizes Heschel's ideas, paraphrasing them in simpler terms. For the beginner who wants to decode Heschel, this book is a helpful guide.

MERKLE offers a more sustained and critical analysis of Heschel's thought. He summarizes Heschel's major ideas, cites his sources at length, and takes on other interpreters of the thinker. He provides a clear account of Heschel's life, of his theological concerns, and of his relationship to the Jewish tradition. This sophisticated introduction to Heschel's major concepts begins by looking at Heschel's life, ecumenical impact, and depth-theology, which is an outgrowth of his universalism. The central section looks at general theological ideas such as God and the divine mystery and at more specifically Jewish theological concerns such as faith, revelation, the Bible, the rabbis, the Torah, and the people of Israel. Interestingly, the study ends with what Heschel regards as the pre-conditions of faith, the “antecedents” of belief on which all religion depends. This organization of the book shows how Heschel's thinking depends on his phenomenological analysis of human faith.

Merkle is a Christian and his interest in Heschel shows the ecumenical scope of his influence. KASIMOW also recognizes this aspect of Heschel's writing and provides a thorough introduction to Heschel's thought. His work is more rigorous and academic and contains copious citations from Heschel's writings, from other modern thinkers such as Martin Buber, and from classic medieval Jewish writers such as Maimonides. This makes the work an excellent preparation for someone who wants a firm basis on which to understand Heschel. One important and often overlooked theme covered here is Heschel's thought in relationship to non-Jewish religions, an implication Kasimow sees as making a crucial difference in modern life. KASIMOW and SHERWIN develop this idea through the many essays in their edited anthology. This anthology demonstrates how Heschel's influence has touched various religious thinkers across several traditions.

While several books provide a guide to Heschel's thought, KAPLAN enables readers to understand just why Heschel is often so frustrating to read, even when he is most inspiring. Kaplan explores Heschel's strategy in evoking faith from a reader and provides readers with a sophisticated investigation of Heschel's means of creating empathy together with critical awareness. He leads the reader through Heschel's philosophical concerns and social activism to a consideration of major modern theological problems such as the Holocaust and “modern miracles” such as the rebirth of the Jewish state. He concludes by reflecting on “Heschel's unfinished symphony”—the enduring significance of his personality and writings. Kaplan addresses serious theological issues in a technical way that is often illuminating. Some readers may find Kaplan's own use of language daunting, but the struggle to discover his insights will be rewarded.

PERLMAN offers an equally technical introduction to one of the major ideas in Heschel's theology—that of revelation. Perlman reviews the ideas of earlier commentators on Heschel and places his theology in the wider context of religious philosophy by looking at the thought of Baruch Spinoza, Edmund Husserl, and Emmanuel Levinas. He also shows how Heschel uses rabbinic teachings about revelation as a foundation for his own thought. A good grounding in philosophy is a prerequisite for profitable reading of this technical book, which illuminates Heschel's place in the general development of mod-

ern thought. It may be too detailed for some readers, but it offers a persuasive account of Heschel as a careful theologian and not merely as a master of language.

FRIEDMAN is better known as an expositor of Martin Buber than of Heschel or Elie Wiesel, who are the subjects of this book. His friendship with Heschel, their shared social concerns, and his early writings on Heschel combine, however, to make this volume a valuable window to Heschel's genius. While the book does review much that Friedman has written elsewhere about Heschel's thinking, it also adds personal touches such as descriptions of Heschel's home life and family. The book includes citations from Heschel's published and unpublished writings that make it useful for understanding the nature of Heschel's public declarations. The final pages in this book note how Heschel and Elie Wiesel collaborated on several occasions and how their "witness" for the modern world converges in a significant way.

Heschel's role as a teacher cannot be overestimated. First at Hebrew Union College in Cincinnati and then at the Jewish Theological Seminary in New York, Heschel impressed his view of religious education on his students. McBRIDE addresses this facet of Heschel in his early study. While later writers also touch on Heschel as educator, this book explores his themes at length and then applies them to the teaching of Christianity. Such an application underscores the way in which Heschel's work is accessible to non-Jews.

German rabbi and ideologue of separatist Neo-Orthodoxy

Samson Raphael Hirsch was a prominent rabbi, author, and spokesman for Neo-Orthodox Judaism. Hirsch defended orthodoxy in a manner that appealed to educated, cultured, and intelligent people. He founded a separatist congregation in

Frankfurt am Main because he felt that the general community did not sufficiently protect the interests of the Orthodox.

HIRSCH, no relative, produced his portrait shortly after the death of his famous namesake. He gives a brief biographical account of his subject and a summary of his main works, together with extensive quotations from them. He correctly sees the keystone of Hirsch's religious philosophy in the extended comparison of the two revelations of God, in nature and in Torah. Nature and Torah (so the argument runs) are both parts of the total reality of which God is the author; in both one must discriminate between the facts and interpretations or explanations of the facts; in both the adequacy of an explanation depends on its covering the facts concerned, or of the facts fitting into the explanation; whether a satisfactory explanation of the facts has been discovered or not, the reality of the facts is beyond dispute; hence the ordinances of the Torah remain the law for us, even if we do not comprehend their reason and purpose.

ROSENBLOOM has written a comprehensive study of Hirsch's life and thought. The work is divided into three parts. Part one deals with the intellectual temper of the age, the background of Hirsch's family, his education, and a detailed account of the various rabbinic positions he occupied in Oldenburg, Emden, Nikolsburg, and finally in his separatist congregation in Frankfurt am Main. Parts two and three analyze respectively two of Hirsch's most important works, *The Nineteen Letters*, dealing with the challenges posed to traditional Judaism by the Emancipation and the modern secular world, and *Horeb*, a compendium of Jewish laws and observances with particular emphasis on their underlying ideas. Rosenbloom stresses the limited secular and religious education acquired by Hirsch. Hirsch attended the University of Bonn for only 18 months and left without obtaining a degree. Rosenbloom even raises doubts about whether Hirsch ever received the traditional rabbinic ordination (*semikhah*). He did study for barely over a year at the yeshivah headed by the renowned Jacob Ettlinger in Mannheim, but it is hardly likely that the latter would have conferred the title of rabbi on a student whose talmudic knowledge was at best limited and superficial. The letter of recommendation that Hirsch received from Nathan Adler for the rabbinic position in Oldenburg, which the latter was relinquishing, referred to Hirsch as "the young man" rather than by the title rabbi, which the occasion would have warranted. Possibly, Rosenbloom suggests, Hirsch was ordained subsequently while serving as a rabbi.

In analyzing *The Nineteen Letters*, Rosenbloom argues that Hirsch nurtured a secret ambition to become a modern Maimonides, as suggested by the Hebrew title of this work, *Iggerot Zafon* (Letters to the North), which parallels Maimonides' *Iggeret Teman* (Letter to the South). Rosenbloom finds that Hirsch's differentiation between the negative investigation of Judaism from without and the positive investigation from within was akin to Hegel's distinction between comprehension of a thing *für uns* and *für sich*. According to Hegel, an appreciative understanding of an attitude or position cannot be satisfied by a mere external response but requires an effort to discover the intrinsic meaning and inner spirit of that point of view.

BREUER contests some of the conclusions of Rosenbloom. He maintains that the correct vocalization of the title of Hirsch's work in Hebrew is not *Iggerot Zafon*, but *Iggerot Zafun* (Letters of the Concealed One, i.e., one who writes under a pseudonym, in this case "Ben Uziel"). This undermines the argument that Hirsch aspired to the mantle of Maimonides. Breuer further finds the evidence for the supposed influence of Hegel forced and unconvincing. There is no direct evidence in Hirsch's writings to enable judgment of how far he was influenced by Hegel's philosophy. The principle of the self-sufficiency of Judaism that Hirsch espoused makes it unlikely that he viewed his work as an exposition of Hegel's philosophy.

LIBERLES's (1981) essay emphasizes the importance that Mount Horeb plays in Hirsch's writings from the mid-1830s to the early 1850s. Hirsch's work on Jewish law, *Horeb*, was actually written before *The Nineteen Letters*, but, at the request of the publisher, the shorter and more popular work was published first. While Horeb as a Deuteronomic synonym for Mount Sinai, the site of the divine revelation of the Torah to Israel, was appropriate enough as the title of a work on Jewish law, that interpretation does not fully convey the symbolic significance of that mountain for Hirsch himself. Considerable evidence from Hirsch's writings bears witness that Hirsch identified Horeb less with the theophany at Sinai than with the dialogue between God and Elijah at Horeb. Just as in the days of the monarchy, Israel forsook God's covenant and worshipped idols and only Elijah remained loyal, so in his own age only Hirsch remained loyal to the Torah and its teachings.

LIBERLES (1985) reveals the context in which Hirsch established Neo-Orthodoxy, as head of the separatist Israelite Society of Religion (Israelische Religionsgesellschaft) in Frankfurt. The debate between Hirsch and Rabbi Seligmann Baer Bamberger of Wuerzburg regarding secession from the community is examined in detail. Liberles conveys the acrimony by reporting that when Hirsch appealed to the rabbinic dictum that if a sage has declared something forbidden—in this instance, remaining in the community with the Reformers—his colleague is not allowed to declare it permitted, Bamberger replied that the rule applies only when both authorities have equal standing, but if one is superior in learning he can reverse the decision of a lesser scholar. Liberles refutes the exaggerated claims about the decline of orthodoxy in Frankfurt before Hirsch's arrival and the myth of ten founders of the separatist congregation. On the other hand, the secession of Hirsch's Religionsgesellschaft from the community is shown to have had a moderating effect on the majority, who thereafter paid greater attention to the needs of the Orthodox.

HABERMAN believes that any analysis of Hirsch that does not see in him a man of faith and a charismatic leader does not do him justice and is false. He points out that some of the greatest Jewish thinkers of the 19th and early 20th centuries, such as Hermann Cohen, Graetz, and Steinschneider, came under his spell, and that more than a century after his death there are vibrant Orthodox communities modelled on his teaching of "Torah plus secular culture." Hirsch, then, may be viewed as the most successful Jewish controversialist in modern times. He also maintained good relations with the non-Jewish majority, declaring Jew and Gentile equally precious to God in his direction of world history, whereas Geiger, the

spokesman of the Reformers, had to attack Christianity vigorously, sometimes to the extent of distorting its teachings, because after discarding Jewish laws and rituals there was otherwise little to differentiate Reform Jews from their neighbors.

Haberman further emphasizes that Hirsch did not antagonize the East European and Palestinian Orthodox establishment either, because he maintained that his synthesis was meant for Germany and Western Europe and was not necessarily valid elsewhere. Thus Hirsch won the support of East European rabbis (even if behind his back they may have whispered that he was a lightweight and a "prayer-book scholar"), while his contemporary Esriel Hildesheimer who tried to export his own version of Neo-Orthodoxy to Hungary and Jerusalem was denounced as a heretic and excommunicated.

Haberman underscores a surprising feature of Hirsch's personality: his tolerance for the ideological shortcomings of his students. When young Kaufmann Kohler came to him with his doubts, Hirsch told Kohler not to worry, that everything would turn out just fine, and that a journey around the world involves passing the torrid zone.

Hirsch's comparison of God's revelation in Nature and in the Torah is examined in detail by Haberman, who finds three aspects of the comparison to have merit. First, Hirsch correctly discerned that modern science, and the modern temper in general, is empirical in its approach rather than a priori. Second, it may be necessary methodologically to prescind from the question of the origin of the Torah and concentrate instead on the type of personality that is molded by adherence to its way of life. In this, Hirsch anticipated the phenomenologists and their concept of "bracketing." Finally, Hirsch made the study of Torah acceptable in a scientific age, arguing that the conceptual methods used to study Torah and science are in many respects analogous, both representing intellectually respectable systems. The theological assumptions of halakhic laws are the counterpart of the metaphysical assumptions of the laws of physical nature. The observer in both cases attempts to rationalize the phenomena he sees, in a manner consistent with the basic principles he assumes. The comparison, however, is shown to founder on an equivocation of the word "law." Hirsch, after all, is confusing a "law" of the Torah, a clearly prescriptive command that such-and-such an action be done (or not done), with a "law" of nature, which is merely descriptive (or statistical) and which simply cannot be "broken."

The notion that "ideas of history" might constitute a worthwhile field of study is a relatively recent intellectual innovation and even more so for Jewish approaches to history. With the exception of biblical historiographic surveys, which generally focus on the Bible's Near Eastern context, scholarship on Jewish philosophies of history is only now beginning to come of age.

BARON's collection of essays, while dated, provides a solid foundation for more recent scholarship on Jewish historiography and ideas of history. His concerns are, in fact, surprisingly current in their focus and scope; he opens with a discussion of Jewish identities and evaluates various kinds of historical inquiry in terms of their ability to serve the particular characteristics of the Jewish past. The second section analyzes Maimonides and his conception of history. Finally, Baron turns to Azariah dei Rossi, Jost, Graetz, Steinschneider, and Herzfeld, all of whom were important contributors to Jewish ideas of history, thinkers whose work still lacks thorough examination by scholars.

MEYER's introduction to his compilation of primary sources delineates some basic theoretical issues pertinent to Jewish philosophies of history, such as periodization and historical continuity. His essay provides a useful outline of Jewish historiographic documents from the Bible through the 19th century. Except for a brief eruption of historical works in the 16th century (including works focused on non-Jewish histories), the late Middle Ages and the early modern periods are for Meyer bereft of historical thought, especially in Northern Europe. He applauds the invention of a critical historical tradition in the 19th century and devotes much of his attention to its practitioners and their heirs: Krochmal, Zunz, Graetz, Dubnow, Baeck, and Rivkin.

YERUSHALMI's well-known, even paradigmatic essay is a model of sophisticated but accessible scholarship on Jewish historical thinking. Animated by the tension between the biblical injunction to "remember" and the striking ahistoricity of the traditional Jewish worldview, Yerushalmi's text divides the Jewish past into the biblical and rabbinic, medieval, post-Spanish Expulsion, and modern periods. He argues that although one can find the seeds of historiographic scholarship in the pre-modern age, these authors are not the intellectual forebears of modern Jewish historiography. Rather, only in the modern period can Jewish contemplation of the past properly be called

"historical." As they applied the innovations of scientific history (*Wissenschaft*) to the Jewish past, Jewish historians opened up new perspectives and opportunities for self-criticism. However, Yerushalmi argues, modern historiography is antithetical to traditional Jewish understandings of the past. Modern Jews may know more about their history than their ancestors, but this knowledge comes at the price of alienation.

While SCHORSCH's focus is limited to the development of a modern, self-critical historical tradition in the 19th and 20th centuries, this book nonetheless contributes invaluable to an understanding of the Jewish historical enterprise in general. The division of the study into two main sections, "Emancipation and Its Aftermath" and "Thinking Historically," reveals Schorsch's concern with the political causes and ramifications of the Jewish turn to historical scholarship. Yet Schorsch relies primarily upon Jewish sources and explanations, rather than taking a comparative approach. Perhaps that focus explains why he sees Jewish historicism as considerably less problematic than Yerushalmi does; for Schorsch, historical thinking is liberating, "the intellectual counterpart to the political freedom of emancipation."

FUNKENSTEIN's work, while serving as a critique of and response to Yerushalmi's essay, has a much greater scope than that text had. Funkenstein's premise is that historical consciousness and collective memory can be distinguished from one another, but they are by no means dichotomous. He demonstrates convincingly that although historiographic literature is the exception in traditional Jewish sources, historical reflection abounds in premodern halakhic and exegetical Jewish literature. This work is greatly strengthened by its comparative focus (Funkenstein is particularly adept with medieval Christian as well as Jewish sources) and by its extensive reliance on political, religious, and social thought. Rather than a mere cataloguing of "philosophies of history," this exceptionally erudite volume engages other themes as well, all of which shed light on the Jewish historical enterprise: the history of antisemitic and anti-Christian polemics; Jews' perception of their own election and uniqueness and their simultaneous challenge to Christian theology and history; past and present forms of messianism in relation to historical consciousness; and the role of historical thinking in the rise of modern nationalism.

NEUSNER juxtaposes the highly historical books from the biblical period (such as Samuel and Kings) and the utter lack of historical interest manifested during the rabbinic period. Using two eras each immediately following political catastrophe as case studies, Neusner investigates the relationship among messianism, politics, and historical thinking. He argues that the rabbis encouraged a mythic understanding of the past, but this interest served mainly to defuse eschatological fervor in the present, for the focus on individual acts of piety and study reframed the causes of the current situation as sociological rather than historical. Interestingly, Neusner concludes that the lack of historical inquiry during the rabbinic period was due to a sense that history had exhausted its pedagogical purposes and that the task at hand demanded a more useful enterprise. Although this article is far from exhaustive, it offers a provocative starting point for future investigations of rabbinic ideas of history.

The strength of VAN SETERS's section on Israelite historiography lies in his attention to theoretical and scholarly approaches (in subsections titled "The Critical Issues" and "Narrative Forms") as well as his presentation of general tropes in biblical histories and in the biblical idea of history. Where most treatments of this topic tend toward the highly technical language of the higher critics, Van Seters presents the issues of authorship, the evaluation of the various biblical histories, and questions of biblical "philosophies" of history in straightforward and accessible terms. He offers his own assessment of the value of comparative and literary approaches to ancient historiography while acknowledging the presence of scholarly debate on these approaches. This essay is followed by separate chapters devoted to the historiography of the books of Joshua, Samuel, and Kings.

The study of premodern historiography constitutes an important exercise in Jewish history. The distinguishing feature of these early texts is the search for meaning on the part of the writer, rather than simply the accumulation of historical facts—what could be called positivism. Indeed, because so much of the efforts of the writers are devoted to the understanding of the historic events, the reports are often filled with invented materials that could be called fiction. The intent of such a mixture of fact and fiction is not, as is commonly held, due to ahistorical tendencies but to a desire to place the events in a larger matrix, one that is based upon archetypes and paradigms of meaning derived from biblical and rabbinic texts. Most recently, especially following Yosef Yerushalmi's seminal study, *Zakhor*, the discourse over Jewish historiography has revolved around the concepts of history and memory as if they were polar opposites. Such categories have been applied to the classic sources of ancient and medieval Jewish history such as Josephus, the anonymous *Seder Tanna'im ve-'Amora'im*, Iggeret Rab Sherira Gaon, Maimonides' *Iggeret Teman*, the anonymous *Yosippon*, Abraham ibn Daud's *Sefer ha-Kabbalah*, the Hebrew Crusade Chronicles, and the *Memorbücher*. They have also informed debates over whether the Jewish historio-

graphic texts of the 16th century, such as Solomon ibn Verga's *Shebet Yehudah*, Abraham Zacuto's *Sefer Yuhasin*, Elijah Capsali's *Seder 'Eliyahu Zuta*, Samuel Usque's *Consolacem as Tribulacoens de Israel*, Joseph Kohen's *'Emeq ha-Bakha*, Gedaliah ibn Yahia's *Shalsholet ha-Kabbalah*, Azariah dei Rossi's *Me'or 'Einayim*, and David Gans's *Zemah David*, constitute new directions or a continuation of the medieval genre, with the major break coming only in the 19th century, if at all. One often-overlooked source of Jewish historiography in the medieval and early modern period is the writings of Jewish travelers such as Eldad ha-Dani, Nathan ha-Bavli, the correspondence between Hasdai ibn Shaprut and the Khazar kings, the chronicle of Ahimaaz, the itinerary of Benjamin of Tudela, the travels of Petahiyah of Ratisbon, the letters of Obadiah di Bertinoro, and the travel diary of David Reuveni.

YERUSHALMI's modern classic in Jewish historiography has inspired an entire generation of Jewish historians to respond not only to his brilliant thesis but also to the rabbinic, medieval, and early-modern Jewish historiographic texts he treats. Yerushalmi begins with a very personal appreciation of and lament over the role of the professional historian, the separation between history and memory, and the difference between the traditional concern of Jews with history and "our own"—he does not specify to whom he is referring. He repeatedly rephrases the distinction between Jewish memory and the study of history, historiography, and curiosity about the past. He continually reverts to a standard for judging historical merit based on the needs of modern scholarship from a very positivistic sense: "the history of the Talmudic period itself cannot be elicited from its own vast literature, [nor even] an elementary retrieval of what occurred." Here Yerushalmi is almost paraphrasing Leopold von Ranke: *Wie es eigentlich gewesen* ("as it actually was"). One might wonder, however, whether scholars can learn something about the history of the talmudic period through the use of anachronism in rabbinic literature and whether something can be revealed about this history in the difference between the biblical and the talmudic versions of events. For example, the story about Moses visiting the academy of Rabbi Akiba does not constitute a fact but reports the historiographic orientation of the rabbis. The rabbis may not have written postbiblical history, but they made it; their concerns with the meaning of history, therefore, constitute historiography. By taking the rabbis to task for not reporting events as historians report battles—in chronicles, in chronological order, in narrative form—is to impose upon them a definition of history that was not their own. When writing about works from the Middle Ages, Yerushalmi attempts to evaluate the intentions of the authors in his own terms, dismissing a wide range of materials because of what he sees as the authors' intentions. He is assuming objective historicism for its own sake as the gold standard of historiography; yet, as others have argued, all history is contemporary. When Maimonides draws on historical evidence with considerable freedom, therefore, one may look to him not as an archivist but as a participant whose use and phrasing is of major importance to subsequent generations. If Maimonides expressed contempt for historical works—while citing historical events—this is itself historiographic. Yerushalmi argues that memories are preserved in ritual and liturgy, rendering them historio-

graphical, a case he made splendidly in his own book *Haggadah and History* (Philadelphia, 1975). However, he also demands accuracy of his sources, succumbing to what R.G. Collingwood once criticized as the desire of some historians for the chronicler or even the poet to do the work of the historian. Both the chronicler and the poet produce what can be the raw data of the past. The attempt to understand it must be left to the historian's efforts and imagination. Furthermore, in Collingwood's view, history is interpreted not as a story of successive events but as an expression of thoughts. Yerushalmi rejects these expressions of thought and looks for facts about events. He continues to assert that the standard for evaluating the authors is their relation to historical knowledge when in fact they must be seen as a source of thought, which according to Collingwood is historical. Yerushalmi tests 16th-century Jewish historical writing against the other historical writing of the era and finds the Jewish efforts wanting. Nevertheless, he finds some changes in terms of a new appreciation of events for the present and future. Here he overlooks the fact that for medieval Jews their archetypal and midrashic presentation of events gave them meaning for the present and the future as well. Yerushalmi is stuck on the idea that in the 16th century there were Jewish historians, but in fact there were not—there were rabbis and poets who wrote historical books.

FUNKENSTEIN, picking up on criticism of the aspects of many implicit or explicit critiques of the distinction between history and memory, adds a third category to these discussions of history and memory: historical consciousness and awareness, or the creative imagination of the historian or writer. He argues that despite the absence of historiography, Jews never stopped thinking about history and that such thinking was not alien to collective memory. Following many writers on the personal nature of collective memory, such as G.W.F. Hegel and Maurice Halbwachs, Funkenstein argues that collective memory based on language expresses personal consciousness, distinct from both collective memory and historical memory. Historical consciousness begins with the present, so that the past is the remembered present and the future is the anticipated past. Funkenstein questions the notion that there was a rupture between historical consciousness and modern historiography. He dismisses Jewish medieval political history, because the Jews saw themselves as objects rather than subjects, a position that can be questioned by reading the various travelers' accounts. He also diminishes the importance in Jewish historiography of the role of archetypes and typologies in ancient and medieval Jewish literature, except in the works of Nahmanides. Funkenstein finds that historical detail plays a role in halakhic literature. The remainder of the book offers a fascinating discussion of the paradoxes and pitfalls of biblical, medieval, and modern historiographic writing.

In this important study of Jewish historiography, MEYER offers an introductory essay that traces the development of Jewish historiography from the ancient period through the Middle Ages, then focusing on the 16th and 17th centuries and including also the classics of 19th-century *Wissenschaft*, before concluding with recent Israeli and American writers. In his essay Meyer identifies the major themes of the material: the collective nature of Jewish identity, the theological component, problems of periodization, rabbinic interpretation,

and secularization. The bulk of the book is devoted to examples from each of the writers, many translated here for the first time. Meyer's introductions to each of the sections contain biographical as well as contextual information. Although many contemporary scholars have offered radical postmodern critiques of premodern Jewish historiography, Meyer's work endures as a classic introduction to the field.

RAPOPORT-ALBERT's collection of essays includes contributions on Jewish historiography by leading historians; three in particular are of importance in evaluating the views of Yerushalmi's work. Jacob Neusner notes that while the talmudic period was rich with historical crises, it produced what he calls an ahistorical canon or philosophical system. At first he searches rabbinic literature for useful historical information in the positivistic sense, the kind of information a military historian would look for: great affairs, vast territories, movements of men and nations, and individual motivations. Neusner, however, ends up using the word historical in two different senses, designating one "manifest" and the other "latent." He does recognize the Talmud as a profound statement of latent history, although he dismisses the Talmud as a historical document, that is, a source of positivistic information. By "latent history" he means trends and issues, and discussions of imagination, emotion, reason, and thought—in short, what could be called the collective mentality of the people.

Without using the actual term, Robert Chazan's essay suggests that medieval Jews had a sense of historical consciousness, seeing themselves as part of a tradition that stretched from Abraham to contemporary polemics concerning the true Israel. As examples of specific but eclipsed elements in this consciousness, he lists the land of Israel, the Davidic dynasty, and the Hebrew language. Details of all three facets of medieval Jewish life are consciously, perhaps not always realistically, described in travelers' accounts, which Chazan dismisses as a far-from-riveting depiction of daily events, suggesting that their authors did not see these elements as suspended but very much alive. Chazan sees the medieval Jewish historiographic enterprise as based on the use of biblical and rabbinic archetypes. He draws examples from liturgical compositions addressing Abraham's sacrifice of his son Isaac. Chazan does, however, carefully note in medieval texts instances of consciousness of discontinuity between contemporary events and previous periods, devoting particular attention to such aspects of Maimonides' writings.

Robert Bonfil's contribution offers one of the most critical approaches to Yerushalmi's book. He notes the absence of a definition of history and historiography in Yerushalmi, questions his assertion that Jewish historiography and history are relatively new products of the 19th century, and notes Yerushalmi's failure to write about external influences on Jewish historiography. Bonfil thus highlights Yerushalmi's notions that there was a sharp break in continuity between the premodern and modern world and that Jewish group memory is decaying. Thus Bonfil asserts that, according to Yerushalmi, in the premodern period history was subordinate to memory, a position that has reversed itself. He then presents Yerushalmi's discussion of Jewish historiography in the 16th and 17th centuries as an exception, the origins of which Yerushalmi attempts to explain as a result of the expulsion of

the Jews from Spain, rather than analyze as a phenomenon. He then proceeds to demolish the notion that many of the titles referred to by Yerushalmi actually constitute works of history according to the standards of the period. Bonfil, however, falls into the positivistic trap of basing his definition of a work of history on whether it contains accurate facts and reads like a historical chronicle, specifically mentioning the examples of political and military history, rather than whether it was written with the purpose of explaining Jewish life.

GRAETZ is the premier example of 19th-century Jewish historiography and is one of the earliest and most significant Jewish histories written by a modern author. Originally written in German in 11 volumes, the English translation is condensed to six volumes that omit footnotes. While the German edition only goes as far as 1848, the English edition includes material up until 1870. A historical positivist who was influenced by Hegel and committed to the *Wissenschaft des Judentums*, the Jewish Enlightenment movement for the scientific study of Jewish history and literature, Graetz interprets Jewish history as revealing the destiny of a people. Jewish suffering, which

Graetz views as greater than that of any other historical group, is one significant mark of Jewish messianic destiny. Although Graetz was personally committed to Jewish emancipation, he firmly believed in Judaism's national character, evinced in what he views as the Jewish people's mission as living bearers of the unique religious and moral message of Judaism. Graetz was harshly criticized by virtually every intellectual faction in 19th-century Europe. His criticism of Christianity and Reform Judaism naturally alienated German Christians as well as prominent Reform Jews. German nationalist antisemitic thinkers used his argument that Judaism was a national religion as proof that Jews could not be integrated into the German nation. Orthodox leaders also criticized Graetz, denouncing him as an infidel and despising his historical analysis of Jewish law. Notwithstanding Graetz's interpretative biases, his *History of the Jews* endures as a pioneering monument of Jewish historiography.

The most recent edition of DUBNOW covers biblical times to the 1930s and concludes with material on American Jewry, the emergence of Nazism, and the Zionist settlement of the land of Israel. Dubnow describes his approach to Jewish historiography as sociological and universal, arguing that Jewish history is integral to the history of civilization as a whole. Like Graetz, Dubnow emerges from the *Wissenschaft des Judentums* tradition, stressing that Judaism can be formulated scientifically and that Jewish history can be understood as a process. Dubnow critiques Graetz's approach, however, arguing that Graetz reduces history to the two dominant motifs of Jewish martyrdom and intellectual creativity. The sociological method is presented as the appropriate corrective for what Dubnow views as a distortive and limited methodology. Dubnow conceives of the Jewish people as a nation but rejects political Jewish nationalism. As such, he maintains that Jewish history is both spiritual and social; Jews were a nation perhaps without a homeland, but they certainly had a national history and identity. In Dubnow's terms, the object of Jewish historiography is "the people, the national entity, its origin, growth, and struggle for existence," and the maintenance and defense of national integrity is the dominant theme of Jewish history. Dubnow is most commonly criticized by historians for disregarding contemporary Western European social scientific methodology in his historiography and for failing to substantially appreciate the effects of external forces on Jewish history. Dubnow's contribution to the development of Jewish history is particularly important as he provided a transition from 19th-century Jewish historiography (with its emphasis on historical process) to later 20th-century Jewish histories, which reject the assumption that Jewish history can furnish a unified interpretative structure.

BARON surveys Jewish history from ancient times until the late medieval period. The revised edition updates many of the sources and reevaluates some of Baron's historical analyses, particularly after the ancient period. Divided into three epochs, "Ancient Times," "High Middle Ages," and "Late Middle Ages and the Era of European Expansion," the history is incomplete, ending before consideration of the modern period. Individual volumes are not precisely chronological; instead, the organization prioritizes thematic analyses. Baron's emphasis is on the social, economic, political, and intellectual

influences of Jewish history. For example, an entire volume is devoted to “Philosophy and Science” in the High Middle Ages, and a volume titled “Citizen or Alien Conjurer” focuses on Jewish social and political marginalization in the Late Middle Ages. Baron is especially interested in institutional and official influences. Several later historians balance this emphasis by exploring how closely different elements of society reflect official church or government interests. The sheer scope of this enormous history allows Baron to explore historical particularities and commonalities. He is appropriately sensitive to the national contexts in which Jewish communal histories emerge and is generally precise in limiting historical explanations and interpretations to specific countries during particular historical periods.

FINKELSTEIN ambitiously assumes the task of comprehensively offering an overview not only of Jewish history but also of culture and religion. This collection of essays by experts is divided into an extremely concise history of the Jewish people from the biblical period until 1945; an extensive section titled “The Role of Judaism in Civilization”; a fascinating albeit obsolete section on Jewish sociology; and an oddly brief section (composed of only one article by Finkelstein) titled “The Jewish Religion.” The first section, which is oriented toward American Jews of Ashkenazi origin, includes essays on the biblical period, postbiblical Judaism, the talmudic period, European Jewish history until 1648, Jewish Western European history from 1648 until the beginning of World War II, and the Holocaust. As the chancellor of the Jewish Theological Seminary of America, Finkelstein’s editorial voice speaks to an American Jewish community in welcome terms: rational faith, the miracle of Jewish survival, the contribution of the Jewish people to civilization, and the place of American Jews within the history of Jewry. While Finkelstein’s work is in no way formative in terms of the development of Jewish historiography (as are the works of Graetz or even Dubnow), it was extremely influential during an important stage in the formation and evolution of the American Jewish community’s self-identity in the 1960s and 1970s.

SELTZER presents an accessible and broad one-volume general history of the Jewish people. Beginning with the origins of the Israelites, this chronological history moves through the ancient, late antique, medieval, early modern, and modern periods. The discussion of each period is complemented by historical maps and chronological tables comparing general and Jewish history. Seltzer introduces the major philosophical and religious thinkers of each historical period, focusing on those persons, events, and movements that Jewish historians have traditionally positioned as significant. The author also comments on the development of Jewish historiography, relating the evolution of this discipline to historical events and intellectual movements. He demonstrates the synergistic relationship between Jewish history, the Jewish people’s understanding of that history, and the development of Jewish historiography. Seltzer’s strength is his ability to introduce the reader to Jewish history by framing that history in terms of particular biographies, schools of thought, or political movements. While this strategy risks being distortive as elitist, Seltzer conscientiously balances this tendency by expanding his discussion to include groups that resist or are unaffected by social, religious,

and intellectual reforms. The result is a succinct and balanced overview of political, social, cultural, religious and intellectual Jewish history.

BEN-SASSON offers an overview of Jewish history from the biblical period to the 20th century. Focusing on religious, political, social, and economic factors, the text is organized into six individually authored, chronological sections. Essays on the ancient and classical periods—from before the Israelite conquest of Canaan through the postbiblical and talmudic eras and closing in 640 C.E.—are essentially chronological. The chapters dealing with the medieval and modern period are thematic. Thus, in the Middle Ages section, the author (Ben-Sasson himself) includes a chapter on Jewish communal autonomy, and in the modern period section the author (S. Ettinger) includes a chapter on antisemitism and the appearance of antisemitic political parties. The well-formulated medieval section emphasizes cultural history, particularly the tensions and interplay between Jews and gentiles. Almost one third of the more than 1,100 pages is devoted to the comprehensively chronicled modern period. Ettinger surveys modern Jewish history from the late 17th century until the Yom Kippur war of 1973. As a whole, the global perspective of Ben-Sasson’s collection and the attention paid to recent scholarship has contributed to its well-deserved status as one of the standard modern works of Jewish history.

STILLMAN presents an excellent overview of Arab Jewry until the beginning of the modern period, which he addresses specifically in his sequel, *Jews of Arab Lands in Modern Times*. He presents an illuminating selection of previously unavailable archival sources, along with photographs, letters, diary entries, newspaper articles, and government documents, offering a richly textured portrait of the Jewish experience in Islamic societies. Beginning with Muhammad and early Muslim attitudes toward Jews, Stillman’s historical narrative moves through the Middle Ages and closes with the 19th century. Stillman focuses on the development of Jewish communities, with attention to how Arab culture, thought, and history shaped the Jewish experience in these areas. He is particularly effective in his historical presentation of the development of tensions between Arab and Jewish communities. Stillman’s portrayal of the diversity and vibrancy of these Arab Jewish communities makes for an accessible and engaging narrative that has quickly become the standard work on Arab Jewry and has been lauded as much for its balanced tone as for its deft presentation of an extremely complex set of relationships.

BASKIN is the only substantial text to present the history of Jewish women from the biblical period until the 20th century. While the essays are not chronologically comprehensive, they are extremely successful as a whole in pointing out the breadth of the history of Jewish women. The collection unites the work of many preeminent scholars working in areas relating to women and Judaism, and it addresses topics and themes from throughout Jewish history, including biblical, rabbinic, medieval, and modern material from both the Sephardi and Ashkenazi traditions in key Jewish communities ranging from Eastern and Western Europe to North America and Israel. The variety of Jewish women’s experiences is selectively explored, combining intellectual, social, cultural, and political histories. The second edition underscores this diversity by adding four

essays that explore specific cultural histories, namely Israeli, English, French, and Eastern European experiences. It is unfortunate that Joan Ringelheim's "Women and the Holocaust: A Reconsideration of Research," which appeared in the first edition, is omitted in the second; the collection would be complemented by an essay exploring the gendered experiences of the Holocaust. Nevertheless, both the study of women and Judaism and Jewish historical scholarship are much enhanced by this remarkable anthology.

Two assumptions undergird BRIGHT's history of Israel. First, he is confident that the Bible is a legitimate source for reconstructing the history of ancient Israel. Second, he believes this confidence to be supported by the results of archaeological excavations that Bright understands as supporting the historical value of biblical narratives. The consequences of Bright's approach is most obvious in his presentation of the patriarchal narratives (Genesis 12–50). He concludes that the biblical narratives are historical works since they reflect the social and economic situation of the second millennium B.C.E. as reflected in ancient Near Eastern sources. Although none of these sources mentions any of the patriarchs, Bright maintains that there is a "balance of probability" indicating that the bib-

lical patriarchs were historical figures. While Bright asserts that it is not possible to be too precise in reconstructing the events that led to the settlement of the Israelite tribes in Canaan, he clearly favors the conquest model.

Bright does more than offer a reconstruction of ancient Israelite history, he also sketches the development of ancient Israelite theology. The contours of the picture Bright draws show his debt to the biblical theology movement, which considers it axiomatic that the events narrated in the Bible actually happened and that the history of ancient Israel be regarded as "salvation history." Bright characterizes both Judaism and Christianity as two possible "destinations" for ancient Israel's history. While Bright's contribution to this history of Israel was an important one in his day, the value of his approach to ancient Israelite history needs careful reexamination in light of the current state of both historical and archaeological scholarship. Its theological orientation makes this work still very influential, however, among more conservative Christian readers.

NOTH offers a perspective on the history of early Israel far different from that of Bright. He believes that the traditions about the patriarchs and Moses offer nothing that the historian can use in reconstructing the history of Israel. This sharp divergence from Bright's approach spawned what became an acrimonious debate between the two scholars that was broken off after Bright accused Noth of historical nihilism for his refusal to consider the stories of the patriarchs and the Exodus as historical in the technical sense. Noth indeed considered the history of Israel as beginning with the tribal league.

The most distinctive and influential feature of Noth's history of Israel is his theory of an Israelite amphictyony. He holds that Israel's tribes organized themselves in a federal structure analogous to the classical amphictyony (an association of neighboring states in defense of a religious center). This theory enables Noth to discuss the settlement period, a notoriously difficult component of Israelite history. In addition, the amphictyony supplies a context within which to locate Israelite religious, social, and political institutions as well as the early stages of the formation of the Pentateuch. Noth considers premonarchic Israel to be a religious entity—the covenant people of God. The theory of an Israelite tribal league makes it possible for Noth to describe an institutional form for this religious entity. While scholars have not abandoned Noth's theory of an Israelite amphictyony completely, they do not use it as comprehensively as he did. Current scholarship has focused its attention on the family and the clan rather than on the tribe as the basic social units of premonarchic Israel.

There have been several attempts to write a history of Israel without the theological biases evident in the Bible. The most comprehensive of these is the posthumously published work of AHLSTRÖM. Still, this book is markedly traditional in its basic understanding of history as an idealistic account of the political and military activities of significant individuals. This is precisely the way the Bible presents the story of Israel. Since there is no corroboration for the biblical account of the premonarchic period, the author asserts that the historian is not on firm ground until the time of David and Solomon. His reconstruction of the early history of Israel differs substantially from the biblical account, while his reconstruction of the time of the monarchy is less radical than other recent histories.

Ahlström devotes three full chapters to the Bronze Age in Palestine. The data presented in these chapters is almost exclusively archaeological. He does discuss Abraham in an excursus and concludes that the biblical stories about him come from a much later date and do not reflect the sociopolitical situation of Bronze Age Palestine. Particularly telling in the patriarchal narratives is the absence of any allusion to Egyptian hegemony in the region. The distinctive feature of Ahlström's presentation is his consistent emphasis on seeing the history of ancient Israel against the wider backdrop of ancient Near Eastern history.

HAYES and MILLER have edited a volume of essays that discuss the problems in writing a history of ancient Israel. Individual essays cover each period from the patriarchs to the coming of the Romans. Two periods that receive attention are the patriarchal and settlement periods—eras that continued to raise difficulties for historians. After an essay by John Hayes on approaches to reconstructing Israel's history, from the earliest attempts to current endeavors, the problems of writing the history of early Israel become evident. While William Dever and W. Malcolm Clark find archaeological data sufficient to conclude that the Middle Bronze Age provides the background for the patriarchal narratives, Thomas Thompson holds that these stories are late literary inventions. J. Maxwell Miller provides a convenient summary of theories regarding the Israelite occupation of Canaan; he asserts that the process by which Israel acquired the land was not a pan-Israel invasion and took place over a long period, though the core of the Israelite community was settled in Canaan by 1200 to 1000 B.C.E. The essays dealing with periods from the monarchy to the coming of the Romans to Palestine show that these eras do not involve such serious methodological issues as does the early history of Israel. The principal issue is how to integrate the results of archaeology into any historical reconstruction, but several of the essays make little or no reference to archaeological data. Their historical reconstructions depend solely on literary sources: the Bible and ancient Near Eastern texts.

While the essays in the Miller and Hayes collection show that there are some methodological issues that any historian of ancient Israel needs to face, GRABBE has edited a volume of essays originating in a seminar that dealt directly with methodological concerns. Lester Grabbe's own essay asserts that a history of Israel can be written with the Bible as a resource. Still, he notes the difficulties attendant to using the Bible for historical reconstruction and suggests that historians indicate the probability of any reconstruction. Other essays describe developments in the field of historiographical study and the ambiguity of terms such as "Israel" and "history writing." Herbert Niehr's essay differentiates among the various sources that the historian can use and the methodological issues related to each type of source. In many instances biblical texts are secondary or even tertiary sources. Highlighting the problems that come with basing any historical reconstruction solely on written sources, this volume underscores the need for developing a more archaeologically and geographically based historiography, as suggested by Thomas Thompson's essay.

In addition to the collected essays they edited, MILLER and HAYES have produced a history of Israel from the period

of the Judges to the fall of the Persian Empire. They forego any attempt at reconstructing the patriarchal and Mosaic periods after discussing the problems that face the historian. For the most part, this is a history of the ancient Israelite nation states. This volume is geared toward nonprofessionals and is augmented by many charts, maps, illustrations, and translations of relevant ancient Near Eastern texts that illuminate the authors' narrative. They use the Bible as one source in their historical reconstruction, but they do depart from its presentation when other sources require it. They are also careful to include data from archaeology when appropriate. While this volume does not deal directly with the methodological issues raised by the Grabbe volume, it does not use the Bible as uncritically as earlier histories tended to do.

FREEDMAN and GRAF have edited a collection of essays that deal with the differing historical reconstructions of how the ancient Israelites came to control the land that became the locus of their subsequent history. There are essays by William Stiebing, John Halligan, Norman Gottwald, and Marvin Chaney. These essays are sympathetic to the hypothesis of George Mendenhall, who holds that there was no violent conquest of Canaan. Ancient Israel emerged as the result of a peasants' revolt against social, political, and economic exploitation by the city-states of Canaan. The final essay is by Mendenhall, who describes how he has refined his original thesis and why he rejects the development of his views by Norman Gottwald, who uses a Marxian model for interpreting the early history of Israel. One feature that all the essays share is the attempt to place the developments in 13th- and 12th-century Canaan into a larger historical, geographical, and sociological framework.

While Mendenhall's hypothesis has proven to be an attractive alternative to the conquest model defended by Bright and the infiltration model offered by Noth, there are questions about the viability of his reconstruction of the situation in Canaan in the Late Bronze Age. There simply does not seem to be enough evidence of a disaffected peasant population that was ready to withdraw its loyalty from the political structures of Canaan. Similarly, questions arise about how Israel emerged from a supposedly diverse body of disaffected peasants. Another question raised by Mendenhall's hypothesis is the origin of the idea of an invasion from abroad, which is central to the biblical presentation of the settlement.

While the question of Israelite origins occupied historians for most of the 20th century, a new issue has stirred up much controversy among both historians and archaeologists. It is the issue of the "united monarchy." FRITZ and DAVIES have edited a collection of essays focusing on the formation of the Israelite and Judean states. Some scholars hold that there was a united kingdom, composed of the Israelite and Judahite tribes, extending its influence through most of the eastern Mediterranean region in the tenth century B.C.E. This united kingdom later split into two states: a northern and a southern kingdom. Others maintain that the biblical narratives about Saul, David, and Solomon are fiction and that the kingdoms of Israel and Judah were never united. Essays by Thomas Thompson and Baruch Halpern are methodological discussions about archaeology, literature, and history. Three essays deal with the social organization of the Israelite state.

Christa Schäfer-Lichtenberger compares the sociological and biblical views of the early Israelite state. Niels Peter Lemche asserts that the patronage society—not the nation state—was the next stage in complexity after the Israelite tribal society. David Hopkins discusses the problems in reconstructing the economic system of an ancient society. The collection concludes with five essays that center on the principal biblical characters of the early monarchy: Saul, David, and Solomon. The essays in this volume offer sharply divergent viewpoints. This reflects the current state of scholarship on the early Israelite monarchy. There is little consensus on even the most basic questions. The debate has become more intense since the discovery of an inscription at Tel Dan, which is read by some as referring to a king of the “house of David.” Questions have been raised not only about the reading of the inscription but also about its authenticity.

The “Second Temple period” spans almost 600 years between the rebuilding of the Temple of Jerusalem by Jewish exiles who had returned from Babylonia in the 530s and 520s B.C.E. and the destruction of the Temple by the Romans in 70 C.E. Characteristic of this period of Jewish history is the continuous interaction between Jewish and other civilizations (most prominently Hellenism) in both the political and the cultural

arena. A study of this interaction, and especially of the rich variety and dynamic nature of Jewish responses to the demands of an increasingly cosmopolitan world, has long occupied a central place in scholarly studies devoted to this period.

COHEN investigates the period from the 160s B.C.E. to the early second century C.E. in a very readable and up-to-date study aimed at both beginning students and well-advanced scholars. In addition to describing the political events that mark this period, Cohen provides insightful discussions of Jewish religious practices and beliefs during this time, the history of the various Jewish communal institutions and sectarian movements, and an elucidation of the complicated issue of the canonization of Scripture. With a glossary and suggestions for further reading, this book succeeds in drawing a truly accessible and comprehensive picture of the transformations in the Jewish community from post-exilic times to the emergence of rabbinic Judaism.

FELDMAN presents a thorough critical bibliography of modern scholarship on Josephus, the author whose writings form the single most important source of literary information on the Second Temple period. Arranged topically, this rich bibliography addresses all the major aspects of Josephus’s work, including his accomplishments as a historian, his activities as a “rewriter” of the Hebrew Bible, his relationship to and depiction of Jewish law and Jewish religious practices, as well as the various text editions and the history of transmission of Josephus’s writings. Each item includes a summary of the book or article cited, providing readers with a quick and reliable means to familiarize themselves with the various issues addressed by Josephus and with recent scholarly discussions on the ways in which Josephus has treated such issues.

HENGEL’s lengthy study argues that the cultural differences between the Jewish communities in the Land of Israel and those in the diaspora (particularly in Egypt) were much smaller than has commonly been assumed. Presenting a systematic analysis of practically all the available primary sources, Hengel also argues that a substantial Hellenization of the Jews in the Land of Israel had occurred long before the Maccabean Revolt. Written in the 1970s with an eye to a scholarly audience, this study continues to occupy a central place in the study of the Hellenization of Second Temple Judaism.

KRAFT and NICKELSBURG have published a collection of essays by leading scholars in the field of Second Temple Judaism. Subject headings include “Historical Settings,” “Recent Discoveries,” and “The Literature.” Each scholar presents an up-to-date review of the state of knowledge in his or her respective field of expertise, with excellent references to further scholarly literature. Especially useful is the easy access it provides to the various types of literature deriving from this period, including rewritten bibles, the so-called testament literature, apocalyptic, wisdom literature, and Jewish historiography. Also included is a short discussion of the Samaritans and an extensive survey of Jewish numismatics.

KUHLEN has composed a richly illustrated and bibliographically well documented study of the archaeology of the land of Israel during the Hellenistic and Roman periods. Discussing monumental architecture, including palaces and the-

aters, domestic architecture, funerary architecture, and small finds, in addition to questions of chronology, Kuhnen documents the interaction between local and Greco-Roman civilization on the level of material culture over a period that spans almost a millennium. Kuhnen furthermore elaborates on the history of archaeological research in this part of the ancient Near East. In the appendixes, discussions of Jewish numismatic evidence and of the physical remains bearing on the Nabateans have been included.

SCHÜRER's classic study of the history of the Jews in the time of Jesus, which was originally published in German in 1886 and which has since been translated into English and thoroughly updated by a team of well-known scholars, provides readers with a systematically arranged account that addresses virtually all aspects of Jewish history during the Second Temple period. It includes discussions of the political developments that affected the Jewish community and the various types of literature produced at the time, and it also includes an extensive, up-to-date presentation of the evidence bearing on the Dead Sea Scrolls and the Qumran community. Of encyclopedic scope and generally reliable, Schürer's three-volume *tour de force* is a work originally conceived from a Christian theological point of view onto which has been grafted comprehensive nonpartisan modernization in the form of massive footnoting.

STEMBERGER has written a study that critically investigates the present state of knowledge concerning the various Jewish sectarian groups that are known to have played a role in the history of the land of Israel during first centuries B.C.E. and C.E. Discussing at length the evidence contained in the writings of Josephus, the New Testament, and rabbinic literature and using this evidence to describe the ways in which Pharisaic, Sadducean, and Essene ideology and theology differed, Stemberger also presents a sensible discussion of the question of whether the rabbis of the post-70 C.E. era should be regarded as the direct successors to and intellectual heirs of the Pharisees. Concision notwithstanding, this is one of the most balanced accounts of this issue currently available.

VANDERKAM presents an easy-to-read introduction to the study of the Dead Sea Scrolls. Addressing all the major issues, VanderKam first describes the discovery of these documents and the archaeological methods used to reconstruct them, and then proceeds to present a systematic discussion of the contents of various manuscripts retrieved in and around Qumran. VanderKam also explores the strengths and weaknesses of the theory that associates the Qumran community with the so-called Essenes. He concludes his survey with a discussion of how the Qumran discoveries have affected understanding of the text of both the Hebrew Bible and the New Testament. Each chapter contains a bibliographical note with suggestions for further reading.

The talmudic era, beginning with the Second Temple's destruction in 70 C.E. and extending to the Islamic conquest of Mesopotamia in 634, is the common focus of the diverse studies considered here. Four are comprehensive treatments; the others are more specialized. All represent historical approaches to Judaism in a broad sense that does not entail a narrative of events. As Yerushalmi notes, "the history of the talmudic period itself cannot be elicited from its own vast literature."

SCHIFFMAN provides the most comprehensive history, beginning with the Hebrew Bible and ending with the Talmud and Midrash. His is the most straightforward chronological narrative and is easy to read. The author provides tables, notes, and a glossary as well as the expected index and bibliography.

ALON was constructed by his students out of lecture notes that cover the historical outline of the period and include detailed discussions of subjects that interested the rabbis. The English translation is clear, with a minimum of unexplained terms. There is no glossary, however, and some passages may be hard going for the uninitiated. Alon wrote when most scholars assumed that the rabbis ruled in this era, that the only Judaism was rabbinic Judaism. While the subject matter is determined by rabbinic literature, Alon brings vast erudition in other sources from the period, including Greek and Latin literature and documentary papyri. His topical approach tends to leave some periods uncovered and to assume that the details are valid for the whole period unless contradicted by other evidence.

JAFFEE defines the period 450 B.C.E. to 650 C.E. as the era of early Judaism, and he examines Judaism in a frame that is

geographically the broadest of the four general histories discussed here. His short book is notable for recognizing that Jewish history includes both men and women. Jaffee is committed to the topical approach, by which he conveys the changing religious worlds of the varieties of Judaism. His topics include social and political aspects as well as the symbolic structure implied by conceptions of Judaism. Jaffee covers ritual spaces and performances; traditional text as written and transmitted; and the transformative knowledge of sages, mystics, and visionaries.

KRAEMER also takes a sophisticated look at topics, with ensuing difficulties similar to those faced by Alon and Jaffee. Her topics are determined by the available nonrabbinic information. Kraemer introduces the reader to a number of women by name, as they are known from inscriptions, papyri, and literature. Areas discussed include women's economic lives, education, synagogue life and other religious practices, and public activity. The usual topics of marriage, motherhood, male–female relationships, and control by men are also considered. Kraemer is concerned with the reliability of her evidence as history, and her article is interspersed with brief methodological discussions.

PESKOWITZ writes about women as well as men in Judaism of the Roman period. She considers both “a history in which women were present and a historiography in which women have been absent.” Her book is an intriguing if meandering conversation about historical topics made new by the way in which she asks questions of the material. Peskowitz develops a delightful invitation to participate in thinking through the implications of historical evidence for the period. She is careful to explain any terms that might be unfamiliar; she demands of her readers a great deal of thought rather than a great deal of erudition.

KALMIN is a straightforward attempt to persuade the reader of his thesis. He argues (in contrast to Neusner's portrayal of close and constant contact, as discussed below) that the rabbis of the Babylonian Talmud were much more aloof from the nonrabbinic classes than the rabbis portrayed in the Palestinian Talmud. He points out that the pervasive differences between the two Talmuds support the historicity of the contrasting traditions in each. According to Kalmin, though, the precise extent of the differences is difficult to gauge. Kalmin's style is clear and almost lawyerly: he lays out his thesis at the beginning of the work, and each chapter buttresses his points from a different perspective. To add strength to his argument, Kalmin explores the interpretive, or exegetical, differences between the Jewish communities of Babylonia and those of Israel, discussing the rabbis' literary treatment of David, Moses, and Ahitophel. Kalmin does demonstrate that there are differences, although this is not the strongest aspect of his discussion.

NEUSNER has anticipated Kalmin's question about the degree of separation of the talmudic sages from the rest of Jewish society, and Neusner has come to a different answer. In his dissection of the chronological layers of the Babylonian Talmud, Neusner narrates a history derived from the Talmud but woven together with nontalmudic information about the Parthian and Sassanian (post–224 C.E.) rulers of Persian Babylonia and their culture. He notes that rabbinic

leaders held positions that entailed supervising the markets, for example, which would not tend to isolate them within their own aristocratic class. Neusner's five volumes provide a coherent narrative of the development of rabbinic Judaism in Babylonia from the late Persian Period through the final redaction of the Babylonia Talmud (circa 600 C.E.). As a coherent narrative, it is a worthwhile aid to cognitive appropriation of the activities and concerns of the rabbis; it is by no means a work of demonstrable historical truth, and Neusner himself has famously come to doubt the possibilities for historical reconstruction entertained by his early publications.

HAUPTMAN's understanding of history is indexed by change observed at particular points over several millennia. She typically compares original biblical expressions of the law with later interpretations, noting changes and transformations in interpretation representative of the talmudic era. She demonstrates that within the limits of their patriarchal system, the rabbis sought to lessen the severity of laws dealing with women. Her style is wonderfully open; she represents the positions of others with care and appreciation of valid if unconventional arguments.

YERUSHALMI provides a summary essay covering a very long span of time with memorable phrases and sentences on every page. Yerushalmi enjoins the reader to remember and yet there is no history and no memorized narrative sequence past the time that the Bible ends. The extant sources, after Josephus (c.37–101 C.E.), are not concerned with narratives of events. As Yerushalmi interprets it, history is made plain in the prophetic telling of God's role in biblical events. Without the prophetic voice telling the story of God and God's people, there is no narrative history.

Jewish life during the Middle Ages took place in three distinct spheres: Italy and Northern Europe, the Iberian Peninsula, and the Islamic world stretching from Baghdad to Morocco. The historiographies of these three regions differ sharply, but in all three cases historians generally recount a story of initial religious toleration eventually followed by assault and expulsion. In these standard histories, the Jews are portrayed as fundamentally passive, and the internal life of Jewish communities is typically depicted as hermetically sealed, virtually untouched by cultural exchanges. These images require, and are slowly achieving, revision in order to acknowledge dialectical interaction between Jewish and non-Jewish communities on all planes. Similarly, the histories of Islamic territories that describe tranquil relationships between Jews and Muslims until the dawn of early modern times must be modified to recognize more fully the tensions in the Judeo-Islamic experience.

BAER's comprehensive work discusses Jewish communal, intellectual, and political life, with extensive coverage of religious issues. Baer contends that there is a unity of the Jewish people in all ages and that their entire "history . . . constitutes an organic unit." Furthermore, he assumes a moralizing position, asserting that the wealthy are skeptics, Aristotelians, and prone to conversion, while the poor are pious, mystical, and faithful. Although it has been the subject of a number of articulate challenges, this text remains worthwhile and provocative.

Gerson COHEN's rewarding translation of a traditional chronicle includes highly erudite footnotes and copious endnotes, as well as an exemplary introduction and further discussion. He paints a lasting portrait of Spanish Jewish grandeur in the so-called Golden Age, even as he emphasizes

the significance of tensions and crisis, rather than dwelling on specific cultural achievements or moments of glory.

ASHTOR's idealized descriptions are less insightful than the analysis offered by Gerson Cohen, but GOITEIN's enormous survey of all aspects of Mediterranean Jewish life is a synthesis of great and enduring value that organizes a vast quantity of difficult-to-read documentation in Judeo-Arabic drawn from the Cairo Genizah. Goitein's attempts to reconstruct Jewish family life in volume three are seemingly descriptive, but they also effectively answer the basic questions posed by other scholars studying the history of the family and provide a foundation for an array of detailed future research projects.

A judicious collection of documents and commentary, STILLMAN's work excels in its description of the conflict between Muhammad and the Jews, a little-known episode that is pregnant with implications for modern Jewish-Muslim relations.

Mark COHEN's history of Egyptian Jewry in the High Middle Ages may be the sole in-depth study of Jewish communal control in a specific Judeo-Islamic setting. Based on rabbinic literature and Genizah documents, the book probes traditional questions of social organization and studies the respective status of Jews and Muslims in the region.

STOW presents the first overview of European Jewish life in the Middle Ages (including Italy and sometimes Spain) since Ben-Sasson's dramatic nationalistic accounts of the 1960s, which depicted a church-driven history of cultural exchanges alternating with persecution. Stow portrays Jewish life against the background of Christian piety; discusses the significance of the emergence of monarchies whose foundations were at least as spiritual as they were secular; and analyzes the Jewish immersion (albeit not submersion) in medieval culture as a whole.

KATZ's classic study of Jewish-Christian relations traces Ashkenazi attitudes toward Christianity, emphasizing in particular how Jews moved from perceiving Christianity as a kind of idolatry toward recognizing Christian monotheism. Katz identifies the dangers inherent in this change and explains why Jews at the turn of the 14th century were not quick to accept its first expressions by Menahem Me'iri.

Jeremy COHEN's book has garnered enormous attention for its thorough discussion of Christian Hebraist products of the 13th century. Especially useful are lengthy excerpts from the *Pugio fidei* (1278) of Ramon Marti (Raymond Martini). Much debate has been inspired by Cohen's insistent statement of the thesis that the mendicant orders aroused Christian society against Judaism, as the orders sought to convert the Jews or have them expelled.

LANGMUIR (1990a, 1990b) must be seen as two halves of a whole. The first book is a long, sociological attempt to identify the seat of antisemitism in what Langmuir defines as the irrational, specifically in accusations of ritual murder leveled against Jews. While Langmuir is perhaps overly careful in the distinction he draws between the "irrational" and the "non-rational" elements of the anti-Jewish myths and canards of the Middle Ages, the often brilliant essays in his second volume are not limited by such strict definitions. It is debatable, however, whether the sharp break Langmuir would make between anti-Judaism and antisemitism helps or hinders his analysis.

MARCUS presents a thorough study of the doctrine and social organization of the Hasidei Ashkenaz. The book investigates two competing theses: first, that these "Hasidim" (not to be confused with the modern hasidic movement) were a continuity of early Italo-Ashkenazi culture; second, that they were extremists, propagating wholly untenable pietistic ideals, which Eleazar of Worms eventually domesticated, thereby introducing an ascetic element into later Ashkenazi practice.

Surprisingly, CHAZAN is the first book to deal at length with the history of the First Crusade and the Jews. Its intensive exposition of Hebrew texts brought the topic to the attention of a wide audience for the first time; previously, only a few readers of late-19th-century German editions and translations were aware of the relevant literature. Chazan's readings are highly faithful to the literal meanings of the medieval chronicles, but this faithfulness often results in interpretative inconsistency.

Modern Jewish experience is frequently dated to radical transformations in an influential host culture, whether to Napoleon's dismantling of the ghettos of Western Europe at the end of the 18th century or back still further to the development of modern economic institutions in the mercantilist culture of 17th-century Amsterdam.

SACHAR's historical survey of the modern period begins with these developments and clearly presents the major historical factors that shaped modern Jewish life in both Eastern and Western Europe. He successfully highlights the different

experiences of modernity in these two regions and provides small human details that bring the narrative to life for the reader. Dominant modern concepts such as Jewish Emancipation, antisemitism, liberalism, capitalism, and Zionism are presented in terms of their historical context and influence. The latter third of the text (in the revised edition) is devoted to the second half of the 20th century. The Holocaust is treated succinctly in two chapters that focus respectively on the historical antecedents of Nazism and the war years. Unusual among general modern Jewish histories, the text also includes one brief chapter on the history of Jews in Canada, Australia, South America, and South Africa. The revised volume closes with three chapters on the State of Israel from its earliest stages, through the Arab-Israeli wars, to the political challenges in the late 1980s to the settlement and limited annexation of the West Bank. Overcoming the difficulties of compiling a general history of this complex period, this text is one of the few works that effectively present an overview of modern Jewish history from its precursors to the end of the 20th century.

KATZ confines his study to the period he considers the first century of modern Jewish history, 1770 to 1870. Like Sachar, Katz emphasizes the differences between Western and Eastern European experiences of modernity. However, Katz also contends that European Jews in both the East and West shared many common experiences as a consequence of modernity, with their increased participation in the wider secular society. Focusing on the interplay between Jews and non-Jews, Katz skillfully illustrates various reactions to the social, cultural, intellectual, and economic changes of the early modern period. He is especially adept at tracing the ebb and flow of the forces that were operating in the bid for Jewish Emancipation. Katz outlines how both Jewish and non-Jewish communities were divided on the issue of Emancipation, and he explores how opponents and proponents took advantage of legal and cultural factors to advance their positions. While each European nation was subject to distinctive dynamics, Katz concludes that, despite these variations, Emancipation in each instance was fueled by the common forces of nationalism, rationalism, and humanism. Although Katz may tend to represent disproportionately the history of the intellectual elite at the expense of other groups, this minor difficulty is outweighed by his ability to convey deftly the complexity of the particular historical contexts and processes of Jewish Emancipation in an accessible manner.

NEUSNER examines the question of the transformation of Jewish faith during the modern period. Noting that both Judaism and Christianity were fragmented when each religion's respective claim to self-evident authority was undermined by 19th-century scholarship, he contends that the modern epoch in Jewish history is chiefly distinguished by a plurality of types of Judaism: the Orthodox, Reform, and Conservative movements, Yiddishism, Socialism, and Zionism, and, lately, the Judaism of Holocaust and Redemption. Each of these variants operates as a cultural system that responds to the challenges of modernity, such as secularism, assimilation, or the Holocaust. Neusner investigates how each form of Judaism explores such issues, emphasizing the various movements' historical developments, their respective claims to represent a self-evident truth, and their relative successes as cultural adaptations. This theoretical model offers an unusual view of modern Jewish his-

tory in which ideological and religious communal affiliation is the primary category of analysis.

GOLDSCHIEDER and ZUCKERMAN emphasize the process of modernization in their treatment of this period. The authors' methodology is less historical than sociological. They compare Jewish communities' responses to modernization and argue that the social cohesion of ethnic communities, such as Jewish communities, is not inevitably bound to break down due to modernization. Rather, they contend, modernization works as a process: modifying or transforming, strengthening or weakening, social structures. In this argument, ethnicity is regarded as a continuous social force that operates throughout history. Modernity is not the antithesis of ethnicity, and secularism is not the necessary end result of modernization. The authors apply this theoretical framework to Jewish communities throughout Europe, the United States, and Israel, from the premodern period through the late 20th century. Drawing on myriad sources including demographic data, political speeches and platforms, religious ideology, and economic and political theory, this project presents an original view of modern Jewish communities, which has in recent years transformed the model of modern Jewish history.

HYMAN focuses on gender as a significant and largely overlooked category of analysis in the study of modern Jewish history. This brief book is not a general history, but it is included here as a corrective for general histories that tend to efface the presence of women in history. This work is clearly limited in its scope, focusing exclusively on the theme of assimilation during the period 1850 to 1950 in Europe and the United States. The author does not address the Holocaust or the period considered in Katz's work. Hyman revisits traditional analyses of Jewish assimilation as a major feature of the modern period, positing that gender differences are manifest in the differing ways that women and men experienced and responded to the challenges of modernity. The author's skillful use of little-known sources, such as speeches, institutional publications, and memoirs, combines with incisive analysis and argumentation. Hyman frames the question of assimilation broadly, enabling her to touch on virtually every major theme of modern Jewish history, including antisemitism, Zionism, capitalism, secularism, and religious diversity.

MENDES-FLOHR and REINHARZ offer a comprehensive collection of sources for the study of modern Jewish history. Arranged chronologically and spanning the entire modern period, this collection includes virtually every type of written source, including many texts that had not previously been available in English. Each source is concisely annotated with sufficient information to place the selected passage in its historical context, and chapters are introduced with a succinct overview of the historical period or theme at issue. The diverse selection of texts demonstrates the editors' critical sensitivity to the multiplicity of Jewish experiences in the modern period. However, this sensitivity is marred by certain conspicuous deficits. The editors have consciously included more texts relating to Jewish women's experiences in the second edition, but there remains an unfortunate paucity of material pertaining to women or gender issues. Similarly, important non-American, non-European texts related to modern Jewish history are not well represented, and the coverage of Arab Jewish

experiences of modernity (especially prior to the emergence of the State of Israel) is notably inadequate. Still, the value of this rich documentary history to the student of modern Jewry cannot be overestimated.

Holiness (*kedushah*) conveys ultimate meaning and supreme authority in religious life. Jewish people, texts, events, places, rituals, and symbols associate sanctity with worldly life (Genesis 2:3; Psalms 19) for groups (Exodus 19:6, Deuteronomy 7:6) and individuals (Deuteronomy 5:23–26). Such expressions and performances praise the elemental conditions of life in a world that is given to humanity's care (Isaiah 6:3), and they convey hope for improving the scarce chances of the human lot (Isaiah 19:2). Judaism finds holiness both in familiar, partially exhibited social and natural worlds, and in unique, all-encompassing realms of mystical experience. With holiness, one aspect of life is set apart from the rest of life in order to be rendered perfectly whole and complete (Leviticus 11:44–47).

Paradoxically, what is reckoned holy authorizes reality by supplanting life's "profane" terms, just as it transforms that reality by converting into "ordinary" life. The confluences

and tensions in this paradox vary according to contexts in which holiness is set and uses to which it is put.

DOUGLAS's work correlates ritual institutions, creation myths, and classifications of good and right in the sacred. The author uses anthropological tools to argue that such ritual "abominations" as eating pork express symbolically the ideology of priests of the Book of Leviticus, sketching a "moral map" of their society. Douglas's theorem "where there is dirt, there is system" encapsulates the belief that sacrificial rites cleanse impurities and impose order in response to untidy distinctions and practical blunders (such as those that can arise when the priests deal with anomalous species that do not conform to generic classes of living creatures). Like cleanliness, holiness protects life as it expels waste. Social arrangements and moral codes placate anxieties about confusion and imperfection. They contain and constrain life at its boundaries in order to attain the "unity, integrity, perfection of the individual and of the kind." Purity that abolishes malfeasance and dissonance is paradoxically ordered by systems or bodies of thought and practice it displaces, for without the existence of profane elements, the distinction "holiness" would not have any significance.

NEUSNER places the dialectic of holiness and profanity in an evolutionary schema in his comprehensive exposition of the Mishnah's order of Purities. He contrasts the biblical priests' view of holiness as governed by sacrificial rites with the holiness expressed in the richly layered symbols and gestures of rabbinic Judaism, and he contends that the rabbis' examination of foods on the table and fluids in the body demonstrates their concern for the purity of the home, where "the sacred abides, if not wholly as it did in the Temple." As familiar blessings replaced exceptional sacrifices as holy rituals, "intentions of ordinary people living commonplace lives" established "a sacred structure held together by hope." Neusner explains the changing view of what constitutes holiness by examining the different historical conditions and social concerns faced by biblical Israel and rabbinic Judaism.

KNOHL investigates changing accounts of holiness within the Bible's priestly writings themselves. Elucidating cultic terminology and technique, he argues that the Holiness Code (Leviticus 19–26) is a late composition that integrated priestly legislation with its subsequent critique by the prophets, and he thus identifies the distinct yet compatible conceptions of holiness found in different periods in the history of priestly texts. For early priests, the holy withdraws from ordinary life, denoting the abstraction of divinity as "wholly other." In the later "holiness school," however, purification rites mesh with human purposes such as social justice, bringing holiness into every mode of life through blessings and deeds. The locus of holiness shifted, for instance, when sabbath replaced sacrifice as a central rite: the latter's "sanctuary of silence," which entreated awesome power, evolved into the sabbath's "temples in time," which linked high moral purpose with domestic, worldly institutions. Once viewed as whole and imposing, holiness becomes partial and familiar in later priestly accounts.

Rich evocations of holiness appear in LEVENSON's study of biblical poetry, narrative, law, and architecture. Bringing harmony to discordant voices, the book focuses on the Torah received at Mount Sinai and the Temple erected on Mount

Zion. The author shows that the Sinaitic covenant set Israelites into personal relationships with God through an "ever-renewed" contract, in which specific religious deeds (*mitsvot*) commemorated events in "the intersection of love and law . . . the link between a past together and a future together." In addition, Zion provided divinity with permanent residence in the Temple or images of Messiah. Transcending history, sacrifice articulated "a theology of creation . . . where the costs exacted by the harshness of normal life are not paid" and life obtained "a higher degree of reality." The sacred resided in unity distinct from the evolution of creation, yet partial indications of sanctity pervaded all elements of worldly life.

Some baser aspects of purity are exposed by EILBERG-SCHWARTZ. Sex and violence in Jewish law and lore show that claims to moral integrity can create or reproduce systems of social power as they address concerns about natural dangers. Besides reflecting social interests, the act of purification "symbolically enacts" the experience of communal identity: such rites, which can be as diverse as animal sacrifice, circumcision, or prayer, encourage social and cultural coherence rather than conflict among community members. Noting that a body politic is maintained despite or because of competition for scarce resources and skirmishes over boundaries, the author argues that holy objects and performances formally equate the structure of a society with that community's mythic conception and original moral code. The book effectively summarizes issues of embodiment and power in ancient Judaism, but the author fails to scrutinize the enlightened gaze through which anthropology identifies certain behaviors as savagery.

HOFFMAN focuses on the specific contexts in which the blessings of holiness are performed. Detailed research into liturgical changes in modern Reform Judaism accompanies broad discussions of ancient myth and ritual, situating the "sacred" in specific vocabularies and cultural settings. The author contends that public ceremonies differentiate holy from profane in order to bestow "meaning, pattern, composition, and rhythm . . . on human existence in the world." By contrast, esoteric practices identify sanctity with cosmic forces (Isaiah 6:3), allowing "the mystic to escape the fetters of mundane reality and to enter the realm of the numinous." The study's anthropological views of worship illustrate varieties of holiness in historical and social contexts.

Culling vivid portraits of extraordinary individuals from Jewish literature from the Bible through the writings of Hasidism and the Musar movement, JACOBS gleans historical reversals in the meanings of *tsaddik* and *hasid*, which can attribute holiness to either a pious person who resides within proscribed and proscribed activities or an exceptional individual who exceeds the insufficient if necessary boundaries of legality. Thus, both regulated and free acts can be seen to sanctify reality, as holy persons embody such divergent qualities as erudition and innocence, simplicity and extravagance, equanimity and rapture, or isolation and participation. The author asserts that Judaism offers many routes to holiness, as it "counts the world well lost in the attempt to come closer to God."

The essays collected by FRANK explore arguments for Jewish separateness in pursuit of holiness. The contributors examine sanctified communities (Exodus 19:6; Deuteronomy 7:6)

and sanctifying commandments (Leviticus 19:2, 21:6). L.E. Goodman maintains that Saadya and Maimonides believed that moral perfection is intrinsically rational for humans, although its applications are shaped by specific dictates of the good life. He concludes that ritual invests social convention with “a borrowed sanctity” that “modulates” individual Jewish lives so that “the whole life of Israel becomes the symbol of God’s holiness.” Moshe Sokol argues that ritual metaphorically restructures the experience of divinity differently in different contexts. Norbert Samuelson contends that political and theological lines of meaning do not converge in rabbinic, medieval, and modern systems of thought, suggesting that the object of worship is ambiguous. The volume helpfully evaluates evidence of holiness in diverse communal sensibilities and ritual performances.

Most studies have not considered sanctity a modern problem. ROSE corrects this oversight, exploring currents of holiness in Jewish engagements with recent European enlightenment ideologies and emancipatory schemes. Each essay draws the reader into a masterly polemic arguing that philosophy has failed to show how modernity and Judaism are split equally between a “moral discourse about rights and actual systems in power” and are broken by the “interference of meanings” whenever societies and communities intervene between intentions and activity. Sharp analyses show how those like Buber, Rosenzweig, and Levinas simultaneously oppose and reconcile ethical values and conventional norms. Caught in the middle, holiness “elevates what it would exclude as its Other” and imagines law and morality only where “the world . . . is dangerous: its *dominium* that of an apparently independent ‘power’ which is in effect dependent on the defeat of its others, and is therefore rigidly enforced but unstable and reversible.” This ties a sacred history to its holocaust (eradication). Rather than improvise a single term between divinity and creation, Rose reconstructs modern Judaism as a worldly ideal that mediates states of practice, always discovering greater meanings and values. This brings the reader full circle in seeking out the diverse contexts and purposes that render ultimate significance and power in Judaism.

The Holocaust—the intended total destruction of the European Jews by the German Nazis and their European collaborators—has resulted in the creation of at least 10,000 books and articles, most of them written in the past 20 years. In the first decade after the end of World War II, a few very fine histories and personal accounts appeared, but they were largely ignored. It was only after the trial of Adolf Eichmann in the early 1960s that serious research on a wide variety of topics began. More books on the Holocaust were produced in the 1970s and a flood of material appeared in the two decades that followed. The realization had taken hold that the Holocaust was a defining event of the 20th century, a turning point in human affairs of the greatest magnitude. But it took at least a generation after the event for the Holocaust to achieve this centrality.

BAUER is perhaps the leading Israeli historian of the Holocaust. His fine survey appeared in 1982 after much research on various aspects of the Holocaust had enabled such a comprehensive synthesis to be done. It was one of the first works on the Holocaust to begin with the question, “Who are the Jews?” This enabled the non-Jewish reader to achieve a multi-cultural perspective, viewing the Jews as people as well as victims. Bauer begins his story early, in the time of emerging Christianity. He paces the reader through the Middle Ages, the Renaissance and Reformation, the Enlightenment, and the 19th century. This has the effect of combining Jewish history with the broader developments of Western civilization. Excellent chapters on World War I, the Weimar Republic, and the context of Nazi Germany set the stage for the story of the Holocaust. Here, the Jewish response, including resistance, is covered thoroughly. Chapters on the behavior of the Allies and the possibility of rescue are very informative. Bauer views the Nazi intention of total eradication as ideologically motivated, and he presents his case very well. This fine history is studded with helpful maps and contains a detailed and most informative diagram of the Auschwitz concentration and death camp.

DAWIDOWICZ presented her history of the Holocaust in the mid-1970s, at a point when interest in the event had begun to escalate. The book is very well written, and its first part focuses on a detailed analysis of Hitler and Nazi Germany, the SS (*Schutzstaffeln*, the Nazi secret service), Nazi foreign policy, and the annihilation camps. Dawidowicz portrays Hitler convincingly as obsessed with the “Jewish problem” above all

other considerations. The second portion of the book deals with the reactions of the victims and presents their story most eloquently. The behavior of the Jews in the ghettos, the heroic attempts of Jews to sustain community and cultural life in the midst of hellish conditions, the resistance of the ghettos in the face of the greatest of odds, the horrendous choices faced by individuals, and finally the ability of the victims to maintain their decency are rendered with great skill. The book concentrates mainly on Poland, while the fate of the Jews in other countries is summarized not in the text proper but in a massive appendix. Dawidowicz's omission of the failure of the Allies to intervene and the lack of an assessment of the significance of the Holocaust in human affairs make this book less comprehensive than Bauer's. Still, the book provides a moving human record of the Jewish people during the most trying chapter of their long history.

GILBERT presents his work in the style of history as chronicle, in the manner of earlier classic historians. His book, much longer than the histories of Bauer and Dawidowicz, presents the story of the Holocaust month-by-month. Although short on analysis, the chronicle is overwhelming in its detail, unforgettable in its focus on riveting episodes. The victims are not anonymous; wherever possible Gilbert provides their names to record that real individuals lived, struggled, and died during this period. Gilbert's use of sources is masterful and includes much new material not available in previous histories. One striking example is that of Salmen Lewenthal, a member of the "Sonderkommando" [Special Squads] in Auschwitz. He witnessed the arrival of the transports, the revolt of the inmates in October 1944, and the terrible fate of the children. Lewenthal's manuscript was discovered in 1962 in a jar buried in the ground near Crematorium III, where he worked. He did not survive, but he left an invaluable testimony. Gilbert's narrative history is among the most gripping of the general chronicles of the Holocaust.

The young scholar GOLDHAGEN has written one of the most controversial books about the Holocaust to have appeared to date. He set out to prove that ordinary Germans from all walks of life were able to kill because "ideas about Jews that were pervasive in Germany and had been for decades, induced ordinary Germans to kill . . . systematically and without pity." Moreover, they enjoyed themselves while doing it. The author argues that a specific, "eliminationist" type of antisemitism had developed in modern Germany. He shows, for example, that of 51 antisemitic publications that appeared between 1861 and 1895 in Germany, almost one-half called for the physical elimination of the Jews. Goldhagen would only have strengthened his case had he discussed the Austrian antisemites. Once the Nazis came to power, the killer instinct was liberated, and during the Holocaust ordinary Germans, including police battalions, Hitler youth, and even army musicians, participated in the killing until the last day of the war. Goldhagen seems, however, to have underestimated the role of Hitler and the bureaucracy, the impact of constant indoctrination, and the force of totalitarianism. He overlooks the existence of some democratic and humanistic elements in Germany that refused to succumb to hate. Still, Goldhagen has produced a stimulating and courageous work of scholarship that succeeds in showing how millions of ordinary people

internalized obsessive stereotypes and were able to kill with glee and abandon. Jewish survivors have welcomed this book more warmly than most historians have, as the survivors experienced the actions of these "ordinary Germans" firsthand.

HILBERG produced one of the seminal books of 20th-century scholarship. A work of massive, thorough research, it is a book about a process, about how the European Jews were destroyed. The focus is on those who carried out the Holocaust: "Lest one be misled by the word 'Jews' in the title, this is not a book about the Jews. It is a book about the people who destroyed the Jews. Not much will be read here about the victims. The focus is placed on the perpetrators." Still, Hilberg discusses the precedents that led to the Holocaust. Medieval exclusion of the Jews was followed by expulsion and then in modern times by racist ideas of extermination. As a political scientist, Hilberg argues that once the German Jews lost their civil rights in 1933, their right to live became questionable. This enormous study is divided into the steps of the destruction process starting with Nazi definition of the Jews, then covering expropriation, concentration, mobile mass shootings, deportations and, finally, the vast network of industrialized camps of death. Hilberg illustrates that for the first time in history, the killers overcame all obstacles to genocide, and a vast bureaucracy of death was established. The Holocaust can be a warning, said Hilberg, but it can also be a precedent. Despite the great studies of Jewish spiritual and physical resistance published since 1960, Hilberg held in his 1985 revised edition to his original assertion that Jewish resistance was negligible. His focus was on how 6 million people could be destroyed by a modern state in a short period of time, and this contribution to modern understanding will be of lasting value.

POLIAKOV, a foremost historian of antisemitism, wrote his work in French in 1951 when the word "Holocaust" had not yet been applied to the Jewish catastrophe. This was the first major survey of the history of the Holocaust. Despite later scholarship on resistance, European collaborators, the role of the professions and of ordinary people, and non-Jews who saved Jews, this book was a milestone in the history of Holocaust scholarship. Its findings and conclusions still hold up very well. Poliakov was an observer at the Nuremberg trials and had access to many captured Nazi documents. He traced the development of the Holocaust from the beginnings of Nazi persecution through pillage (which only recently has become an area of widespread interest), to the ghettos, massacres, and death camps. He includes a chapter on resistance. What was most innovative about his work was his attention to the bystanders and the churches and especially to the non-Jewish victims of the Holocaust. Poliakov was one of the rare observers to realize early on that the Holocaust was the most extreme manifestation of genocide in a century of what later came to be called "ethnic cleansing." Even so, he realized that the Holocaust was powered not by self-interest but by fanaticism and irrationality. The killing of the Jews became an end in itself, and that put the Holocaust in a class by itself.

WEISS published his study shortly after Goldhagen's book appeared, and it is the perfect companion work to the Goldhagen thesis. Like Goldhagen, Weiss asserts that antisemitism in Germany was different from that in other countries: it was more pervasive, more philosophical, and wedded to German

nationalism. Unlike Goldhagen, Weiss develops a linear history of a unique antisemitism in both Germany and Austria. He draws from a wide variety of sources—intellectual history, social movements, political parties, and influential elites. He shows how this antisemitism came to advocate extermination and became radicalized in the 20th century. He proves how the Nazis were able to tap into a popular wellspring—the Holocaust required the complicity of tens of thousands of Germans from all walks of life—notwithstanding that after the war many Germans preferred to absolve themselves and their peers from the mass murders they had committed. Unlike Goldhagen, who is a child of survivors, Weiss notes that he is of Austrian Catholic ancestry, an example of the distinguished Christian historians who are producing works on the Holocaust of first importance.

YAHIL, like Bauer, is a distinguished Israeli historian of the Holocaust. Her massive history complements the other major surveys; it explores aspects of the Holocaust that are treated lightly or passed over in other works. For example, Yahil provides in-depth accounts of the organizations of German Jews, their reactions to persecution, and their specific problems of prewar emigration. In the course of her account of the Holocaust proper, Yahil provides close-grained accounts of lesser-known ghettos in the Radom district and eastern Upper Silesia. Exploration of such intriguing topics as “The Orthodox Jew and the Struggle for Survival,” “Efforts to Get People Released” from the labor and extermination camps, the behavior of neutral Switzerland and Spain, and “Escape Routes to the Far East” all provide extremely valuable insights on the Holocaust that are lacking in other works. Although this sometimes results in choppy organization, the book is ideal territory for browsing and for filling gaps in both regional and topical coverage.

Because the extremity of Nazi atrocity struck many as incompatible with the aesthetic concerns of literature, and the need to assert the facts of the Nazi genocide seemed at odds with the license of the literary imagination, Holocaust literature was not taken seriously by scholars for several decades after World War II. Among the first book-length studies of Holocaust literature, LANGER (1975) opened the field in important ways to literary analysis. Based on an exploration of literary techniques developed in individual literary works, the book establishes an aesthetics of atrocity and argues for the role of the literary imagination in conveying difficult aspects of Nazi horror. Like works that follow it, the book argues against political philosopher Theodor W. Adorno's assertion of the incompatibility of the Holocaust and the poetic imagination.

While acknowledging a discomfort with applying the tools of literary criticism to works depicting massive suffering and

death, ROSENFELD ultimately sees critical methodologies as vital in understanding the complicated import of significant writing by Holocaust survivors. Taking as its central theme the double death inflicted by the Nazis during the Holocaust—the annihilation of European Jewry and the destruction of dearly held ideas about humanity and inherited traditions of meaning—the study explores the perspectives and literary strategies of Holocaust literature. Probing the implications of that double destruction for literature and culture, the book argues that one must think through criteria for distinguishing good representations from bad or exploitative ones, criteria that open on aesthetic as well as moral categories.

Similarly asserting that one needs to unravel the complexities of literary style and structure in order to understand the important ideas that underlie works of Holocaust literature, BOSMAJIAN explores the connections between history, myth, atrocity, and language in postwar German literature. The study focuses on the attempts to struggle against the legacy of the Nazi era and the particular challenges it poses for the German language and literary tradition. The book argues for the predominance of irony in Holocaust literature.

Asserting the place of imaginative literature about the Holocaust as a form of testimony, EZRAHI surveys and categorizes a broad spectrum of Holocaust writing according to mode of presentation, placing each work along a continuum of “realism” ranging from diaries and memoirs, to documentary fiction, to mythical representation. Underlying each mode, the analysis discerns an ideological or ethical interpretation of these historical events and the way they must be remembered.

For HALPERIN, in a less literary and more straightforward reading of these works, Holocaust writing serves primarily as a moral vehicle, a means by which authors instruct readers in the moral implications of the Holocaust. Examining diaries, memoirs, and fiction by survivors, the book evaluates them according to ethical rather than literary criteria, reading the works as straightforward reflections on the history of the Nazi genocide and the lessons to be gleaned from it.

In a collection of essays primarily by creative writers and literary scholars, LANG questions the role of imaginative writing in Holocaust representations. From different perspectives, the essays address aesthetic and ethical limitations of Holocaust writing of all kinds—literary, historical, philosophical. They consider as well the way that evil is conceptualized in writing about the Holocaust.

The essays in FRIEDLÄNDER, too, consider the difficulties raised by the representation of the Holocaust across disciplines. Historians, historiographers, philosophers, and literary scholars probe issues such as historical relativism and ideological interpretation with relation to the Holocaust and the problems of aesthetic representation of the Holocaust, seeking the ethical limits and particularly the appropriateness and usefulness of postmodernism in representing the events of the Nazi genocide. Several of the essays focus specifically on literature, addressing such topics as the Holocaust in Israeli literature and the poetry of Paul Celan, and the volume as a whole tackles issues that bear on the understanding of the complexities of Holocaust literature, such as the shaping of cultural memory and the appropriation and misappropriation of the Holocaust.

Several studies examine Holocaust literature not only as testimony but also as a form of reflection on some of the complicated issues that arise in Holocaust studies. Using the theme of muteness as a central term of analysis, HOROWITZ traces the tension between the said and the unsaid in Holocaust fiction. Reading a wide range of narratives, the book demonstrates that Holocaust fiction uses different forms of muteness to address and help resolve the central issues that arise in Holocaust studies, such as the difficulty in adequately representing the Nazi genocide, the dangers of Holocaust fiction, and the limitations of historical narrative. When embedded in a literary work, muteness can paradoxically express the confrontation with the void—meaninglessness, the shattering of the self, death. The book presents both a theoretical framework for reading Holocaust fiction and a series of close readings of individual works.

Rather than seeing Holocaust literature as a vehicle for history, PATTERSON focuses on literature’s ability to convey truths that are not necessarily factual. Thus, the book argues, literature is the medium best suited to conveying the dehumanization and confrontation with meaninglessness experienced by victims of the Nazi genocide. Using a Bakhtinian analysis and attentive to the theological implications of the Holocaust, the book focuses on the Holocaust novel as a dialogic encounter.

Similarly focusing on ethical issues, BRENNER explores the diaries of four Western European women who perished during the Nazi years: Edith Stein, Simone Weil, Anne Frank, and Etty Hillesum. She argues that each of these women saw the Holocaust as a threat not only to her existence but to the liberal, universal values that gave moral order to her world. These women were assimilated, secularized Jews or Christians who had converted (or whose parents had converted) from Judaism prior to the Holocaust. The book views the women’s very act of writing about this as a form of resistance to Nazism.

Rather than looking at Holocaust literature exclusively and across cultures, MINTZ examines imaginative responses to the Nazi genocide in Hebrew literature in the context of responses to catastrophe in Hebrew literature and in the Jewish tradition. Looking at catastrophe as an event defined not only by pain and death but also as one that engenders a crisis of continuity for the culture, this study explores the way Hebrew literature struggles with such issues as the Jewish community’s sense of itself, its role in history, its connection to God and the covenant—in short, the paradigms of meaning by which it understands itself.

Working in a similar vein, ROSKIES discusses Holocaust writing by victims and survivors in the context of Jewish responses to catastrophe over time. Arguing against seeing the Holocaust as an apocalyptic event without analogy, Roskies examines ghetto diaries, as well as poetry and art by survivors, in light of traditional Jewish liturgical expressions of lamentation and the acknowledgment of divine transcendence. Seeing precedents in these religious writings as well as in the more secular body of writing that depicts violent pogroms, the book asserts an inner continuity as the Jewish tradition absorbs, mourns, and transcends the Nazi genocide.

In HARTMAN, essays by creative writers, historians, literary critics, and art historians consider the different ways in which the Nazi genocide has been remembered and interpreted and contemplate the shape memory will take as more time passes. Examining material as diverse as ghetto diaries, survivor writing and oral testimony, monuments, painting, film, and concentration camp architecture, the essays examine the complications of remembering and transmitting a history of atrocity and trauma.

YOUNG argues that the past becomes known and remembered through its various representations in historical and literary narratives, poetry, written and oral recollections, and official memorials. Examining a wide range of material, the book explores the kinds of understanding of the past implicated in different forms of historical representation, collective and personal memory, and imaginative reflections.

LANGER (1982) argues that the different ways in which survivors recollect and narrate the memories of their experiences during the Nazi genocide not only reveal what happened but also frequently reflect a need to reaffirm values shaken by the Holocaust. Analyzing fiction by Tadeusz Borowski, Elie Wiesel, and others, memoirs by Primo Levi, poetry by Gertrud Kolmar and Nelly Sachs, books by Bruno Bettelheim and Viktor Frankl, and other writing, the study traces the way psychology, language, art, and literature have confronted the difficult issues raised by the Holocaust. LANGER (1995) continues to explore this theme, focusing on the reluctance of much Holocaust literature and film to see the Nazi genocide for what it was. Instead, the book argues, these works tend to depict the Holocaust in ways that reaffirm treasured ideals—such as the triumph of the human spirit over evil, the innate goodness of people, and the ability of art to transcend even the harshest reality.

Several works focus on Holocaust writing by people who did not themselves experience Nazi atrocity. Carrying further the idea that imaginative literature can serve as a form of Holocaust testimony, KREMER argues that those who are neither survivors nor eyewitnesses may bear witness through the imagination. Thus, U.S. writers who were not personally threatened by the European Jewish catastrophe have, through a combination of research, empathy, and moral engagement, created a body of literature that represents the Nazi genocide and struggles with its implications. The volume offers close readings and analyses of ten Jewish American novelists.

Focusing exclusively on writing and art by the post-Holocaust generation in Israel, the United States, and elsewhere, SICHER explores issues of collective memory and trauma as Holocaust representation passes from the domain of survivors and eyewitnesses into history and cultural memory. The multidisciplinary collection of essays by scholars in literature, film, history, psychology, American studies, and cultural studies examines the uses and interpretations of the Holocaust half a century later.

The essays collected in FLANZBAUM analyze the central position of the Nazi genocide in the American imagination, and they interpret the proliferation of Holocaust imagery in high and popular culture. Written by scholars in a variety of disciplines, the essays examine the Americanization of the

Holocaust by looking at contemporary poetry, fiction, theater, film and television, museums, memorials, and visual arts.

If Elie Wiesel is correct that the Holocaust, or Shoah, transcends history and that the living are neither capable nor worthy of recovering its mystery, then responses to the Shoah say more about the fears and concerns of the respondents than about the event itself. Religious and theological response to the Shoah is an excruciating experience, but it is nevertheless necessary. Wiesel himself relates witness stories promoting Jewish survival as an unshakable dogma after Auschwitz. The theocentric religious philosophies of Emil

Fackenheim, Eliezer Berkovits, and Irving Greenberg talk respectively of an obligatory 614th commandment (no posthumous victory for Hitler), encounter theology, and voluntary covenant, which together represent a mending of the Jewish world. Richard L. Rubenstein demands a letting go of traditional Judaism's doctrine of God for a new symbol of God's reality conducive to the lessons learned from Auschwitz. In contrast, Irving J. Rosenbaum and Pesach Schindler show how rabbinic responsa and Hasidism maintain classical Orthodox belief rooted in spontaneous religious experience in dealing with the Holocaust. Franklin H. Littell and Rosemary Radford Ruether speak of the iniquity of the Shoah as the indelible stain on the Christian world made near-permanent by the nearly 2,000 years of a hermeneutics of hate. Simon Wiesenthal and Zev Garber raise issues of identity and ethics.

The position taken by GARBER, BERGER, and LIBOWITZ is not a historical approach alone, since that may hinder student comprehension of the event. They present a wide range of literary, pedagogical, and theological concerns and approaches that attempt to pinpoint ways in which it is possible to remain human and seek meaning in an age of technologically administered mass death.

WIESEL's writings have made him the messenger of the Jewish Holocaust victims and the prophetic muse of the post-Holocaust age. This fact may explain why he composed his first published memoir, *Night*, in Yiddish, the *lingua franca* of murdered European Jewry, rather than in French, the language in which he usually works. Wiesel writes masterfully, and in *Night* he describes the death camp horror that turns a young Jewish boy into a witness to the death of his family, his innocence, and his God.

Never shall I forget that night, the first night in camp which has turned my life into one long night. . . . Never shall I forget the little faces of the children, whose bodies I saw turned into wreaths of smoke beneath a silent blue sky. Never shall I forget those flames which consumed my faith forever. Never shall I forget that nocturnal silence which deprived me, for all eternity, of the desire to live. Never shall I forget those moments which murdered my God and my soul and turned my dreams to dust. Never shall I forget these things, even if I am condemned to live as long as God Himself. Never.

Wiesel's manifesto does not diminish the paradox of the Shoah but serves to make the issue more troubling, and therefore also more full of hope. Wiesel has strongly advocated that the specific lessons of the Shoah should never be lost. His eyewitness approach to the event, which is rooted in the redemptive quality of memory, carries the message that one can survive with morality, a message that appeals to all who have suffered or will suffer.

FACKENHEIM attempts to show how the Jew gains authenticity and respectability after Auschwitz. He explores the options in Jewish thought caused by modernity and reflected in the writings of Baruch Spinoza and Franz Rosenzweig. According to him, the Holocaust experience makes folly both of Spinoza's absolute of reason and of Rosenzweig's "anti-

speculative" existentialist thought. He posits that Jewish survival cannot be seen in physical terms nor in ahistorical thinking. Rather, the survival of the Jews is learned from the everyday acts of prisoners in the death camps nurtured and sanctified by the way of Torah. Thus, the standard for millions of Jews trapped in Hitler's inferno was neither nihilism nor despair nor suicide but the practice of Judaism to the extent possible under such horrendous conditions. This behavior, identified by Fackenheim as *tikkun 'olam* ("mending the world"), points the way to healing the rupture of the Jewish people after the Shoah. In sum, Jews must survive as Jews—morally, ethically, and ritually—and under no circumstances must a posthumous victory be granted to Hitler (Fackenheim's "614th Commandment").

BERKOVITS understands well the limits of theology, what it can and cannot do in explaining the effect of the worst catastrophe in Jewish history on the faith of Israel. The two principal approaches, complete submission to the Shoah as a manifestation of divine will or a total rejection of beneficent providence, are both acceptable within reason. In his radical Orthodoxy, the basics of Judaism are derived from an encounter between God and Israel begun at Sinai and renewed during centuries of prophetic leadership and later rabbinic thought. God is a creator God and the world of his creation is purposefully designed as less than perfect, for if it were perfect there would be no need of history or of the finite realm. God is not the elusive "absolute" of philosophers, but, as in the biblical-rabbinic imagery, he is involved in history and cares for his creation. He shows his loving concern through ethical-religious channels. Man, made in the image of God, properly lives that image only by performing Godlike actions of mercy, justice, and righteousness. God purposefully hides his face (*hester panim*) so that humanity can exercise freedom of ethical choice, thereby becoming a partner—albeit subordinate—with him in bringing about a universal era of peace and redemption. Shoah is a dramatization of faith shattered when humanity fails and *hester panim* prevails. Berkovits acknowledges this and his encounter theology treats all who died in the European hell, believers and non-believers alike, as *kedoshim* (saints, martyrs). From this recognition comes the breakthrough of faith after the Shoah.

GREENBERG holds that in view of what the Shoah presents, the murder of millions coupled with a horrifically hidden God, the role of Israel's covenant and the nature of Israel's election must be revised, reevaluated, and renegotiated. He is willing to acknowledge that the Imposed Covenant of Sinai is no longer valid after Auschwitz. It cannot be otherwise; it has failed. Centuries of persecution have chipped away at its words, and the flames of the Shoah have obliterated its authoritative voice that "descended in fire" (Exodus 19:18); it is "the shattered paradigm." Yet, in its place, a new covenant has arisen by virtue of the actions of survivors and other Jews who chose not to assimilate, die, or forget but to survive as a people. Jewish survival by any means necessary, including "secular" activity, is the central tenet of the new Voluntary Covenant; the rest of the Jewish way is commentary. Greenberg is not willing to sacrifice the unity of Judaism any more than the unity of God. By propounding a shift in the image of the covenant from imposed to voluntary, he is responding

to today's religionless Jew, who lives Judaism either by being, or by being in the process of becoming, but not necessarily by doing the Torah of Sinai. Covenant living in the image of God, not logic or straight belief, is Greenberg's new theology ("holy secularity") for shaping Jewish values after the Shoah.

RUBENSTEIN's enlarged and updated version of *After Auschwitz*, published 26 years after the first edition appeared, follows the form but not necessarily the content of his seminal work, which many agree "invented Holocaust theology." The kaleidoscope of information therein includes: (1) rethinking the death of a theology that teaches God chose Israel, sustained her in history, and abandoned her in Auschwitz; (2) reinterpreting belief and tradition for an increasingly post-traditional Judaism freed from the mass of fundamental legalism and ethnic parochialism; and (3) more generally, reflecting on noteworthy current events at the crossroads of three continents in terms of Holy War and ethnic cleansing.

Rubenstein questions unabashedly the principle of divine activity in history. He asks why the Guardian of Israel did not impede the senseless slaughter of millions of Jews, including 1.5 million children. Likewise shocking and tragic to him is the suggestion that Nazi atrocity is a just compensation for collective Jewish sins or a wake-up call against a far worse collective punishment and devastation. He opines that the evil that the Nazis unleashed against the Jewish people, coupled with a seemingly nonintervening deity, requires as a basic minimum that Jews give up any notion that they are the Chosen People of God. Rubenstein's invitation to seek God beyond the God of theism forces us to confront the results of belief in the biblical God of merit and promise, reward and punishment. He proposes a new framework for Shoah theology, and he begins with a frank acknowledgment of a basic insufficiency of Jewish doctrine to explain Jewish tragedy. The eclipse of trust and the absence of convincing theistic answers contribute to Rubenstein's modus operandi. He replaces the biblical-rabbinic Lord of History with the kabbalistic doctrine of Holy Nothingness. That is to say, the essence of God as known to God is neither material nor personal. "To speak, admittedly in inadequate language, of God as the "Nothingness" is not to suggest that God is a void; on the contrary, the Holy Nothingness is a *plenum* so rich that all existence derives therefrom. God as the "Nothing" is not absence of being, but a superfluity of being. . . . The infinite God is not a thing; the infinite God is nothing."

Contra his critics, Rubenstein never wrote of the "death of God" but only "the time of the death of God," meaning, "the absence of God in contemporary culture." Nor does he maintain that people exist by their own resources (wit and animalistic instinct to survive as a group or race). Rather, he writes that life is more than narrow individualism and group chauvinism when dealing with ethical and moral issues. Thus, psychoanalysis, sociology, and political theory—rather than traditional categories of biblical and rabbinic belief—can best explicate Judaism and the Jewish people after Auschwitz.

ROSENBAUM draws on the responsa of the rabbis from the Shoah, particularly the multivolume *She'elot u-Teshuvot mi-Ma'amakim* by Rabbi Ephraim Oshry of Kovno, and he discusses religious problems caused by the Shoah for the whole gamut of Jewish law: domestic relations, financial affairs, observance of kashrut, sabbath, festivals, and other religious

duties, and life and death issues. The disturbing ethical and moral question of who shall live and who shall die and related dilemmas are eclectically chosen from this literature and commented upon. Examples of human courage and Jewish solidarity, generally unknown to the nonspecialist, are lucidly presented in this volume.

Though others have written on oral and literary responses to Jewish martyrdom and suffering or have authored responsa on the Shoah, SCHINDLER seeks out the hasidic response: how aspects of classic hasidic thought imbued with Kabbalah permeated the belief and behavior of the hasidim of Belz, Bratslav, Gur, Lubavitch, and other dynasties and prepared them to face life and death during the European *hurban* ("destruction"). Each chapter examines the effects of a specific problem resulting from the kabbalistic-hasidic *Urglaube* regarding the symbiotic interaction of God and Man, in which the actions of *etaruta deletata* (Lower World) have an impact on *etaruta dele'ela* (Upper World). The problems are: evil and suffering; punishment and exile, redeemed by chastisement and redemption; *Kiddush ha-Shem* and *Kiddush ha-Hayyim* (sanctification of God's name in death and life); cofraternal roles of zaddik and hasid, leader and follower; and the realized tension between the activist and quietist schools of hasidic response to the trauma of *di milhomeh yohren* ("the war years"). Schindler explores the full range of hasidic *hutzpah* and *'ahavat Yisrael* (respectively, courage bordering on the reckless and love of the Jewish people), and he shows how hasidic faith and rabbinic halakhah fashioned the single-mindedness of most hasidim, who defiantly opposed Nazi evil decrees, but, in the end, accepted joyously the divine decree.

LITTELL's title suggests that Christians have made much of the cross and crucifixion but it is the Jews who have lived it. Whether or not there is a direct link between 2,000 years of Christian supersessionism and the Shoah, Christian culpability in the destruction of European Jewry cannot be denied. Littell, dean of Christian scholars of the Shoah in the United States, was among the first to question the credibility of Christianity in the wake of the Shoah. He asks how Christianity can claim moral credibility, let alone superiority, if in the heart of Christendom thousands of baptized Christians and other leaders consented to the mass murder of Jews contrary to doctrinal statement and confession of faith. He calls on Christians to unload their theological antisemitism by rejecting age-old *Contra Judaeos* preaching and teaching. Death begets rebirth, and implicit in the Jewish people's return to history (resurrection) after the Shoah (crucifixion) is the humbling of Christianity. "If we who profess Christ, do not when push comes to shove care whether Jews live or die . . . our 'dialogue' is but foolishness, our utterances but a tickling of jaded ears." Littell concludes that only full fraternity of the Christian Church with the Jewish people, inaugurated by confession of Shoah guilt, can begin the process of *teshuvah* ("return") to an old-new common tradition of remembrance.

RUETHER's work is considered among the most radical in exposing the anti-Jewish tendencies in the New Testament, which became the basis of hostile teachings among the Church Fathers and in later ecclesiastical education. She calls antisemitism "the left hand of Christology" and maintains that Christian "messianic absolutism . . . generated Christian

totalitarianism and imperialism,” which is the bedrock of the *Adversus Judaeos* tradition. By historicizing the eschatological and by spiritualizing the historical, the New Testament writers interpret the positive prophetic texts as fulfilled in Jesus and, by extension, the Church as the “new Israel,” and the negative prophetic texts as fulfilled in the “old Israel.” This recasting of sacred history is possible only if Jesus is perceived as the absolute and only way to God and salvation. Ruether argues that this is historically flawed and religiously absurd. Further, this saga of Christian triumphalism justifies for many Christians their active participation in the Shoah. Hitler (baptized a Roman Catholic and never excommunicated by the Church), for example, when asked by a group of Methodist deaconesses in 1933, “Herr Reichskanzler, from where do you get the courage to undertake the great changes in the whole Reich?” responded with a New Testament in hand, “From God’s word.” The way out of this morally and theologically alarming situation, Ruether suggests, is (1) to rethink the exclusive Christ of faith in full view of the Jewish Jesus of history, and (2) to see Christian sancta as parallel to, not above, the Jewish experience. Ruether’s proposals constitute an important step forward in amending the tradition of anti-Judaism in Christian theology that contributed to the Shoah.

WIESENTHAL tells of a Nazi, a participant in the slaughter of innocents, terrified of dying with the burden of his guilt. He asks forgiveness from a Jewish concentration camp survivor, one who knows well the meaning of the Jewish moral dilemma when victim-survivor shakes hands and makes peace with the enslaver-destroyer. The Jew listens with horror and feeling to the German’s deathbed plea, and walks quietly out of his presence without giving absolution. The author’s moral dilemma now becomes the reader’s as the latter is asked to confront the question, “What would I have done?” A collection of 32 responses from Jews and non-Jews alike then follows, providing the reader with a situation that must be entered, analyzed, and internalized.

GARBER provides information about the challenge to Jewish and Christian self-identity and theology presented by the Shoah. He summarizes his philosophy about teaching and learning from the Shoah as “Sinai, not cyanide.” In other words, Garber maintains that a moral and ethical standard must prevail over a philosophy of survival at any price. He believes that passionate objectivity—not a controlled and distant objectivity—is the only way to avoid becoming a mere teller of facts. The Shoah requires passion and a broad, philosophical approach—“historiosophy”—so as not to diminish the event.

Perhaps because Nazi Germany made pervasive and concerted use of the film industry as a tool of ideological persuasion, or perhaps because the Allied forces liberating the concentration camps at the war’s end could not believe what they saw, cinema has been an important vehicle for representing the Holocaust since the mid-1940s. Included under the rubric of Holocaust films are documentaries (which may rely upon original Nazi or Allied film footage and photographs, retrospective testimony, or journeys back to the site of atrocity), docudramas, feature films, and experimental cinema. Critical consideration of film as a serious genre for reflection on the Nazi past, the implications of that past, and the cultural lenses through which it is viewed, took on greater importance at the end of the 20th century.

A comprehensive overview of films dealing with the Holocaust, INSDORF covers a wide range of genres—including documentary, docudrama, and feature films—in a variety of languages. Organizing the films according to genre, subgenre (such as the personal documentary, the montage, or black humor), and theme (such as the child, identity, or German guilt), the book covers more than 100 titles produced from the 1940s through the 1980s. In addition to summarizing the plot of each film, Insdorf articulates what she considers as its central thesis, compares it to other films in its category, and offers some details related to its production.

Focusing solely on film produced in the United States, DONESON examines fewer films than Insdorf but does so in greater depth. The book not only explores the ways in which U.S. cinema and television attempt to represent the Holocaust but also investigates the U.S. slant of these representations. The book places each film in the context of the cultural moment in which it was produced, discussing, for example, the changing stature and concerns of the U.S. Jewish community and the development of “Americanized” meanings for the Holocaust.

AVISAR similarly analyzes the motivations and interpretations implicit in cinematic representations of the Holocaust. Arguing that film can contribute meaningfully to discourse on the Nazi genocide by both representing the Holocaust and

reflecting upon its meaning, Avisar arranges Holocaust film first by genre—documentary and narrative (feature) film—then by nation, with a chapter each on Czech and U.S. cinema: the former is interpreted as complex if sometimes flawed, while the latter is regarded as a failed enterprise, both morally and aesthetically.

Like Doneson, COLOMBAT focuses on the representation of the Holocaust in the cinema of a single nation—in this case, France. The first third of the book analyzes almost five decades of French films in light of French antisemitism during and after World War II and evolving attitudes toward complicated issues of French complicity and resistance, with respect to political issues current during film production. The last two-thirds of the study offer close analyses of particular films (including *Night and Fog*, *Mr. Klein*, and *Weapons of the Spirit*) and the work of Marcel Ophüls and Louis Malle.

SANTNER does not focus on representations of the victims of the Nazi genocide; instead he studies how postwar German cinema performs and depicts the *Trauerarbeit*, or the psychological expression in the German national psyche of the legacy of Nazism and the Holocaust. By looking closely at the works of two filmmakers, Edgar Reitz (*Heimat*) and Hans Jürgen Syberberg (*Our Hitler*), the book explores the successes and failures of individual and national attempts to integrate the memory of loss, destruction, and disorientation.

In an anthology about what may be, arguably, the most influential representation of the Holocaust in a feature film, LOSHITZKY provides multiple ways to consider Steven Spielberg's *Schindler's List*. Written by scholars in fields as diverse as history, literature, cultural studies, film studies, and communication, the essays examine the reception of the film in the United States, Germany, France, and Israel, evaluating its success as a representation of the Holocaust. Several of the essays discuss its use of antisemitic imagery, while others explore the place of popular culture in interpreting and transmitting collective memory.

Homiletics

Bettan, Israel, *Studies in Jewish Preaching: Middle Ages*, Cincinnati, Ohio: Hebrew Union College Press, 1939; London: University Press of America, 1988

Friedenberg, Robert V., *"Hear O Israel": The History of American Jewish Preaching, 1654–1970* (Studies in Rhetoric and Communication), Tuscaloosa: University of Alabama Press, 1989

Ruderman, David (editor), *Preachers of the Italian Ghetto*, Berkeley: University of California Press, 1992

Saperstein, Marc, *"Your Voice Like a Ram's Horn": Themes and Texts in Traditional Jewish Preaching* (Monographs of the Hebrew Union College, no. 18), Cincinnati, Ohio: Hebrew Union College Press, 1996

The word *homiletics* is generally understood to refer to the art of preaching. In the present context, it is used in a broader sense to cover the history of Jewish preaching, entailing the sermons delivered by Jews, usually in the context of public worship, and the texts (printed books or manuscripts) in which a record of such oral communication was preserved. There is evidence of an ongoing tradition of Jewish preaching from the rabbinic period through the early Middle Ages. However, the earliest extant texts of actual Jewish sermons written by identifiable authors date from the 13th century.

BETTAN, a professor of homiletics at the Hebrew Union College in Cincinnati, Ohio, was the first to publish critical investigation of medieval and early modern Jewish preachers in English. His volume of studies is composed of articles published in the *Hebrew Union College Annual* during the 1930s, supplemented by an introductory essay on "Early Preaching in the Synagogue" and a brief conclusion. These studies focus on the printed oeuvre of seven European preachers, from Jacob Anatoli in the 13th century through Jonathan Eybeschuetz in the 18th. Most of the chapters follow a common format: an introduction, a biographical and bibliographical section, a treatment of the preacher's biblical exegesis and other homiletic techniques, and a topically organized reconstruction of the preacher's religious worldview. For this purpose, Bettan weaves together passages from all the sermons written by the preacher. He provides sound introductions to these seven figures, although he provides little clear sense of what any one actual sermon was like.

In a sense, FRIEDENBERG's book continues Bettan's project, taking up in the 18th century where the earlier book left off and shifting the purview from Europe to North America. The author reveals an interest in rhetorical technique and in the relationship of the preachers and their sermons to the American historical context. The first chapter, on colonial and Revolutionary America, highlights the Sephardi clergyman Gershon Mendes Seixas; the second, on Jacksonian America, treats the German immigrant Isaac Leeser; the third, on the Civil War period, analyzes a sermon by the Swedish-born New York rabbi Morris Raphall that refutes the abolitionist claim that slavery is condemned as a sin in sacred scripture. An extensive discussion of the preaching of Isaac Mayer Wise, founder of the institutions of American Reform Judaism, shows the influence on Wise of Hugh Blair's rhetorical theory. The author then reviews the preaching of the Zionist rabbis Stephen S. Wise and Abba Hillel Silver. The final chapter discusses sermons of five "elder statesmen," representing Orthodox, Conservative, and Reform Judaism in the post-World War II generation. The many sermons by American preachers published in Yiddish or Hebrew are not addressed. An epilogue discusses homiletic training in American rabbinical seminaries in the 1980s.

RUDERMAN has edited, introduced, and contributed to a collection of essays on the Italian Jewish community, primarily in the late 16th and early 17th centuries. Marc Saperstein provides an overview of the topic, raising such issues as the paucity of texts preserved and the absence of bibliographic studies, the relationship between a native Italian homiletic tradition and the impact of the Spanish émigrés, the influence of Christian homiletics, the training of Jewish preachers, and the writing and printing of sermon collections (including the shift from Hebrew to vernacular texts). Moshe Idel treats the Mantuan rabbi Judah Moscato; his analysis of passages in two of Moscato's sermons points to the significant influence of Hermetic views and thus the powerful impact of Renaissance culture on Moscato's thought. Robert Bonfil discusses sermons by Judah del Bene, recorded by an educated listener, to illustrate the role of preaching as a mode of mediating between the elite culture of the intellectual and the popular culture of the average congregant. Ruderman's own contribution documents the use of scientific knowledge and medical analogies in the sermons of Azariah Figo. Joanna Weinberg analyzes the sermons of the Venetian polymath Leone Modena and the possible influence of a homiletic work by the Italian bishop Panigarola. Elliott Horowitz analyzes the emergence of the eulogy as a major genre of Italian preaching beginning in the 16th century. A common theme in many of these studies is the effect of Renaissance culture and the role of kabbalistic and scientific doctrines in these sermons.

SAPERSTEIN (1989) was the first comprehensive study of medieval and early modern Jewish homiletics published in English since Bettan. A substantial introduction discusses the nature of the source materials, including the problematic relationship between the oral sermons and the texts in which they were preserved, the settings and occasions for Jewish preaching, the interaction between preachers and their congregations (especially when sermons of rebuke were being delivered), the ways in which preachers organized and structured their material, and the value of sermons as evidence for Jewish history and as a genre of Jewish literature. The individual sermon, rather than the collection gathered over many years, is the focal point. Examples of such sermons by 16 preachers over six centuries are translated and analyzed, all for the first time in English, four of them from manuscript. The book concludes with a collection of briefer sources pertaining to the history and theory of Jewish preaching.

SAPERSTEIN (1996) contains a number of thematic studies of traditional Jewish preaching from the Middle Ages through the 18th century. These themes include homiletic motifs in sermons for the Days of Awe and Passover; exegesis of biblical and rabbinic texts and the popularization of philosophical material by the preachers; Jewish-Christian relations as revealed in the preaching of both sides; sermons of rebuke as a reflection of points of tension in Jewish society; and occasional sermons in times of national crisis or celebration as evidence for an incipient sense of patriotism. The book also contains a number of homiletic texts published for the first time, including the earliest known Jewish instructions on the art of preaching and several significant examples of the eulogy genre.

The intersection of religion and sexuality is a small but growing field of investigation. While there have been many studies of the legal prohibitions against male homosexuality found in ancient Jewish texts, female homoeroticism in ancient periods has been ignored by commentators. There are few works considering Jewish themes from a gay or lesbian perspective, and the genre of the coming-out story, chronicling the personal struggles and creative experiences of individuals trying to reconcile their homosexual and Jewish identities, has been the most popular vehicle for Jewish gay and lesbian self-expression.

In a thorough and clear discussion of all relevant references in Jewish legal literature, LAMM presents a standard Orthodox approach to the issues of Judaism and homosexuality. Like a number of other authors writing from an Orthodox or Conservative perspective, he contends that contemporary Jews should condemn homosexuality as something that defies Jewish law and nature.

MATT is the first Conservative rabbi to break from the tradition that condemns homosexuality as a sin, crime, or sickness. Arguing that homosexuality is not a choice, he supports the integration of gay men and lesbians into mainstream Jewish religious life, as congregants, rabbis, and teachers. Matt also reasons that if God fashions people with same-sex desires, then these desires must be a natural part of the order of creation. His writing has influenced many Jewish communities to accept gays and lesbians, while also inspiring liberal rabbinical seminaries to accept them for training.

SHOKEID, an Israeli anthropologist, offers a sympathetic ethnographic account of several years that he spent attending Congregation Beit Simchat Torah, a gay and lesbian synagogue in New York City. Although the congregation includes both men and women, the author neglects gender issues, focusing primarily on the men who started the congregation, and exploring how they reconcile their Jewish and gay identities through religious activities of study and prayer.

BECK provides the first book that concentrates entirely on the stories of Jewish lesbians coming to terms with their identities. Most of the contributors to this anthology came out as lesbians during the second wave of the feminist movement in the United States in the 1970s. Discovering that lesbian feminism is not always sympathetic to religion in general and to Jewishness in particular, the authors began reclaiming their connection to their Jewish roots. Using personal narratives, poetry, and fictional accounts, the contributors to this volume break new ground by making lesbians visible in the Jewish community for the first time in history. Several ultraorthodox groups have responded by excommunicating the editor and contributors and burning copies of their book.

BALKA and ROSE offer the first collection including the perspectives of both gay men and lesbians. This series of essays contains coming-out stories; academic studies on gay men and lesbians in different historical periods; discussions of contemporary issues of gay and lesbian synagogues; and analyses of homosexuals' involvement in the world of U.S. Judaism. The authors present a powerful and influential set of arguments for the inclusion and visibility of gay men and lesbians in the Jewish community, as well as practical suggestions for involving homosexuals in synagogue life. The volume also incorporates the views of feminists and Jews with disabilities. A poignant essay by a closeted lesbian rabbi illuminates issues of discrimination in the Jewish community, while an account of a gay commitment ceremony raises the issue of gay marriage.

RAPHAEL's series of personal essays is the only available full-length treatment of the conflicts and connections between gay and Jewish identities. As a child of Holocaust survivors, Raphael is particularly effective when discussing contemporary Jewish and gay issues related to that trauma. He also examines the difficulty of writing fiction and prose with gay and Jewish themes and reviews the reception that his work receives from particular audiences.

MOORE uses interviews from a number of Israeli lesbians to reveal the complexities of their position in Israeli society. Although the interviews are limited to speakers of English, they create a broad and complicated picture of Israeli lesbian life and the changes that have been taking place as a public gay rights movement has emerged.

ALPERT's book elaborates on neglected Jewish texts about female homoeroticism and uses midrashic techniques to suggest ancient and modern texts that might be relevant to lesbian Jewish life. She evaluates issues that concern religious lesbians, such as how to celebrate holidays and mark life-cycle events in a Jewish context. The book also examines the importance of Jewish lesbian fiction for creating positive images for Jewish lesbians.

The fundamental tension in the slender and inadequate literature on Judaism and human rights involves the fervent belief that Jews as a minority around the world are entitled to human rights, while as a majority in the Jewish state they are entitled, out of regard for traditional religious sensibilities, to limit the rights of minorities, whether Muslim, Christian, or Jewish. Key to following the fundamental problems in most literature on Judaism and human rights, therefore, is the paradox of secular Jews using religious texts abroad to enhance arguments for human rights and religious Jews using secular politics at home in Israel to limit them. In particular, the literature on Judaism and human rights regularly tries to show the Jewish origins of democratic principles, while Israel to this day lacks a constitution because of the objections of religious Jews whose hostility toward democratic principles can be chronicled throughout history. For the most part, it seems that Israeli writers treat this subject, especially with regard to problems in Israel, with much more honesty and sophistication than writers in the diaspora, who tend to be apologetic or in denial.

COHN's judicial career has been brilliant, but when he attempts to write on Judaism and human rights in this and other books, he falls into the same trap as many others. This book is apologetic and polemical at the same time, trying to both demonstrate pride in the glorious religious tradition of the Jews and to show that some of the major desiderata on human rights can be filled from within the tradition. Cohn attempts to create an imaginary case for human rights in Judaism based on the assumption that biblical and talmudic texts were normative and not countered by any subsequent legal developments or interpretive traditions. Thus, he presents a picture unconnected with history, tradition, or reality. Unfortunately, Cohn quotes out of context and without citation, and he suggests that his readers find the sources using dictionaries and concordances, leaving them at the mercy of his impressionistic and selective renderings. Indeed, he emphatically states that he is not an apologist, noting that aspects of the tradition are discriminatory, untenable, and archaic, but he assures readers that in their day these aspects of the tradition were progressive. Cohn tries to convince his readers that the Torah serves as a constitution that guarantees human rights, but later in the book he celebrates the uncompromising nature of ancient Judaism against the threats of other religions, noting bans on doing business with idolaters. Cohn apparently sees no contradiction in championing Torah Judaism as a guarantor of human rights and its allowing the murderer of a non-Jew to

receive his punishment from God rather than in a court of law. The argument often deals entirely with generalities and not specific cases. Cohn's Jewish information is often deficient, to the detriment of his argument. For example, he attributes only to God the right to kill extra-judicially or without trial, ignoring long-standing valorization of dispatching the *moser* (informant), Amalek, and the seven nations of Canaan. Basing equality of the sexes in Judaism on God's having created men and women in his image is either delusional or wishful thinking in light of traditional Judaism. In his zealous enthusiasm to demonstrate the fact that discrimination against women in Judaism is to their benefit, Cohn asserts that a husband cannot impose work on his wife, contradicting Maimonides' instructions that a woman who refuses to do housework is to be beaten with a rod (Mishneh Torah, Ishut 21:10). Similarly, of the three passages in the Mishnah that deal with forcing a man to divorce his wife, one against it (Yebamot 14:1) and two in favor of it (Gittin 9:8 and Arakhin 5:6), Cohn mentions only the one against it. Similarly, he refers to the ban of Rabbenu Gershom on divorcing a woman without her consent, without mentioning all the exceptions to it that have accumulated over the centuries.

FALK presents a notably serious and reasoned approach. In his chapter on democracy he forthrightly asserts that both law and religion subordinate the wishes of the individual, that there are inherent tensions between religion and democracy, and that there can be no easy synthesis between Judaism and democracy. On this point he invokes the thought of Yeshayahu Leibowitz, who asserts that democracy, which is anthropocentric, is based on the Kantian idea of human autonomy, while religion, which is theocentric, is based on heteronomy. Nevertheless, acknowledging that some spokesmen for Orthodox Jewry see democracy and Judaism as incompatible, Falk raises the possibility that this may not be the case and traces arguments from Jewish history and religious texts for both sides. This leads to his view that Judaism, especially as practiced under state control in Israel, must make some serious concessions concerning autonomy for the two to be compatible. Unlike others, who deny any conflicts between Judaism and democracy, Falk argues soundly and cogently that many Jewish ideals of equality and human rights, despite biblical precedents sanctioning the oppression of various groups, were meant for a glorious egalitarian future. His chapters often, therefore, have more of a hortative than a historical quality to them.

KONVITZ, a major figure in the study of human rights, presents an unfounded, tendentious, contradictory, and apologetic masterpiece that deserves careful reading to learn how myths are created. Konvitz establishes *a priori* categories to explain Jewish existence: Israel does not place its own national existence or honor as an absolute; the "essence" of the Hebrew scriptures (selectively equated with Judaism) represents a universal ethical system of thorough egalitarianism; principles of the Torah and the U.S. Constitution are so close that he can speak of an "American-Hebraic idea"; and Israel has a unique sense of purpose among the nations. Anyone who looks beyond these comforting notions, especially with regard to what happens in Israel, is guilty of sympathizing with the murderous aspirations of the Palestine Liberation Organization. Konvitz's enthusiasm for his idealized vision of the United States leads

him to conclude that the United States has resolved issues concerning racial segregation and abortion not by violence and mob action but through the rule of law. He next considers Israel, where he concludes that the eventual constitution will be based on the spirit of the Torah, which will put some actions beyond the power of any human institution. So, the United States must live by the law, a law derived from Judaism, but Israel is destined to be a theocracy. Konvitz has little patience, therefore, for those who question the segregation of the sexes at the Western Wall in Jerusalem and are not sensitive to the traditional needs of those religious Jews who enforce the segregation. At one point, however, Konvitz unexpectedly admits that he has been nurtured by both cultures. This constitutes a surprising assertion because all along he has been attempting to convince readers that Judaism and Western democracy represent one and the same culture. He sees the all-male prayer groups at the Wall as representing all Jews praying in one place at one time and revels in the diversity of those different kinds of Jews with whom he can pray—omitting women and liberal Jews. Konvitz's sympathy for civil rights evaporates entirely as he relates a critical experience in which he encountered a Jew at the Wall trying to stop another Jew from taking a photograph on the sabbath, which Konvitz views enthusiastically as the effective expression of group consciousness.

SHARFMAN, an instructor at the University of Haifa who is involved in the Israeli civil rights movement, places Israel's lack of a constitution in the context of the history of the state and the ongoing development of particular laws involving various freedoms such as freedom of the press and freedom of association and the problems posed by both religious and security considerations. At the center of her deeply impressive historical argument stand developments in Jewish Palestine from the 1920s on, especially the emphasis placed by David Ben-Gurion, Golda Meir, the Histadrut, and kibbutzim, and even by Vladimir Jabotinsky and the Revisionists on centralization of power, bureaucratization, control by an elite, and the lack of acceptance of the role of the individual. Sharfman documents compellingly the hostility of pioneer politicians to press freedom (and the very idea of broadcasting) as well as their sympathy for the use of coercion and even violence to settle controversies. She describes one of the first collisions between the religious groups and democratic principles, which involved the right of women to vote and to serve on the Representative Assembly and the National Committee. In 1922, because religious Jews would not sit with women, the Representative Committee did not meet for almost a year. With the founding of the State, both Ben-Gurion's party, Mapai, for opportunistic reasons, and the National Religious Party, out of commitment to the authority of the Torah, opposed a constitution, and for this reason, the Ben-Gurion government maintained the Emergency Powers Act imposed by the British. Sharfman refers to the government's treatment of new immigrants as "a hierarchical system of dependence" by operated by "petty tyrants" and "thugs." Moshe Sharett, acting prime minister, referred to new immigrants as "children," incapable of exercising any judgment, and Ben-Gurion called them "human dust." Arab minorities were subject to the military government until 1966, a rule that many in the government saw as corrupt, an obstacle to the development of true democ-

racy in Israel, and a useful tool for enemy propaganda. The religious establishment, through political coalitions, gained control of all Jewish marriages and divorces as well as the supervision of many other matters. Ben-Gurion noted: "The freedom of religion and conscience that the religious party demands for itself is not something it is prepared or capable of granting to others." Sharfman notes the inherent contradiction between the position of religious Jews who do not accept the right of a secular majority to rule over them and their view of their right as a minority to impose their views on the majority. In other words, Jewish law does not recognize moral autonomy, only obedience. Attempts to put forward basic laws of human rights, even when they do not grant freedom of worship to all religions and branches of Judaism, have been opposed by the religious parties who want to protect their control over determining matters of personal status. Sharfman cites quotations from religious leaders indicating that recognition of human worth and human freedom reflects an antireligious and even racist mentality. She shows that secular parties, both on the right and on the left, have accepted the religious status quo both out of practical necessity to maintain power and support coalition governments and out of the desire to preserve images of national unity. Sharfman reports early misgivings expressed by Supreme Court Justice Haim Cohn about the exclusive jurisdiction of religious courts, Ben-Gurion's resistance to change, the hope expressed by a minister of religious affairs that Jewish law could be modernized, and Ben-Gurion's deathbed regret that he had not followed Cohn's advice.

For many of the authors represented in SIDORSKY's collection, the concept of human rights does not extend beyond what Jews are entitled to receive. They do not appear to believe that when Jews are in power, they are obligated to extend rights to others. Leslie C. Green's essay cites the 1950 Israeli Law of Return as an example of respect for human rights, clearly confusing Jewish rights with human rights. The essay goes on to argue that Israeli courts have ensured that there is no religious discrimination and that tolerance and equality are maintained among all religious groups, a statement that is contradicted by the many laws in Israel that discriminate against Reform and Conservative Jews. Similarly, Yoram Dinstein's essay notes that the Six-Day War marked a turning point for the treatment of Jews in the Soviet Union, oblivious to the fact that it also marked a turning point for many Arabs in the territories occupied by Israel that year. Shimon Shetreet deals squarely with issues in Israel, acknowledging the presence of religious coercion in Israel with the subjection of citizens to the religious courts for marriage and divorce. In another essay on Israel, drawing heavily from materials in the *Israel Yearbook on Human Rights*, Jerome J. Shestack tries to diminish most charges of human rights violations against Israel, including allegations of torture. He suggests that in 1967 Jews found themselves ruling over others for the first time and that it was "a strange and unwanted role for the Jews," although since the founding of the State, Jews had ruled over many thousands of Arabs. Ultimately, when Shestack has exhausted all dodges, including the improvements in human rights enjoyed by the Arabs, he deals with censorship, economic standards, administrative detention, treatment of detainees, deportations, the

demolition of homes, and the building of settlements. Most of these practices he attributes to the need to counter Palestinian terrorism and support Israeli security needs. Shestack ends, however, by making it clear that occupation is repugnant to what he calls Jewish values, although its biggest supporter is the National Religious Party, and he asks what engaging in such an occupation will do to Israeli society. In his essay, the great Jewish historian Salo Baron confirms that as democracy spread through Europe during the 18th century, Jewish elites were afraid that egalitarianism would weaken traditional Jewish communal control and threaten their leadership role. Contrary to the apologetics about the compatibility of Judaism with democracy and the Torah with constitutions, Baron shares a Yiddish joke from the time that explains the word for constitution, *Konstitutsie*, as *konst du, tist du*, "if you can, you do," pointing to the fear that constitutions would enable an expansion of individual liberties, something that traditional Judaism was not prepared to accept.

ZAMIR and ZYSBLAT offer a collection of Israeli Supreme Court decisions with introductions that nicely supplement Sharfman's book, particularly her final chapters on the Israeli Supreme Court and various freedoms. Zysblat's introduction, however, diverges sharply from some of the points made by Sharfman. He asserts that constitutions are not necessary to establish democracies: totalitarian regimes can exist with them, and democracies, such as Great Britain, can exist without them. He also casts the traditional Jewish community and the Zionist movement as having long-standing traditions of democracy. Indeed, contradicting one of Sharfman's major points, Zysblat asserts that the proportional representation system in national elections, which requires such delicate coalitions, is in fact the major guarantee of democracy in Israel. His main point, however, agreeing with Sharfman, is that the Supreme Court, by creatively interpreting the law, is the ultimate protector of civil rights in Israel. Some of the classic cases discussed include the Kol Ha'am case of 1953, which concerned the closing of a newspaper for attacking Abba Eban's supposed offer to put 200,000 Israeli troops at the side of the Americans in the event of a war with the Soviet Union; the Kach case of 1987, which concerned the obligation of public television to carry information relating to the incitements to racism of Rabbi Meir Kahane; and the Elon Moreh case, involving the question of Jewish expropriation of Arab land on the West Bank for ideological rather than security reasons, the only reasons allowed by law and international convention. David Kretzmer, a professor of law at the Hebrew University and a member of the United Nations Commission on Human Rights, confirms that the most adamant opposition to civil rights legislation in Israel comes from the religious parties. In particular, he notes that the 1992 Basic Law of Human Rights does not allow judicial review of existing legislation, which he feels indicates a lack of confidence that this legislation would meet the basic standards of human rights. Kretzmer's article makes it clear that there is a basic conflict between Israel being a Jewish and a democratic state, evidence that Judaism is not essentially committed to human rights and that democratic institutions did not spring forth from Jewish tradition.

The study of Jewish humor is a relatively new field. The first important book about biblical humor was *Humour and Irony in the Bible* (London: Luzac, 1891) by Rabbi Joseph Chotzner (1849–1914), rabbi of Belfast and a former housemaster at Harrow. The next important book on this subject was Edwin M. Good's *Irony in the Old Testament* (London: SPCK, 1965). Since the 1980s, however, humor in the Hebrew Bible has been analyzed in detail in scholarly articles and monographs. The author of seminal studies on humor in both Hebrew Scripture and other literatures of the ancient Near East, GREENSTEIN traces the history of research and describes succinctly the seven major forms of humor manifest in the Hebrew Bible: sarcasm, ridicule, satire, parody, trickery, verbal wit, and proverbial humor.

DAVIDSON, best known for his classic studies on medieval Hebrew poetry, focuses his analysis on parody. He calls attention to two parodies in the Jerusalem Talmud (Pesahim 3:7 and Nedarim 6:8); discusses the Samaritan high priest Phinehas ben Abisha's (1376–1440) fascinating treatise on Samaritan eschatology that takes the form of a parody on the biblical story of Noah and the Ark (Genesis 6:13–8:11); and surveys more than 500 parodies from Jewish literature spanning the 11th to the 19th century. Davidson shows that Jewish parodists were preachers disguised as jesters, and he contends that most Jewish parodies were recognized for what they were and never swallowed whole. He argues, however, that parody did perform important social functions. For example, when Joseph Perl of Tarnopol aped the famous Latin anticlerical satires of 16th-century German Christian humanists in his 1819 book *Megalleh Temirin* (*Revealer of Secrets*), he succeeded in exposing the vices of hasidic leaders and the foolishness of their followers. Davidson declares with misplaced modernist optimism that Hasidism "might have withstood anathemas indefinitely, but it could not endure the lash of ridicule and exposure very long."

In a book published before the collapse of the Soviet Union, HARRIS and RABINOVICH posit that for many Russian Jews poking fun at the foolishness of Communist officials is "a treasured, if largely private, means of conveying anger, frustration or criticism in an often hostile environment." Through his personal use of Soviet Jewish humor, the proverbial Soviet Jew "manages to face life with endless reserves of common sense and optimism." He becomes "the irrepressible foil of the world's most powerful repressive society."

AUSUBEL's English-language anthology contains humorous stories and poems by 72 authors; most of the selections come from Yiddish-speaking Ashkenazi Jewry of the 18th to 20th centuries, although the volume also includes texts by three medieval Jews from Spain (Abraham ibn Ezra, Judah Al-Harizi, and Shem Tov Falquera) and a selection from the apostate Bar Hebraeus (1226–1286), who became head of the Jacobite Church in Syria and who wrote in Arabic. Still, this collection belongs to a genre of anthologies of Jewish humor that perpetuate the simplistic notion that Jewish humor is largely limited to humor in a Yiddish milieu.

JASON's analysis of the humor of Middle Eastern Jews corrects this distorted impression. She also argues that the stories of the foolish sages of Chelm belong to a genre of "numskull tales" that are found in non-Jewish and Jewish cultures alike. "Numskulls," she asserts, "are not a mirror ridiculing human society but are perceived by the narrating society as part of the universe of beings, real and imaginary, which populate the normal world." The imaginary realm ruled by fools who think they are wise is identified, to the chagrin of the real inhabitants of the place in question, with a real place: for example, Schildau in German folklore, Gotham in English folklore, or Chelm in Yiddish folklore. Following the dean of Israeli folklore studies, Dov Noy, Jason also argues that "parodies on Jewish traditional literary style are the only 'special kind of joke [that] has not been found (until now) in non-Jewish cultures.'" Contrary to this claim, however, even these jokes, as Davidson's seminal study explains, have their counterparts in other cultures, such as 11th-century B.C.E. Babylonia where the famous "Dialogue of Pessimism" parodies well-known works that were part of the literary canon studied in the scribal academies.

COHEN assembles 14 scholarly yet eminently accessible essays. These studies demonstrate that Jewish humor worthy of study is confined neither to the vanished world of East European Jewry nor to the literary parodies of medieval Iberian Jewry. Topics treated include female Jewish comedians in the United States; Israeli humor; Canadian Jewish humor; and Woody Allen. The volume contains a comprehensive bibliography of Jewish humor.

DUNDES and HAUSCHILD investigate jokes about Jews circulating in Germany since the Holocaust. Commenting on examples of antisemitic humor collected by Hauschild in 1982, folklorist Dundes accepts the view that jokes told about the members of a particular ethnic, national, or religious group may offer a socially sanctioned outlet for the expression of aggression toward that group, and he surmises further that the concept of self-hatred may adequately explain why Jews tell antisemitic jokes.

Although there is considerable literature available on the history of Jews in Hungary, it is mostly in Hungarian, German, and Hebrew. For the English reader, there is only one comprehensive monograph available, written by Raphael Patai. Other scholarship is also available on this topic, but it is published in different collections of essays or as chapters in general history books on Hungary and Central Europe. The following survey considers studies of Hungarian Jewish history on a large scale and includes descriptions of the political, social, cultural, religious, and economic status of Hungarian Jews. Among these topics, literature on the Holocaust and on the period between World War I and World War II are numerically overrepresented, a reflection not only of the available literature in English but of the enormous impact of the Holocaust as a subject of scholarship.

BRAHAM (1981) is a full account of the events of the Hungarian Holocaust. The introduction presents the political characteristics of the Hungarian Jewish past; special attention is paid to the interwar period of Hungarian and international politics. The text, which is thoroughly documented with evidence and facts, is arranged chronologically but is often interrupted by analysis of different institutions created by the Nazis to destroy Hungarian Jewry (for example, chapters on the organization of forced labor, the ghetto, and the administrative aspects of deportation). The appendix provides further information on the special regulations regarding the status of Jews, the chronology of the period between 1867 and 1965, and the names of authors whose works were prohibited during the Holocaust. BRAHAM and VAGO and BRAHAM and PÓK update the literature on the Holocaust in Hungary. Both volumes offer essays on the postwar impact of the Holocaust on Hungarian society.

BRAHAM's (1969) three-volume set contains essays written by several Hungarian Jewish authors. The aim of the first two volumes is to provide literature on various aspects of the history of Hungarian Jews. Among the subjects covered are the history of Jewish settlement; an overview and bibliography of the political and social integration of Hungarian Jewry; the destruction of Jews in Transylvania and in Carpatho-Ruthenia; research facilities in Hungary concerning the Holocaust period; Hebrew poetry in Hungary; the history of the Jewish Congress of 1868–1869; a historical study of the economic life of Hungarian Jews; a good guide to Hungarian Jewish art and culture; the Jewish policy of the Kallay government; the role of the Jewish Council in the Holocaust; and the war crimes trials relating to Hungary. The third volume is devoted entirely to the Holocaust. Its main focus is on providing primary sources and personal accounts.

The collection of essays edited by CARMILLY and contributed by prominent historians and rabbis is more than its

title suggests. The rabbi-professors in the Rabbinical Seminary of Budapest were the spiritual leaders of the country's Neolog (progressive) Jewish community and the main contributors to Jewish scholarship in Hungary for more than 100 years. Two heavily annotated essays deal with Hungarian and Transylvanian Jewish historiography. The other essays cover the history of the seminary, the seminary's relations with the Jewish world, and the scholarly contributions of its professors. The book contains lists of seminary-related publications and of the names of faculty members and graduates. Some photographs also accompany the volume.

The volume edited by DÁN collects essays written by a number of distinguished scholars as a tribute to the memory of Alexander Scheiber, the director of the seminary and the leader of the Neolog community in Hungary for three decades. Although the majority of articles offer contributions on different issues in general Jewish history, the book features additional information on the following topics of specific concern to Hungarian history: the history of the Jews of Buda, the Jewish tax collectors, and an important essay on Jewish communal organizations.

In the volume edited by DON and KARÁDY, a few essays deal specifically with Hungary. Katz's article discusses some unique characteristics of Hungarian Jewish history: Hungary's relatively high percentage of Jews compared to neighboring countries and the official split between Neolog and Orthodox communities that created different answers to the call for participation in the economic and cultural life of Hungary. A few articles deal with the special effects of the dissolution of the Austro-Hungarian Dual Monarchy on the status of the Jews. Don discusses how this period brought about the end of a pattern of consistent liberal policies toward Jews. Nathaniel Katzburg states that the Dual Monarchy as a multinational state provided an opportunity to exercise independent Jewish policies, and he notes that growing antisemitism in the interwar period slowed the assimilation process. William O. McCagg, Jr., points out that after World War I, the ultraleft revolution destroyed the alliance between the democratic urban classes, and the repression of the revolution destroyed the prestige and participation of the entire political left. With the Treaty of Trianon, a great number of Orthodox communities became part of the successor states that acquired Hungarian territory, and thus the Neologs' influence became stronger within Hungary. McCagg notes that Jews' continued involvement in the Hungarian political system had a negative impact on their relationship to Jews in other Central European countries. Karády suggests certain topics for further studies concerning comparative sociology in the region. Lengyel and Kovacs deal with the survival pattern and the ethnic composition of the economic elite. Kovacs describes the status of Jewish lawyers in the interwar period. Comparing their position to that of doctors, she shows that since lawyers received protection from their professional associations, they were much less likely to lose their status. The decline came after the war, when lawyers could no longer keep their professional associations.

The literary anthology edited by HANDLER (1977) presents Jewish literature from the interwar period. Although the

choice of authors could have been broader, this collection is the only source of its kind.

The overrepresentation of Jewish athletes in winning Olympic medals for Hungary is the subject of HANDLER (1985). The book examines the period between 1896 and 1968. The phenomenon is a telling aspect of the Hungarian Jewish community's special achievements. The author mentions his difficulties with collecting data; some athletes significantly preferred not to reveal their Jewishness to the public.

KATZBURG presents official policy and legislation on the status of Jews in the interwar period. The orientation of each government and policies of the various parties are discussed. While describing the special laws, the author explains their effects on different aspects of Jewish life. The volume concludes with an excellent summary and a small collection of contemporary diplomatic documents.

McCAGG examines the causes of the social stratification of the Jews and their elevation to the Hungarian nobility. The excellent portraits of individuals and families provide a selection of stories on the merging of the business world with nobility, which caused economic, social, cultural, and political mobility. The author is fascinated by the great number of geniuses that have emerged from Hungary and searches for a correlation between their achievements and the ennoblement of Hungary's Jewish capitalists.

PATAI's work is mostly a cultural history. Scattered data have been collected and organized to form a continuous history of Jews in Hungary. The book provides a wealth of information but it does not discuss such aspects of Jewish history as the settlement of different communities, their institutions, the economic and social status of the Jewish people in Hungary, the reasons for the weakness of the Hungarian Zionist movement, or the role of orthodoxy. It is a well-written and interesting book and is a remarkable source for English readers with an interest in Hungarian Jewish history.

PERLMAN searches for the distinctive characteristics of Hungarian Jewish immigration to the United States. His goal is to understand the causes of a certain invisibility of Hungarian Jews as a group on the way to making it in the United States. The causes can be traced to the fact that they were listed either as Hungarian or as German and Austrian immigrants. Furthermore, the majority of Jewish immigrants did not recognize them either, on account of their lack of "Yiddishkeit." Perlman discusses the different waves of emigration, and a detailed bibliography on Hungarian Jewish emigration accompanies the book.

SANDERS's article provides a description of literary life after the war, the atmosphere, the question of identity, and the main themes chosen by Jewish authors. Readers will become familiar with the most important names and works in contemporary Hungarian Jewish literature.

SCHIEBER's collection of Jewish inscriptions from the territory of greater Hungary makes accessible sources for the study of the history of settlement and of the level of Hebrew culture in the region. Scheiber describes and presents photographs of a variety of artifacts, from tombstones to textiles. Although the book may appear too technical for the general reader, it offers tangible evidence of an early Jewish presence

in Hungary. A finding list, inventory numbers, and references complete the volume.

SILBER's collection takes on the task of describing the socioeconomic aspects of Jewish life in Hungary. The book is dedicated to Moshe Carmilly-Weinberger, whose biography and bibliography are also presented in this volume. Comparing Jews with other ethnic groups, the question of the disproportionate role of Jews in the economy is discussed in the introduction by Silber. He explains the phenomenon in connection with social dimensions—their minority status, the large population of peasants, the politically powerful nobility, and the weak urban class—rather than in terms of particular ethnic or cultural orientation. While economic backwardness in Hungary triggered participation, political backwardness had negative effects. Emancipation came late, the royal towns often exercised their right not to tolerate Jews, and, as essays by Hanak and Katus point out, occupational restrictions forced Jews to accept a socially disadvantaged status. By analyzing Jewish participation in the economy and especially in the commercial sector, Don concludes that Jews preferred to operate in the competitive market. Jews constituted almost one-quarter of the capital's population, and the high proportion of Jews among Hungary's urban professionals is the subject of Katus's essay. As Katus's data show, from the middle of the 19th century, new fields started to open for Jews in agriculture and the free professions. Three scholars, Bacskai, Puskas, and Komlos, warn against the overestimation of the role of the Jewish entrepreneur. Puskas examines the changing patterns in land leasing and sees scope for a much more integrated Jewish role in the whole development of the Hungarian economy and society. Komlos examines the standard of living of the Jewish population. Karady notes that regional variation also played an important role. Neolog strongholds were located in urban areas and the Orthodox

remained in the villages and underdeveloped regions. The opportunity for Jewish personalities to emerge and their growing influence in national organizations are the subjects of the studies of Voros, Deak, and Varga. Kovacs investigates the question of how antisemitism affected engineers; compared to doctors and lawyers (discussed in Don's book), this group suffered most from discrimination. Ranki examines the common characteristics of Jewish occupational structure in 20th-century Central Europe.

VAGO and MOSSE have edited a collection of comparative essays focusing on the sociopolitical aspects of Jewish history. The volume is a result of an international symposium, held in Haifa, emphasizing the interaction between Jews and non-Jews in Eastern Europe. Major issues raised include the different degrees of assimilation and dissimilation, identity, and the role and treatment of Jews in different East European societies. A significant portion of the volume is comprised of essays on Hungary.

DALMAT's bibliography surveys only books published in Hungary between 1945 and 1990. The entries are arranged chronologically by subject. YARON's parallel bibliography covers books and periodical articles that appeared between 1945 and 1970.

KOMORÓCZY's volume is the result of a team effort. The content is very rich, examining all aspects of Jewish life in Budapest. Starting with the first signs of a Jewish presence in Roman times, the growing Jewish involvement in the capital is illuminated. The illustrations of prominent people and buildings present the reader with a good sense of the community's ethos; the bibliography provides access to a wealth of information; and descriptions of the life in certain areas traces the uniqueness of Hungarian Jewish experience.

Ibn Daud is generally considered the first Aristotelian among medieval Jewish philosophers. He also distinguished himself as

a chronicler and historian, and his *Book of Tradition* was the standard source for the history of the talmudic–early medieval period until well into the 20th century.

COHEN (1967) in his extensive introduction deals with the very limited biographical information available regarding ibn Daud and the cultural environment and background of the *Book of Tradition*. Cohen's penetrating analysis discusses ibn Daud's overwhelming influence not only on medieval and early modern Jewish historiography, but also on its more recent counterpart, generally called *Wissenschaft des Judentums*, as it developed in the 19th and the first half of the 20th centuries among such Jewish and non-Jewish scholars as Graetz and Halevy in Germany and George Foot Moore at Harvard. In his "Analysis and Interpretation," Cohen examines the structure of the *Book of Tradition*, ibn Daud's sources, his conception of the symmetry of history, his views of the four empires and Jewish history, and his typology of the rabbinate. Cohen discusses the ostensible reason for his chronicle: the challenge to rabbinic Judaism from the Karaite schismatics, whom ibn Daud portrays as malicious, fraudulent, and traditionless heretics whose arguments carry no weight whatsoever.

Two caveats may be entered against Cohen's otherwise excellent work: first, his patronizing and condescending attitude to ibn Daud, and second, the extreme historical relativism espoused by him. Cohen repeatedly uses such expressions as "preposterous arguments," "fantastic blunders," "howlers," and "glaring contradictions and discrepancies." His relativist position is clearly stated in the opening pages of his introduction. Here he espouses the view that until recently ibn Daud was a primary source of information on the talmudic and geonic period and on Jewish settlement in the Iberian Peninsula, but that with the new Genizah material and other sources on the Jews of Spain, the work is now virtually "worthless" as "a source of historical information on earlier periods," even if it remains "one of the finest introductions to the Jewish community of 12th-century Spain." Cohen views himself as standing outside of the stream of history, and his historical relativism is a self-defeating assumption. However, because of the wide range of authorities, both primary and secondary, utilized by Cohen, his flawed methodological assumptions do not undermine his analysis of ibn Daud's work as a basic introduction to the way of life, tensions, and achievements of the rabbinic civilization that flowered under the protection and stimulus of Islamic domination.

COHEN (1991) is a detailed study, with 255 wide-ranging and erudite footnotes, of ibn Daud's account of the capture, redemption, and rise to fame of four scholars, the renowned tale of "The Four Captives" recounted in the final section of ibn Daud's chronicle. Cohen views the tale as a historical romance composed to explain the transfer of rabbinic authority from Babylonia to Muslim Spain and the West.

GUTTMANN and HUSIK offer the standard histories of medieval Jewish philosophy. Each has his champions among the outstanding authorities in the field. Harry Wolfson valued Husik's *History* very highly, while Georges Vajda of the Sorbonne preferred the work of Guttmann. The chapter on ibn Daud's philosophy in both of these works may be consulted with profit, as may the newer summation of SIRAT. Samuelson has contributed the chapter on ibn Daud to a 1997 collective work on Jewish philosophy edited by FRANK and LEAMAN.

SMIDT VAN GELDER-FONTAINE offers a detailed examination of ibn Daud's philosophical work, *The Exalted Faith*, which he wrote in Toledo in 1160–1161, at about the same time that he wrote his historical work, *The Book of Tradition*. The two works belong together and form an integrated apologia that a modern editor might have issued under the title *The Defense of Judaism through Reason and History*. Smidt van Gelder-Fontaine's work is a revised version of her doctoral dissertation at the University of Amsterdam. She felt moved to write it because *The Exalted Faith* is usually neglected, and ibn Daud is either portrayed merely as the forerunner of Maimonides or as a not very original thinker. Hers is a thematic investigation of *The Exalted Faith*. Each chapter gives a summary of ibn Daud's discussion of a theme and its interrelation with other topics discussed, the Jewish and Islamic sources on which he drew, and the way in which he incorporates the philosophy of the Islamic Aristotelians al-Farabi and ibn Sina into his own thought. She pays careful attention to ibn Daud's use of biblical verses to show that the Bible and philosophy are in agreement.

In contrast to the view of Guttmann and others who believe that free will plays only a marginal role in *The Exalted Faith*, and that in fact the work is primarily concerned with the relation between philosophy and religion in general, Smidt van Gelder-Fontaine believes that free will is central to the work. Although freedom of the will is dealt with in only five of its 104 pages, consideration of the treatise's complete structure makes it clear that the question of whether man is free or determined in his actions really dominates ibn Daud's thinking. The free will problem may appear only at the end of the work, but as ibn Daud puts it, in an Aristotelian idiom popular among medieval Jewish thinkers (it is found even in the second stanza of Solomon Alkabez's famous Sabbath hymn), free will is first in thought but last in action. In other words, the author's main point is left to the end with the whole argument gradually leading up to it.

ERAN shows the indebtedness of ibn Daud to his Muslim predecessors and demonstrates his literal dependence on Avicenna for his definitions of substance and accident.

SAMUELSON (1979) discusses in detail ibn Daud's defense of freedom and its relation to divine foreknowledge and providence. Ibn Daud raises the difficulty that if God knows what

man will do throughout his life, it is hard to see how he can be blamed and punished for his sinful acts. Ibn Daud's answer is that some actions fall into the category of the "possible" whose outcome God himself does not know. If God knew all future events, then all events would be necessary, and if everything is necessary, then human labor and petitionary prayer would be futile. To this answer Samuelson raises the objection that even if humans were to grant the assumption that people will labor and pray only if they believe that their efforts can change something, God could still choose a world in which He knows everything, but does not allow human beings to know that He knows everything. The knowledge of future contingents is one of the hardest knots in philosophy and has troubled logicians to the present time. Indeed, modern logicians have given future contingents an intermediate truth-value similar to what ibn Daud calls the "possible."

SAMUELSON (1977) examines the place that ibn Daud's theory of prophecy occupies in his philosophical system, the pre-conditions for attaining prophecy, the grades of prophecy, and the sense in which ibn Daud describes prophecy as a natural phenomenon. The article includes a comparison of ibn Daud's theory of prophecy with that of Maimonides, ibn Daud building his apologia on the publicity attached to the miracles related in the Torah and the uninterrupted continuity and incorruptibility of the unbroken chain of tradition going back to Sinai. If the report of a particular event derives from only a single person, doubt is justified, but when a mass of 600,000 prophets (witnesses) guarantee the authenticity of that event, every doubt is excluded. This argument proves the authority of the Sinai revelation somewhat cavalierly by assuming the accuracy of the biblical narratives in which it is conveyed.

The multiple facets of this polymath, as poet, biblical exegete, grammarian, mathematician, astronomer, astrologer, and philosopher, and some aspects of his life, both in Islamic Spain and in Christian Europe, have attracted the attention of many scholars.

FRIEDLÄNDER (1877) discusses the philosophy and theology of ibn Ezra and analyzes his biblical commentaries. The first essay deals with ibn Ezra's cosmogonic ideas as expressed, above all, in his exegetical works; the author notes that the first verses of Genesis describe for ibn Ezra the transformation of preexistent chaos into the universe. He elucidates his anthropological ideas, which, following a neoplatonic pattern, are centered on the theory of the microcosm. The divine and immortal soul is a stranger and a prisoner in the body, desiring to return home to its heavenly abode and to know God through the study of His works in the universe. Friedländer also discusses ibn Ezra's views on revelation and inspiration. The second essay includes a detailed description of his biblical commentaries, which, although needing to be complemented by more recent scholarship, offers a comprehensive picture that still has much to offer by way of useful information about the contents and characteristics of ibn Ezra's exegetical works. Friedländer describes briefly some of the manuscript versions of the commentaries and supercommentaries (i.e., commentaries written by later authors in explication of ibn Ezra's own commentaries).

FRIEDLÄNDER (1873) features an introduction dealing with the biography of ibn Ezra, notes on the authors quoted in the *Commentary on Isaiah*, ibn Ezra's philosophical and theological ideas, and a description of his writings and of some of the manuscripts. The first volume includes an annotated English translation of the commentary; the Hebrew text, edited from manuscripts, is in the third volume, which also includes a useful glossary, while the second volume has the King James version of Isaiah revised according to the interpretation of ibn Ezra. Even if Friedländer's biography of ibn Ezra includes some uncritical or scarcely proved observations, the translation of the commentary is accurate and true to the Hebrew text, and the notes constitute an important aid, replete with references. Of the biblical commentaries by ibn Ezra available in English, it remains perhaps the most valuable edition.

LIPSHITZ offers an introduction, a critical Hebrew text of the *Commentary on Hosea*, and an English annotated translation. The introduction deals briefly with the activities of ibn Ezra as biblical exegete and his influence on future generations, among Christian scholars as well as Jews. The Hebrew text, based on six manuscripts, was superseded not long after its publication by the superior 1989 edition of Uriel Simon (*Abraham Ibn Ezra's Two Commentaries on the Minor Prophets: An Annotated Critical Edition* [Hebrew]), which also added a second and previously unknown commentary on Hosea by ibn

Ezra. Lipshitz's English translation, however, is true to the text and is supplemented with many observations on the history of exegesis in general, intended to make the complex language and thought of ibn Ezra accessible to today's readers.

SIMON discusses four different Jewish commentaries on Psalms by Saadia ben Joseph Gaon, the Karaites Salmon ben Yeroham and Yephet ben Ali, and by Moses Gikatilla and Abraham ibn Ezra. He presents the peculiarity of ibn Ezra by contrasting him with the preceding authors: the Book of Psalms was for Saadia, a second Pentateuch; for the Karaites, prophetically ordained liturgy; for Gikatilla, nonprophetic prayers and poetry; while for ibn Ezra it is prophetic and sacred poetry. Simon compares the preserved parts of the two versions of the commentary written by ibn Ezra, the first one from Italy, and the second (standard) one, from France. The prologue to the "First Introduction" deals with the character of the Psalms as sacred poetry designed to be sung with instrumental accompaniment, while the introduction to his standard Psalms commentary discusses only the question of authorship and the holiness of the Psalms. Simon analyzes ibn Ezra's opinion about the writing and editing of Psalms, about the prophetic function of the psalmists, and the possible late date of composition of some psalms. Simon underlines ibn Ezra's differences with the Karaites and discusses his views about the order of Psalms and the meaning of the strange terms that appear in their headings. It is an excellent book by one of the leading experts on the exegetical activity of ibn Ezra.

DÍAZ ESTEBAN collects the Proceedings of the International Symposium on ibn Ezra that took place in Madrid, Tudela, and Toledo in February 1989. Of the 45 papers, 24 are in English and deal with diverse aspects of ibn Ezra's life and work: ibn Ezra's biography and his world, biblical exegesis, Hebrew grammar, Hebrew poetry, and the history of science and of philosophy. There are contributions from T. Alexander (folktales), A. Yitzhak (Saadia), L.A. Feldman (Nissim Gerondi), L. Glinert (syntax), R. Goetschel (the golden calf), E. Gutwirth (supercommentaries), E. Hazan (poetry), M. Itzhaki (riddles), I. Lancaster (creation), N.R.M. de Lange (Byzantium), I. Levin (a synoptic evaluation), R. Loewe (ibn Gabirol), Z. Malachi (astronomy and astrology), S. Regev (reasons for the commandments), S.C. Reif (*Commentary on Canticles*), T. Rosen (*muwashshahat*), M. Saraf (North African literature), G. Sed-Rajna (Hebrew manuscripts), H. Shai (Judeo-Arabic commentaries), E. Silver (ibn Ezra's early life), U. Simon (harsh language and humor), A. Tanenbaum (the soul in his poetry), Y. Tobi (poetry), and Y. Yahalom (the poetics of Spanish *piyyut*).

TWERSKY and HARRIS present a compilation of essays in English and Hebrew about different aspects of the work of ibn Ezra. The English section of the book includes studies by N. Sarna, U. Simon, T. Langermann, and J. Harris. Sarna underlines ibn Ezra's unique place in the history of Jewish exegesis, starting with linguistic analysis and intellectual coherence, and describes the main features of his work, such as the emphasis on grammatical questions and rhetoric, and ibn Ezra's respect for the classical Sages accompanied by irreversible detachment from the post-talmudic exegetes. Langermann deals with the role of astrology in ibn Ezra's philosophical outlook, focusing on passages in which an

astrological interpretation is evident, such as treatments in his biblical commentaries of animal sacrifices, the holidays, the scapegoat, the peculiar properties of the land of Israel, free will and determinism, and the special status of the Jewish people. Simon explains the technique followed by ibn Ezra's interpreters in their supercommentaries. He offers a historical review of such writings, from the earlier period (13th century), in which many supercommentaries were written and lost, through the so-called ibn Ezra Renaissance in the second half of 14th century. Harris discusses the meaning of ibn Ezra in modern Jewish history, from Spinoza on, according to him an enigmatic and protean profile and a central role in historical debates. He reviews the reactions to ibn Ezra's exegetical work among Christians (such as Richard Simon) and Jews (M. Mendelssohn, A. Geiger, M. Schreiber, etc.). Also discussed are responses to his philosophical views (Krochmal, Jastrow, Rosin). Ibn Ezra is shown to be of crucial symbolic significance for later generations, a pioneer of Bible criticism and a truly modern metaphysician. As such he is adored by progressives and regarded with considerable misgivings by hardline traditionalists.

Tanenbaum, Adena V., "Poetry and Philosophy: The Idea of the Soul in Andalusian Piyyut," Ph.D. diss., Harvard University, 1993

Of the many activities of the notable Andalusian Jew Moses ibn Ezra, scholars have paid particular attention to his poetry, his work on literary criticism (*Kitab al-Muhadara wa-al-Mudhakara*, "Book of Discussion and Conversation"), and his philosophical views. Additionally, historians have investigated concrete aspects of ibn Ezra's life. Some of his poems can be

read in Heinrich BRODY (1934) and in Raymond Scheindlin's *Wine, Women and Death* (1986) and *The Gazelle* (1991).

BRODY (1933–34) comments on one of the most obscure aspects of ibn Ezra's life: his alleged love affair with his niece, which has been interpreted as the cause of the poet's voluntary exile from Granada. Although some scholars accepted this hypothesis proposed by Samuele Davide Luzzatto, Brody asserts that the romance is just a fable because the known facts preclude it. Both poetry and letters show that ibn Ezra left Granada later than his brothers, around 1095; he moved to Christian Spain because he did not feel safe in Andalusia. The specific incident that made him leave Granada and in which his niece (Isaac's daughter) was apparently involved remains undetermined, but Brody is certain that it was not a love affair. Brody's article is a classic exposition of the life of the poet by one of the great scholars of the first half of the 20th century, who knew and used the sources in a very convincing way. It is still well worth reading.

ALLONY examines the attitude of ibn Ezra toward Arabic culture, in the light of the ideological trends that prevailed during ibn Ezra's lifetime. Allony emphasizes that the poet, like other Jewish intellectuals of his time, was aware of two social forces operative in the Muslim world and in particular in Andalusia: the 'arabiyya, and the shu'ubiyya. The first doctrine, defended by many learned and educated Muslims, asserted the superiority of Arabia, the Arabs, Muhammad, the Kuran, and Arabic language and poetry, while the second started as the reaction of the people of many of the conquered countries, aiming to obtain equal rights and promoting their own cultures as equally valuable to that of the Arabs. For Allony, these two currents inspired many of the Jewish cultural and literary polemics that originated during the Middle Ages. Ibn Ezra admired Arabic culture much more than other Jewish intellectuals of his time, but because he was a loyal, traditional Jew, he was not completely carried away by this admiration. He defended the aesthetic and rhetorical values of the Bible and Hebrew language, and he wrote poetry only in Hebrew. Allony offers an interesting perspective on the intellectual attitude of this author.

FENTON, who has recently published a book in French on ibn Ezra's *Maqalat al-hadiqa* (1996), offers in this article an extract from his doctoral dissertation (Sorbonne, 1976), which provides important information about this little known work that completes the *Kitab al-Muhadara*. When he wrote the article, Fenton had no access to one of the two manuscripts of the book, held in the Russian National Library in St. Petersburg, but his study of the other manuscript, preserved in Jerusalem, allowed him to present the contents of the book: a demonstration that the Hebrew Scriptures possess their own elaborate system of rhetoric and a polemic against the supremacy and inimitability of the Kuran, plus an analysis of biblical metaphors. Fenton draws attention to aspects of the book that bear important literary or philosophical (Neoplatonic) significance, analyzing some of its Jewish and Greco-Arabic sources. A pioneering study of this rediscovered, fundamental work of ibn Ezra, the article should be of considerable interest to philosophers and historians of literary criticism alike.

TANENBAUM interprets the ideas on the soul found in two liturgical poems by ibn Ezra. She shows that many images of wandering, displacement, and captivity in the secular poems he wrote after leaving Granada were often employed in his piyyutim in order to evoke both the plight of the Jewish nation and the odyssey of the soul. Tanenbaum analyzes in particular a long, strophic poem of repentance, which refers in several stanzas both to Israel and to the soul. The poet defines "exile" as the soul's separation from her source, because she has an essential affinity with God, is linked to Him with bonds of passionate love, and is engaged in the quest for reunion. Through philosophical study, the soul may attain ultimate felicity, the contemplation of the divine. Readers interested in liturgical poetry and philosophy will enjoy this meaningful inquiry.

SCHEINDLIN analyzes the views on the nature of poetry and its place among the activities of the intellect expressed by ibn Ezra in his *Book of Discussion and Conversation*. Scheindlin describes the contents of the book both analytically and from a global perspective. He concludes that this work does not resemble the Arabic *artes poeticae*. It is a defense of Jewish culture, a redemption of the honor of the Hebrew language, and its main concern is the legitimacy of Arabic-style Hebrew poetry. Ibn Ezra's book contains a mixture of positive and negative evaluations of poetry. The contradictions can only be explained with reference to the peculiar cultural situation of ibn Ezra's circle. Traditional talmudists opposed Arabic-style poetry, reacting against the use of the holy tongue for secular purposes and against the sensual way of life and the social setting of poetry. Furthermore, subjecting Hebrew to the patterns of Arabic could be seen as a kind of subversive act, a celebration in Hebrew of Arabic culture. Ibn Ezra critiques and defends poetry; he did not stop writing poetry, but he did turn to philosophy in old age. A very personal and original interpretation of this crucial and difficult work, Scheindlin's study is especially recommended.

DANA studies the qualifications of the poet according to the *Kitab al-Muhadara*: natural gift, ethnic and geographic origin, and creative talent. For ibn Ezra, poetry is not an art that can be acquired, for it presupposes a natural talent. The Arabs were naturally eloquent, and their geographical proximity to cultured countries helped them to develop their talent in the same way that the tribes of Judah and Benjamin, who dwelled in Jerusalem, excelled intellectually (as seen in their descendants, the Jews of Spain). The poet has an imagination that enables him to experience visions and distinguishes him from other men, but poetry requires labor and skill, too. Creativity as an effect of inspiration makes poetry into humanity's ideal intellectual achievement. Dana offers a clear and accurate presentation of the subject with constant references to Arabic literature.

BRANN qualifies ibn Ezra as "the most conservative of the Andalusian Hebrew poets to compose poetry on the model of Arabic prosody and poetics." This is not necessarily a negative evaluation because, as Brann also remarks, ibn Ezra was considered "the consummate Hebrew poet, the embodiment of the traditions and ideals of the school." Brann translates several paradigmatic poems; analyzes their structure and literary strategies in search of the interplay of formal elements;

and shows that the poet, who respects the complex of traditional norms of composition, has made an intense personal investment in his creations. Brann views ibn Ezra as a true master of technique and makes it clear that in this poetry the important element is not thematic subjectivity (the reflection of the personal experiences of the poet), but ibn Ezra's embellishment of tropes and figures. Ibn Ezra's poetry is interpreted as a practical application of the literary theory expressed by the poet in his *Kitab al-Muhadara*. His originality lies in his structural mastery over traditional forms of composition. Brann's book is quite demanding, but the well-prepared reader, with some knowledge of literary criticism, will appreciate a fine and precise analysis that is an extremely valuable introduction to the world of medieval Hebrew poetry.

The exceptional significance of the role played by the Andalusian philosopher and Hebrew poet Solomon ibn Gabirol in medieval Jewish culture has attracted the attention of many scholars interested in the different aspects of his personality and work. Only a part of his poetic oeuvre can be read in English translation: in 1923 there appeared Israel Zangwill's rendering of *Selected Religious Poems* by ibn Gabirol. Raymond Scheindlin's *Wine, Women and Death* (1986) and *The Gazelle* (1991) both contain exquisite English versions of some of the poems, accompanied by helpful commentaries.

The excellent and expert scholarship of LOEWE yields a fine overview of ibn Gabirol's manifold production and his interesting personality. Loewe presents in 200 pages ibn Gabirol's ethics and metaphysics on the one hand and his secular

("social") and liturgical poetry on the other. The author is aware that, due to editorial requirements, his study is too short to deal adequately with all the pertinent subjects, and he humbly contents himself with providing "an appetizer," encouraging his readers to address themselves seriously to more technical works. Nevertheless, no important detail about ibn Gabirol's life and times, including his philosophical and poetic activities, has been neglected. Loewe furnishes several good poetic translations (with original text), including the complete *Royal Crown*, with useful commentaries. Loewe suggests that ibn Gabirol is "the greatest of the Spanish-Jewish poets." A personal, original, and very valuable synthesis of the many facets of this Jewish author, this is the best comprehensive introduction to ibn Gabirol's work.

BARGEBUHR, who has published another notable book in German on ibn Gabirol, argues that the palace of the Alhambra is the site of ibn Gabirol's poem describing an Andalusian mansion. Bargebuhr constructs a whole theory about this poem and its "Solomonic symbolism," which assumes that the poet did not die in 1052 or 1057, as is usually thought, but around 1070 (following the view of the Renaissance Jewish historian Abraham Zacuto) and that ibn Gabirol spent a long time in Granada. Ibn Gabirol wrote this particular panegyric when his patron, Yehosef ibn Nagrela, constructed his splendid palace. Its remains can be seen in the excavated structures of the 11th-century Alhambra; the fountain described by the poet would be the extant Fount of Lyons. The book tries to reinforce this theory with many arguments derived from art history and Hebrew poetry, and it includes translations of several descriptive poems of ibn Gabirol accompanied by commentary. This is a very learned book written in an almost belligerent style. The author's central thesis, however, is not accepted by many serious scholars.

SIRAT's survey of the history of Jewish medieval philosophy constitutes the best available introduction to this subject for a wide audience. Ibn Gabirol is included in the chapter titled "The Neoplatonists." The author comments briefly on ibn Gabirol's philosophical works, centering her attention on his *Fountain of Life*, "a good illustration of the non-confessional character of philosophy when the philosophy in question is a science [the science of matter and form], and not the application of this science to a revealed religion." Sirat describes ibn Gabirol's thought as one of the most striking and original philosophies produced by a medieval Jew, even if he followed Neoplatonic ideas when he analyzed the mechanism of creation. Among ibn Gabirol's main contributions, Sirat emphasizes the importance he accorded to knowledge, the human being as microcosm, the concept of the three souls, his doctrine of the divine will, and the ascent toward the divine. Sirat argues that ibn Gabirol had a limited influence on later Jewish philosophers because he did not treat the most urgent problem for the Jews of subsequent generations: the relationship between philosophy and faith. But she emphasizes also that, in spite of the attacks of the Aristotelians, his ideas, "destined to misinterpretation," can still be found in the works of the Spanish kabbalists. This is an excellent general presentation of his philosophical significance.

A curious early work, MYER dedicates more than 500 pages to the study of ibn Gabirol's philosophy, searching for the con-

nection between his writings and the Kabbalah (in particular the Zohar) and other esoteric (even Chinese, Egyptian, and Mexican) literature. From today's perspective, the book is a strange mixture of learned but uncritical philosophical and mystical references, with almost no practical value. Those who do choose to read it will need to apply constant vigilance, continually contrasting it with the new data and more authentic perspectives that have accrued after more than a century of research.

TANENBAUM devotes a large section of her doctoral dissertation to the study of the soul and the notions of retribution in the *Royal Crown* and in one of ibn Gabirol's liturgical poems of admonition. Tanenbaum posits that the incorporation of speculative ideas into his poetry is one of ibn Gabirol's most significant innovations. From his Neoplatonic perspective, ibn Gabirol integrates traditional and new philosophical concepts and redefines some of the fundamental assumptions and symbols of classical Judaism. The soul may be seen as a divine emanation, and it must return to its source. Ibn Gabirol set trends that would dominate Andalusian piyyut through the middle of the 12th century. This study coordinates in a very clear way the decisive philosophical and poetic elements of ibn Gabirol's work.

Scheindlin, in several articles and in sections of his books, has interpreted masterfully several aspects of ibn Gabirol's poetic work. Comparing his liturgical poems, and in particular his *reshuyot*, with Arabic *zuhd* poetry (SCHEINDLIN [1993]) and with Sufi poetry (SCHEINDLIN [1994]), Scheindlin notes that *zuhd* (ascetic) poetry is not a forerunner of Sufi poetry, and he demonstrates that none of these poets directly influenced ibn Gabirol. He also asserts that these genres cannot be taken as sources for ibn Gabirol's innovations in the sphere of Hebrew liturgical poetry. The intimate tone of his poems, their references to the love of God, and the new individual voice are closer to some kinds of Arabic private prayer of the time. SCHEINDLIN (1996), an analysis of ibn Gabirol's poem on the palace and its gardens, proposes a literary reading of the verses as a true panegyric in accordance with the classical rules. (This interpretation is far-removed from Bargebuhr's thesis, which Scheindlin rejects in this article and in other publications.) The poem, with its movement from light to darkness and back to light, deals ostensibly with palaces and gardens, but it is really about a patron. The transition verse allows the poet to disclose the patron's power as creator of the animating soul of the palace and the garden. This is a wonderful approach to ibn Gabirol's creative literary imagination, and it is particularly recommended.

Samuel ibn Nagrela, known also as Samuel ha-Nagid, the title he received as leader of the Andalusian Jewish communities, was the vizier of the Berber kings of Granada, Habus and Badis, and was one of the most significant personalities of al-Andalus in the 11th century. His productivity in numerous and diverse disciplines has earned the attention of many scholars interested in literature and history. Some of his poems are available in English, thanks to books by Leon Weinberger, *Jewish Prince in Moslem Spain: Selected Poems of Samuel Ibn Nagrela*, (University: University of Alabama Press, 1973), and Peter Cole, *Selected Poems of Shmuel HaNagid* (Princeton, New Jersey: Princeton University Press, 1996).

SCHIRMANN, in a classic essay, offers a comprehensive picture of the rich personality of ibn Nagrela that, after the passage of some decades, has retained its full value. The great teacher of the present generation of historians of Jewish medieval literature, Schirmann presents with precision the most important aspects of the life of the Nagid; his political and military career; his polemical, halakhic, and philological writings; and his poetry. The article is historically oriented, offering a good conspectus of the main data contained in the war poems without paying extended attention to their literary aspects. One might quibble over occasional small details in the course of the many questions so masterfully covered in this study, but this is indispensable reading.

ASHTOR dedicates a long chapter of his notable book to Samuel ha-Nagid and his son, Jehoseph ha-Nagid. Ashtor's presentation of these characters has all the virtues and limitations of the rest of his book: a learned use of contemporaneous Arabic and Hebrew sources; a precise description of the political, sociological, economic, and spiritual atmosphere of the epoch; sharp historical judgement; and excessive reliance on imagination to explain minor details on points where *current knowledge is limited*. All of these characteristics combine to give the most detailed biography of the Nagid available. It is necessary to read the text from a rigorously critical perspective, but it can even be enjoyed as a novel.

WASSERSTEIN includes a chapter on the Jews in his excellent study of the Muslim Taifa states, and the pages devoted to ibn Nagrela are particularly illuminating. The activity of

the Nagid is depicted within the framework of a detailed and well-constructed examination of the epoch. Wasserstein investigates ibn Nagrela's polemical controversy with ibn Hazm and the problem of the employment of highly qualified Jews in the courts of the Muslim kings. This is a sober and very objective picture of the role played by ibn Nagrela in Granada's government and is highly recommended.

BARGEBUHR studies the palace of the Alhambra. Examining ibn Gabirol's poem describing an Andalusian mansion and its "Solomonic symbolism," Bargebuhr maintains that the poem was written when Jehoseph ibn Nagrela, the son of the Nagid, erected a splendid palace on the hill of the Alhambra. The Nagid had called ibn Gabirol to Granada to help educate his son. Jehoseph's palace, Bargebuhr claims, coincides with the excavated structures of the 11th-century Alhambra, and the fountain described by ibn Gabirol corresponds to the extant Fount of Lyons. The book tries to reinforce this theory with many arguments taken from art history and Hebrew poetry, and it describes in detail the atmosphere of Granada in the time of the Nagid and his son. This very learned book adopts an almost belligerent tone in defense of its author's central thesis, which is not widely accepted today.

BRANN rereads the conflicting literary representations of the Nagid by the Arabic writers of his time, searching for their textual environment in order to illuminate some of the subtleties of the paradoxical relations between Muslims and Jews in al-Andalus, which were characterized by extended periods of tolerance punctuated by occasional outbreaks of hostile reaction. He explores in these sources how the members of the two communities thought of each other and lived together, asking: how is it that positive representations of Jewish courtiers such as the Nagid and vicious attacks on the Jews were written at the same time? Furthermore, why do scholars reading the same sources find in them quite different perspectives? The Hispano-Arabic sources, Brann argues, can be read as a textualization of the fluctuating and ambivalent relations between Muslim and Jew. The presentation and interpretation of the sources here is simply excellent, and the more familiar readers are with the milieu, the more intensely they are likely to relish this article.

SEGAL's unpublished doctoral dissertation compares *Ben Tehillim* by the Nagid with the book of Psalms and scrutinizes the esoteric codes that allow a medieval author to establish parallels among different texts. After a typological comparison of the poems of both books, Segal establishes a full and clear linkage between eight poems of the Nagid and an equal number of Psalms. Ibn Nagrela, who chose to conceal a body of poetry closely related to Psalms within his *Diwan*, fashioned not a few of his war (or "martial") and nature poems after models in the Psalter, and these poems can be identified as belonging to the esoteric corpus called *Ben Tehillim*. Thus, *ibn Nagrela employed specific cues, or literary devices, to lead the "extremely discerning reader" to discover the concealed textual references*. Segal contends that "most likely the Nagid wrote his 'psalms' for recitation in the soon-to-be rebuilt Temple" and that this context could be the "primary reason for his veiling of the exact nature and locus of *Ben Tehillim*," but this conclusion (and Segal's messianic evaluation of the Nagid's poetry) is not clearly justified. In fact, the book is not free from controversy in several

aspects, but Segal presents a very suggestive theory, well worth the consideration of well-informed readers.

ROSEN translates and comments on the Nagid's poem about the sea-monster, "in many respects, the strangest poem in the *Diwan*." After examining its factual probability, she searches for similar motifs in Arabic literature, concluding that in this first sea poem of Hebrew medieval literature, the Nagid leaned heavily on an established tradition (including that of Sinbad), in particular in his account of the beast. The fact that very similar images are found in work by a later Arabic poet allows her to infer the existence of an earlier common tradition. As in the Nagid's later war poems, the narrative sequence (similar to the description of the battle) is framed in a "religious" prologue and epilogue. This is a simple, clear, and well-crafted analysis of the poem and its parallels.

HAMORI analyzes and comments on the war poem written by the Nagid in 1039 celebrating the victory against the troops of ibn 'Abbad of Seville. Hamori distinguishes 11 thematic sections in the poem and pays particular attention to the forms of parallelism and symmetry that mark the conclusion of each section. He supports his explanations with references to Arabic and biblical texts employed by the poet. The Nagid's rhetorical practice in the verses appears in the numerous isomorphic structures, above all at the boundaries of the thematic segments found in the composition. An illuminating interpretation of the poem, this will be particularly appreciated by specialist readers.

Analysis of Jewish iconography must ask whether there should be Jewish art at all, given the prohibition on image-making in the second commandment, and this question has indeed preoccupied many Jewish-art historians. Scholars at the end of the 20th century, however, began emphasizing other issues as well.

GUTMANN's collection accords clear priority to the relationship between the second commandment and the production of Jewish art. Despite the biblical prohibition, Jews have created art since earliest antiquity, and their work has naturally been influenced by the artistic styles of their non-Jewish neighbors. The essays in this volume generally take the position that art that exhibits the style of the surrounding culture must necessarily imply a certain degree of assimilation by the minority community. Some Israeli scholars have disputed this assumption, however, positing lost Jewish antecedents for the Christian art that later Jewish art seems to emulate. This debate is perhaps an example of the intellectual conflict between diasporism and nationalism.

A substantial counterweight is provided by the classic, 13-volume work by GOODENOUGH (1953–1968). He attributes the existence of Jewish art to assimilation and heterodoxy, but he also argues that an analysis of Jewish art, beginning with the ancient period, can help explain the culture and its aesthetic impulse. Goodenough moves beyond debating whether Jewish art has a biblical "right" to exist, impressively investigating a host of other issues in these volumes, which are arranged by topic. A useful abridged edition of the arguments from the multivolume magnum opus appeared in 1988.

KOCHAN represents the interest of recent art theory in the philosophical rationales for prohibiting or justifying the creation of graven images. The author considers the history of changing definitions of the term "graven image" and presents comparisons between Jewish and Byzantine iconoclasm and iconoclasm as he seeks to describe a Jewish aesthetic and explain how it emerges and develops in history.

The massive index of Jewish art edited by NARKISS is the product of the labor of numerous young art historians in Jerusalem who are attempting to create a catalog of monuments of Jewish art and architecture around the world. Each card in the index records one iconographic motif from a manuscript or ritual object. This documentation is meticulously thorough, creating a very useful research tool, but the attention to detail also means that the project will proceed slowly and coverage will long remain very partial.

COHEN effectively charts the attitudes of early modern and modern Jews toward art and particularly toward its political uses. In a work that is large in scope, yet detailed both in language and ideas, Cohen argues that the study of visual culture can help explain the formation of modern Jewish identity from the court Jews through Zionism. This book excels at analyzing the connections between Judaism's visual and political cultures.

HUBERMAN presents an unsatisfactory concordance of images and texts, iconological in its approach and quite inattentive to history. She juxtaposes each image in her book with an "appropriate" biblical or midrashic text, thereby implying that the images express an ahistorical, universal message. In fact, images rarely convey the same meaning across all contexts, and it is important to be cautious instead of jumping to conclusions about an icon's significance, even when a text accompanies an image. Thus, oblivious to the possibility of ambivalence or subversiveness, Huberman notes the juxtaposition of a synagogue painting of an Austro-Hungarian eagle with a verse from Deuteronomy 32:11 describing God's pro-

tection of Israel. Taken at face value, this combination of image and text assuredly implies that the icon serves as a patriotic symbol of the loyalty of the Jews to the Austro-Hungarian Empire. Huberman does not explain, however, that some observers would recognize that the imagery of the icon also evokes the text of Obadiah 1:4 (which depicts the eagle as a symbol of an empire destined to be destroyed by God). Thus, the same illustration can be interpreted by “insiders” as presenting a message that radically challenges the verse so diplomatically cited.

As an antidote to the sort of approach typified by Huberman, EPSTEIN discusses the medieval use of iconography to formulate dreams of subverting or protesting against the majority culture. In the Middle Ages, the art of Jews seems indistinguishable (except for the language of the manuscripts) from the art of non-Jews, but Epstein argues that careful attention to the distinctive text-culture of the original audience for medieval Jewish art can reveal a sort of symbolic secret language that displaces the surface meaning of the images.

Identity is a term that ordinarily suggests a quality of stability, equality, or unchanging internal substance or essence. Contemporary notions of personal and cultural identity, however, suggest certain vexing problems, not the least of which is that the modern mind must come to some appreciation of notions of mobile or constructed—hence fundamentally malleable and relational—forms of identity. The human, natural, and physical sciences, though disagreeing in many significant ways, all have contributed to modern theories of identity a tendency toward an evolutionary and differentially constituted formulation. Personal, social, and cultural identities are understood under these terms to be eminently historical, thoroughly mate-

rial products of the interplay between multiple forces that, though they include the individual, are often considered to be beyond the individual's ken or control. Simply put, identity becomes an ongoing achievement, something like a conversation, rather than a fixed core around which change occurs. The theme of identity is perhaps best understood when counterposed with sameness, otherness, and difference, raising the question of how something remains identifiably the same while undergoing significant alteration.

In their remarkably well wrought, beautifully textured work, GILMAN and ZIPES have overseen the production of a millennial monument to German Jewish identity. It is an exceptional achievement of coordination, structure, and selection featuring the historical-critical work of 119 eminent contributors of topical or historical essays, which have been arranged in chronological order. Each essay can be likened to a partial diagnostic examination of a complex system. Each measures the pressure of a particular moment in time under the guidance of the following symptomatic question: “what is ‘Jewish’ about ‘Jewish’ writing in ‘German-speaking countries?’” Regarding this question the following issues seemed paramount: language and discourse, ideal and actual geography, Diaspora as exile and achievement, survival and separation, and integration and acculturation. As the editors note, the volume addresses this complexity; it does not resolve it. Some essays focus on a political or historical event, others on an author or group of authors, still others on cultural, artistic, religious, or literary movements. Found here, for instance, are essays by Paul Mendes-Flohr on Franz Rosenzweig's 1914 essay “Atheistic Theology”; Susannah Heschel on Abraham Geiger's 1857 ground-breaking *Urschrift und Übersetzungen der Bibel*; Klaus Berghahn on Lavater's attempt to convert Moses Mendelssohn in 1769; and any number more. Each article ends with a fine bibliography. This volume should find its place as a standard reference on a great many shelves.

In a work that is sure to arouse a passionate response in the reader, BOYARIN and BOYARIN argue that Jews and Jewish culture are ripe for cultural studies. They wonder, however, whether “Jewishness is up to the challenge.” The authors realize that the intentional embrace of a cultural studies purview would situate Jewish cultural identity within a broader cultural-comparative framework, hence perhaps introducing the thesis of a specific (and philanthropically supportable) “Jewishness” to its own demise. The editors and contributors argue otherwise, countering that opening up to the Other what has been largely an internecine debate on the question of Jewishness is a “move toward the recognition of Jewish culture as part of the world of differences to be valued and enhanced” and a way to “avoid being consumed by a liberal universalist ethos.” Contributions include Benjamin Orlove's examination of ethnographic notions of selfhood as multiple and fragmentary; Chana Kronfeld's essay, which asks whether modernism's penchant for privileging marginal literature as the voice of the revolutionary Other may not in fact be the substitution of one marginalizing criteriology for another; and Vivian Patraka's discussion of the use of the term Holocaust in public discourse, arguing that it functions performatively and strategically as a meaning-making term and not solely as the name for a historical fixity, and that it evinces a representative mobility that

ensures both the necessity and the impossibility of its remembrance. A number of authors embrace a deconstructivist approach, which, one might argue, is an eminently Jewish form of interpretation and argument.

RUBIN's work on assimilation is rich with historical detail and filled with anecdotal accounts, first-hand testimonies, summary biographies, and personal observations, a combination that makes his book on this most difficult of subjects a surprisingly lively read. Major and minor figures, movements, and events from all sides of the issue, both Jewish and non-Jewish, are given voice and juxtaposed so that the result seems more like a living and vigorous conversation than a presentation of categories, arguments, and positions. Indeed, one will search the book in vain for a conclusive determination on the issue since, as Rubín takes pains to point out, assimilation historically has been a double-edged sword with both remarkably beneficial and disastrous results. Throughout the text, the reader will be confronted with the paradoxical and incongruous modalities of life and thought that mold the identity of Jewish difference. These modalities derive from what Rubín seems to argue is the natural teleological force or direction of assimilation, which is the eventual (possibly salvific) total interiorization of Jewish difference under the sign of a universal difference. Such a result, of course, tends to leave the defense and support of a Jewish specificity speechless and perhaps finally vacuous. Such impossibilities and actual contradictions are at the heart of the matter, and Rubín does not shy away from depicting the reality of these entanglements or from exposing the consequences.

GORNI's text begins with a statement of difference: the difference between notions of essential identity and "the essence of contemporary Jewish identity." He argues that the goals of emancipation have in large measure been achieved in this century's movement of the diasporic community to the United States and in the creation of the State of Israel. Today it is the link between the two that "confers collective identity on this multiform entity. The Jews as a group have no other real identity." For Gorni, the "real identity" of contemporary Jewry is found in the explication of this division, for it is the question of Jewish identity that divides them and, one might say, keeps them together. The United States and Israel are differentiated centers of Jewish identity. Each side of the divide is further differentiated by a multiplicity of intellectuals, academics, and public figures, constituting a heterogeneous and contentious mix that ensures that the debate remains ongoing and malleable. Gorni tracks the permutations of the debate through four phases that span the years 1942 to 1987, starting with the question of normalization that began with the creation of Israel up to the present preoccupation with the question of equal status between diasporic and Israeli Jewry. The utility of Gorni's presentation is the determination of categories or principles equipped with which the reader may understand what might otherwise appear to be a wholly acrimonious debate. In Gorni's afterword, the category that becomes the most determinate way to preserve Jewish distinctiveness is a form of Cultural Zionism adequate to the times, to wit "the Jews of the Diaspora must promote the center" and "Israel must encourage autonomous, cultural and ideological trends in the Diaspora."

In a compendium of DAWIDOWICZ's previously published essays, the reader will find her sketch of "the odyssey of American Jews in search of themselves." The essays are divided into four sections. The first concerns the meaning of modern American Jewry; the second describes Judaism in terms of its religious forms; the third explores the continuity between a large part of modern Jewry and its East European roots; and the fourth takes up the Holocaust as it continues to set Jewish priorities and definitions. Dawidowicz will not define Jewish identity by birth alone but maintains that the conditions of modernity dictate that Jewishness must also be a matter of choice. Early on, Erik Erikson's theory of identity formation is given a positive review, a theory that holds that identity or "selfhood" is an interactive accomplishment, an "intersection of individuality, culture and history." Within this mixture, a contemporary Jewish distinction requires profession, commitment, and a mobilized community. In other words, Jewishness must not only be a given, it must also be sought after and affirmed. Dawidowicz is convinced that Jewish identity will persevere even under conditions of increasing secularization and shifting Jewish values because religious identity, which she continues to believe is essential, "does not necessarily affirm a personal commitment to Judaism, but rather to membership in the Jewish people."

The relationship between Jewish identity and Jewish writing is YUDKIN's target. For the Jewish people, a people of the text and hence a written and writing people, the supposition of just such an equation has long been formative for Jewish identity. But this is no simple coincidence. The first chapter, "A Jewish Literary Identity," sets the tone for what follows. Over the course of a chapter that darts from author to author, language to language, place to place, period to period, and finds no unifying theme, Yudkin states his thesis: "These are Jewish writers carving out literature from an experience, sometimes changing course, country, language, opinion and objective. They reflect the pattern of Jewish life made articulate." Jewish identity as written becomes the articulation of the conditions within which Jews find themselves, conditions of mobility, discomfort, alienation, and, perhaps, nonidentity or marginal identity. The experience of Jewish writers and the corpus produced is paradoxically the writing of an identity in continual search of itself. The table of contents reflects this theme. The terms "between," "revolution," "exile," "periphery," and "fringes" in search of "home," "centre," "Europe," and "new beginning" are definitive. Yudkin finds that such conditions have afforded the Jewish writer an extraordinary freedom and power to render Jewish existence in unflinching detail. Yudkin considers the work of a large number of writers from Europe, America, Russia, and Israel and successfully renders each author's unique voice and purpose.

As a monotheistic faith, Judaism always has presented itself as rejecting idolatry, by which it means the worship of deities other than the one God. The polemic in the Hebrew Bible against idolatrous worship has been taken up again and again in later writings. Yet modern scholarship shows that idolatry—broadly understood—has surfaced again and again in Jewish religious life and, in fact, was not absent from biblical faith. Several modern thinkers, of whom Nietzsche was the most prominent, reverse the biblical appraisal of idolatry and see in it a positive religious value.

KAUFMANN offers the classical description of idolatry as anathema to Jewish religious life. He surveys the polemics against idolatry in the Hebrew Bible and notes that the biblical authors misunderstood the religious dimension of idolatry. The misrepresentation of idolatry as the worship of wood and stones, rather than the gods they represented, and the mocking characterization of idolatry in the Bible, he insists, demonstrate that biblical religion stood at an opposite end of religious life from that represented by idolatry. Belief in a single creator divinity makes the worship of any created thing incomprehensible. Kaufmann rejects modern scholarship that sees traces of ancient myth and polytheistic belief in biblical narratives. He suggests that biblical religion fails to come to grips with idolatry precisely because it is out of the range of its theological spectrum; it is too alien even for understanding. This approach has been highly influential and continues to dominate many treatments of the Hebrew Bible.

CROSS uses both comparative ancient Near Eastern data and internal evidence from the Bible to show that biblical religion was more complex than Kaufmann suggests. Much of the epic material in the Hebrew Bible is shaped by the mythic themes of polytheism. The recognition of several divine beings surfaces in many biblical passages, and kings who seek to return to archaic and primal traditions often evoke a pluralistic sense of divine powers. The deep imprint of such archaic religion on the Bible suggests that the exilic and postexilic periods were not characterized by an automatic rejection of polytheism or idolatry. Tension between portrayals of Israel's God,

YHWH, as a warrior or as a creator give evidence of the way in which the Bible sought to synthesize the variety of divine entities that tradition had authorized.

SMITH attributes the development of biblical monotheism to two opposite tendencies—that of absorbing and assimilating the religion of the polytheistic environment and that of separating Israelite identity from that of the polytheistic culture. These two movements resulted in creating the image of a single divine being who combines the various potencies and attributes of several diverse deities. Achievement of this result also stimulated a polemic against those cultures that retained separate gods to serve different purposes. Smith seems to agree with Kaufmann that by the end of the process shaping the Hebrew Bible, idolatry became a focus for polemical self-identification. The Bible defines its religion in opposition to idolatry. Yet, like Cross, Smith finds the acceptance of polytheism and idolatry throughout the early history of Israel.

PATAI offers an anthropologist's argument for the existence not only of biblical polytheism but also for the continued worship of several divine forces throughout the Jewish experience. He suggests that the biblical record shows continued devotion to the Hebrew Goddess Asherah. Thereafter, he claims, the Goddess reappears in rabbinic texts and in mystical texts such as the Zohar. The image of Lilith, for example, appears to him as no less a reflection of the female divinity than the Shekhinah, God's indwelling presence. This book uses scholarship accrued from secondary sources even though it includes copious references to original texts. As such, many scholars look on it with distrust and think that it offers an uncritical approach. Readers, however, are likely to be grateful for the many passages that Patai presents in translation and for the range of his interests. He emphasizes the omnipresence of the Goddess not only in biblical times but in later periods of Judaism as well.

FRYMER-KENSKY provides a more detailed and scholarly account of the marginalization of the Goddess in biblical religion. She offers a survey of various goddesses in the ancient world and reflects, as a feminist, on the relationship of theology to women and gender. She interprets the monotheistic emphasis on a single, abstract divinity as a metaphor for the social inequality of the genders in daily life. Nevertheless, she sees prophets who imagine Zion as a mother, daughter, or bride as reviving a more active and dignified view of women. While they remain monotheists, they prepare the way for seeing wisdom as a feminine manifestation of the divine. Frymer-Kensky sees the recapture of the feminine and its integration into a biblically based religious perspective as a major modern challenge.

The challenge of modernity is at the heart of KOCHAN. After sketching the social and historical background of Jewish messianism at the dawn of modernity in the 17th through the 19th century, he turns attention to the rhetoric of opposition to idolatry used in response to it. He surveys the discussions of idolatry in rabbinic material and the medieval period and identifies the view that idolatry is not only worship of material objects and natural phenomena but most essentially is the attempt to create a human reality that displaces God's world. He claims that all attempts to eradicate this idolatrous impulse have ultimately failed. The modern period has proven even more susceptible to the temptation to

substitute a humanly constructed ideal for God's actual world. Even religious Zionism continues the utopian hope that animates idolatry as understood in the modern period.

All these themes find a place in the magisterial work of HALBERTAL and MARGALIT. This book offers a definitive treatment of idolatry from early biblical writings through the modern period, tracing the biblical use of idolatry as a metaphor for betraying national values. Halbertal and Margalit show how idolatry came to refer to any representation of things in the world. The book explores understanding idolatry as error, as myth, as immorality, and as political betrayal. The book concludes by reviewing the modern reevaluation of idolatry as a positive way for humanity to assert control over itself and the world.

There are three distinct groups of Jews in India. While the Cochin Jews of Kerala and the Bene Israel of Maharashtra are thoroughly Jewish in heritage and religious practice, both are also well integrated into their very different regional, ethnic, and linguistic Indian identities. Both groups descend from Jews who settled in India many centuries ago (perhaps 2,000 years ago in the case of Kerala), whereas the ancestors of the Baghdadi Jews in Bombay and Calcutta migrated from Iraq and other Middle Eastern countries from the 18th to the 20th century, during the period of British rule. Since Indian independence in 1947, almost all the Cochin and Baghdadi Jews have left India—the Cochins for Israel, where about 5,000 are found today, and most of the several thousand Indian Baghdadis for English-speaking countries. About 5,000 Bene Israel remain in India, and about 40,000 are found today in Israel. Much of the liter-

ature on Indian Jews concentrates on just one or two of these groups; this entry reviews books reporting on all three.

SLAPAK offers the most comprehensive introduction to the three Indian Jewish communities. Her lavishly illustrated volume is more than a catalog of the ambitious 1995 exhibition that she curated at the Israel Museum in Jerusalem. It begins with useful historical introductions to the three groups by scholars Shirley Isenberg, Barbara Johnson, and Joan Roland, then features Slapak's own meticulously researched articles on the synagogues, ceremonial objects, home rituals, daily life, dress, customs, and ceremonies of each community, plus an article by Shalom Sabar on illuminated Indian *ketubbot*. Slapak's ethnographic material is drawn from Hebrew and English sources and from her many years of research among the Indian Jews in Israel.

BETH-HILLEL's book, notable among the various travelers' reports on the Jews of India, is an edition by W. Fischel of his early-19th-century book. Rabbi David d'Beth-Hillel was an Ashkenazi traveler from Safed who wrote and published the original book in Madras, India, as an English translation of portions of his much longer (and now lost) Hebrew manuscript. He spent eight years traveling in the Middle East and Asia, and from his four years in India he reported on the history and customs of the Jews in Cochin and of the Bene Israel and some newly arrived "Arabian" (Baghdadi) Jews in Bombay. Though this was a time when many emissaries from Eretz Israel were traveling in Asia, Beth-Hillel represented no one but himself; he was motivated by a personal search for remnants of the Ten Lost Tribes, which he claimed to find in questionable places. His views on the Baghdadi Jews in Bombay are thoroughly negative, but he is much more positive about the Bene Israel. In Cochin he reports on the economic decline of the so-called white Jews—a separate congregation of Sephardi and other immigrants who had arrived in Kerala during relatively recent centuries—in contrast to the greater stability that he perceived among the larger and more ancient Jewish group in Kerala.

LORD was a Church of England missionary who worked among the Bene Israel from 1882 to 1924 and who also visited and studied the Cochin Jews. This is a reprint of several of his articles that thoroughly review and evaluate the available literature on both communities. His account of the Cochin Jews is particularly important for its attention to the more ancient Malabari section of the community (sometimes labeled "black Jews") and their own version of their origins. The book has several appendixes, including an extensive bibliography and demographic statistics on the three communities.

RABINOWITZ, a chief rabbi of South Africa who later became a leading rabbinic figure in Jerusalem, traveled to India in the early 1950s when many of the Jews there were awaiting migration to Israel. He takes a scholarly interest in the history of the communities, weaving historical information into this lively account of his visit. He does not hesitate to point out political conflicts among various Indian factions and Zionist emissaries, nor to criticize the over-dependence of many Baghdadi Jews on charitable trusts established by a few wealthy families; and his report on Cochin is offensively gossipy in places. However, the book is valuable in offering a unique overview of the Indian Jews during this important period in their history, and of the Zionist efforts to arrange for their emigration.

TIMBERG compiled the first anthology of articles on the three Indian communities, combining new scholarly writings with reprints of classic sources—earlier articles by David Mandelbaum and Myron Weinstein and a hard-to-find translation from Portuguese of the 1686 DePaiva report on the Cochin Jews (edited by S.S. Koder). The Cochin section includes articles written in the 1980s on songs and legends, comparison of Kerala Jews and Christians, and Cochin weddings in Israel. The Bene Israel articles are historical, focusing on 19th- and 20th-century issues; Shalva Weil's bibliographical overview of research on the Bene Israel is particularly valuable. Timberg himself wrote both historical articles on the Baghdadis.

The KATZ anthology is a collection of more recent articles on the three Indian communities by some of the same scholars. Katz and Goldberg compare Cochin Jewish rituals with Hindu customs of Kerala, and Johnson discusses cultural continuities between Cochin and Israel as seen in community parties. Isenberg writes about changes in culture and identity among Bene Israel villagers, including excerpts from oral histories. Roland and Timberg both discuss the evolution of Indian Jewish identity during the British colonial period, Roland concentrating on the Bene Israel and Timberg on the Baghdadis. Ruth Cernea's article on the Jews of Burma notes historical connections with India. Abraham's article summarizes her research on ethnic identity among the three communities.

BHENDE and JHIRAD analyze results of a professional demographic survey of 81 percent of the Jewish population of India (5,271 in the 1991 census), looking at age and sex ratios, family structure, marriage, education, occupation, and health. Almost half the book consists of statistical tables.

ABRAHAM, an Indian Christian, is the first social scientist to carry out systematic ethnographic research among all three Indian groups. Her sociology dissertation explores ethnic identity and marginality among Bene Israel, Cochin Jews, and Calcutta Baghdadis in India, and among Bene Israel and Cochin Jews in Israel—concluding that they have experienced dual ethnicity in India and dual marginality as Jews in India and as Indians in Israel. Carrying out this ambitious project of interviews and participant-observation in two countries within 16 months limited her sample of sites and interviewees, making it difficult for the reader to assess whether her generalizations would hold for a larger sample. She began the research in India, deriving Israeli informants from those preliminary contacts. Thus, for example, her concentration on white Jews in Cochin may have led to limited contact with the Malabarites who make up the vast majority of Cochinites in Israel.

Research into the complex set of problems presented by the Inquisition started several centuries ago and has produced a vast body of literature representing a great variety of views. Such questions as the true faith of the conversos (converts to Christianity), the reasons for establishment of the New

Spanish Inquisition, the roles of state and church, and the degree of cruelty exercised by the inquisitors remain subjects of debate. The majority of publications on this topic have appeared in historically Catholic countries in Spanish, Portuguese, French, Italian, and German. This essay chiefly discusses recent English-language academic works that represent different schools and opinions. Two multivolume works on the Spanish National Inquisition are omitted deliberately—Henry C. Lea's *A History of the Inquisition of Spain* and Haim Beinart's edition of *Records of the Trials of the Spanish Inquisition in Ciudad Real*. These publications are too rich and too detailed to address in a short survey, but they should be consulted by anyone interested in the topic. Numerous works of local history, including works on the Inquisition in the New World and in different Spanish and Portuguese colonies, also fall beyond the scope of this review. Readers may wish to refer additionally to works that focus primarily on *conversos*, as this subject is intimately connected to the history of the Inquisition. Information on the Inquisition also is included in a variety of publications on the expulsion of the Jews from Spain, in general Jewish and Spanish histories, and in biographies of Spanish monarchs, politicians, and 15th-century Jewish personalities.

Readers should differentiate between the medieval inquisition, a church institution established by Pope Gregory IX in the 1230s to fight various anti-Catholic heresies, witchcraft, satanism, and blasphemy across Europe, and the New Spanish Inquisition (or Spanish National Inquisition) that was sanctioned by Pope Sixtus IV but was essentially a judicial organ (tribunal) that gave to Ferdinand and Isabella the power to interfere in affairs of any class or group in Castile, Aragon, or Andalusia. The Spanish monarchs controlled appointments to the post of Inquisitor General and shared with the church the proceeds from confiscated property. This essay focuses mainly on works about the New Spanish Inquisition and refers to publications about the earlier papal inquisition only in those cases when the discussion is connected to Jewish affairs.

LEA's study of the medieval inquisition is based on extensive research in various archives. The scope of subjects and the wealth of factual information are breathtaking. The inquisition mostly prosecuted Christian heretics, but Lea also chronicles many instances in which Jews were targeted and Jewish texts were destroyed or censored. It transpires that some of the medieval translations from Hebrew were ordered specifically to determine the anti-Christian contents of the books under suspicion.

ROTH is a survey of the Spanish Inquisition. The author provides an overview of the history of the Jews in Spain, and he offers a short excursus into the history of the punishment of Christian heretics from 385 C.E. through the Episcopal (or General) Inquisition to the Papal Inquisition, noting that the use of torture was officially authorized by a papal bull in 1252 and that in both the Papal and the New Spanish inquisitions, inquisitors had the power to confiscate the property of their victims. The accused were not allowed recourse to defense counsel, and the names of witnesses were concealed from the accused. Roth describes the evolution of the Spanish Inquisition, beginning with the first Grand Inquisitors Tomas de Torquemada and Diego de Deza and covering the entire history of the institution, including

the activities of the Holy Office in the New World. He supplies detailed accounts of pogroms and propaganda, and he explores the lives and legal and religious status of conversos, declaring, without offering proof, that the great majority of the New Christians were crypto-Jews (individuals who live as Jews in private and as Christians in public). Roth also identifies a number of New Christians who achieved high positions in Spanish government and society. He argues that there are many similarities between 15th-century Spain and Germany during the Nazi regime.

BEINART (1971) examines the lives of conversos in Spain after the expulsion of the Jews in 1492. He argues that conversos played the same role in Spanish society as the Jews did before the expulsion, and he maintains that for the most part the conversos were crypto-Jews. These conversos struggled to stay separate from the gentile population, marrying within the converso group and educating their children outside of church schools. Beinart considers the impact of the Inquisition on the converso population, demonstrating that there was hardly a family of conversos from which one or more members did not appear before a court of the Inquisition. The author also addresses the arrival in Spain at the end of the 16th century of a great number of conversos from Portugal, noting that the immigrants strengthened the Spanish converso communities. He also examines the rise of a number of messianic movements, usually involving a young female prophet who related her visions of redemption, at the beginning of the 16th century. Beinart cites liturgical pieces found in the archives of the inquisitions that reveal the daily sorrows and hopes of the conversos and show how conversos preserved and disseminated their knowledge of Hebrew and religious texts and tried to fulfill clandestinely the precepts of the law of Moses.

BEINART (1981) presents the conclusions from his study of Spanish Inquisition archives. Both the life and attitudes of the conversos, on one hand, and all the processes and methods of the Inquisition, on the other, are described. Beinart investigates the public and social image of the conversos, recounts their meetings and prayers, and evaluates their attitudes toward Christianity and toward life and death.

BEINART (1992d) describes the growth of antisemitism in Spain, beginning with an account of the pogroms of 1391 that started in Seville. One-third of the entire Jewish population—those who refused to surrender their religion—were killed, and approximately another third were forced to convert to Catholicism. In 1412 another wave of incitements and pogroms forced mass conversion. These mass conversions created considerable problems: on the one hand, some conversos expected to be able to return to their ancestral faith when circumstances allowed. On the other hand, many Spaniards were unwilling to integrate New Christians into the emerging Spanish nation. Beinart discusses riots, trials, pedagogical projects, proposals for segregating or expelling conversos, propaganda, and other 15th-century responses to the New Christians. The essay concludes with a discussion of the actions and methods of the Spanish National Inquisition.

BEINART (1992c) begins with an account of the marriage (in 1469) and coronation (in 1474) of Isabella and Ferdinand, which led to the unification of Castile and Aragon. Beinart explains how the monarchs sought to pacify their nation and quell opposition to their reign through several anti-Jewish deci-

sions, including one related to Jewish moneylenders and another forcing Jews to wear a special badge and clothing of particular colors and fabrics. Beinart also provides details of Ferdinand and Isabella's journey to Andalusia, where complaints that conversos were actively returning to Judaism with the help of local Jews led the monarchs to send a formal request to Pope Sixtus IV to establish a National Inquisition based in Seville. The article covers the implementation of additional anti-Jewish measures and the solidification of the monarchs' power; discusses the history of the segregation and expulsion of Spanish Jews; and reviews the edict of the expulsion itself.

BEINART (1992b) describes the life of the conversos in Portugal and Spain and traces the various attitudes of different monarchs. The establishment of the Inquisition in Portugal was delayed until 1531, and its operations did not commence until 1539. After the unification of Spain and Portugal in 1580, their inquisitions remained separate institutions. This article surveys crypto-Jewish life throughout the Iberian peninsula, relates information on prophetic movements, and investigates the emigration of conversos to the Low Countries, Italy, Turkey, France, and Portuguese colonies in the New World and Africa. The essay also analyzes evidence from the files of the Inquisition of Jewish practices among the conversos in the 16th and 17th centuries.

BEINART (1992a) systematically surveys the history of the conversos from their appearance as a significant group in 1391 up to the abolishment of the Inquisition in Spain in 1834. He divides this history into three periods: the pogroms of 1391 through the expulsion of the Jews in 1492 and the forced conversion in Portugal in 1497; converso life in Spain and Portugal from the 1490s to 1580; and 1580 to the end of inquisitorial activity. In the first section, the author discusses the foundation of the Spanish National Inquisition, and activities of both the inquisitors and the conversos are related throughout all the periods.

NETANYAHU (1995) is the most comprehensive, innovative, and independent research on the subject of the origin and the first phase of the Spanish Inquisition's history to be produced in recent decades. Originally formulated in the 1950s, the author's conclusions have been deeply controversial but equally influential. Netanyahu argues that previous studies of the Inquisition have failed to explain its origins, and he traces the historiography surrounding this topic, contending that the prevailing assumption that the Inquisition responded to the significant presence of Jewish practices and beliefs among the conversos was based on insufficient research and faulty reasoning. In fact, he posits, documents demonstrate that by 1460 the majority of conversos were willing assimilationists who desired to merge with the Christian majority. Over time, the number of sincere Christians among the conversos increased while the crypto-Jews gradually vanished. Therefore, the Inquisition could not have been a response to Judaizing and must be explained in other terms. Accordingly, Netanyahu analyzes an impressive array of primary sources, including documents independent of the official Inquisition records including Jewish, Marrano, and Old Christian sources, and he evaluates socioeconomic, political, intellectual, and theological factors that contributed to the emergence in the mid-15th century of the notion of the conversos as a group that was

racially distinct from other Spaniards. Netanyahu's thinking has for its point of departure the observation that until the establishment of the Inquisition, virtually all Jewish authorities in Spain and outside of Spain regarded the Marranos as renegades, apostates, or gentiles. It could not have been in the interests of the Jews to maintain this view if the truth about the New Christians' affiliations had been otherwise. The author proceeds to a minute examination of the massive corpus of New Christian apologies and Old Christian accusations, and he comes to the conclusion that the standard accusation that the Marranos were Jews or Judaizers was a weapon of a vilifying propaganda representing a flowering of an ancient tradition of antisemitism. From this legacy of hate, according to Netanyahu, emerged the Inquisition's racist obsession with "blood purity."

NETANYAHU (1997) is a collection of the author's essays that originally were published in different periods of his scholarly career. These articles criticize certain theories and doctrines employed by historians to explain the origins of the Spanish Inquisition and the racist prosecution of the conversos. Some Christian scholars have claimed to find such racist notions as blood purity in Jewish sources, but Netanyahu refutes such theories and demonstrates that these scholars have misinterpreted Jewish sources. He concludes that the primary reason that the New Spanish Inquisition was established was the rising tide of antisemitism.

The most recent, significantly revised edition of KAMEN presents a balanced picture of the Spanish Inquisition. The author describes a gradual change in attitudes of the Christian majority toward religious minorities in Spain from *convivencia* to religious tension, ideological intolerance, and crusades of persecution. Kamen attributes the Christian hostility to their resentment of Jews, and subsequently ex-Jews, who made up a professional class comprising translators, physicians, diplomats, suppliers to the army, and especially tax collectors. He describes the fury of the anti-Jewish pogroms of 1391, the mass conversions and creation of the class of New Christians, anti-Jewish riots in the 15th century, and anti-Jewish measures enacted by the crown. He also examines regional and historical variations in the quality of relations between conversos and Christians and between conversos and Jewish communities. Kamen's study continues through the expulsion of the Jews (this section is troubled by the fact that by simply counting surviving tax returns, he probably underestimates significantly the number of Jews in Spain on the eve of the expulsion in 1492), depicts the public activities and religious beliefs of conversos, chronicles in detail the activities of the Inquisition, and evaluates the motives of the various parties involved. Kamen identifies numerous conversos who held the highest positions in the state and church hierarchies. "At the end of the 15th century the principal administrators of Aragon were conversos. At the very moment that the Inquisition began to function, five conversos . . . held the five most important positions in the kingdom." En route to his conclusion that cupidity motivated the Inquisition, Kamen surveys the anti-Jewish and anti-converso writings, attempts to ascertain the true nature of the New Christians, and discovers identical heretical opinions among New Christians and Old Christians, for which only the New Christians were prosecuted.

Kamen concludes that the “converso danger” was invented to justify spoliation of conversos and that there was no systematic “converso religion” in the 1480s to justify the creation of an Inquisition.

For the first five years all the operations of the National Inquisition were limited to the politically sensitive region of Andalusia; a nationwide operation was not yet given serious consideration. Kamen argues that the broadening of the Inquisition and the creation of its new tribunals was probably the result of the plots of would-be inquisitors trying to find good reasons for expanded repression. He points to how the cruelties and iniquities of these inquisitors led to the famous Bull of 1482 issued by Pope Sixtus IV, in which the pope protested wrongful persecution, lust for wealth, false testimony, torture, confiscation of property, and unjust executions—a document that the pope then revoked under pressure from King Ferdinand.

MELAMMED examines a group of archives of the Spanish Inquisition pertaining to trials of New Christian women accused of observing the Jewish sabbath, holidays, customs, and dietary laws. Some of these women were hosting prayer groups in their homes and instructing other conversas in Judaism. Before the expulsion of the Jews, conversas received many forms of assistance from the local Jewish community. Melammed demonstrates that the contents of the files include very detailed, precise claims about the Jewish life of the conversas and their families. The archives also show the inquisitors’ thoroughness and the extent of the suffering caused by the Inquisition.

ZORATTINI uses nearly 2,000 trial records from the bishop’s court of Udine to examine the trials of Jews by the Holy Office of Aquileia and Concordia from the middle of the 16th to the end of the 18th century. He provides details of a number of notable cases, including the trial of a Jewish banker accused of converting the son of a local cobbler and that of a country priest accused of playing chess with a local Jew in his shop. Trials of the Judaizers were relatively rare in northern Italy, and punishments against those convicted were milder than in Spain, a fact that the author explains by noting the small number of Jews resident in Friuli. As a tiny minority, the Jews in that region were not seen as a threat to Catholicism, nor were their assets substantial enough to covet unduly.

Iranian Jews are an ancient community, unique in their life under Shi’i Islam, and have been westernized only in small part during the 20th century. Much of the research on the community deals with its literature in Judeo-Persian. Historical research in Hebrew and English has been published mainly as articles.

BRAUER’s report focuses on the communities of Herat, Kabul, and Balkh, where most of the Jewish population of Afghanistan lived in the 1940s. He describes their economic position in the 20th century following attempts to establish a state monopoly over foreign trade. Brauer provides much information on marriage customs, the position of women and children, communal organization, religious life, and belief in magic.

FISCHEL’s 1945 article deals with the Jews of Khorasan, the easternmost part of the ancient Persian empire. Following a discussion of the sources used, Fischel describes the distribution of the Jewish communities in Khorasan (mainly in the towns of Merv, Balkh, Ghazna, and Herat). He examines the population of these communities, economic conditions, relations with the authorities, and cultural and religious life in medieval times.

Another article by FISCHEL (1950b) examines the Jewish communities of Hormuz, Kung, and Malacca from 1548 to 1551 based on documents from the archive of the Society of Jesus in Rome and other sources. Jews, mainly of Portuguese origin, settled in Hormuz following the Portuguese conquest in 1507. They joined an existing Babylonian Jewish community of great antiquity and played an important role in the economic life.

Another of FISCHEL’s articles (1950a) focuses on Iranian Jews during the Qajar period (1796–1925) and that of Reza Shah Pahlavi (1925–1940). The examination is chronological and is divided according to the reigns of the monarchs and important political and socioeconomic events. Fischel examines the position of the community, economic activities, internal

developments within the community, relations with the authorities and society at large, and attempts at foreign intervention in favor of Iranian Jews, mainly since the late 19th century.

FISCHEL's survey (1953b) of the Jews of Isfahan starts with an examination of the origins of the Jewish community there. Most of the article deals with the Muslim period: Isfahan under the caliphate, the Safavid Dynasty, and the Qajar Dynasty. Special attention is given to the persecution and forced conversion of the Jews of Isfahan in the 17th century.

FISCHEL's article (1953a) on the Jews of Azerbaijan, the northwestern province of Iran, shows the early settlement of Jews there, based on Cairo Genizah documents. He examines the changing influence of Jews in Azerbaijan, especially in Tabriz, under the Mongol rulers (1258–1335). Their political and economic power is detailed as is their contribution to Persian historical writing. Fischel also provides data on the Jews from the 16th to the 19th century.

The Jews of Shiraz in southern Iran are the subject of LOEB's book, based on a field study conducted in Iran and Israel in 1967 and 1968. Following a short survey of the history of the Jews in Iran, and especially in Shiraz, and examining Shi'i Islam's attitude toward Jews, Loeb provides a detailed examination of the Shirazi Jewish community in the late 1960s. Among the subjects dealt with are social and economic life, education, arts, amusements, leisure time, and special local customs. Loeb's book provides a unique opportunity to learn about the daily life of a well-defined urban Jewish community and how the community reacted to modernization under the shah prior to the Islamic revolution.

MOREEN examines an important Judeo-Persian poetic source dealing with Jewish life in Iran during the 17th century. *Kitab-i Anusi* (Book of a Forced Convert) by Babai ibn Lutf is a major source for this period and deals primarily with persecutions of the Jews. Following a political survey of the Safavid Dynasty, Moreen examines the life and work of the author. She analyzes his book in the context of Iranian and Jewish historiography as well as the literary characteristics of the work and its linguistic peculiarities. Moreen also examines the importance of the book in Safavid history and the history of Iranian Jews.

SHAKED's serial publication includes numerous annotated scholarly articles, mostly in English, by leading experts in the field. It contains studies on literature, linguistics, history, and religion and focuses on Jewish-Persian contacts.

The fate of the Jews of Meshhed, one of the few Jewish communities anywhere that were forced to convert to Islam, is examined in detail by PATAI. Following a brief history of Iranian Jews and an examination of the status of Jews under Shi'i Islam, Patai focuses on the attack against and forced conversion of Meshhedi Jews in 1839 and their clandestine Jewish life thereafter. Among the subjects dealt with are the impact of Zionism and the emigration of Meshhedi Jews in the 20th century. The book includes tales and legends as well as an examination of the customs and institutions of the community. The study is based on interviews that Patai conducted in the 1940s with Meshhedi Jews living in Jerusalem and on published sources.

SOROUDI surveys the status of Jews under Islam in Iran until the beginning of the Islamic Republic, relating to the

special attitude of Shi'i Islam to the Jews. Soroudi examines the persecutions and restrictions of the Jews under the Safavid Dynasty (1500–1736). The author also discusses the role of the mullahs under the Qajar Dynasty (1796–1925) and the implications of that role for the Jews as well as the influence of relations with the West during the 19th century. This is contrasted with the position of the Jews under the Pahlavi Dynasty (1925–1978), which advocated secular nationalism, Westernization, and close relations with the State of Israel.

The "Ganj-name" (Book of Treasure) by the 15th-century Judeo-Persian author Emrani is analyzed by YEROUSHALMI. Following a discussion of Emrani's life and works, Yeroushalmi summarizes the Book of Treasure, a book of counsel and advice as well as a commentary on the mishnaic tractate Avot. The text is provided in full in the original Judeo-Persian and in English translation, and both are heavily annotated. Yeroushalmi examines the literary and linguistic aspects of Emrani's book, and his work is of value to those interested in Judeo-Persian and Persian literature and linguistics as well as in the cultural history of Persian Jews.

One of the most ancient of Jewish communities, the Jews of Iraq were urban and rural, with the former undergoing

modernization in the 20th century. Most of the community emigrated in the 1950s. Much research has been conducted on the community, mostly in Hebrew.

BRAUER's book is an ethnological study of the Jews of Kurdistan, based on interviews conducted in Jerusalem in the 1930s with Kurdish Jewish immigrants. The work was published posthumously in Hebrew in 1947, and this is a revised edition by Patai. Brauer examines previous studies of Kurdish Jews, their environment, and history. He pays special attention to their material culture, the family, life cycle, women, economic life, social organization, education, the synagogue, the sabbath, and holidays. Brauer's detailed description serves as an invaluable source about an extinct Jewish rural community.

The mass Jewish emigration from Iraq in the late 1940s and early 1950s is the focus of GAT's book, which is based on archival material from Israel, the United Kingdom, and the United States and on published sources. Against the background of the socioeconomic conditions of the community, its modernization, and involvement in Iraqi life, Gat examines the implications of the 1941 anti-Jewish riots (Farhud) for the community and the establishment of the clandestine Zionist movement with its defense operations. Gat details the secret emigration and discusses the involvement of Israeli emissaries and of Iraqi and Iranian personalities. He believes that there was no connection between the bombings in Baghdad and the exodus. This is a detailed, thoroughly researched study of the Iraqi Jewish mass emigration.

HADDAD, a Baghdadi Jewish ophthalmologist, tells about his life in Iraq and his experiences in Israel and the United States following immigration. He provides a vivid description of his family, the community, education, the 1941 anti-Jewish riots (Farhud), his involvement in clandestine Jewish defense activities, and the Jewish mass emigration through Iran to Israel. His memoirs provide a very personal insider's view of the turbulent 1940s.

HILLEL's book focuses on the Jewish mass emigration from Iraq in the late 1940s and early 1950s. Iraqi-born Hillel was sent from Israel to Iraq to help organize the covert emigration, which took place mostly through Iran. Hillel, one of the main figures involved in this operation, tells about the organization of the emigration; negotiations with Iraqi and Iranian politicians; Iraqi government decisions regarding the status of Iraqi Jews and their emigration; the bombings in Baghdad and the reaction of the Jews to them; the trials and hangings of accused Jews; and international reactions to these events. This is an important detailed testimony by one of the major organizers of the Iraqi emigration.

MELAMED's book includes numerous descriptions, mainly by Iraqi Jewish emigrants, reflecting on daily life in the community. Among the issues discussed are childhood memories, folklore, relations between Jews and gentiles, religious scholarship and customs, economic activity, communal administration, and education. Special chapters describe Zionist activity, the 1941 anti-Jewish riots (Farhud), the mass emigration, absorption in Israel, and the Iraqi diaspora. The testimonies, journalistic reports, and photographs provide interesting source material on the Iraqi community.

REJWAN surveys the history of the Jews of Iraq from biblical times to the mass emigration of the early 1950s. Based

on published sources and his own first-hand knowledge of the later period, Rejwan examines Iraqi Jewish history, culture, and society and provides a chronology. He divides the survey into three parts: from the Assyrian captivity to the Arab conquest (731 B.C.E.–641 C.E.); the encounter with Islam (641–1850); and a century of radical change (1850–1950). Rejwan provides a useful comprehensive historical survey of Iraqi Jews and contributes new information mainly for the 1930s and 1940s, during which he was active in Iraqi intellectual and political life as well as Jewish communal life.

SASSOON's (1927a) book covers the history of the Jews of Baghdad from earliest times to the first decades of the 20th century. He provides much information on important rabbis and families and examines the structure of the community in the late 19th century, religious life, educational developments, welfare services, liturgy, customs, superstitions, proverbs, and printing. A special section deals with settlements of Baghdadi Jews in the Far East. Much of the information is based on personal knowledge not available elsewhere.

SASSOON's (1927b) article covers the history of the Jews of Basra from the 9th to the early 20th century, focusing on the 19th century. Numerous sources, many in Hebrew and Judeo-Arabic, are cited with English translation and detail the structure of the community, its leaders, economic conditions, and relations with the authorities and foreigners.

SAWDAYEE (1991) provides an examination of the impact of modern education on the Jewish community of Iraq, with special reference to Baghdad, against the background of developments in society at large during the 19th and 20th centuries. He describes the various school systems that became available to Jews due to external interventions (Ottoman, British, and Arab as well as French-Jewish and Anglo-Jewish) and internal efforts, including those of wealthy Iraqi immigrants in Europe and the Far East. Sawdayee describes the cultural, economic, social, and political impact of these developments on the Jews of Iraq and the reasons for their mass emigration.

SAWDAYEE (1974) is a diary of the author that details the condition of the Jews of Iraq during and following the 1967 Israel-Arab Six-Day War. Sawdayee was one of some 3,000 Jews who remained in Iraq following the mass emigration of the early 1950s. He describes their harsh conditions, especially following the Arab defeat in 1967, and focuses on the clandestine escape of some 95 percent of the Jews in 1970, leaving only 250 in Iraq.

SHIBLAK examines the reasons behind the mass emigration of Jews from Iraq, mostly to Israel, in the early 1950s. The study opens with an examination of social, economic, and political developments in Iraq in the first half of the 20th century. This is followed by a discussion of the involvement of Jews in Iraqi society, the implications of the Palestine issue for Iraqi politics, and the role of Zionism among Iraqi Jews. Because Jews were deeply involved in Iraqi life and the role of Zionism was weak, Shiblak explains how it was the events culminating with bombings in Baghdad, trials, activities of Israeli emissaries in Iraq, and the denaturalization law that eventually led to the mass exodus.

Since the magisterial commentary of Bernhard Duhm written late in the 19th century, Isaiah has been treated by biblical critics as three books in one. First Isaiah, chapters one to 39, originated in the eighth century B.C.E. and is a record of the ministry of the prophet Isaiah of Jerusalem himself. Second Isaiah, chapters 40 to 55, often said to have originated in Babylon, is seen as an exilic work. The last eleven chapters, which comprise Third Isaiah, are said to date from the very early restoration period, the late sixth century B.C.E. In modern academic tradition the three sections of the book have been treated as separate but related works, but approaches to the interpretation of Isaiah have been transformed in recent times by the growing realization that whatever the diverse origins of the various hypothetical sections of the text, the book as it exists now is a unity, in terms of presentation if nothing else. A number of monographs have sought to investigate, quantify, and explain this unity.

WILLIAMSON acknowledges with regret the dichotomy that he claims has arisen between the older historical-critical exegetical methods and the newer approaches of literary criticism. He states his desire to try to bridge that gap by proposing an explanation for the combination of Deutero-Isaiah in the first 39 chapters of the book that both historically-oriented and literary scholars will find attractive. Choosing not to complicate his study further by taking the work of Trito-Isaiah into account, Williamson presumes that “approaches to the unity of Isaiah should be pursued by way of a more intense appli-

cation of traditional methods rather than ignoring or bypassing of them.” In particular he sets himself three tasks: to investigate to what extent (if any) Deutero-Isaiah may have been written in “conscious dependence” upon Proto-Isaiah; to consider what purpose and function the links between the two sections identified by other scholars serve; and to examine the possibility of “converse influence,” in other words, to quantify the influence of later passages of the book upon earlier ones. Williamson’s detailed and convincing analysis leads him to conclude that Deutero-Isaiah was especially influenced by the writings of Proto-Isaiah, and that he deliberately sought to build upon the earlier work, which the later author believed had special significance for his own time. To make that influence plain, Deutero-Isaiah then edited and adapted the writings of Isaiah of Jerusalem to serve as part of his new prophetic history and vision of the future.

SEITZ is concerned with two important questions: how the message of Isaiah of Jerusalem came to be taken up and expanded so dramatically by later generations, and in what form the book of Isaiah originally circulated before it was combined with later material. Seitz suggests that the obvious place to start to answer both these questions is the end of First Isaiah. In chapters 36 through 39, which deal with God’s intervention to save Jerusalem from Assyria during the reign of Hezekiah, he identifies the most important link between the two main sections, chapters one through 39 and chapters 40 through 66. Since the motif of “concern over the destiny of Zion” is fundamental to chapters 36 through 39, he suggests that this theme may well be the structuring device of the book in its present form. It explains how Second Isaiah deals with some of the important theological issues raised by the deliverance of Jerusalem, bringing the earlier tradition to culmination. Chapters 36 through 39 are therefore the “pivot on which the entire tradition process turns” and determine “most of the shape and character of Second Isaiah.”

WATTS’s (1985, 1987) two-volume commentary presents a unique approach to all 66 chapters of Isaiah. Since all of the historical events of the book are presented as past history, Watts postulates a very late date for the book. He sees it as an authorial unity that comprises earlier materials but dates in its present form from Jerusalem in the fifth century B.C.E. He sees Isaiah as a vision, which he defines as a prophetic drama, and he divides the book like a play into acts and scenes, ascribing different lines of speech or narration to different speakers and characters within the drama. The theme of this drama, according to Watts, is God’s strategy for human history—it seeks to remind its listeners of God’s past intervention on Israel’s behalf and thereby assure them of his future interest in their safety and blessing. Even if his admittedly rather curious presentation of the text is unconvincing, Watts’ philological, translational, and textual notes are of immense value, as are his bibliographies (which appear before each major section). The way the commentary is divided into two sections—a short “comment” on notable verses or clauses and a larger-scale “explanation” that covers the wider perspective of the text—makes it very useful for study and reference.

MISCALL’s commentary sets out to be a “reading of the text of Isaiah as a whole” rather than a commentary in the traditional sense of the word, and it pays no attention to

philological, textual, or historical details. He shares Watts's view that the book of Isaiah in its present form must date from the postexilic era, but beyond that Miscall refuses to consider its composition, authorship, or provenance, leaving aside even the question of which oracles are authentic to Isaiah and which should be seen as later additions. While Miscall recognizes that the book has an obvious historical reference, he chooses not to interpret the book in relation to its historical context but rather in relation to itself and its readership. Thus, rather than seeing sin and punishment as a feature of Israel's past and blessing and privilege as their future destiny, he argues that all events in the book speak directly to the time of the author and his contemporaries, as well as later readers. Miscall's intent is to present an overview of the text, a guidebook to lead readers through the web of intertextuality that is Isaiah, pointing to many features of interest and difficulty along the way. Again like Watts, Miscall views Isaiah as a vision, "a panorama of God and world," but understands this to mean that Isaiah presents a particular future that Israel can choose, something to be sought out and worked for rather than just borne in mind, and Miscall highlights the stark choice Isaiah presents between the destiny of the righteous and of the wicked.

Much contemporary research into the Book of Isaiah presumes this literary unity. CONRAD's work is typical of the newer literary-critical approaches to Isaiah for a number of reasons. First, he treats the book as a single entity and is unconcerned with the question of its origins. Although he still feels such issues have their place, Conrad is more concerned with the reception of the text than its formation. Second, he argues that the role of the readers of the book is far more important than scholarship has traditionally acknowledged, and that the modern context is really the only one readers can use to interpret the text with any degree of confidence. He maintains that readers actually know nothing about the real or implied author and his original audience and that readers cannot be sure how the biblical text relates to actual historical events and individuals, if indeed it has any historical reference at all. In the center of his book, Conrad applies his literary methodology to the text and considers the royal narratives, the "we" passages, and the passages that would appear to imply that YHWH has a strategic plan for the future of world history by considering the effect of such passages on the reader.

Another interesting reader-response study of the book, much more cautious than Conrad's and written from a feminist perspective, is that of DARR, who considers the reception of Isaiah's family imagery from the perspective of a hypothetical knowledgeable ancient reader. While her work on the text itself is insightful and thought-provoking, it is largely descriptive, and Darr's great strength lies in the way she demonstrates the "determinative power" of the biblical text, how it directs its readers and "invites [them] to particular perceptions of reality."

Two additional important commentaries deserve mention. Although SWEENEY is noted for his literary and redactional studies of the book, his commentary is significant as the only purely form-critical one for many years. He focuses on the smallest literary units, paying attention to their structure,

genre, setting, and intention, as well as the historical development of the Isaianic tradition where appropriate. Sweeney's is not, therefore, an exegetical commentary and needs supplementing with other sources of information, but it provides an excellent counterbalance to the literary commentaries already discussed. The usefulness of the book is increased further by its helpful introduction to the form-critical categories that relate to prophetic books, narratives, and speech forms, and an excellent glossary.

FRIEDLÄNDER's work is an annotated translation of the great commentary on Isaiah by ibn Ezra, arguably one of the most important (and interesting) of all precritical commentaries on the prophets. A short biography precedes the commentary itself, where, while the editor's explanatory comments are helpful and insightful, ibn Ezra's own understanding of the text is allowed to shine through, revealing some fascinating interpretative insights and raising questions that often seem remarkably modern. At the same time, his background in rabbinic interpretation also is obvious in the style and form of the commentary.

It is also worth noting that despite recent controversy over the extent of the work of Isaiah of Jerusalem, much interest in the historical individual remains. CHILDS presents one of Isaiah's most important early works. What exactly happened during Hezekiah's revolt and Sennacherib's 701 B.C.E. campaign into Judah has long puzzled scholars, since neither the Bible nor the extrabiblical evidence is quite clear. Childs acknowledges that this is the case and suggests it will always be so. To his mind, the difficulty is insoluble without additional external information, and therefore he makes no proposals as to the real events of that year. A second issue is that of the preaching of Isaiah—what was his response to the crisis at the time, and what course of action did he advocate before and after? Once again Childs suggests that no definitive answer is possible, and having rejected other attempts at reading things into the mind of the prophet, he restricts himself to a purely form-critical analysis of the texts from Isaiah and the biblical histories that address the Assyrian crisis, in an endeavor to demonstrate the different kinds of source material available to contemporary scholars. The diversity Childs notes in these sources would no doubt be labeled inconsistency by more skeptical scholars: whereas he admits that the message of hope and the message of judgment in Isaiah offer "two strikingly different portrayals" of the prophet's ministry that "simply cannot be harmonized," Childs refuses to choose between them because he sees them both as employing ancient traditions. His intention, as one reviewer has said, is to cross-examine the witnesses rather than hand down a verdict.

HAYES and IRVINE also concern themselves with the historical question and are much more positive than most biblical historians as to what can really be known about Isaiah's ministry. They suggest that virtually all of chapters one through 39 should be ascribed to the preaching of Isaiah of Jerusalem, and, equally controversially, they argue that with a few minor exceptions the material is arranged in chronological order with very little editorial adaptation. After a detailed survey of what is known of the history of the period and a summary of Isaiah's theological and religious context, Hayes and Irvine proceed to comment on the text section by

section, giving particular attention to the historical context of the various speeches and narratives. Although their argument is perhaps taken too far, their stress on the authenticity of most of first Isaiah serves as a welcome rejoinder to some of the more extreme form-critical studies.

The relationship between Judaism and Islam, and between those who practice these religions, is necessarily complex, spanning 14 centuries, diverse cultures, Arabs and non-Arabs, religion, philosophy, and politics. For most of this period, Jews were a small but important minority within the Islamic world, but Islam continued or absorbed many elements of Judaism, which itself was greatly influenced by surrounding Islamic religion, culture, and intellectual life. Contemporary Middle Eastern realities bespeak relations that are much different; the rise of Israel and of modern Islamic nation-states has necessarily colored the way all or almost all 20th-century authors write on this subject, even when relating only to pre-modern times. The numerous works that deal specifically with aspects of Israel in the Middle East or other contemporary issues are not discussed here (nor are works that specialize in one country or region). The last part of the 20th century has also seen a dramatic rise in the Islamic communities of Europe and the Americas; Jewish-Islamic relations in these areas, however, have hardly begun to be studied.

GOITEIN's major contribution to medieval Jewish studies is his massive *A Mediterranean Society*; many Jewish-Islamic themes surface in that work as well as in his short *Jews and Arabs*. Originally written in 1955, Goitein revised *Jews*

and *Arabs* several times and included a chapter bringing the story past the Six Day War. In this work, Goitein suggests reasons for spiritual affinities but also finds great differences between Islam and Judaism in the speed of religious development, the different ways of life in the religions' formative stages, in attitudes toward language, and in their perception of their prehistory. Goitein goes on to summarize legal and economic situations and modalities of the "Jewish-Arabic symbiosis," including language, philosophy, mysticism, messianism, ritual, and poetry. His remarks on Arab literature and journalism after 1967 are of great interest. He saw Arab attitudes of fierce resistance to Israel borne not out of persecution and decay (as seems to explain the quiescence of the Middle Eastern Jewish communities) but out of ascent and prosperity. Throughout, this book is informed with an optimism that might seem quaint. Although it is clearly tinged with realism, few others allowed themselves so positive a view about prospects for contemporary intellectual and cultural interaction between Muslims and Jews until the Oslo accords, a process that commenced over two decades after the final words of *Jews and Arabs* were written.

WASSERSTROM is perhaps the most successful of the many writers who have weighed in on the question of the "symbiosis" of Judaism and Islam in the early Muslim centuries, the term popularized by Goitein in the work noted above and elsewhere. Wasserstrom discusses the borrowing of cultural imagery from one religious community by another while noting that the cultural loan hardly has "the same sense as when a lender lends to a debtor." Rather, continued borrowing resulted in a tremendously creative manipulation of common, mutually intelligible social and cultural languages of theology, messianism, and eschatology. Wasserstrom notes Jewish influences during the formative years of what became a world civilization, within the context of the Jews' social, religious, and intellectual contributions. Of particular interest are his treatment of the Jewish-Islamic symbiosis in the story of the Jewish Messianic Abu 'Isa al-Isfahani and his exploration of Shi'i-Jewish contacts, both in history and in the construction of myth. Also extremely suggestive are his treatments of interfaith contacts in exegesis, chronicles, and eschatology. This book, with its lyrical writing and breadth of reference, is an important addition to the intellectual and religious history of both Judaism and Islam and to the study of how this history has been perceived.

COHEN argues that any description of the status of Jews within Islamic society must strike a firm balance between the myth of an interfaith utopia and the "neo-lachrymose counter-myth" of never-ending persecution. To do so, Cohen describes and contrasts Jewish status in Islam with that in medieval Europe, displaying a deep familiarity with both modern and medieval sources in European languages, Hebrew, and Arabic. Beyond a reexamination of legal status, he discusses economic integration and social concerns such as hierarchy, marginality, ethnicity, and sociability. Polemics and the historiography of persecutions occasion a balanced evaluation of intellectual historians' views of collective memory and identity, anti-semitism, and Jewish attitudes toward the authorities in the many lands of their dispersion. Cohen probes deeply into some fundamental concerns of Jewish life in the Middle Ages and

reminds readers that it is inappropriate to read the history of Jewish-Islamic relations with monolithic, preconceived notions.

STILLMAN's (1979, 1991) two-volume set provides a series of essays tracing the history of the Jews of Arab lands from earliest times to the contemporary world, accompanied by a substantial selection of English translations of the most important primary sources, many from the Genizah. The documents in both volumes cover the full gamut of genres: some texts are legal or literary, including laws and edicts and a fairly lengthy selection from Maimonides' *Letter to Yemen*; others are more personal, including marriage documents, letters, and lists. The historical chapters provide a narrative context for the history of the Jews in the Islamic world, following such items as economic and political integration, internal leadership, polemics, and interreligious discourse. Stillman devotes a chapter to "the long twilight" starting in the 13th century, in which the status of the Jewish communities worsened and the relationship between Jews and Muslims became one of persecution. For the modern period in the Middle East, of course, the dominant issues are nationalism, antisemitism, and especially Zionism. Readers of Stillman's essays will get a good sense of the great differences between various Arab countries and regions. The author carefully but briefly gives an overview of Jewish institutions, economics, and status in each of the major centers of Jewish life. In the second volume, he stresses the many differences between Arab countries in their attitudes toward Zionism and other Jewish movements and toward the role of the Jews in their midst.

BAT YE'OR's (1980, 1991) books, like Stillman's, each include two sections, the first being a monograph on the history of non-Muslims in Islamic lands, the second a substantial collection of documents. Gisele Littman's Hebrew pen name means "Daughter of the Nile"; she was born in Egypt, which she left in the humiliating mass exodus of 1956. The historical surveys are well written and researched, although clearly organized to present the narrow point of view that Jews (and Christians) in Islamic lands are victims of *jihad* and must be considered "oppressed" or "subjugated original populations." The accurately translated documents provide a substantial selection and represent important materials often not available elsewhere in English. Both volumes include Christianity within their scope; the status of Jews and Christians was at least in theory identical, and treating them together helps elucidate some points. Yet there is little about the theological, cultural, or administrative developments within either community: the focus is on the history of subjugated status. Bat-Ye'or clearly sees contemporary events in the light of the continuity of the Islamic institution of *jihad*, carried on by all means possible, including terrorism, diplomacy, and war. Readers will find her works challenging and constructive, but they should approach them with care, remembering Cohen's caveat about one-sided interpretations of Jewish-Islamic relations.

Most of the major works on the history of the land of Israel consist of multivolume series in Hebrew, which are often exhaustively detailed and devoted to a particular period or place. Some works are guides to specific locations and discuss historical, archaeological, natural, and recreational aspects. In addition, many studies offer reevaluations of historical, cultural, and archaeological trends, often centered around specific events in the history of the land of Israel, such as the Maccabean revolt, the discovery of the Dead Sea Scrolls, the destruction of Jerusalem, the Bar Kokhba revolt, the Crusades, the battle of Tel Hai, and the Israeli-Arab wars. The books discussed in this essay are representative works in English from each of these categories.

AVIGAD's book is a systematic study of Jerusalem through many of the stages of its development. In particular, Avigad writes as an archaeologist involved with the excavations in Jerusalem from 1969 to 1980. The book is filled with aerial photographs, maps, old photographs, pictures of recent discoveries, and sketches offering plausible reconstructions of historical sites. The text provides a historical as well as an archaeological narrative. Avigad reports on the discoveries from the periods of the first and second temples, including inscriptions, city walls, coins, pottery, weapons, mosaic floors, and wall frescoes, some of which bear evidence of the fire and devastation of 70 C.E. Based on a map of Jerusalem from the Byzantine period, Avigad and his crew also discovered the ruins of several massive churches and the ancient Roman road, the *Cardo*, running through the city. Avigad's account ends with several important discoveries from the period of the Crusades.

AVI-YONAH begins with a brief survey of the Persian period, covers the Hasmonean rule, and then discusses the Roman conquest and subsequent wars with the Jews. Among little-known features of his story is the extent to which Jews continued to practice temple rituals after the sanctuary in Jerusalem was destroyed in 70 C.E. Avi-Yonah draws on Jewish, Roman, and Christian sources. He offers detailed accounts of specific events, often discussing a range of scholarly opinion about them. Some of his characterizations of early Jewish-Christian relations may be slightly lacking in nuance, but in other matters, such as the rebellion of Patricius and the plans

of Julian the Apostate to rebuild the temple, he is nuanced in the extreme. Shortcomings include Avi-Yonah's claim that women were confined to the balconies of the synagogues, which contradicts Shmuel Safrai's important 1963 article concerning the topic. Similarly, he traces the roots of the development of Hebrew poetry, *piyyut*, to the ban on Torah study imposed by the Byzantine emperor in the early seventh century, another view that has been challenged by other scholars.

DEVIR's exceptional travel guide, translated from Hebrew and based on an Israeli television show, divides the country into seven regions and discusses approximately a dozen little-known sites of historical significance in each region. Devir devotes two pages to each site and includes photographs, a map, and a historical essay for each. Among the sites profiled are forts, aqueducts, mountains, lakes, streams, waterfalls, monuments, ancient synagogues, ruined cities, battlefields, churches, and gorges. Many of these sites are not typical tourist destinations, and some, therefore, are not maintained or easily accessible.

PARKES offers one of the few one-volume English-language histories of the land of Israel. His early works on the relationship of the church and the synagogue and on the medieval Jewish community, as well as his studies of antisemitism and his advocacy of Jewish causes during the 1930s and 1940s, made him a philosemitic pioneer among Christian clergymen and scholars. In this book Parkes also embraces the Jewish cause, often without considering Arab interests or Muslim sensibilities. Despite the stridency of this polemic as well as an occasional overabundance of details and a lack of clear design, Parkes provides a valuable and insightful survey of the global and local forces during each period of the history of the land. Each chapter contains incisive observations for formulating an appreciation of the scholarly controversies that surround each period. Parkes asserts (and many now agree) that Hadrian's decrees were not meant to be anti-Jewish. His comments on anti-Christian formulations, presumably the *birkat haminim*, drawn up by the rabbis at Yavneh, may assume more than the data allow, but he does make the important point that Jews were as aggressively anti-Christian in late antiquity as Christians were anti-Jewish. Parkes describes in detail a Jewish revolt against the Romans in 350 that was led by Patricius, an event that often goes unreported but contributes much to understanding the continued rebelliousness of the Jews of Palestine. He dates the often unnoticed return of Jews to Jerusalem after the Hadrianic expulsion to the fifth century, during the time the Empress Eudocia was living in the city. Parkes pays attention to cultural and religious developments in Palestine, as reflected in rabbinic and patristic literature. As Parkes traces the subsequent occupations of Palestine by the Persians, Arabs, crusaders, Mameluks, and Turks, he does not pay significant attention to Islamic accomplishments and is wont to dismiss Muslims out of hand as being responsible for destruction, devastation, and depopulation. In particular, he asserts that the sacred graves often taken over by Muslims began as Jewish or Christian shrines, although the scholarly consensus today often asserts that Jewish and Christian pilgrims appropriated Muslim tombs. Parkes provides a fascinating survey of modern Palestine including Napoleon's campaign, the role of natural disasters, missionaries, archaeologists, philanthropists, and con-

suls and the rise of Arab nationalism and the Zionist movement. In addition, Parkes regularly inserts information about all the various minorities in the land of Israel: Bosnians, Druze, Circassians, Egyptians, Samaritans, Karaites, and Bahai.

SMITH presents a valuable synthesis of literature written by authors of many different sympathies. He begins with a survey of the history of Palestine, quickly moving to Turkish rule. Smith repeatedly shows how events in the region are results of earlier developments elsewhere in the world among Jews, Muslims, and Western powers. A regular phenomenon in his account involves politicians, including Western diplomats, Israelis, and Arabs, lying in order to advance their own personal agendas at the expense of national policy. In controversial matters all sides find different levels of meaning in statements made by members of the opposing sides. All sides routinely hope that expectations for peace will not be met and peace negotiations will fail.

ZERUBAVEL focuses upon three major events in the history of the land of Israel, which she does not treat in chronological order: the battle of Tel Hai, the Bar Kokhba revolt, and the fall of Massada. She discusses each event in the context of the development of Zionist historiography and Jewish collective memory in the land of Israel and abroad. She thus locates the origins of each myth and their depictions in literature, ritual, and commemoration, and discusses the current political and national aspects of each myth. One of the most intriguing features of the book is the way in which Zerubavel shifts the object of her study from the events of history themselves to the different ways in which meaning is attached to them. Thus, unlike most people for whom the tour guide serves as a major source of historical information, she makes the tour guide into an object of study as an agent of collective memory, demonstrating that history and memory are not always identical but exist in a creative tension. She reports that one tour guide told her how he was taught to give different versions of the Massada story to Israeli and to foreign tourists. In one anecdote Zerubavel reports that David Ben-Gurion chided Bar Kokhba and his followers for having written in Aramaic and not Hebrew. One of the most fascinating aspects of the book is the description of the development during the 20th century of the myths associated with Massada as Jews developed the site for visits. Zerubavel also incorporates the role that these myths play in contemporary jokes. When Zerubavel's book first appeared, it received particular attention because it offered a revision of Joseph Trumpler's famous last words at the battle of Tel Hai in 1920. According to legend he said in Hebrew, "*Tov lamut baad artzenu*" ("It is good to die for our country"). Questioning not only his level of Hebrew but the naturalness of such a sentiment, Zerubavel reports that a countermyth developed in which his final words were the similar sounding Russian curse, "*uob tzoynu mat*" ("f—k your mother"). The book ends with a discussion about the invention of tradition and the multiple meanings of memories, important concepts for studying any aspect of the history of the land of Israel.

The Land of Israel fosters tension in Jewish thought. The sacred geography of the Land and the "holy city" of Jerusalem have been integral to the memories and aspirations of the Jewish people; many of the commandments of the Torah can be observed only within the boundaries of the Land. Yet Jewish communities have lived and thrived outside the Land for millennia. To maintain the centrality of the Land without subverting the possibility of creative Jewish life outside it was the challenge faced by Jewish thinkers of the diaspora in all generations.

BUBER's book was first published in Hebrew in 1944 under the title *Bein Am Learzo* (Between a People and Its Land). The structure of the book set the pattern for later treatments. It begins with a section on the Bible, exploring motifs such as the prayer of the first fruits (Deuteronomy 26:1-10), in which the gift of the Land betokens the unity of the God of history and the God of nature, the promise of the Land in the covenant, and the idea of Zion as the center of a future redeemed world. Buber then analyzes interpretations of these motifs in rabbinic literature. A section on "The Voice of Exile" includes ideas of the Land in the Zohar, in Judah Halevi's Kuzari, and in Judah Loew (Maharal) of Prague, to whom he attributes the "beginning of the national idea." Also included is the account of the hasidic rebbe Nahman of Bratslav's visit to Palestine. Turning to the Zionist idea, he treats Moses Hess, Leo Pinsker, Theodor Herzl (the rather critical discussion of whom reflects Buber's own reservations about political Zionism), Ahad Ha'am, Rabbi Abraham Kook, and Buber's special hero, A.D. Gordon, whom he calls "the most remarkable" of the pioneers. In the diversity of these medieval and modern thinkers, the material looks less like a history of an idea than variations and transformations of a theme.

The essays edited by HALKIN cover similar ground while focusing on the themes of exile and redemption. In his own contribution, Halkin insists that "Zion is the central theme of the Bible": its gift from God to the chosen people, its loss, and its (future) restoration. Gerson Cohen, noting that "fully one third of the Mishna, and hence of all Jewish law, is inextricably

connected with the land of Israel," discusses legislation regarding emigration from the Land and rabbinic treatment of the rights to the Land. Essays on medieval literature return to the themes of exile and the attempts to transcend it in liturgical poetry by Palestinian, Ashkenazi, and Spanish poets and in prose texts, including the Zohar and works by Halevi, Maimonides, and Nahmanides. Two final essays treat modern Hebrew poetry and prose, both emphasizing the power of the exile motif recovered (after its abandonment by the Jewish Enlightenment) by the Zionists, who repudiated the traditional claim of its penitential value. Only rarely are issues such as the possibilities of full spiritual life in the diaspora or the possibility of exile in the Land of Israel itself given serious attention.

HESCHEL's work is characteristically lyrical and rhapsodic, suffused with biblical language. It is deeply engaged, with the author rhetorically speaking on behalf of the Jewish people in history: "Why did our hearts throughout the ages turn to Erets Israel? . . . We have lived in some parts of Europe for nearly two thousand years." This book is explicitly set in the immediate aftermath of the Six Day War, which is juxtaposed contrapuntally with the Holocaust. Heschel does not abandon the assertion made in earlier writings that, unlike paganism, Judaism finds holiness in time rather than space. Yet in the wake of emotions generated by a Jewish return to the site of the Temple Mount following the dreadful anxiety of May and early June 1967, he apparently concluded that he gave insufficient emphasis to the role of sacred geography in Jewish experience. An earlier work proclaims, "The sanctity of time came first, the sanctity of man came second, and the sanctity of space last." Here the emphasis is different: "The history of Jerusalem is endowed with the power to inspire such moments [of holiness], to invoke in us the ability to be present to His presence."

DAVIES's (1974) extensive study treats in great detail the significance of the Land of Israel in Hebrew Scriptures, extrabiblical Jewish sources, and the New Testament. DAVIES (1982), a considerably shorter book, is also more sweeping, setting out to determine whether the territorial dimension, specifically the attachment to the Land of Israel, is essential or accidental and peripheral to Judaism. After a section on biblical and extrabiblical and rabbinic sources that summarizes much of the earlier book, Davies continues through the Middle Ages to the Zionist movement and modern religious thinkers, although here the treatment is far more sketchy. Despite abundant textual evidence for the centrality of the Land, Davies notes the diversity of Jewish expressions on this subject, such as the texts that shift the focus away from Jerusalem or spiritualize it, the transformation of Torah into a "portable land," or the varied historical experiences of diaspora Jewish communities. His conclusion is that living in the Land is not absolutely essential to Judaism in the way that the Torah is, that "Judaism is not a territorial religion."

HOFFMAN's edition of scholarly essays reveals the academic outlook a generation after Halkin's book. The biblical scholar Harry Orlinsky argues from a precise analysis of legal terminology that the assignment of the Land of Israel to the Jewish people was a fundamental "cornerstone" of the covenant between God and Israel. The article that follows, on

Land theology in Philo and Josephus, explores the rather different treatments by two leading diaspora thinkers of Hellenistic Judaism. Two essays on the Mishnah grapple with problems such as the borders of the Land, the status of the laws bound up with the Land for gentiles living in it and for Jews living outside it, and—more abstractly—whether the sanctity of the Land can be transferred to other places. Five essays on the “medieval” period dealing with legal, polemical, philosophical, kabbalistic, hasidic, and artistic texts reveal a panoply of attitudes—including attempts to spiritualize the Land often associated exclusively with Christian doctrines—that belie simplistic ideological pronouncements. Three contributions on the modern period treat the “demystification, resymbolization, and politicization” of the Land, and the knotty problem of whether the return of the Jewish people to the Land and the reestablishment of a Jewish state there should be viewed as part of the process of messianic redemption or in strictly historical categories. This is the best summary in English of current, nuanced, nonideological, and nonpolemical investigation into an abundance of Jewish sources.

Since the birth of modern Zionism over a century ago, the question of what role Judaism would play in the building of a Jewish national homeland has been surrounded by unremitting controversy. Was Zionism a European nationalist movement representing something fundamentally new in Jewish culture? Or rather, was it an outgrowth of Judaism's 2000-year commitment to return to Zion? Throughout the transformation of Zionism from an ideology into a movement and finally into a modern nation-state, the question of the role of Judaism has always been of the essence. The debates over the role of Judaism in Zionism and the State of Israel have also attracted scholarly attention for decades. Through a review of some of the scholarship concerning the role of Judaism in Zionist ideology, Israeli political culture, and Israeli popular culture, this survey highlights the way that questions concerning Judaism and Israel are central to many aspects of current research on the State of Israel.

One cannot appreciate current discussions concerning the status of Judaism within the State of Israel without viewing it within the context of Zionist ideology at the end of the 19th century. Since the birth of modern Zionism, the question of Judaism and modern Jewish national identity has been at the center of the Zionist effort to define itself. Was Israel to be a state for Jews? Or a Jewish state? LUZ addresses these questions by arguing that Zionism sprang up in the late 19th century in order to address the tension created between “religion and life,” or tradition and modernity. Luz mainly explores the position taken by secular circles in Eastern Europe concerning the relationship of Judaism and Zionism and unfortunately does not contextualize the views of these circles by juxtaposing their opinions with those of Zionists in the religious camp.

The main secular ideologue who dealt with the complex relationship of Judaism to a prospective state of Israel was Asher Ginzberg, commonly known as Ahad Ha'am. ZIPPERSTEIN explores Ahad Ha'am's writings within the context of his complex relationship to Judaism and the general background of Jewish life in Odessa in the late 19th century. Ahad Ha'am saw Zionism as a Judaic cultural renaissance, and without Judaism at the center of the new Jewish homeland, the dreams of modern Zionists would ultimately fail. While Zipperstein highlights the weaknesses in Ahad Ha'am's writing (he often

used his conclusions as evidence in his arguments), Zipperstein does not deal with why Ahad Ha'am was so popular in his day. Nonetheless, Zipperstein raises critical questions in connection with his subject's contention that a state for Jews could never exist without a central role for Judaism.

Raising similarly troubling questions concerning the relationship of Judaism and the State of Israel is the late-20th-century philosopher Yeshayahu LEIBOWITZ. In his incisive yet somewhat repetitious collection of essays, Leibowitz argues that Judaism and the State of Israel must be separate entities for the sake of both. Leibowitz maintains that Judaism makes demands of humans but does not bestow upon them benefits. Political involvement corrupts Judaism by not focusing on the demands that Judaism makes of its believers but rather on Judaism's utility. Leibowitz believes that any link between Judaism and the State of Israel both debases Judaism and endangers the state, for politicized religion is not religion and can be used improperly to justify any act.

Other late-20th-century approaches to the role of Judaism within the State of Israel are presented in RAVITZKY. An intellectual historian, Ravitzky argues that after the founding of the state, "the religious mind found it difficult to view Zionism and messianism as two unrelated phenomena." It was this troubled religious mind that could not ratify a constitution for the State of Israel that was not based on Torah law. Ravitzky shows how some Orthodox Jews insisted that the State of Israel embodied messianic redemption, while others, such as the Satmar hasidim, saw its creation as an act of Satan and refused to recognize Jewish sovereignty in the land of Israel. Ravitzky does clarify the multiple and competing ideologies of Orthodox Jewry concerning the question of the relationship of Judaism and the State of Israel. However, ideologies do not develop within a social or political vacuum, and Ravitzky fails to contextualize his discussion within the greater context of Israeli society. Consequently, Ravitzky does not provide a framework to explore all the complexities of the relationship of Judaism to the State of Israel.

There are several collections of articles that examine the question of Judaism and the State of Israel from a legal or sociopolitical perspective. The classic and pioneering work on this topic is LITVIN and HOENIG, which provides many basic insights into this complex relationship. However, over the last 30 years much has changed in Israeli society, causing parts of their study to become outdated. Articles in SOBEL and BEIT-HALLAHMI examine how Judaism is often the arena for social conflict on the communal level in Israel, as can be seen from several case studies that the book presents and from the dilemmas faced by religious "dissenters" (such as Reform or Conservative Jews) in Israel. This collection provides the greater context for the findings of SOBEL's community case study of Yavneel, in which he uses the events in one small village in the Galilee as a lens to see how Judaism becomes the focal point for social conflict in the State of Israel.

Also utilizing a case study approach, LIEBMAN and DON-YEHIYA explore such issues as religious parties in Israel and religious extremism, yet their most provocative analysis concerns Jewish identity among secular Israelis. They maintain that Israelis' national identity reinforces their Jewish identity and that Israelis affirm the value of a Jewish state that is based

on a recognizable religious culture. Israelis, it transpires, generally believe that there must be some relationship between Judaism and the State of Israel. If Israelis ever question the centrality of Judaism to the State of Israel, it is chiefly because they are practically inconvenienced by coercive religious legislation mandated by religious extremists as the price of their participation in Israel's perpetual coalition governments.

Using cultural studies as their framework for analysis, URIAN and KARSH present a series of articles dealing with the numerous conflicts arising from "the problematic continuum between Israeliness and Jewishness." The great value of their collection is their exploration of the *Kulturkampf* between religious and secular Israelis as reflected in contemporary Israeli cinema and theater. A number of provocative essays on topics such as images of religious Jews and *ba'alei teshuvah* in the theater demonstrates how the study of Israeli arts and culture offers substantial insight into the dilemmas shaping Israelis' understanding of the relationship of Judaism to the State of Israel.

The value of NEWMAN's case study of Gush Emunim, the ultranationalist post-1967 settler faction within the National Religious Party, is that it brings to bear both sociological and ideological analysis on the question of religious extremism and the State of Israel; however, this collection is problematic since Newman overstates the impact Gush Emunim has had on Israeli society and political culture. Gush Emunim is just one manifestation of what can result from the combination of Judaism and politics in the contemporary State of Israel. The violent results of the current debate concerning the role that Judaism should play in the State of Israel is addressed in SPRINZAK, which explores intra-Jewish violence throughout the history of Israel. The assassination of Yitzhak Rabin by a religious Zionist prompted Sprinzak's examination of Jewish violence, which is basically a compendium of intra-Jewish violent conflicts in Israel. While not directly addressing the question of the role of Judaism in the State of Israel, Sprinzak places recent violence, which was driven in large part by the question of the role of Judaism in Israel, within the historical context of intra-Jewish conflict in Israel. Sprinzak's discussion of contemporary conflicts exposes certain biases, yet his overview of the sporadic violence of some ultraorthodox Jews in response to decisions of Israel's democratic government and of haredi desire for a greater role for Judaism in the State of Israel (or at least the land of Israel) is illuminating for anyone who wants to understand the recent violence within its proper historical perspective.

Healer, seer, master of prayer, storytelling, and song, spiritual guide, model of open-hearted, life-affirming religion, Israel Ba'al Shem Tov ("Master of the Good Name") was one of the most influential teachers and leaders in Jewish history. He stands at the source of and continues to inspire the hasidic movement, which despite Jewish secularization and the destruction of its Eastern European homeland remains a growing and confident trend in Orthodox Judaism and a vital source of ideas and inspiration for unorthodox Jews. His written legacy, however, is minimal, consisting of a few letters to relatives. He is known through the writings of disciples and through stories retold and, indeed, increasing in number over successive generations.

BEN-AMOS and MINTZ have translated and annotated *Shivhei ha-Besht*, important as the major source for attempts to reconstruct the life of the Ba'al Shem Tov and as the first printed book of hasidic tales. First published in 1814, 54 years after the death of its subject, the book is steeped in early hasidic oral tradition; nearly every story begins by noting from whom the author heard it. The translation is straightforward and, explicitly and appropriately, does not aim for more aesthetic appeal than the original. As a result, the nonhistorian may find this book uneven reading and spiritually less than uplifting. The focus of most of the stories is on rather crude miracles, as well as scattered, frustratingly brief recollections of a variety of incidents. It rewards a patient reading, however, with its glimpses of a very human Ba'al Shem Tov, seen at times angry, afraid, or jocular. The translators have included appendixes that are useful for the study of the stories, including a recapitulation of the original work's notes on informants, and an index to folkloric motifs. There is one glaring misjudgment in the translation whereby the Tetragrammaton is spelled out with vowels, contrary to Jewish practice and certainly not reflecting the original text.

BUBER, writing in German, was one of the first to introduce Western European and North American readers to the hasidic traditions of Eastern Europe and to draw on hasidic inspirations in constructing a contemporary and unorthodox approach to Judaism. Buber drew on extensive reading in hasidic literature, although unfortunately without noting his sources. His retellings of stories are usually closely based on the original versions, but they have a distinctively polished literary quality, well reflected in Olga Marx's English translation.

At times, in keeping with his intuitive sense of their meaning, Buber changed stories in subtle but far-reaching ways. Most of Buber's hundred or so stories about the Ba'al Shem Tov are drawn from *Shivhei ha-Besht*, so that the reader of Ben-Amos and Mintz's translation can readily discern Buber's hand at work. Drawing on other sources as well, Buber constructs a version of the Ba'al Shem Tov that remains accessible to many contemporary readers, with miracles downplayed and the intensity of human relationships highlighted. Buber has smoothed over some of the Ba'al Shem Tov's rough edges seen in *Shivhei ha-Besht*, creating, surprisingly, a more saintly figure than in the original hasidic texts.

ROSMAN undertakes a serious and thorough attempt to discover all that can be known historically about the Ba'al Shem Tov. With appropriate skepticism and a wide use of sources, he surveys earlier scholarship, draws on evidence previously unconsidered or undervalued, and arrives at new, potentially controversial conclusions. In particular, he makes use for the first time of the Polish archives of the town of Miedzyboz, the Ba'al Shem Tov's home. These records establish the historical existence of the Ba'al Shem Tov (which some scholars had questioned); he is referred to as the "kabbalist" and "doctor." The archives yield information about his family and associates, his status in the Jewish community, and the general economic and political context of his time. The chapter significantly titled "A Person of His Time" offers Rosman's tentative reconstruction of the Ba'al Shem Tov's historical role. He sees the Ba'al Shem Tov as a transitional figure: a recognized mystic and healer, supported by the Jewish establishment of his community, who practiced the pietism of his time in a way that lent itself to greater popularization. In this view the Ba'al Shem Tov did not found a new movement; rather, when the hasidic movement began, its leaders saw him as their predecessor and inspiration. The final chapter analyzes the editorial decisions made by the printer of *Shivhei ha-Besht* as an early example of the use of stories of the Ba'al Shem Tov in supporting new developments in Hasidism.

The hasidic works devoted to teachings attributed to the Ba'al Shem Tov are not available in translation. Excerpts of his teachings, however, can be found in Kaplan and Sears, both of whom, though from Orthodox perspectives, are following Buber in presenting the Ba'al Shem Tov in a way that is meant to be useful to contemporary spiritual seekers.

To this end SEARS's book contains two main sections: a selection of teachings and anecdotes grouped according to themes, and a section of customs and recommendations for the daily routine and the holidays. The translations are clear, although some readers will find the transliteration of Hebrew terms according to a modified Ashkenazi pronunciation to be confusing. As Sears acknowledges, attribution of most of these teachings to the Ba'al Shem Tov himself is dubious; the selection draws on a wide variety of sources including some from long after the Ba'al Shem Tov's time.

KAPLAN was an important Orthodox outreach teacher, oriented, as his introductory sketch of the Ba'al Shem Tov's life suggests, toward meditative practice. He provides clear English paraphrases (not literal translations) of selections from classic hasidic books, arranged by such themes as "Meditation and Prayer" and "Life and Society." Teachings attributed to

the Ba'al Shem Tov are well represented, more than those of any other master. There are footnotes on the Hebrew sources and on parallel texts. Neither Sears nor Kaplan has attempted to sift out what is more or less likely to be historically authentic; rather, the Ba'al Shem Tov is presented as later generations of hasidim remembered him.

Jews have lived in Italy since the Roman period, and the scholarship on their history covers a broad range of topics from many historiographic perspectives. There are scholars who prefer a documentary history centered on specific archives and others whose content is regulated by a predetermined topic. Historians may favor working with Christian sources, or prefer instead Jewish internal records, or be happy to use both. Of course, there are studies that survey the development of the Jewish presence in Italy throughout history and others that stress a particular period.

ROTH (1946) is one of the most basic texts in the field. Its purpose is to survey the entire Jewish history of Italy in a manner that is accessible to nonspecialists. This is also its fault; there is neither a comprehensive bibliography nor footnotes, so its academic usefulness is limited. Roth compresses a vast amount of scattered material in one book, however, starting from the Roman period and continuing to the 20th century. He covers much ground at high speed. His point of view is classical and his book describes a history of events and personages.

SHULVASS describes Jewish history in Italy during the Renaissance with special attention given to such topics as the characteristics of the Jewish population and its geographical dispersion, the evolution of the community, economic life, family and social life, literature, the fine arts, the world of sci-

ence, and finally the Renaissance in daily life. Shulvass argues that the Renaissance is regarded as one of the most significant eras in human history because men began to perceive the world more consciously in all its vastness and beauty. This work is an important contribution to the comprehension of what is therefore a central period in Jewish history. It is readable by anyone, specialist or layperson.

SIMONSOHN's book is a summation of the six great volumes of archival documents he has published in this series. As he states in the introduction, the book is an attempt to trace the history of the papacy's policy toward Jews from its inception to the Counter-Reformation. Thus, the book covers more than 1,000 years of history, from the adoption of Christianity by the Emperor Constantine through the Middle Ages to the 16th century. It traces the unfolding of Christian-Jewish relations as viewed by the papacy and depicted in the records of the Vatican Archives. Topics examined in this study include the Inquisition and its attitude toward Jewish literature, the prosecution of Jewish converts, polemics and disputations between Jews and Christians, and Jewish banking.

ROTH (1959) is a classic text on the cultural aspects of Italian Jewish history from the 14th to the 16th century. It analyzes the non-Jewish context of Renaissance Jewish life as well as the influence of non-Jewish scholars on Jewish culture. As Roth wrote, "this work is an experimental study of the interaction of two societies and of two cultures at one of the seminal periods of the world's history." In his opinion, the Jews not only participated in Renaissance culture, but they also made essential contributions to what was, in consequence, a "golden age" of Jewish-Christian relations. Perhaps this picture is idyllic, but until a few decades ago this was the main trend of Jewish historians, and Roth was an important representative of this reading.

BONFIL (1979) deals with the shape of the institution of the rabbinate—one of the central topics in Jewish history—during the Renaissance. This monograph describes such topics as the social meaning of rabbinic ordination, the judicial function of the rabbis, and the cultural world of the rabbis. It analyzes the application of Jewish law and the role of the rabbis within the community structure. Bonfil pays much attention to the cultural aspects of rabbinic activity, such as literary and philosophical production, according them equal weight with juridical and social aspects.

TOAFF concentrates on the Jews of Umbria, although his book is also an essay on the specific historiographic question of whether Jewish history should be studied from Jewish sources only or seen through the eyes of outsiders. Toaff's thesis is that to form a true picture of Jewish life one must take account of all the pressures and contradictions acting from within and without. In his opinion, it is not acceptable to disqualify Christian sources as tendentious in order to give credence to the image of a homogeneous Jewish society. Toaff wants to present a picture of everyday life instead of the intellectual history hitherto in fashion, and therefore his book deals with such topics as love and marriage, foodways, magic and ritual beliefs, patterns of discrimination, and employment opportunities for Jews.

BONFIL (1994) deals with the "fundamental opposition between the world of the Christian majority, and that of the

Jewish minority." In fact, Bonfil wants to suggest a partial revision of current historiography so as to present the history of Renaissance Italian Jewry from the inside. In his opinion, a history seen from the inside implies "coming to awareness of the self in the act of specular reflection in the other." This book is a major essay on historical theory, dealing with issues of

time and space, sound and silence. At the same time, it is crammed with information about such topics as Jewish occupations, education, and culture.

Born in Cairo to an upper-middle-class Jewish family of Italian nationality, the mistaken declaration of his birth two days earlier forever marked Edmond Jabès. His identity as a Jew and as a poet was no longer singular but was invaded by an “other” who shared his name and existence. The first manifestation of existence, for the Jew and for God, is marked by an absence carried within the name. These ensuing realities of lack, absence, otherness—all major themes of Jabès’s oeuvre—appear to have been marks of his being from birth. Toward the creation of a new language of mystical Jewish humanism in aphoristic poetry and prose, Jabès counters these terrifying realities with fragmentary poems and commentaries of hope that prioritize love for the stranger; the incarnation of difference in the face of every human being; the desire for love and sharing; the importance of hospitality; and longing in the absence of the other for God. As much as any kabbalist, this Jewish poet was passionately consumed with the magical power of letters to write the universe anew. His death marked the close of a great sequence of books that continue to call all into question and, with special force, to challenge the persistence of antisemitism and racism throughout the world.

GOULD reprints in translation two important European essays by M. Blanchot and J. Starobinski, while also assembling some of the foremost interpretations of Jabès by North

American critics, poets, and novelists. Gould’s introduction furnishes the reader with broad strokes on the Jabèsian canvas, especially in its tentative delineation of the contributors into four possible circles of interpretation: boundaries; exile, humanist, Jew; reading the question; and displacements. The commentary beginning in section two introduces Blanchot’s category of interruption as a rupture in the word of the broken tablets where the renewed history of a people folds in on itself. Blanchot’s category is further investigated by Handelman and Stamelman (via Scholem) in their application of Isaac Luria’s apophatic system of contraction, exile, and restoration to the Jabèsian project for purposes of comparison and elucidation. Handelman follows the Lurianic thread in presenting a comparison to Rabbi Nahman of Bratslav, whose visions of God’s exile pushed Hasidism to its limits, just as Jabès pushes postmodernism to its limits. Handelman posits Jabès as having met Scharlemann’s challenge of formulating a postmodern theology that questions theism in order to incorporate time and negation back into the deity. What ensues—a decentering bordering on nihilism—is challenged by Kaplan as an act of post-Nietzschean humanist faith preserving the play of desire in the Book as question. The third section of Gould’s work addresses the literary qualities of this questioning, which are held to be exegetical or midrashic. Endless subversions of the signified, both oedipal and Lurianic, belie the investigation of Waldrop (Jabès’s foremost translator). The fourth section dwells on the controversy of the Book and certain possible directions in post-Holocaust Jewish writing. Lang posits that Jabès is not writing *about* the Holocaust but is writing *in* the Holocaust, collapsing subject and medium.

STAMELMAN provides a rich introduction to the scope of Jabès’s thought as it appeared in 17 books published between 1943 and 1985. From the very first page of the Jabèsian book, Stamelman encapsulates the poet’s oeuvre as that of an exile who offers testimony to the loss of life, family, and homeland. Reading Jabès involves becoming aware of a scream; the poet’s words resonate with the lamentations of exile, with the ashes of Auschwitz, with the voice of humanity separated from a withdrawn God, with the cry of unending questions. Language as the root of all existence allows Jabès to find all of reality within the Book. However, the errancy of words reveals the incompleteness of every book. Despite the reality of the forever deferred work, the Book of books, there resonates beneath all writing a messianic text of a withdrawn God awaiting revelation. Each (re)reading and (re)writing of a book

reveals another book in the offing. Reduplication of signs fosters continuous revelation in the book. The tissue of signs that enshrouds Jabès's oeuvre (Jew, God, book, desert, stranger, threshold, vocable, question, etc.) while circling in a never-ending repetition always reveals another facet of the exilic condition. The ephemeral answer, however, is merely another question, in a chain of interminable self-interrogation. Questioning is a mode of being in the world. It underlies the Jewish quest for identity.

MOTTE constructs a matrix for reading the self-interrogation that Jabès demands of all readers as well as the author.

BOYARIN elaborates this Jabèsian quest for Jewish identity in constructing a new discipline called Jewish ethnography, deriving its structure from the poet. Boyarin's fourth chapter, "Jewish Ethnography and the Question of the Book," undergirds each of Boyarin's idiosyncratic case studies, which seek to demystify and invigorate the contemporary practice of anthropology by revealing the link between knowledge and power. This link reveals the dualism of approaches to integration in anthropological studies, being either spatial or temporal. Boyarin redresses this oversight with his threefold concern: to create a choice beyond either self-representation as a specialist in an unrecognized area of research or abandonment of any professional relationship to a particular group in order to focus on pure theory; to critically engage the ignored or patronized status of Jewish ideas in elite intellectual discourse; and the well-being of the Israeli Jewish and Palestinian Arab peoples. The consideration of a distinctive Jewish ethnography builds on this threefold concern by relating to integral aspects of both Jewish cultural dynamics and postmodern thought about writing. Boyarin draws upon Jabès as both a Jew and as an ethnographer and on Jabès's writing as exemplary of postmodern Jewish self-expression. Further, Jabès is seen to challenge the rabbinic substitution of ritual solidarity for material community. The proposed hermeneutical community collapses with the modern period and its revolution against an elite rabbinic community of textual desire. Neither the book nor the land alone can sustain both the moral exigency and the historical contingency that together constitute Jewishness. The proposed solution to this overt spatial or temporal priority is a negative ethnography, since time and space are being constantly reinvented.

WOLFSON's project of re-visioning kabbalistic hermeneutics is continually guided and undergirded by the subtextual poetry of Jabès. God's linguistic self-disclosure (both graphic and phonic), a predominant motif in the Jabèsian oeuvre, is traced by Wolfson throughout the work of the 18th-century Lithuanian talmudist and kabbalist R. Elijah ben Solomon Zalman, the Gaon of Vilna. Jabès proposes to imagine the fabric of the world and human existence as textual. Writing, from Jacques Lacan on, has its ontic ground in the phallus. Thus, language is more than the house of being—it is the very being itself. This linguistic unveiling, of and through the Hebrew Scriptures, is the time of being's becoming. In framing his analysis of the Gaon through Jabès, Wolfson reveals the essential connection between the book and time. Both textuality and temporality disclose the dialectic of hiddenness and manifestation. The revelation of the hidden thread through dissimulation is intrinsic both to the text and its divine coun-

terpart. Sealing one's fate in the engraving of time that ensues from the veiled disclosure of the exposed concealment is the challenge of writing.

The Book of Jeremiah attracted increasing critical interest in the last two decades of the 20th century, particularly with respect to questions of authorship and formation. The lively debate that ensued has been marked by the publication of a number of significant commentaries and monographs.

CARROLL (1989) is probably the best general introduction to the critical problems associated with Jeremiah, and it claims to presuppose of the reader no prior knowledge other than having read the biblical text. It gives a fine overview of the contents, structure, and what is termed the "theopolitics" of the work. For Carroll, "argument and ignorance" are the defining characteristics of Jeremiah scholarship: little, he thinks, can be known of Jeremiah the man, nor which sections (if any) of the book that bears his name he wrote, nor even to what time the book should be dated. Carroll's approach in this work is therefore to review the various debates surrounding the book without reaching firm conclusions.

CARROLL's (1981) own approach finds much firmer expression in his monograph. The emphasis in this work is on the idea that the Book of Jeremiah is the result of a "Jeremiah Tradition" rather than the work of the prophet himself. However, Carroll does argue that much of the poetic material in chapters one through 25, if not written by the prophet himself, at least provides the starting point for the accretion of prose traditions by the editors of the book. Probably the most important of these editors would in fact have been the Deuteronomists—the group responsible for writing the so-called Deuteronomistic History. For Carroll, it is this school that should be credited for much of the present form of the book. This is a detailed and helpful work that provides information on the various genres and editorial intentions of the

material and gives a wealth of detail on the historical background to many of the texts.

CARROLL's (1986) commentary on Jeremiah provides more detailed analysis of the text than his other two works and is therefore best approached last. It is, if anything, more outspoken than his previous monograph, attacking the "dogma of Jeremiah studies" that the prophet himself may have produced the poetic oracles in the book. Thus, these oracles are just as likely a product of the Jeremiah tradition as the prose sermons in the book, and the "historical" Jeremiah (if such a thing can be said to exist) is utterly obscured behind a tradition that has created the Jeremiah of the book that bears his name. This is an excellent commentary, with an extensive and useful introduction.

McKANE approaches the text in a way similar to Carroll. Yet, whereas Carroll is cautious about ascribing Jeremianic authorship to any text, McKane takes the position that the poetry in the first half of the book may be seen as the original Jeremianic nucleus of the work, to which other (non-Jeremianic) oracular material was added over the course of time. The book of Jeremiah is thus an example of what he terms a "rolling corpus," evoking the image of a snowball rolling down a hill, gathering extra layers of snow as it goes. This is not an easy work to read, emphasizing as it does questions of language and different traditions represented by the secondary translations (especially the Greek Septuagint). Nevertheless, it is an extremely important work, and students of Jeremiah should aspire to read it.

HOLLADAY takes a much more traditional approach to the Book of Jeremiah, adopting the position that it is possible to establish the data for reconstructing the chronology of Jeremiah's career with some degree of accuracy. This is done in the first volume of his commentary in a preliminary survey. The main significance of Holladay's position, expounded in more detail in the second volume, is that he disagrees with those commentators (e.g., Carroll, McKane) who see the prose sections of the book as representative of a strong Jeremiah tradition and in particular as having been shaped by the Deuteronomists. While some expansion to the text of Jeremiah occurred during and after the exile, the Deuteronomistic elements in Jeremiah's writing may be seen as the prophet's counterproclamations to a posited preexilic septennial recitation of Deuteronomy. Indeed, argues Holladay, much of the characteristically "Deuteronomistic" terminology of Jeremiah can in fact be shown to be distinctively Jeremianic. Examples of such language in other works are claimed to have been composed later than the Book of Jeremiah and hence influenced by the prophet. Thus, the distinctive voice of the prophet can be said to extend beyond the poetic oracles into the sermonic prose of the latter portion of the book.

NICHOLSON takes up a middle position between the extremes represented by commentators such as Carroll and Holladay. Nicholson's approach examines the Jeremianic prose tradition in turn from literary, theological, and historical perspectives, concluding that these portions of the book are the product of exilic writers' attempts "to draw out, expand, or otherwise develop for their own situation and time, the significance of his oracles and sayings." As such, even the prose elements may well be based on authentic sayings of the

prophet. Although somewhat dated, this monograph remains a useful and sensible guide to the critical problems of the text.

OVERHOLT represents a holistic approach to the Book of Jeremiah that takes less account of questions of authorship or setting, concentrating instead on a particular theme in the book: that of falsehood. He argues that the Book of Jeremiah is concerned with three main types of falsehood: the false sense of security of the people threatened by Babylon; the falsehood of the prophetic opponents of Jeremiah, who encouraged the Judean people to resist the Babylonian might; and the falsehood of idolatry, which led ultimately to divine punishment and the destruction of Judah. Although the complex questions of authorship are not addressed, this monograph gives a good overall picture of the theology of the book that bears the prophet's name.

Despite its location in a semi-arid and mountainous region, without natural resources or a port, Jerusalem has been one of the world's most celebrated and contested cities, a critical element in the sacred geography of Judaism, Christianity, and Islam. Jerusalem's rise began in the 11th century B.C.E. when David established it as his political capital. His son Solomon constructed the First Temple, consolidating Jerusalem's status as Judaism's spiritual center. For almost a millennium, Jews brought their sacrificial offerings to Jerusalem, until the destruction of the Second Temple in 70 C.E. For the next 1,900 years,

successive groups, including Romans, Byzantines, Arabs, Crusaders, Ottomans, and the British, governed the city, each leaving an indelible mark on its identity. In 1948, the newly founded state of Israel and Jordan divided Jerusalem into two cities, the latter acquiring possession of the Old City and its holy sites. Nineteen years later, Israel unified the city under its sole authority. Jerusalem has been venerated as the city of God's presence, of messianic redemption, and of eschatological hope. A city intimately entwined with the sacred legends and heroes of three religious traditions, Jerusalem arouses deep feelings that have contributed to its prestige and beauty but have also figured in its contentious and sometimes bloody history.

BAHAT, a leading archaeologist of Jerusalem, begins with brief discussion of the topography of Jerusalem and the major archaeological excavations conducted since the 19th century. In the following chapters, he maps out the boundaries of the city and the locations of its major structures. In addition to the maps and the many valuable line drawings and plans of major buildings, Bahat provides a history, drawing on both the archaeological finds and the literary records of Jerusalem from its prehistory to the 1970s.

SHANKS presents some of the most significant archaeological discoveries that illuminate the history of Jerusalem from the time of David to the destruction of the Second Temple. Hundreds of photographs and drawings augment his lively descriptions of Hezekiah's tunnel, the Herodian Temple, and the Garden of Gethsemane, among other sites. He also includes a briefer treatment of the major monuments built during the Byzantine, Islamic, and Crusader periods.

AVIGAD, director of the archaeological excavations of the Upper City beginning in 1969, reports on the many important discoveries unearthed in a decade of work, which was often conducted in the midst of controversy. Among the highlights in this richly illustrated book are the discovery of the Israelite wall, which demonstrates that the ancient city covered part of the western hill; the excavation of the Burnt House, which provides vivid testimony to the devastation that consumed Jerusalem in 70 C.E.; and the identification of the once magnificent Nea Church built by Justinian in the sixth century C.E.

YADIN and GEVA are two volumes that together collect more than 70 articles originally published in the Hebrew-language archaeological journal *Kadmoniyot*. The volumes offer the most detailed reporting in English on the archaeological excavations conducted in Jerusalem between 1967 and 1992. Each book includes general articles on various areas of the city and more detailed studies on specific subjects such as buildings, tombs, and seals. As one might expect, both volumes are richly illustrated with photographs of the sites and artifacts, maps, and floor plans. Geva includes a list of all major archaeological activities in Jerusalem from 1967 to 1992 and a brief description of the most important discoveries associated with each dig.

HAMMER collects more than 200 passages culled from a diverse array of Jewish writings on Jerusalem, including folktales, songs, and prayers, and excerpts from prophets, rabbis, philosophers, mystics, travelers, historians, Zionists, politicians, poets, and novelists. The collection offers a rich section on modern writers, some pieces appearing in English for the

first time. More than 100 maps, photographs, and paintings enhance the literary descriptions. The book emphasizes "the way in which the Jewish consciousness has perceived Jerusalem, has been created by it, and has in turn created a Jerusalem that includes streets and alleys but goes beyond that into feelings, values, beliefs, and prophetic hopes."

Gilbert presents vivid histories of Jerusalem during the 19th and 20th centuries. In GILBERT (1985), he traces the emergence of Jerusalem from a small, backward town into a thriving, if miniature, metropolis by the end of the 19th century, and he includes many of the earliest photographs of Jerusalem. Working from an array of contemporary documents, Gilbert not only tells the history of the city, but also conveys a sense of life in Victorian Jerusalem. GILBERT (1996), also drawing on numerous eyewitness accounts, examines the tremendous geographic expansion of the city, the growing division between Jews and Palestinians, and the volatile history of Jerusalem in the 20th century.

BENVENISTI, former deputy mayor of Jerusalem, offers a highly informed study of contemporary Jerusalem. His synchronic approach to the history of this conflict-riven city, particularly since 1967, engages several contested issues including the management of the holy sites; the political implications involved in drawing boundaries; the difficulties of establishing an effective and equitable municipal government; the unique linkage between urban planning and political goals; and the spatial, economic, and cultural distinctions that have left the city greatly divided and have contributed to hostility, fear, and prejudice among its inhabitants. Throughout the 20th century, Jews and Palestinians mined the chronicles of Jerusalem to construct myths that "aid them in their present-day quarrels." In order to deal with the conflict, he advocates an incremental, process-oriented approach that stresses remedies to immediate controversies rather than grandiose plans designed to meet a predetermined solution. Despite the tumultuous history of the city, Benvenisti looks forward to a time of peace and reconciliation among the various groups who call Jerusalem home.

ARMSTRONG chronicles the history of Jerusalem as a holy place, a city of mythical status, and a symbol of the divine for Jews, Christians, and Muslims. She describes how the city has undergone religious, political, linguistic, and cultural transformations, and she examines how each successive culture has used its sacred myths and architecture to justify its claim to the city and to shape Jerusalem's religious identity. She closes with a critique of those groups who have employed a "religion of hatred," controlling the city through violence and by displacing others.

LEVINE has collected 33 essays written by outstanding scholars that explore the central ideas, events, monuments, and institutions that define the sacred character of Jerusalem for Jews, Christians, and Muslims and that identify the place of Jerusalem in medieval Jewish and Christian traditions. The contributors examine how each religious community made its unique mark on the city and how each defined Jerusalem to suit its own religious, political, and social agendas.

A most remarkable transformation in scholarship has taken place in recent years regarding the Jewishness of Jesus. Only a few decades ago, following the lead of Rudolf Bultmann, the primary thrust was on Jesus' uniqueness and his universalism. But over the last several years a growing body of literature has stressed instead the deep positive connections between Jesus and the Judaism of his time. While this new scholarship has taken many different turns in likening Jesus to his Jewish contemporaries, there remains through all the volumes the common thread that it is impossible to understand Jesus and his renewal movement today without situating them squarely within the Judaism of the period. Most of the new scholarship has been undertaken by Christians, but some Jews also have looked anew at the significance of Jesus' teaching for Judaism.

BOROWITZ's analysis of contemporary Christologies is one of the best books to come from a Jewish perspective. With his customary critical openness Borowitz surveys the thought of important Christian theologians such as John Knox, Karl Barth, Wolfhart Pannenberg, Rosemary Ruether, Dorothee Soelle, Karl Rahner, Jürgen Moltmann, James Gustafson, and Reinhold Niebuhr. Borowitz's last two chapters ask whether Christology automatically leads to antisemitism, or, as Ruether has termed it, whether antisemitism is Christology's "left hand." Borowitz argues that it is not. In his reflective conclusion he expresses gratitude for the opportunity to interact with these theologians, and he invokes a Jewish blessing upon them. This volume remains a seminal work in the Christian-Jewish dialogue. While there is need for further reflection from the Jewish perspective, Borowitz has laid a solid foundation.

CHARLESWORTH has been one of the most prolific contributors to the rethinking of Jesus' Jewish context, both as an author and as an editor. In this volume he acts as both. In addition to writing two fine essays titled "The Foreground of

Christian Origins and the Commencement of Jesus Research" and "Jesus, Early Christian Literature, and Archaeology," Charlesworth has assembled a notable array of Jewish and Christian scholars such as John P. Meier, Géza Vermès, Daniel Harrington, David Flusser, Harvey Cox, Hans Kung, Ellis Rivkin, and Allan F. Segal. This is a superb introduction to the field.

CROSSAN's book, the central work of an ever-expanding corpus, has been much discussed, both in academic and popular circles. Because of the extensive publicity it has generated, it has probably been read by more nonscholars than any other volume on the subject. It is a scholarly work but is written in an idiom that effectively communicates with the nonspecialist. Crossan has been a preeminent member of the Jesus Seminar, a group of scholars that has aimed at identifying the authentic gospel sayings of Jesus. Crossan himself maintains that the so-called "gospel tradition" is not limited to the four canonical gospels alone but is found in other texts from the period as well. It is vital to bring all of these together to arrive at any coherent picture of Jesus. Crossan does this in this volume, although not to the satisfaction of some important New Testament scholars.

Crossan's picture of Jesus is that of a peasant Jewish Cynic whose appeal came from his actions more than his words. Jesus was part of the ideological orientation and pastoral missionary perspective of inclusive Judaism and cannot be properly understood apart from that context. Clearly this volume demands attention even if one ultimately disagrees with Crossan's methodology and some of his basic conclusions.

MEIER's volumes, while they have not achieved the same popular notoriety as Crossan's works, have received a somewhat more positive evaluation in scholarly circles. While Meier recognizes the need to turn to noncanonical sources for a full picture of Jesus and his activities, he believes far more than Crossan in the historicity of the gospel accounts themselves. In volume one, Meier discusses sources, methodology, and what he terms the "roots of the person" of Jesus. He ends with a chronology of Jesus' life. Volume two is more thematic, focusing on Jesus' stance toward the Mosaic law and other questions. For Meier, Jesus emerges as a "marginal Jew" who, while passionate in his Jewish beliefs and committed to Jewish religious practice, was nonetheless willing to criticize a corrupt clergy and thereby invoke the ire of the upper-level priests.

For those previously unacquainted with the literature, a reading of the Crossan and Meier volumes will provide a good cross-section of contemporary Jesus scholarship. Despite their serious methodological differences, Crossan and Meier both agree on the profound linkage between Jesus and the Judaism of his day.

For many years in biblical studies and still today in some circles, the parables of Jesus were seen as unique to his preaching and as a means whereby he drew a line in the sand between his vision and that of his Jewish colleagues. Recent scholarship has begun to change that perspective dramatically, insisting that the parable was a quite commonplace literary device in Jesus' time and that the parables of Jesus insofar as they critique Jewish practice, do so out of a Jewish perspective. In a collection dedicated to a rethinking of the parables,

THOMA and WYSCHOGROD have brought together a respectable group of Jewish and Christian scholars such as David Flusser, David Stern, Aaron A. Milavec, and Lawrence Boadt to complement their own contributions. This volume is a good place to begin a consideration of the parable as a uniting, rather than a divisive, force in Christian-Jewish relations.

VERMÈS is one of the most noteworthy Jewish scholars on the New Testament. While not all other scholars, either Jewish or Christian, would subscribe to some of his conclusions in *The Religion of Jesus the Jew* and other works, his research must be acknowledged in any serious discussion of the Jewish context of Jesus' teachings. Vermès is very positive in his assessment of Jesus' links to the reformist Judaism of his day. Following a rather general Jewish line of argument, he accuses Paul of shifting Jesus' emphasis on God the Father, an emphasis in which *teshuvah* (repentance) and *emunah* (faith) were key to a direct relationship with God, to a focus on the risen and glorified Lord without whose meditation it is impossible to reach God.

YOUNG, an evangelical Christian scholar, has done important research in lining up Jesus' parables with the Jewish tradition. In the manner of Thoma, he has gone against the prevailing scholarly grain in his approach. This work, rooted in an important way in the work of Young's Jewish mentor David Flusser, argues that the "kingdom of heaven" theme, a central focus of Jesus' teaching, is not an eschatological concept but rather a technical term Jesus used to designate God's reign as a present reality among those who have accepted the call to obey the divine will.

Finally, ZANNONI's edited volume includes prominent scholars such as Shaye Cohen, E.P. Sanders, Paula Fredericksen, John Donahue, Alan Segal, and Monika Hellwig addressing Christological issues in the context of the Jewish-Christian dialogue. This is an excellent introduction to the array of perspectives on one of the central issues in the contemporary dialogue, the theological significance of Jesus.

Jewish Christians can be defined as that group of ethnic Jews who were the first to believe that Jesus was the messiah. They considered themselves Jews and followed the Mosaic law as they had always done. They are classically associated with Peter and John of the Jerusalem Church. There is some evidence that this form of Christianity/Judaism continued into the fourth century C.E. This group is not to be confused with later Christians of non-Jewish descent who were attracted to Judaism and its practices or teachings—the so-called Judaizers. There are certainly attestations of Jewish Christian groups, but what they believed, where they lived, or how they behaved is extremely difficult to discern in great detail.

WILSON is a large work that covers more than Jewish Christians. Two chapters, however, are particularly helpful in exploring some of the historical factors that had a bearing on Jewish Christianity. Wilson believes that there was a strong and fairly well-defined form of Christianity that appears, from a modern perspective, to blur the lines between Judaism and Christianity. His research tracks the movement of these Jewish Christians and the possible reasons for their marginalization in Christianity. He grants a certain degree of validity to the supposed exodus of Christians (of Jewish origin) from Jerusalem to the city of Pella, part of the Roman Decapolis. This occurred shortly before the Jewish War of 66–70 C.E. This is a highly disputed historical account, but Wilson takes a mediating line, reading the account in the light of other associated historical phenomena. The fact that the Jerusalem bishops appear to be non-Jewish after this time points away from an influential Jewish presence in the Jerusalem church after 70 C.E. The shift from Sabbath to Sunday is also explored. These topics are covered in the chapter on Christian worship.

LÜDEMANN's book is organized principally around Paul and the varied reactions to his work. The book is thick with footnotes and scholarly accoutrements. At times, the prose is unabashedly partisan, and there are also points at which he is overly general. This does not, however, detract from the interesting scenario he lays out or from his engaging style. By his reckoning, the apostle Paul was the first Christian heretic. It was the Jewish Christians of Jerusalem who first rejected Paul because of his teachings and expelled him from their ranks. Paul's life and ministry are interpreted as basically fruitless and troubled. Those who came after Paul used his teaching in different ways. The battle was waged over who owned Paul, and the once-orthodox Jerusalem Church (i.e., Jewish Christians) became the heretics. This theory is speculative and fragile, but it is also a helpful counter to some overly homogenized accounts of early Christianity.

The subtitle of ROWLAND's book sets the stage for his approach to the emergence of Christianity. This book is helpful because it spends a luxuriant amount of time discussing the

nature of Judaism before the emergence of Christianity. Rowland's survey covers a wide range of topics, from attitudes toward the temple to ideas surrounding angelic mediators. What links Rowland's thinking is the genre of Apocalyptic. This fiery vision of Christianity counters the popular notion that Christianity sprang fully formed from the womb of proto-rabbinic Judaism. Rowland forwards the notion that Christianity arose as an apocalyptic Jewish sect that expected the imminent return of Jesus, the proclaimed Messiah. Rowland also attempts to track the shift from a loosely formed group defined by freedom and expectation to the less expectant but better organized group of believers who became known as the Christians. Thus, this book sheds very helpful light on Jewish Christianity.

PINES provides an extended and erudite article on what he feels is an authentic piece of evidence for the existence of Jewish Christianity up until the fifth century. Besides the many references to various Christian groups in Christian writings, there are virtually no sources that can be attributed to these groups, save the Pseudo-Clementine tradition. Pines attempts to show that beneath a tenth-century Arabic polemic against Christianity lie ancient fragments of a Jewish Christian document. The attempt is limited by Pines's understanding of early Christianity and the generalizations he sometimes employs. Even if his thesis is overly enthusiastic, it remains an interesting example of a literary excavation that does shed some light on the beliefs and attitudes of ethnically Jewish groups who were messianic in their thinking and completely Jewish in their practice.

PRITZ attempts to fill a gap in the scholarship on Jewish Christianity by focusing on the Jewish Christian group referred to as the Nazarenes. Many times various Jewish Christian groups are thrown into one group, but a closer examination reveals that such a conflation is the product of Christian apologetic and scholarly habit, rather than actual similarity. Pritz admits that tracing such a group is a difficult process. His work catalogs ancient sources that refer to the Nazarenes. Pritz concludes that this is the name of the most primitive group of Christians. The name existed even before Christians were called such. He reckons that this is the group that fled Jerusalem around the time of the Jewish War (70 C.E.). Caught between the Jews and the Christians, they were forced out of both communities.

TAYLOR's book is a systematic refutation of the theory that Christian holy sites were established by early Jewish Christians based on their first-hand knowledge of the places where Jesus prayed, was crucified, and was buried. The author challenges this idea by questioning the presumption of a strong and constant Jewish Christian presence in Jerusalem up until the Jewish revolt of 135 C.E. The book illustrates that there is a great deal of disparity between the literary sources for Jewish Christianity (almost entirely Patristic) and the archaeological material. She asserts that much archaeological material has been falsely dated (making it appear much older) and much of the symbolism has been misread in order to make it fit into a scholarly construct called Jewish Christianity. She concludes that it is the influence of Constantine in the fourth century C.E. and his attempt to establish Christianity as the preferred religion that is responsible for the Christian veneration of holy places, not Jewish Christians.

The foundational work of DANIELLOU has advanced this field to a great degree. His book is a compendium of all possible sources, organized around theological themes. Daniélou's work constructs a theology from very disparate elements. It is pure theology in that he does not consider the historical question of whether there was any one group who ever believed in these ideas. This book should be read with the full knowledge that what Daniélou describes are aspects of early Christianity that have Jewish components. It does not describe the theology of a single group called Jewish Christians, neither does it establish the existence of Jewish Christians. If read with this understanding, however, the work is a rich tapestry of detail and an interesting analysis of fine theological points. His analysis is linguistic and exacting at times, but it is organized topically so the reader can choose particular subjects with ease. This is a book for the reader who is serious about delving into the theological aspects of Jewish Christian beliefs.

The term "Jewish quarter" usually refers to the area of a large city, such as Prague, Budapest, or Warsaw, where Jews have made their homes and created their businesses. Some Jewish

quarters were quite elegant, such as those of Vienna or Budapest, and many others were slums until sanitation brigades cleaned out dangerous buildings and abandoned homes, as was the case of the old Prague Jewish quarter in the latter half of the 19th century. Some Jewish quarters were voluntary communities, and others were the result of forced segregation, such as the ghettos of early modern Italy or the mellahs of Morocco, where Jews continued to be locked up at night in the 20th century. In countries where policies of ghettoization applied, Jewish quarters were a feature not just of major cities but of the remotest small towns as well. Voluntary or not, the Jewish quarters represented to some degree a haven for diaspora Jewry.

Many Jewish quarters repeatedly suffered destruction and rebuilding during the course of the centuries. The best-preserved Jewish quarter in Europe today is that of Prague. Most were all but eradicated by the Nazis during World War II; since the fall of the Berlin Wall, however, a number of these quarters are experiencing restoration as a function of new interest in the former Jewish presence.

DAGAN and HIRSCHLER's compilation, a comprehensive history of the Jews of the Czech Republic and Slovakia, does not treat the Jewish quarter as an explicit theme in much depth. However, Hans Kohn's chapter in volume one, titled "Before 1918 in the Historic Lands," relates the history of the Prague Jewish quarter, or Josefov. In Ruth Kestenbergl-Gladstein's article, "The Jews Between Czechs and Germans in the Historic Lands, 1848–1918" (also in volume one), there is significant discussion not only of the cultural contributions made by Jews once they were free to leave the Prague ghetto, but also of the prejudices and other obstacles they encountered as "strangers" in the Czech lands. Volume two contains Hugo Stransky's chapter, "The Religious Life in Slovakia and Subcarpathian Ruthenia," which provides valuable descriptions of the Jewish quarter of Bratislava, the center of religious authority in the area, as well as that of Kosice in Eastern Slovakia and of Mukacevo in Subcarpathian Ruthenia.

DUBNOW's work consists of two volumes of text plus a third volume of indexes, which are very helpful in locating information on various aspects of life in the Polish Jewish quarters. Chapter two of the first volume, "The Jewish Colonies in Poland and Lithuania," relates the historical background of the arrival of Jews in Poland and the steady flow of Jews into the Polish lands from Bohemia and Germany due to persecution. The rise of Casimir the Great, "the peasant king" who believed the Jews had a special role in developing Poland economically, and the history leading to the development of Cracow's Kazimierz Jewish quarter are amply discussed.

GREEN's book provides a contrast to studies of the Jewish quarters of Central and Eastern Europe, bringing to light the history of the old Jewish quarter of Paris, the Marais, known also since the Middle Ages by the Yiddish appellation, Pletzl. Green seeks to define the social and economic impact of the arrival in the late 19th century of Eastern European Jews, where there was already an established community of French Jews. She traces the history of the labor movement within the community, describing such features as the tension between immigrant Jewish workers in the garment industry and their employers, also immigrants. The book details the

inner workings of the Jewish quarter, with much material on political activity and religious life. Maps of the Pletzl are provided as well as charts of the social and political composition of the quarter.

IGGERS's anthology of newspaper articles, letters, and selections from memoirs details lesser-known aspects of Czech Jewish life, particularly in the Jewish quarter of Prague, from personal points of view. There is important material here on the legends of Rabbi Loew, the history of the cemetery, the dissolution of the ghetto in 1852, and the partial demolition of the old Josefov district. Most significant, however, are the personal feelings about the Jewish quarter revealed in this collection.

ISRAEL's work focuses on the participation of Jews in European economic life together with their gravitation to cities and areas of cities where many Jews already resided. The "program of ghettoization" is also discussed admirably, using the examples of Rome, Venice, and Mantua. There is a fascinating bibliography with an enormous range of references that run the gamut of European languages.

MICHMAN's research is particularly interesting for its insights into the complex fragmentation of the Dutch Jewish quarter concerned. He describes the Dutch government's dealings with the two Jewish communities in Amsterdam, Sephardi and Ashkenazi (or rather, Portuguese and High German), and the Jewish political activities within the two distinct camps. Also discussed are the newspapers of the communities, the languages, and the adoption of Sephardi customs within a new community of more liberal Ashkenazi Jews in direct opposition to the traditionalist old community. In particular, Michman discusses the controversies that raged between these communities, most importantly the matter of "the feasibility and justifiability of a continued observance of religious precepts," which caused a deep rift during the "French Era" of Napoleonic occupation of the Netherlands.

PATAI (1971) and PATAI (1980) devote much space to tracing the historical development of the Jewish quarter and capture the old world in photographs of the inhabitants as well as buildings that frequently no longer exist or remain today only as abandoned shells. The author focuses on Eastern and Southern Europe, North Africa, and Southwest Asia. He provides a wide perspective on the Jews in these areas and the communities that they formed; Sephardim and Ashkenazim are both well represented.

SADEK, ŠEDINOVÁ, and MACHT have compiled an interesting volume that is first and foremost a photographic survey of the Josefov section of Prague, the former Jewish quarter. The book provides an in-depth report on the architecture and decoration of many of the synagogues, among them structures dating from the Gothic, Renaissance, and Baroque periods. The work also includes a substantial history of the Prague ghetto in an appendix.

The history of Jewish studies has not yet been written. Scholars engaged in this field, however, are beginning to subject it to searching analysis. Pertinent articles have appeared that offer two extreme positions on the recent development of Jewish studies. One stresses the increased interest in Jewish studies as a result of heightened Jewish self-awareness beginning in the late 1960s because of the Six-Day War, growing interest in the Holocaust, and the influence of African American and ethnic consciousness that resulted in the establishment of new academic programs and a diversification of the curriculum. The other, usually a reaction to the first view, argues that the study of Hebraica and Judaica has held an ancient and honorable place in the traditional university curriculum. The truth, of course, lies somewhere in the middle. Jewish studies, by which is meant the critical study of the history, literature, and thought of the Jewish people since the biblical period, has an ancient pedigree that is far from unbroken or unblemished. On the other hand, the field continues a scholarly tradition that stretches back to periods earlier than the consciousness-raising events of the late 1960s, particularly to 19th-century Germany, turn-of-the-century America, and mid-20th-century Palestine.

ADELMAN, tracing most of the literature on the history of the field, shows that while Jewish studies has had a long history, it has had an erratic pattern of growth and, even after its establishment, course offerings in Jewish studies have been and still are regarded as dispensable. He notes that the appearance of Jewish studies seems to correlate more with the personal needs of the practitioners—Christian or Jewish students, teachers, and alumni—than with what schools have considered to be their essential curricular needs. Although making substantial academic contributions, medieval European and colonial American Christian pioneers in Hebraica, Judaica, and rabbinica pursued their work for the furtherance of Christianity, often at the expense of Judaism. Adelman maintains that the early pioneers of *Wissenschaft des Judentums*, "the science of Judaism," had a mixed agenda with two incompatible goals: Jewish survival and ethnic pride and objective nonpartisan scholarship. The failure of Jewish studies to find acceptance at universities until the late 20th century can be viewed as being as indicative of the nature of the field as it is of the universities. Having developed in other contexts, most notably rabbinical seminaries and Jewish communal institutions, Jewish

studies has acquired contours that still make it difficult for it to fit into the secular collegiate curriculum, according to Adelman. The burden of adjustment, however, does not fall exclusively on Jewish studies. He proposes that one of the essential aspects of Jewish studies is a challenge to the nature and structure of Western higher education. One of the tensions present when Jewish studies is introduced as a field is whether it or the traditional curriculum is in fact ethnic. Ironically, writers on Jewish studies typically want to distance their field from the "ethnic" label, which often evokes partisan associations, while at the same time they list all the benefits that the Jewish community derives from the academic study of Judaism. Adelman points out that they argue that Jewish studies should be objective and should not be a partisan enterprise, and they overlook the fact that the academic process has always been committed to fostering particular values whether they are nationalistic, religious, gendered, or racial. Adelman maintains that the ultimate defense against ideological forays into the classroom is the academic process itself, which is based on rigorous disciplinary and methodological questioning of all data, assumptions, and conclusions. If such tests are not applied, the fault does not lie with a particular field but with the academic process itself. According to Adelman, the task before Jewish studies, therefore, is not the repression of identity, community, or social concerns, but the creation of a methodology that will help these matters find expression among many disciplines and departments on campus. Indeed, he argues, the articulation of Jewish considerations in the curriculum provides an opportunity not only for those involved in academics but also for those committed to the ethnic community. The critical academic study of the Jewish people is the only opportunity to challenge tendentious, polemical, and self-serving interpretations of the Jewish experience. Thus, writes Adelman, Jewish studies offers a valuable way to invigorate a sense of cultural creativity and to develop critical thinking in the Jewish community.

COHEN and GREENSTEIN's collection contains articles on the state of various fields within Jewish studies, written by leading scholars and including insightful responses by their colleagues. In Greenstein's overview of recent biblical scholarship, one argument may serve as a significant point of departure, embracing many views toward the study of the Bible. Although the camel has been seen as the biblical animal par excellence, scholars have questioned when the camel was actually domesticated and whether references to it in Genesis were anachronistic. Greenstein presents views dating the appearance of the camel from as early as 1200 B.C.E. to as late as 600 B.C.E. In his response, Jon D. Levenson offers, among many interesting comments, the remarks of a 14th-century supercommentary to Abraham ibn Ezra's Pentateuch commentary in which ibn Ezra suggested that anachronisms in the Torah may undermine the idea that Moses wrote it: "What should I care," the supercommentator asks, "whether it was Moses or another prophet who wrote it, since the words of all of them are true and inspired?" Such a comment both refutes and accepts the basic critical premise of ibn Ezra. In his essay "The Modern Study of Ancient Judaism," Cohen formulates a profound response to many of the questions that haunt Jewish studies: "History, like most of the humanities, is an art, not science. Its results are conditional,

not inevitable; conjectural, not empirical. Historical truths are not 'discovered' so much as 'created' by the interpreter." Cohen adds another analytical gem with his introduction of the distinction between scholarly "unifiers" and "separators." These approaches represent the attempts by scholars either to find a consistent unity in the work of an author or to see inconsistencies, contradictions, and developments in the work of a particular writer or a text. Cohen applies this model to the study of texts by Philo and Josephus as well as the Dead Sea Scrolls, and by extension it may be applied to all of Jewish studies. Finally, Cohen raises the issue, often implied but rarely confronted, of internal versus external influences on Jewish development. In his response, Richard S. Sarason pursues this issue by trying to establish criteria for determining influence beyond superficial parallelisms. Ivan Marcus's "Medieval Jewish Studies: Towards an Anthropological History of the Jews" raises many important interpretive matters concerning the intersection of social history, literary criticism, religious studies, and anthropology. Marcus offers two phrases worthy of repetition that mark attempts to find nuances and ambiguity: "surface bumpiness," rather than the "smoothness of the text," and "the weirdness of a cultural phenomenon," which he uses to characterize his readings of medieval Jewish texts, aided in the former case by the medieval commentaries of Rashi and in the latter by Clifford Geertz and Victor Turner.

MYERS picks up the development of Jewish studies in 19th-century Europe and follows it into Palestine. He traces the transformation of *Wissenschaft* in German to Jewish studies in Hebrew and the change in agenda behind such a transformation, most notably from justifying Jews and Judaism to German culture and society to the invention of a national identity in Palestine and the construction of a new historical memory. At the center of this book is the story of the development of the Institute for Jewish Studies at the Hebrew University, which opened in 1924. Two of the key features of Myers's argument are that such a transformation, from *Wissenschaft des Judentums* to *Hokhmat Yisrael*, was never complete and that a so-called Jerusalem school of Jewish studies never created a monolithic point of view. One of the ultimate paradoxes of the development of Jewish studies in such a national environment was the expressed hope of many of the practitioners to free Jewish studies and Jewish identity from external influences, forces that were not only the hallmark of Jewish development in the diaspora but in Palestine as well. Instead, what was stressed was internal essence, inner continuity, and organic development, embodied in common memory, Hebrew, habits, and rituals. Biblical criticism, therefore, proved particularly troublesome throughout the early history of the university, and Jewish history and general history were taught in separate departments. Others, however, often tried to incorporate the influence of external forces and stressed, particularly in fields such as medieval Spanish Hebrew poetry, Jewish philosophy, and Haskalah literature, the high level of influence of the non-Jewish environment. Myers reports that the Yivo Institute was created in Vilnius by anti-Zionists in response to the opening of the Hebrew University and the opposition to the study of Yiddish there. Paradoxically, it was the German Jews of Palestine who supported the study of Yiddish as part of their sympathies with cultural pluralism in Palestine, while the native

Yiddish speakers with their newfound loyalty to Hebrew formed the opposition to Yiddish studies. In Jerusalem as well as in Germany, Jewish studies were, therefore, caught between personal, national, and communal concerns and the requirements of objective scholarship.

SCHORSCH notes that from 1812 to 1822, Prussian authorities declared Jews eligible to hold academic posts, and Jewish intellectuals in Europe turned to the *Wissenschaft des Judentums*, calling for critical study of Jewish history, the Bible, rabbinics, literature, theology, law, and even contemporary statistics. This was a movement that attracted young Jewish intellectuals, primarily students at the new University of Berlin, whose feelings toward their own people had been awakened by contemporary criticism, popular anti-Jewish movements, and the indifference, estrangement, or apostasy of many young Jews. They hoped that such a purely scholarly, objective study of the Jewish past would awaken in Jews a sense of pride; produce educational, communal, and religious reform; help foster Jewish survival; and cause non-Jews to develop a more favorable opinion of Jews. These goals extended beyond disengaged scholarship and reflected the sometimes ambiguous direction of the movement, which included preference for Sephardi over Ashkenazi culture, Reform over rabbinic Judaism, and the rational over the mystical. Schorsch traces the development of the thought and activities of several of the pioneers of *Wissenschaft* (some of whom would later convert, finding it impossible to pursue a career at German universities). Leopold Zunz, who resolutely remained in the field but never in a university position, had become frustrated with the anti-Jewish views of his professor, Christian Friedrich Ruehs, which may have inspired his own Jewish writings in reaction. Moritz Steinschneider, who devoted his long life to prodigious Jewish scholarship but also never held a real academic position, offered the following sobering observation: "One cannot teach Jew-haters, least of all through history." Heinrich Heine, although he converted, is discussed in the context of his early association with *Wissenschaft* and his hostility to some of its approaches, which led him to write the "Rabbi of Bacharach." He noted later in life that kugel (noodle pudding) had done more to preserve Judaism than all the issues of the *Zeitschrift für die Wissenschaft des Judentums*.

Westermann, Claus, *The Structure of the Book of Job: A Form-Critical Analysis*, Philadelphia: Fortress, 1981

One of the most complicated books of the Bible and full of highly enigmatic poetry, the Book of Job explores human suffering as well as God's justice, foreknowledge, and power. As a result of a contention between God and Satan over Job's fidelity, Job is beset with loss of wealth, family, and health. His friends counsel him to repent of the sins that must have caused his suffering, while Job maintains his innocence and calls on God to explain his hardships. A young man, Elihu, also challenges Job when Job's friends run out of words. Finally, God addresses Job in two dramatic scenes but never attempts to justify his actions. Instead, God calls on Job to contemplate his finite humanity as compared to divine omnipotence and wisdom. In the end, Job is pronounced righteous by God and his health and prosperity are restored.

Job has been an intensely studied book. Scholars have challenged its unity, some defending it as a composition by one author, others seeing it as a compilation of several sources. Nor is there agreement on the book's main message or even genre.

MURPHY explores the various units that make up the book. After analyzing the structure of the book as a whole (which he divides into 31 sections) as well as exploring issues of genre and setting, he concludes that the overall intention of the book is to show the inadequacy of the theory that God always punishes evil people and always rewards those who do good. Instead, the book defends God's mysterious freedom to act as he wants in the world. Murphy then offers a structural analysis of each section of Job with short discussions of the genre, setting, and intent of these sections.

WESTERMANN argues that the Book of Job is organized around Job's lament, "Why must I suffer?" He contends that the narrative portions of Job that introduce the book and conclude it are integral to the message of the work as a whole and are part of the skillful crafting of the author. After making this assertion, Westermann analyzes individual sections of Job as different genres (disputation, praise, lament, etc.) and shows how they fit into the author's construction of the book.

POPE offers a translation of Job and a detailed commentary. He views the book as a compilation of compositions by various authors with a central core revolving around the dispute between Job and his friends. Despite this patchwork of sources, the book exhibits a high degree of unity of thought. The book itself fits into no category neatly but combines features of several genres. Pope argues that the most likely date for the composition of the core of the book is the seventh century B.C.E. Overall, Job presents several conflicting views of the problem of divine justice in conflict with purposeless human suffering. At times it argues for a view of suffering as always owing to God's just punishment of evildoers. At other times it argues that Job is an exemplar of trust in God, even as Job's suffering cannot be explained. Other passages suggest

that the problem of human suffering is beyond human understanding. Still other passages suggest that human suffering can also be a warning to righteous people about potential and latent sins.

HABEL defends the coherence of the Book of Job in his commentary by arguing that the book is organized as an extended metaphor. The comparison is to a lawsuit. Job first contemplates filing a lawsuit, then challenges his accuser, seeks an arbiter, and submits testimony. Then Job takes an oath and presents his challenge, receives a verdict, is challenged by God, retracts his litigation, and is vindicated. This lawsuit plays itself out in three movements: God afflicts the hero, the hero challenges God, and God challenges the hero. However, Habel admits that the lawsuit metaphor does not answer the question of God's justice, which is the focus of much of the book. Instead, through the lawsuit Job comes to transcend the moral order by his innocent suffering. Habel declines to settle on a date for the composition of the book, presenting arguments for dates anywhere between the tenth and fourth centuries B.C.E. However, he favors a date in the fifth or fourth centuries.

GORDIS views Job as the foremost achievement of Hebrew wisdom. He asserts that the author understood human suffering as a moral discipline. Neither God nor his world can be judged fairly from the perspective of human suffering and need, as Job attempted to do. The author of Job offers no justification that will make sense to human logic; the author was too religious to believe that any neatly articulated system of human thought could explain creation's beauty or the tragedy of human existence. Gordis argues that the book possesses an organic unity and denies the claims of scholars who would view the book as a compilation by various authors. However, he does admit that some passages in the Hebrew text may have suffered from corruption during the centuries of its transmission. Gordis includes a second section in his book, offering his own creative and insightful translation of Job.

LEAMAN treats the problem of suffering and its relation to evil in the world not only in the Book of Job but also in Jewish thought through the centuries. He examines the problem of suffering in Job as handled by Philo, Saadia ben Joseph Gaon, Maimonides, Gersonides, Baruch de Spinoza, Moses Mendelssohn, Hermann Cohen, Martin Buber, and several modern writers on the Holocaust. In all these he explores the question of how God could allow evil in the world and concludes that questions about evil and suffering are not only important in their own right but also serve to direct people to try to understand their relationship with God.

The destruction of the Second Temple, the center of Jewish political and religious life, in 70 C.E. was a watershed event that necessitated a restructuring of Judaism and of Jewish leadership. According to traditional accounts, Johanan ben Zakkai stands out during this period as a leader with foresight and initiative who guided the Jewish people and Judaism through a potentially catastrophic crisis. Classical scholarship tends to rely on these traditional sources and views Johanan as a national and religious hero. Newer scholarship, however, is more critical of rabbinic sources and challenges many of their basic assumptions. Because Johanan is seen as instrumental in the creation of diaspora Judaism and the foundation of “normative” rabbinic Judaism, his activities remain more or less pertinent to the study of all subsequent phases in the development of Judaism.

GRAETZ’s portrayal of Johanan and the institution he established at Yavneh reflects Graetz’s overall historiographic program. Although a product of the Wissenschaft school, he used its methodology conservatively in reaction to the radical scholarship associated with religious reformers such as Abraham Geiger. Graetz’s primary focus is on the continuity of Judaism as a religion, so that what matters to him here is Johanan’s role in establishing Yavneh as a new spiritual center and in creatively maintaining religious traditions despite new political circumstances. Graetz dwells on the hermeneutical approach of Johanan and his unique ability to connect oral tradition and contemporary conditions to the written law.

DUBNOW’s perspective similarly reflects his programmatic ideology. For Dubnow, Jewish continuity was based primarily on national identity rather than religion, and this identity could be preserved perfectly well in the diaspora. Accordingly, Dubnow praises Johanan for the establishment in Yavneh of a new social and political center and for creating “the foundation of future Jewish autonomy.”

Alon’s scholarship is distinguished by his critical use of both traditional Jewish texts and classical literature. His research on Johanan offers new conclusions based on a questioning of accepted theories and a reconsideration of fundamental assumptions. Based on the broader political situation and evidence offered by Josephus, ALON (1977) claims that Yavneh was a Roman internment city to which Johanan was exiled. In light of the fact that the Roman goal was to destroy Jewish autonomy, Alon dismisses the possibility that Johanan was able to convince the Romans to hand over Yavneh for the establishment of a new Jewish center: “the only concession [Johanan] could obtain from the Romans was to save some lives—his own life and the lives of his disciples and friends and relatives.” The English version of Alon’s work also provides a complete translation of the rabbinic sources that reveal divergent traditions regarding Johanan’s departure from Jerusalem and his meeting with Vespasian.

As in his earlier book, ALON (1980) is particularly interested in Johanan’s leadership role before and during the war with the Romans and his status in the period that followed. Alon identifies Johanan as a leader of the Pharisees who was a realist regarding relations with Rome and resisted the rebellious tactics of the Zealots. Alon argues that following the war Johanan was not accepted universally as the leader of the community, and it is not at all clear that he filled the role of patriarch. In fact, Johanan faced a great deal of opposition from the masses and from the other leaders. Yavneh, Alon contends, only became the locus of a strong central authority when Rabban Gamliel, a descendant of Hillel, was appointed as head of the court there.

Neusner’s work on Johanan is particularly interesting because his methodology and conclusions have changed through the course of his long career. NEUSNER (1962), his first book, and its popular version, NEUSNER (1975), rely heavily on rabbinical sources—midrash, Mishnah, and Talmud—and he treats the information he finds there uncritically. He assumes that all these texts contain reliable and historically accurate information about the life and actions of Johanan. Through these sources Neusner attempts to construct a biography of Johanan, a task previously unattempted. As the title of the popularized version implies, Neusner explores the life of Johanan within the context of the political and religious crises facing the Jews in the first century as the result of Roman rule. He traces Johanan’s move from the Galilee to Jerusalem, his ascent within the Pharisaic sect, his homiletic and interpretive style, and his constant struggle with the Sadducees and Temple priests. According to Neusner, Vespasian knowingly and strategically allowed Johanan to establish an academy in Yavneh. In keeping with Neusner’s understanding of Roman policy, Vespasian did not wish to inflict utter destruction but wanted to quell the rebellion and to reestablish a limited and loyal Jewish self-government. Johanan succeeded in consolidating the power of the Pharisees who came to represent establishment Judaism while marginalizing the other sects. By assuming religious and legal authority, he reshaped the religious cult and facilitated the survival of Judaism and Jewish autonomy in the post-Temple period.

NEUSNER (1970) serves as a corrective to the methodology of his earlier work. Here, he pioneers his form-critical and

source-critical approach, which acknowledges the complex relationships between various rabbinic texts and questions the historical reliability of these texts. Using his new methodology, which categorizes sources according to particular forms and traces the developments and additions that appear in later texts, Neusner observes the growth of a tradition. He draws interesting conclusions about the development of rabbinic literature and about rabbinic perceptions of Johanan through different generations but finds he can say little about the figure of Johanan himself. Neusner concludes that Johanan was opposed to war with the Romans and that he was responsible for the promulgation of numerous decrees following the destruction of the temple. This amounts to a much less colorful picture of Johanan than that portrayed in Neusner (1962), certainly more cautious and in all probability more accurate.

COHEN offers an entirely different perspective on Yavneh and its meaning that seems to have ramifications for, if not roots in, the fragmented nature of late-20th-century Jewry. Cohen bases his revisionist theory on a reexamination of the familiar sources and an analysis of new evidence such as Patristic writings and data from Qumran. Despite the trauma experienced by the loss of the temple, Cohen maintains that the destruction did not mark a crisis. In the years leading up to the destruction, the proliferation of sects and cultic practices that did not revolve around the temple prepared the rabbis and the general population for this very situation. This being the case, the contribution of Johanan was not that he provided an alternative to temple Judaism. Rather, Cohen praises Johanan and his contemporaries in Yavneh for creating an inclusive society that abolished the sects that were so prevalent in the previous period. Perhaps in search of a pluralistic model for the present, Cohen argues that sectarianism was brought to an end in Yavneh not by the increased exclusivity and dominance of one group but by a conscious effort on the part of the scholars to "agree to disagree." Contra Neusner, Cohen dissociates the rabbis and the Pharisees; unlike the Pharisees, the rabbis were not interested in creating a leadership clique that dubbed dissenters heretics. With the destruction of the temple, the source of a monolithic understanding of Judaism was gone and a pluralistic conception of Judaism evolved.

Judean patriot turned Roman historian of the Jews

The Jewish historian Flavius Josephus was a priest, an alleged Pharisee, commander of rebels defending Galilee during the Great Jewish Revolt, and a beneficiary of the patronage of the Flavian dynasty following the war. He is undoubtedly one of the most important and most perplexing sources of information about Jewish communities in the Roman Empire during the late Second Temple period.

Although Josephus refers to a number of literary projects in his writings, only four texts are extant. The *Jewish War*, completed within a decade of the destruction of the Temple by Titus in 70 C.E., strives to correct public misconceptions about the events that led to the Great Jewish Revolt and to rehabilitate the martial reputation of the Jewish defense (his own role included) during the war and its immediate aftermath. *Jewish Antiquities*, written during the early 90s, presents a history of the Jews from the biblical account of Creation up to the events preceding the Revolt. The *Life*, which was issued as an appendix to *Antiquities*, responds to personal attacks against Josephus by his various rivals and gives a further account of his conduct during the war and his fortunate treatment by Vespasian and Titus, the details of which sometimes conflict with the description in *War Against Apion*, clearly written for a non-Jewish audience, contrasts Judaism and Jewish history with Greek civilization; it may be the only extant example of an early Jewish apology.

For readers unfamiliar with Josephus's writings, GRABBE provides a brief yet critical resume of his life, followed by an overview of each of his four extant works. Grabbe also evaluates Josephus as a historian and suggests general considerations that will help the novice to interpret Josephus's historical and personal claims.

In another text intended for nonspecialists, RAJAK concentrates mostly on Josephus's early life and writings. She discusses the plausibility of Josephus's assertions about his family pedigree, his traditional Jewish education, and his experiences in the world of the priestly social elite. She generally accepts Josephus's claim that he experimented with several forms of Judaism when he was 16 years old and his contention that he spent three years in the wilderness during his adolescence. Rajak then examines Josephus's interpretation of the Great Jewish Revolt, considering his biases as a member of the priestly elite and the tension between his adoption of Hellenistic historiographical conventions, on the one hand, and his traditional Jewish notion of Providence and his preoccupation with collective suffering for national sins, on the other. The author closely scrutinizes the occasionally divergent accounts in *War* and *Life* of Josephus's controversial actions in Galilee.

She asserts that the latter account is generally more reliable, although it does not clearly reveal Josephus's true intentions with regards to the revolt. In *War*, Rajak claims, Josephus sought to ingratiate himself with the more moderate Jews, who must have been highly suspicious, their moderation notwithstanding, of the circumstances behind his survival and subsequent prosperity. *Life*, according to Rajak, addressed fellow Jews who lived through the same events, as Josephus worked to rescue his reputation as military commander from charges of gross incompetence stemming from his dismissal.

COHEN critically reconstructs the events of Josephus's Galilean campaign from the conflicting accounts in *War* and *Life*. The author argues that Josephus intentionally obscured the early course of the rebellion in *War*, alleging a period of moderation and legitimacy sandwiched between periods of terror and anarchy. By dividing the early history of the war into two parts, the tyrannical first period followed by the legitimate second period, Josephus was able simultaneously to condemn the fomenters of the war and to justify his own involvement. Cohen postulates that the outbreak of the war occurred spontaneously, without plans or leaders, and that Josephus willingly participated in the war from its chaotic inception, having been sent with two other priests to prepare the district of Galilee for the Roman onslaught. Josephus failed, however, to incite the nonbelligerent Galilean population, who deserted at the first sign of Vespasian's advent, and he was finally compelled to enter Jotapata, where, after a brief resistance, he was captured. After this point, Josephus served the Romans as propagandist, guide, and interpreter. At the same time, his views, as depicted in *Antiquities* and *Life*, became distinctly pro-Pharisaic as Josephus aligned himself with the rabbis, who were increasing in influence, perhaps even attaining some measure of official recognition for their academy at Yavneh.

Many scholars tend to limit their studies of Josephus to particular events or specific time periods, but BILDE offers a comprehensive biography, covering events prior to the war, Josephus's exploits in Galilee in 66 and 67, his life as a captive in a Roman camp, and his later history as a client of the Flavian dynasty. Bilde willingly accepts Josephus's claims in *Life* about his motives and pacifist attitudes during the campaign in Galilee, thus challenging Cohen's assumption that Josephus initially supported the Revolt wholeheartedly. Bilde treats Josephus as a creative author with artistic ambitions (as well as obvious political and theological intentions) who faithfully transcribed essential data from his sources. Understanding *Against Apion* as the key to all of Josephus's writings, Bilde contends that Josephus aimed to reestablish and maintain the rights and status of the Jewish people within the Roman Empire in the precarious situation following the war, while at the same time seeking to encourage his coreligionists to cooperate openly with the Roman government and with Greco-Roman civilization.

Concurring with Rajak and Bilde, ATTRIDGE understands Josephus as a member of the Jerusalem aristocracy who therefore would have received an education both in Jewish traditions and in (at least) the rudiments of Greek learning. However, Attridge is more skeptical than these other historians about Josephus's account of his adolescence

in *Life*, asserting that his description of the formative influence of the various schools of Jewish thought appears rather artificial. Specifically, Attridge questions how easily Josephus could have been exposed to the three dominant Jewish schools of thought during his youth if much of this period was also devoted by him to desert asceticism, and the author notes that Josephus's tale has plenty of parallels in other stories of philosophers' quests. Thus, the account is probably a literary invention that serves to indicate that Josephus made an informed choice when he opted for the Pharisees. Unlike Bilde, Attridge contends that the inconsistencies between the accounts in *War* and *Life* about Josephus's activity during the early war years in Galilee present certain knotty problems for the modern interpreter. In *War*, Josephus is a noble warrior elected by the people of Jerusalem, and a worthy adversary of Rome who ultimately bows to necessity and to the evident will of God by conceding to Titus and the power of Rome. *Life*, Attridge submits, serves primarily as an apologia for the historian against the attacks of Justus of Tiberias, who leveled charges of war-mongering and tyranny. Attridge's most useful contribution in this study is the delineation of the distinctive tendencies in each of Josephus's extant works.

SCHWARTZ studies the intellectual development of Josephus during the years between completion of his two major works, *War* and *Antiquities*. Schwartz stresses that Josephus was a public figure, interested and informed about political developments in Rome and Judea, and Schwartz argues that many features of Josephus's historiography can be best explained against the background of his shifting political concerns and social connections. Schwartz observes, for instance, that references in *War* to biblical stories do not demonstrate any depth of knowledge, but they do express a reverence for the cult and the Temple, which points to Josephus's affiliation with the upper-class Jerusalem priesthood. Thus, *War* reveals Josephus's concern for the interests of the Herodians and high priestly families, the traditional Judean aristocracy who remained the most powerful people in Jewish Palestine. In *Antiquities*, however, Josephus suddenly exhibited great familiarity with, and willingness to report accurately, the contents of the Jewish Scriptures, and he also abandoned the highly peculiar stories of *War*. Schwartz speculates that this change may signify that by the 90s Josephus no longer supported the traditional priestly regime. Rather, the more rabbinic descriptions of Jewish law in *Antiquities* probably functioned as propaganda to promote the sages, who had now begun to consolidate their leadership in Jewish Palestine.

In recent years the Book of Joshua has garnered considerable scholarly attention centering on theological issues (for example, the justice or lack thereof in so-called holy warfare), historical concerns (what, if anything, can be recovered concerning an Israelite influx into, if not invasion of, Palestine), and literary matters (the book's inclusion in the larger work of the Deuteronomist[s] and its overarching themes when read synchronically, among others). For more than a millennium, Jewish interpreters, reading the text of Joshua with great care and sensitivity, have noted many of the same phenomena as their modern counterparts as well as others that escape contemporary notice. Because there is no single commentary on Joshua that encompasses all these insights and approaches, it is necessary to consult a number of volumes in order to appreciate this book at its fullest.

BOLING and WRIGHT have combined their respective talents and expertise to produce one of the best commentaries on the Book of Joshua. Wright, a colleague of W. F. Albright and a pioneer in biblical archaeology, wrote the introduction, which he completed shortly before his death in 1974. Since Boling chose not to update it, the synthesis that Wright achieved could not have taken into account any of the developments that occurred during the decade between his death and the book's publication. Boling, who also wrote the Anchor Bible commentary on Judges, was very familiar with textual and literary matters. He is generally successful in combining diachronic and synchronic insights in the production of a new translation and full textual and exegetical annotations. Although Boling sometimes puts forth interpretations that are idiosyncratic and a bit off center, overall this volume is a clear and trustworthy reflection of mainstream biblical scholarship on the Book of Joshua at the end of the 1970s.

BUTLER's volume appeared in the Word Biblical Commentary series just a year after Boling and Wright's. Some readers may be put off by its inclusion in a series sponsored by a conservative Christian publisher (Word Books). They should not be. In many ways, Butler's is the finest one-volume commentary accessible for the general reader. Although he tends to be most comfortable with traditional interpretations that favor the historicity of the Joshua narrative, he is not dogmatic and retains the rare ability to give ample space to opposing points of view. Butler is especially sensitive to the structure and texture of the Hebrew of the Masoretic Text and has many acute, even arresting comments to make in this regard. His bibliographies are remarkably complete and up-to-date, and his volume is user-friendly both in its overall organization and its individual

units. It should be noted that, like Boling and Wright, Butler lacks any special training in traditional Jewish exegesis or scholarship.

NELSON's treatment is among the very best and clearest expositions of those spawned by the recent renewal of interest in the Book of Joshua. Like many contemporary scholars, Nelson does not believe that this biblical book contains or communicates much (if any) valid historical information about the period of Joshua or an Israelite "conquest" of Palestine. Rather, the book as it exists now is the end product of a complex process of composition, transmission, collection, and redaction. At each stage of this development, as Nelson expounds upon it, authors or redactors sought to address questions of vital concern to their own generation. Although such a focus on Nelson's part might have led to the slighting of a synchronic appreciation of the finished product, this is fortunately not the case here. Nelson also pays considerable attention to the Septuagint version of Joshua and the differences between this Greek text and the Masoretic Text. Nelson does not, however, deal with traditional Jewish sources; those interested in such matters will of necessity turn to commentaries such as those evaluated below.

COHEN's commentary on Joshua reproduces the Jewish Publication Society's English translation of 1917 along with the Hebrew text. The revision of Cohen's work in the early 1980s was primarily directed toward the elimination of non-Jewish sources contained in Cohen's original edition. The overall goal of this Soncino series is to acquaint the general reader with many of the main strands of traditional Jewish biblical interpretation. Given the extent and vastness of such exegesis, Cohen was necessarily selective in the material he included. His exegetical stance is decidedly conservative: the Book of Joshua is a single literary composition by an eyewitness contemporary with the events described. Moreover, as viewed by Cohen, there are no contradictions within the Book of Joshua or between this book and other parts of the Hebrew Bible, especially the Book of Judges. Cohen is thus free to concentrate on the truths, spiritual and otherwise, that are divinely revealed through this text.

ROSENBERG and SHULMAN have produced a unique volume on the Book of Joshua. In addition to printing the Masoretic Text, they also include an Aramaic Targum and the standard collection of classical Hebrew commentaries found in rabbinic bibles. The Masoretic Text receives a new English translation as does all of the commentary of Rashi, the most influential medieval Jewish exegete. Many other well-known Jewish commentators are quoted extensively in English, and select portions from talmudic and midrashic sources are also cited. All of this conforms to and confirms the value of the rather lengthy subtitle of this volume: *A New English Translation of the Text, Rashi and a Commentary Digest*. The exegetical stance of the volume's editors is highly conservative, but there is an awareness on their part of at least some elements of the modern critical approach to the Hebrew Bible.

DRUCKER was entrusted with the preparation of the Joshua commentary for ArtScroll. Every ArtScroll volume (there are now more than 400 of them, encompassing a wide variety of Jewish texts and themes) is carefully prepared from an aesthetic as well as a theological perspective. In the case

of Joshua, those competent in Hebrew are treated to an easy-to-read font, and all users benefit from an array of maps that is all too rare even in books devoted to such geographically rich narratives as Joshua. In keeping with other ArtScroll productions, the divine name is represented by the term Hashem (literally, the Name). ArtScroll translations seek to bring out the theological and philosophical implications of the Hebrew as God's word, an enterprise that is enhanced and enriched by extensive (albeit necessarily anthologized) citations from traditional Jewish sources. Although not to everyone's liking, the ArtScroll phenomenon is a growing presence within North American Jewry and not just in the Orthodox community.

DAVIS's volume, as is made clear through its subtitle, is distinguished by its new linear translation of the biblical text and of Rashi. The top portion of each page contains a series of brief lines (one to five words each) from the traditional Hebrew text of the Book of Joshua with an English rendering opposite. The bottom half of the page follows the same columnar format, but with lines from Rashi (in Hebrew and in English) rather than from the biblical text. Rashi's paramount influence not only among subsequent Jewish interpreters but also on Christian exegetes and bible translators fully justifies the attention lavished on him in this work. English readers are now also in a position to compare the work of Rashi as Davis presents it with the earlier translation furnished by Rosenberg and Shulman. Davis's translation maintains proper names in a form closer to the Hebrew than is usually found (for example, Moshe and Yehoshua). In many other ways also, in the introduction and in the translation itself, readers are ushered into the world of Joshua as understood by the rabbis.

One of the greatest personalities of Jewish Middle Ages, Judah Halevi was at the same time an immensely popular poet and a rather conservative thinker, whose magnum opus, the *Kuzari*, pioneered opposition to philosophical interpretations of Judaism. The poetic and philosophical aspects of his work have been highlighted in both earlier and recent studies about him. Numerous studies have been dedicated to the life of Halevi and in particular to his eventual journey to Jerusalem. Some of his poems are translated into English in *Selected Poems of Jehudah Halevi*, edited by Heinrich Brody and translated by Nina Salaman (Philadelphia: Jewish Publication Society, 1928).

Biographical insights are offered by Baron, Kayser, Goitein, and Yahalom. BARON presents a valuable sketch of Halevi, reviewing this rich personality's experiences against the background of his age. In the space of a few pages, Baron describes the political and cultural context in which Halevi created his poetical and philosophical oeuvre. Baron considers the meaning of Halevi for Jews in the 1940s, and the author underlines, among other traits, Halevi's great perseverance in times of crisis, his courage, his clarity of purpose, and his firm belief in the Palestinian ideal. The article was written before the discovery and publication of important materials, but it remains very interesting as a general evaluation of Halevi's personality and period.

KAYSER's book gives the classic precritical perspective on the epoch and the circumstances of Halevi's life, unfortunately with a heavy admixture of inexact details. The author was a well-known German literary journalist who was persecuted by the Nazis. In the language of his era, Kayser presents Halevi as "one of the mightiest religious poets [that] any race and any century has ever produced," and "the greatest symbol of medieval Judaism." Due to a lack of critical principles, Kayser fails to distinguish between documented data and legends about famous authors, including Halevi. Some of his assertions are careless impossibilities; he maintains, for instance, that Halevi heard as a boy of "the atrocities perpetrated by the Almohades." Nor is Kayser necessarily helpful when he describes Halevi's "metamorphosis from mundane minstrel to religious bard" as a deepening and widening of his character. However, some of Kayser's descriptions of the poet's work and personality are still acceptable. The book has to be read critically, because many of its views have been refuted by

new data, but it projects an infectious enthusiasm for Jewish civilization that one can admire to this day.

GOITEIN, after protracted study of the Judeo-Arabic materials of the Cairo Genizah, was able to publish several very important new documents about Halevi and in particular about his last days in Egypt and his journey to Jerusalem. In the last of his five magisterial volumes on medieval Jews along the Mediterranean, Goitein devotes 20 pages to the discussion of several letters connected with Halevi. In the first letter, written in Granada in 1130, a young friend described Halevi as “an illustrious scholar of unique and perfect piety.” Goitein studied the archives of Abu Sa‘id Halfon ben Nethanel ha-Levi, a Cairene businessman who visited Spain many times and became a good friend of Halevi. These archives have yielded more than 20 letters from or about Halevi; five are holographs that the poet himself wrote in Spain, with important allusions to the redaction of the *Kuzari*; there are also letters with references to his stay in Egypt, his presence on board the ship that would bring him to Palestine, and his death in the summer of 1141. Goitein translates and comments on these texts; his quite new and critical data is presented in exemplary fashion by a true master.

YAHALOM offers a new perspective on the last years of Halevi’s life, employing only recently accessible materials from the Second Firkovich Collection of the Russian National Library in St. Petersburg. These documents enable a new evaluation of the poet’s metaphorical language, which challenges the view of the life of the poet generally accepted since the essay published by Jefim Schirmann in 1938 (“The Life of Judah Halevi,” [Hebr.], *Tarbiz* 9). Yahalom’s article presents new hypotheses, for instance, about the time of Halevi’s visit to al-Andalus: Halevi was still living in Christian Spain, and it was there that he met Moses ibn Ezra after ibn Ezra left Granada, close to 1095. Once Halevi came to al-Andalus in search of the great sages, he would never return to Christian Spain; the eruption of invaders from North Africa prompted him instead to actualize his life’s dream by going to the land of Israel. Yahalom comments also on new materials that throw light on the last months of Halevi in Egypt and his failed attempt to go to Palestine overland. He is able to offer as well a new outlook on the transmission history of Halevi’s poems, thanks to hundreds of manuscript pages from St. Petersburg. The article uses important, previously unknown materials, and it offers a multitude of interesting new insights, although some interpretations are still open to discussion.
